OPPORTUNITIES

WE own and offer for sale on attractive terms a few especially well selected tracts of timber running from 50 million to one billion feet that are ready for immediate operation, having a good local demand at high prices.

The timber on the Pacific Coast is the last stand of the great forests. Well selected timber in British Columbia is the best investment on this Continent and offers especially attractive inducements for manufacturers.

EDGINGS

Ontario

The Parry Sound Barrel and Manufacturing Company, Limited, has been incorporated with head office at Parry Sound and an authorized capital stock of $500,000.

The Trent Cooperage Company, Trenton, Ont., recently lost a large quantity of lumber by fire. The loss amounted to $10,000, which is partly covered by insurance.

The Wallaceburg Lumber Company, Limited, Wallaceburg, Ont., has been incorporated with authorized capital of $40,000; David A. Gordon, Donald D. Gordon, Harry Turnbull and others are interested.

The planing mill belonging to H. A. Marshall, 507 Davenport Road, Toronto, was recently destroyed by fire. The building and machinery were completely destroyed. The loss amounted to $10,000.

George & Laurie, who have lumber interests at Owen Sound, Ontario, have bought the Empress Shingle Mill at Cassidy's Siding, on the E. & N. Railway, Vancouver Island, B.C. It is understood that this is the start of larger operations on their part.

The Robinson Cabinet Manufacturing Company, Limited, has been incorporated with a capital of $40,000, with head office at Walkerville, Ont. The provisional directors are H. S. Robinson, of Toledo, Ohio, U.S.A., and C. A. and J. J. Rukamp, of Detroit, Mich., U.S.A.

Arnold & Bell, Limited, has been incorporated with a capital of $100,000, with head office at Sudbury, Ont., to carry on business as lumber merchants. The provisional directors are W. J. Bell, J. P. Reid, G. J. Valin, C. McCrea and A. J. Manley, all of Sudbury, Ont.

A report from Fort Frances, Ont., indicates that the Ontario and Minnesota Power Company are considering the erection of another paper mill at that point. The company recently bought vacant real estate to the value of $20,000, which would be suitable for a proposition of this nature, and they have stated that if they receive sufficient encouragement and assistance from the town they will build a couple more large mills.

The offices of the Spanish River Pulp and Paper Mills, Limited, are now established at Sault Ste. Marie, Ont., at the plant of the Lake Superior Paper Company, which was merged with Spanish River over a year ago. The former offices on King Street, Toronto, were closed some time ago and certain departments of the firm's business are now conducted from the offices of the Lake Superior Corporation in the Traders Bank Building.

Eastern Canada

Shareholders of the Laurentide Company will meet on September 23 to sanction an issue of $4,000,000 6 per cent. mortgage bonds, a portion of the funds being required for the extension of the plant and the new power development at Grand'Mere, P.Q.

Brownsburg Furniture, Limited, has been incorporated with a capital of $49,000, with head office at Brownsburg, Que. The provisional directors are J. E. A. Decelles, of Montreal, Que.; P. Lepine, V. Bouchard, P. Goyette, and R. Bertrand, of Brownsburg, Que.

The Two Pauls, Limited, has been incorporated with a capital of $10,000, with head office at Danville, Que., to carry on business as lumber merchants. The provisional directors are F. J. Paul, C. C. Bernard, G. J. Hamilton and W. N. Paul, all of Danville, Que.

The Ontario Paper Company, of Thorold, have purchased the timber limits at Ha-Ha Bay, on the Saguenay River, P.Q., formerly owned by the Battle Island Pulp Company, of Fulton, N.Y. The limits comprise 27,000 acres of freehold and 100,000 acres of leasehold land. The price was $300,000.

John Maloney's new sawmill at Chatham Road, N.B., has been completed. The mill is 120 ft. x 40 ft. and stands upon crib work 300 feet out from the low water shore line. It is equipped with a rotary saw, resaw, double edger, trimmers, and lath machine. Two shingle machines will be put in next year. The mill will cut from fifty to seventy-five thousand feet per day. A deep water wharf will be built immediately in connection with the mill. Mr. Maloney's mill at Barnaby Ridge will be shut down.

The Lumber Corporation of Nova Scotia, Limited, which owns about 569 square miles of timber and pulpwood lying on the eastern seaboard of Nova Scotia, is offering $1,000,000 first mortgage twenty-year sinking fund gold bonds. The security for these bonds will be the company's lands, timber, leases, mill, buildings, fixed plant and machinery, water rights and concessions. The property is estimated to contain timber and pulpwood valued at nearly $5,000,000. The board of directors includes the Earl of Denbigh, John Howard, agent-general in London for the province of Nova Scotia; George S. McClearn, Liverpool, N.S., president of the McClearn Lumber Company, Limited; and D. H. Foresman, Williamsport, Pa., formerly general superintendent of the Central Pennsylvania Lumber Company and former manager of the Davison Lumber Company, of Bridgewater, N.S., who is now efficiency engineer to William Whitmer & Company, Philadelphia. The company's bankers are the Royal Bank of Canada.

A meeting of the bondholders of the East Canada Power and Pulp Company, in which Sir Rodolphe Forget is largely interested, was called for August 31st, at which it was expected that a full report would be presented, covering the company's transactions since its inception. This company was organized in 1910 to build and operate a pulp mill and a 25,000 h.p. hydro-electric plant. The company met with financial difficulties early in its history. It is capitalized at $1,500,000 of ordinary stock, all of which was issued and fully paid up. There have also been issued $1,500,000 of consolidated 6 per cent. bonds. The company owns some very valuable property and it is be-

lieved that if it can be re-organized on a conservative basis the bondholders would not lose heavily. A report from Montreal states that, with the exception of pulp and pulpwood, accounts, and a few materials, the property of the East Canada Pulp and Power Company, Limited, in liquidation, is to be sold by auction on September 22. The timber limits, held under provincial license, are approximately 392 square miles, and are situated in the Murray Bay River, P.Q., district. The company have also property on the east side of the harbor at Murray Bay, formerly belonging to the Laferriere Lumber Company. The sale will include the various mills, factories, dams, machinery, etc., and 740 shares of the capital stock of the Labrador Electric and Pulp Company, with $50,000 bonds of the last named company.

Western Canada

The H. J. Wells Lumber Company, Edmonton, Alta., recently commenced business.

The Parks Lumber Company, Limited, of Verwood, Sask., has been incorporated with a capital stock of $25,000.

The Kamsack Lumber Company has been registered at Grand View, Man. Mr. Theo. A. Burrows is the proprietor.

E. R. Vipond, who is in the pole business on the Arrow Lakes, is establishing a shingle mill and box factory at Nakusp.

Messrs. Finch, Withers & Company, lumber merchants, of Strathclair, Man., have been succeeded by the Finch Company.

The Dissette MacConnell Lumber Company, Limited, Victoria, B.C., has been incorporated with an authorized capital of $25,000.

The North Canada Lumber Company, Limited, has been incorporated with a capital of $100,000, with head office at Prince Albert, Sask.

The Beaver River Lumber Company, Limited, has been incorporated with a capital of $50,000, with head office at New Westminster, B.C.

The Barclay Shingle Mills, Ltd., is the name of a company which will operate the Port Haney, B.C., plant. Associated with J. A. McKercher in the business are W. J. Barclay and Thomas Paradis.

The sawmill belonging to J. B. Winlaw, at Winlaw, B.C., was recently destroyed by fire. The loss, which included the section house and 6,000,000 feet of lumber, is estimated at $120,000, on which there was insurance of $60,000.

Western Woodenware, Limited, has been incorporated with a capital of $20,000, with head office at Winnipeg, Man. The provisional directors are H. F. Tench, J. F. Waller, L. J. Carey, W. B. K. MacRury and N. B. Henry, all of Winnipeg, Man.

The sawmill belonging to the Fern Ridge Lumber Company at Fern Ridge, B.C., was recently destroyed by fire. The loss amounted to $150,000. There was insurance on the mill to the amount of $72,000 and on the stocks to the amount of $30,000.

A company is shortly to be floated for the purchase of growing timber over a large area at Grey's Creek, Loughbourough Inlet, B.C., from which it is estimated that over two and a half billion feet of merchantable timber will be procurable, says the Timber Trades Journal of London, Eng.

The Colonial sash and door factory has started operations at Huntingdon, B.C., the adjoining town to Sumas, on the boundary line. The principals of the company are A. Williams, Vancouver, president; R. L. Gallinger, of Washington, manager, and H. M. Morris, a practical man with English experience.

Frank DuBois, former manager of the Elk Lumber Company, Fernic, B.C., bought 2,100 acres of crown granted timber lands east of Fernie from the Black Estate, Winnipeg. These limits were previously held by the Hosmer Lumber Company. There is a mill on the property, but it has been idle since 1907.

The P. W. Fau Vel Lumber Company, with offices in the Holden Building, Vancouver, B.C., is completing a shingle mill at Lake Burnaby, about 12 miles from the city. The P. W. Fau Vel Lumber Company operates two shingle mills of its own and in addition has contracts with others that are manufacturing shingles for it.

Large areas of timber on Vancouver Island are owned by the Washington-British Columbia Timber Company, of Walla Walla, Wash., which has secured registration in this Province. Officers of the company are: President, E. Blackburn, Walla Walla; vice-president, H. A. Gardner, Walla Walla; secretary, George H. Foster, Baker City, Ore.

C. E. Ayer, manager of the North Star Lumber Company, Elko, B.C., says his company will close down their planing mill at Elko in September indefinitely and also their mills at Jaffray and Cranbrook and get out of business in the Crow. These companies are controlled by John Hanbury, the well-known sash and door manufacturer, of Vancouver.

Mr. John B. Atchison, head of the firm of Atchison & Company, saw mill and building contractors, Cornwall, Ont., died recently of blood poisoning which set in as the result of a fracture of his right arm, received while cranking his automobile.

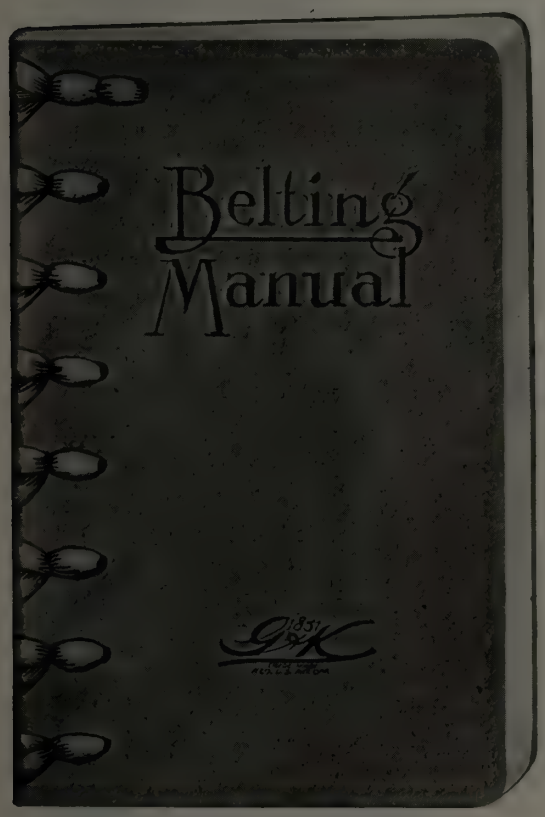
Educational Talks on Leather Belting.

The "Care of Belting" Manual—Yours

To obtain the highest efficiency in power transmission in the problem which confronts every manufacturer. For years leather belting has demonstrated its ability to stand more abuse and come out "alive" than any other means of power transmission. It is an undisputed fact that if leather belting is given a tithe of the attention which of necessity must be given to other forms of transmission, it will demonstrate beyond question its greater efficiency and economy.

To promote this efficiency and economy is the fundamental object of



Actual Size 3¾" x 5¾"—90 Pages

THE "BELTING MANUAL"

with its 90 pages of practical belting information.

It tells how to install belting, how to care for belting, how to repair laps, how to make belts endless, how to apply dressings, how to lace belts, how to clean belts, how to remedy some of the belt troubles, how to find width and length of belts.

The various metal rules are unusually complete, and complied for use in solving the daily problems of power plant practice. In short, the "Belting Manual" is an authentic text-book on the transmission of power—it is a veritable fund of informatian for every belting user.

A copy will be sent you gratis upon request—clip the coupon.

Clarke's Clothing

For

Lumbermen

Mackinaw Pants

The materials in these pants are the best that money can buy. The workmanship is on a par with our other goods.

The A. R. C. Brand of clothing contains every garment necessary for the complete outfitting of the lumberman for winter work in the woods.

Illustrated are a few of the A. R. C. garments. They are roomy in design, perfect in workmanship and are made of the best material.

Our illustrated catalogue contains full information about the A. R. C. line

Write us today.

Mackinaw Coats

Well tailored from mackinaw cloth and suitable for street wear.

Plymouth Glove

The best made for all kinds of hard wear. Peccary hog leather is a favorite with lumbermen. The toughest and best wearing glove it is possible to make.

Bullhide Moccasins

Are steadily gaining in favor owing to their warmth and wear resisting qualities.

Pullover Mitt

Made in burro, sheepskin, horsehide, and peccary hog leathers. Specially adapted for lumbermen, rivermen and miners.

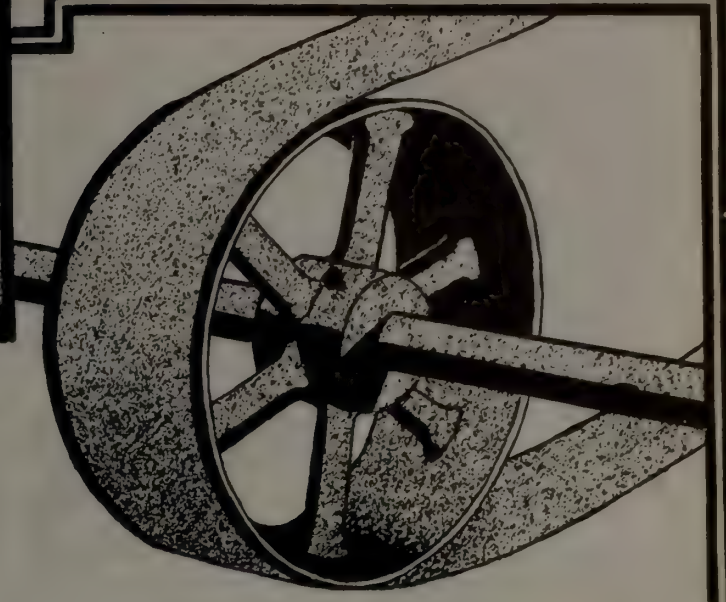
"Wilson Bros." Flooring and Trim

"Wilson Bros." stamped on every piece of this flooring stands for Quality. Look for the name. Hardwood and Pine. **Interior Finish of All Kinds.** Also Hardwood Veneer Doors to detail. We are equipped to fill large or small orders on short notice. Write us for prices.

Wilson Bros., Limited - Collingwood, Ont.

When You Overhaul Install

GOODHUE BELTS



"Acme Waterproof" Leather Belting

This brand is especially well suited to the wet places in a saw or pulp mill and will run true as long as it is in service. When you are overhauling your mill equip it with "Goodhue Belts" and you will never regret it. They are honestly made of solid leather—every inch a good belt and they won't stretch.

Get our Details and Prices.

Send for Cross-cut Saw Booklet giving complete instructions on caring for and selecting these saws

Disston Cross-Cut Saws

Henry Disston & Sons, Limited
Keystone Saw, Tool, Steel and File Works
TORONTO, CANADA
Branch at Vancouver, B.C.

We have had three-quarters of a century of experience.

Used in all the largest lumber camps in the world.

Rutherford's Stock Millwork

KLIMAX

If it's made of wood we can supply it. Our line of stock millwork embraces an immense variety of patterns in doors, newels, mouldings and other trim. Buy from our stock catalogue and you can save money and be sure of prompt shipment.

We are also equipped to cater for special detail work and keep a large plant in operation for this purpose.

The stocks we carry will always be found right up to the minute, and prices will be lower than obtainable elsewhere.

Write us for catalogue.

Loans on Timber Lands

For Long Periods of Time in Amounts from $25,000 and up

We have been in the lumber business for over half a century.

We now control and operate a number of mills. We also loan money to lumbermen.

It will be to your advantage to deal with practical men who know the requirements of the lumber trade all over Canada.

Our business is to know the wants of the lumbermen and to meet them.

Ontario Bond Corporation of Canada, Limited

HAMILTON, ONTARIO

You'll be a vital part of the great Johns-Manville Continent-wide Roofing Service if you're a J-M dealer

This means that you will no longer be "up against" one hundred and one ordinary competitive roofings with their profit-killing prices. It means, further, that you will have back of you a remarkably extensive advertising campaign and a fifty-year-old organization which is as much concerned in the **Service rendered by its roofings** as in selling the roofings themselves.

And it means that you will be the only dealer in your town selling J-M Asbestos Roofing and J-M Regal Roofing—the world's STANDARD roofings always sold at a price that gives the dealer a LIBERAL profit.

Write TO-DAY to the Johns-Manville Branch House nearest you and ask for Special Dealer Proposition.

The Canadian
H. W. Johns-Manville Company, Limited

Manufacturers of Asbestos Roofings; Pipe Coverings; Packings; Brake Lining; Boiler Preservative; Fire Extinguishers; Cold Water Paint; Etc.

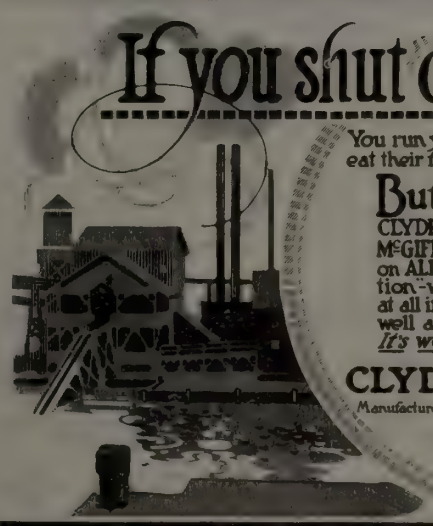
Every manufacturer of boxes; every manufacturer who has nails to drive in any article, or packages of any kind to manufacture, should write the **Morgan Machine Company** for latest developments in machinery for the Box Industry.

Morgan Machine Company

ROCHESTER, N. Y.

If you shut down your mill



You run your *teams* into the stables to eat their fool heads off *and the feed bill is a dead loss.*

But when you shut down your CLYDE REHAUL SKIDDERS and McGIFFERT LOADERS you shut down on ALL expenses except depreciation—which actually doesn't happen at all if you grease the machines up well and run them in under a roof *It's worth considering!*

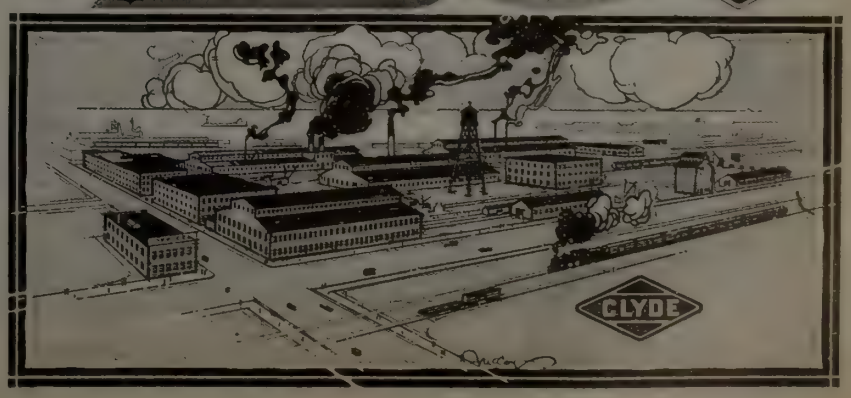
CLYDE IRON WORKS

Manufacturers of Machines for EVERY Logging Operation

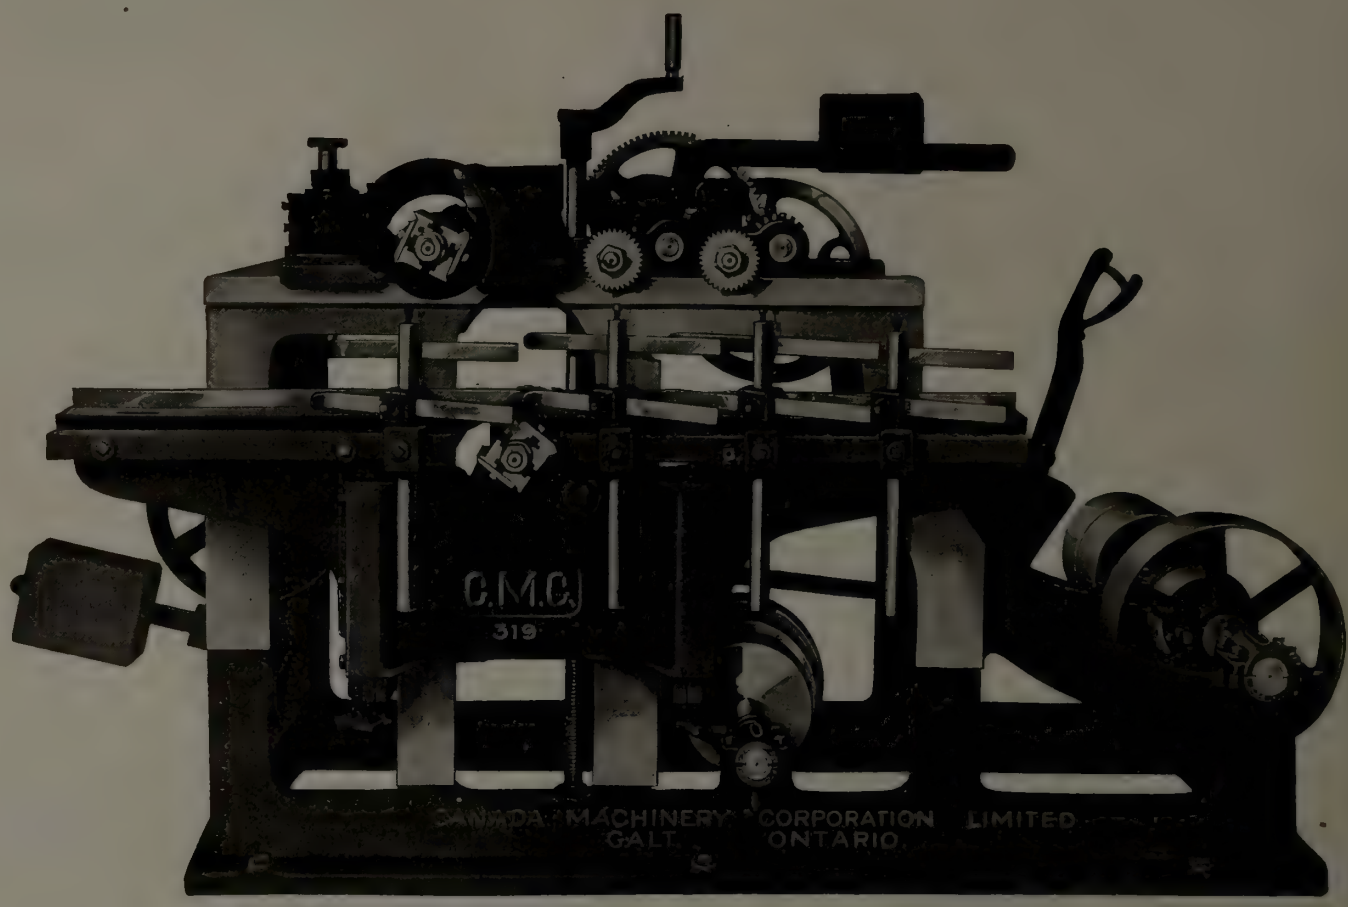
· DULUTH · U·S·A ·

"Great Part of the Northwest"

CLYDE



DOOR C.M.C. STICKER



No. 319 Double Door Sticker

Designed for sticking both edges of stiles and rails for doors and sash at one operation.

The feed rolls are made to swivel on the frame, a new "C.M.C." feature that meets with the approval of practical millmen. This arrangement enables the operator to adjust the lead of the rolls to suit the quality of the material, thus overcoming the difficulty often experienced with machines of this class.

Three rates of speed can be obtained, and the change made from one rate to another without stopping the machine, thus saving considerable time.

It will take stock from 2½ inches to 15 inches wide and up to 4 inches thick.

Descriptive Bulletins on Request.

F. M. DIXON

59 St. Peter St. - Montreal

I would rather stroke a bird's wings than woman's hair.
And the fragrance of the rose pressed against my lips
Is sweeter and more sincere than woman's kisses.
—El-Rami.

Those Who Have Read:
"The Soul of Lillith," written by Marie Corelli, no doubt have been struck by the cynical expressions of El-Rami as to women's constancy. Throughout the whole novel there is a tone of doubt of women in general, though in discussion with Feraz, his brother, he admits there are clever women and faithful women; but further states: "we men seldom choose them, we are fools and we pay for our folly."

There is No Doubt of the high quality of the goods we manufacture, **The High Quality is Constant.**

Take for instance

Harris Heavy Pressure

"the babbitt metal without a fault."

We have spent years in experimenting in our chemical laboratory to produce a babbitt metal which would fill the bill in 95 cases out of 100 where genuine babbitt is used and our sales, which are increasing most rapidly, give evidence that the quality is constant and the metal reliable.

Engineers know that H.H.P. is built for service.
H.H.P. is the best babbitt metal for all general machinery bearings.
H.H.P. will not crack or squeeze out.
H.H.P. runs cool at any speed.
H.H.P. is copper-coated and copper-hardened.

Our reputation and guarantee is back of every pound

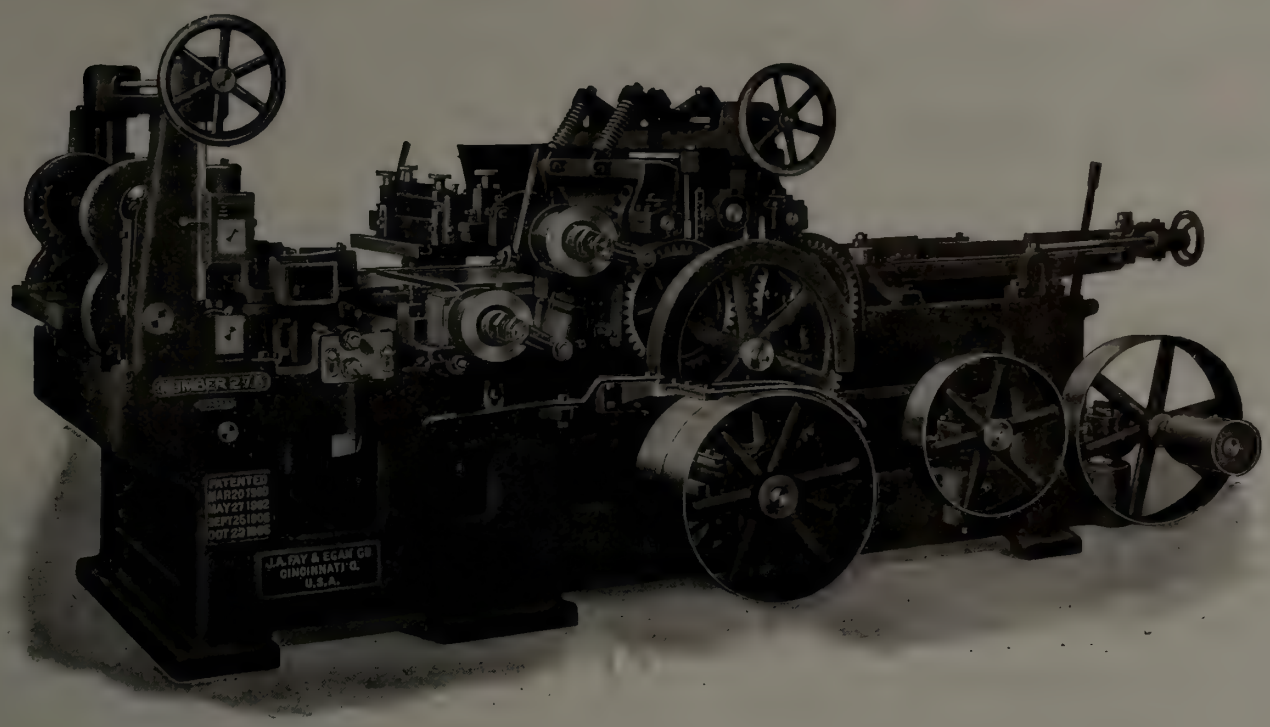
Our Claims for the FAY — EGAN "LIGHTNING" No. 275 Sustained



This medium weight and medium priced Planer and Matcher is daily Proving our claims as the greatest general purpose machine

The letter from Shaw Bros. Co., Macon, Ga., is typical of many others we have received from satisfied users of the 275.

J. A. FAY & EGAN CO.,
Cincinnati, Ohio.

Gentlemen: We purchased one of your No. 275 Matchers, size 16 x 8, a little over a year ago, and have been running it continually ever since, working all sorts of material on it from ½-in. ceiling to sizing 16 x 8 timbers. In fact, most of the time it has been doing the work of a timber sizer, and I must confess in all my 25 years of experience I have never seen its equal for the amount of work it will turn out. It has the most wonderful feed for its size, and I have run all makes of machines.

No one need be afraid of buying one of these machines for general all round work and I heartily recommend it to any wanting such a tool. We have not had a cent of repairs, and if we could not secure a duplicate of it, would not take twice the amount we paid for it.

We congratulate you on the development of such a machine, and wish for you the hearty success you deserve. We are also well pleased with the other machines we purchased from you.

Yours very truly,
Shaw Bros. Company, Macon, Ga.
By David Shaw, President.

The actual results obtained on the No. 275 are the strongest proofs of the value of this machine —note in the letter, herewith, the wide range of work—½" ceiling to sizing 16 x 8.

In other mills, the 275 has taken care of any work, either soft or hard wood, within the limits of its capacity and has given the same satisfaction.

Besides matching and surfacing, it will make flooring and moulding up to 1¼" deep.

The initial cost and operating expense of the 275 is well within the means of every planing mill and factory owner and, once installed, it will make big money and soon pay for itself.

There are many mill owners who owe their success to the adaptability of their 275 to all classes of work.

If you need or use a general purpose Planer or Matcher, let us tell you more about the 275—write for Bulletin C-8, sent free on request.

J. A. FAY & EGAN CO.

465-485 W. Front St. **Cincinnati, O., U. S. A.**

Are your horses of use to you?

This seems an absurd question—and the answer is always **"Of course they are"**—In which case provide your stables with:

Johnson's Reliable Veterinary Remedies

Johnson's Horse Liniment, No. 1 (Alcoholic)

1 gal. jugs (Imperial)	$4.50 gal.
1 lb. bottles	8.00 doz.
2 lb. bottles	15.00 doz.

Johnson's Horse Liniment, No. 2 (an oil liniment)

1 gal. jugs (Imperial)	3.00 gal.
1 lb. bottles	6.00 doz.
2 lb. bottles	11.00 doz.

Johnson's Horse Colic Remedy
A sure and speedy cure for all kinds of Colic

1 gal. jugs (Imperial) 40 doses	5.00 gal.
1 lb. bottles 4 doses	8.00 doz.
2 lb. bottles 8 doses	15.00 doz,

Johnson's Camp and Household Remedies, such as Cough Syrup, Healing Ointment, Headache Powders, Big 4 Liniment, Stomach Bitters, Cathartic Pills, etc., etc., have stood the test of twenty-five years and are in use all over Canada, from the Atlantic to the Pacific. Prices are lower than those of all other manufacturers. Letter orders receive prompt attention.

A. H. Johnson, Wholesale Druggist, **Collingwood, Ont.**

Are Your Horses in Good Condition?

Horses for all lumber work are subjected to the hardest hauling under the most severe conditions. They should therefore be as fit as all possible care and attention can make them.

In the Lumber Camp, Around the Mill, In the Yard

and wherever lumber has to be hauled the horses are always liable to a multitude of small injuries which if not attended to promptly may develop into lameness or disfigurement, thus reducing the working capacity of the horse and impairing its value from a sale standpoint.

You should always have handy and ready for use

Good Liniment

to reduce bruises, strains, soreness; allay pain and inflammation quickly, be an antiseptic dressing to a cut or burn, or to heal a wire cut, wound or laceration.

ABSORBINE

is an antiseptic healing preparation as well as a resolvent and a discutient. It will assist nature in bringing about a dissolution of the bunch, restore the circulation, gradually restoring the part to its normal condition.

It will produce permanent and complete results without blistering or removing the hair, and will leave no blemish. You can work the horse at the same time.

All enquiries on special cases answered without delay—full information and instruction on request. Absorbine $2.00 per bottle at dealers or express prepaid.

Manufactured only by

W. F. Young P. D. F.

424 Lymans Bldg. -:- MONTREAL, CANADA

Log-Handling Machinery

All our Loaders, Kickers and Canters are made with cylinders of the style shown in the cut.

Check Valves are provided in each end, and all piping between valve and cylinder is eliminated. These cylinders are extra heavy and very durable, and are absolutely guaranteed by us.

We carry in stock at all times a complete line of Log Deck Machinery—so we can always serve you promptly.

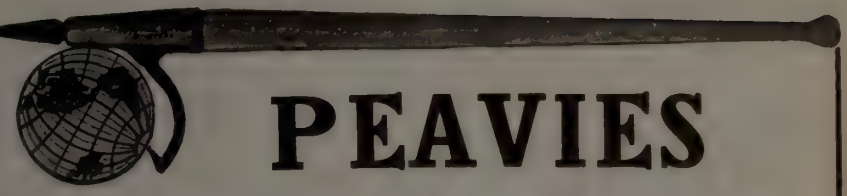
"LET US KNOW YOUR WANTS"

J. W. JACOBS, 29 Hermine Street, **Montreal**



PEAVIES

Cant Hooks, Boom Chains, Timber Dogs

It is time to think about your logging equipment for the ensuing season. Let us figure on your requirements for Peavies, Cant Hooks, Timber Dogs, Boom Chains, and Shackles, Mill Chains, Forged Steel, Log Stamping, Hammers, etc.

Our products are the result of over 50 years of careful study of the lumberman's requirements and we can offer the best equipment at the lowest price.

Write us for particulars and prices

ARGALL BROTHERS Three Rivers, Quebec

Not altogether what we say but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

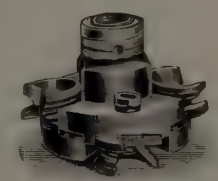
West & Peachey - Simcoe, Ont.

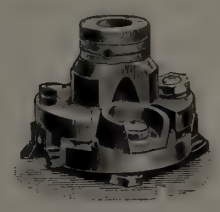
The

Shimer Cutter Heads

For Door and Sash Work

These Heads are designed especially to meet the requirements of Door and Sash makers—to save all the hand fitting. The shape of the mould desired is turned into the Circular Bits, guaranteeing a uniform pattern, and that there will be no trouble in framing door and sash parts when matched with Shimer Cutter Heads. Prices are as follows:





Door Head in solid section, complete with Bits to work 1 to 1¼ in. Doors	$18.03
Door Head with Expansion feature complete, extra	2.60
Bits for heavier doors $7.28 to $9.36 per set.	
Sash Head in solid section, complete for 1 to 1¼-in. Sash	17.91
Sash Head with Expansion feature complete, extra	2.60
Bits for heavier sash $7.00 to $7.66 per set.	
Cope Heads without Bits, each	6.45
Cope Bits moulded to pattern, $1.43 to $1.56 each.	

If you wish to reduce running expenses it will pay you to study the advantages offered by the Shimer Cutter Heads. There is nothing like them for strength—for Reliability—for Fast Cutting—for Quick Adjustment—for all-round work and lasting qualities.

These tools are turned out of Solid Steel Forgings—have the Shimer "make-ready" which saves you all the fitting and trying—keep your work up to the standard

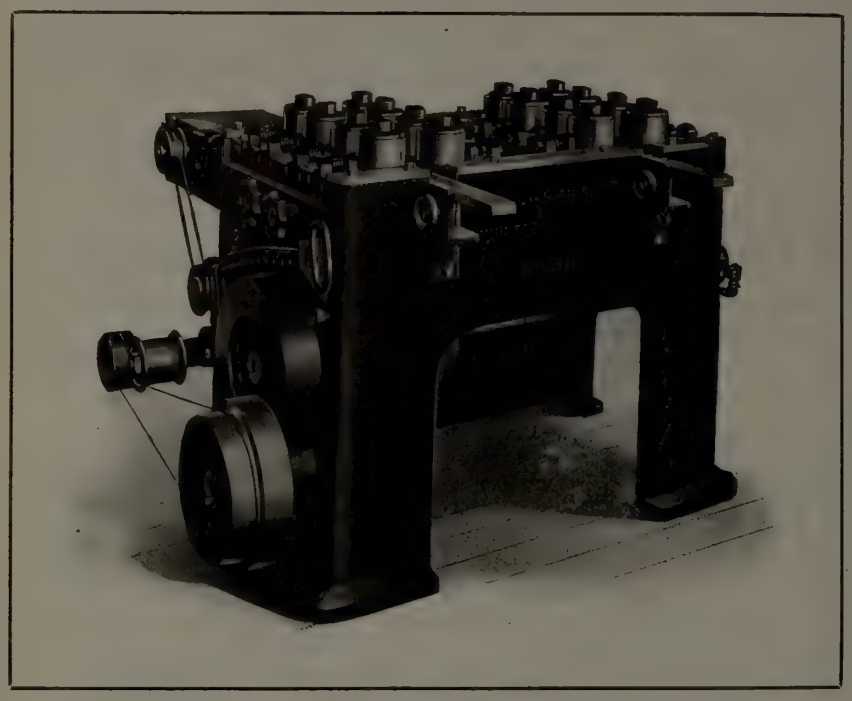
River Driving Costs

will be decidedly lower this year if you use Adams Gasoline Towing Machinery in 25 ft. punts for carrying supplies and handling booms and logs. One man does the work of ten. We have both machinery and complete punts for prompt shipment. It will pay you to write us now. Gasoline engines all sizes, 2 to 25 h.p.

Adams Launch & Engine Co.

Penetang, Ont.

Improved Box Board Matcher



16 driven feed rolls, 4⅛ in. in diameter, each one of which can be adjusted independent of all others.

4½ in. between centres of first and second pair; 5½ in. between centres of second and third pair (the cutters work between this pair) and 4¼ in. between centres of third and fourth pair.

This Matcher is compactly and rigidly constructed with every part readily accessible and the operators are close together when working.

Catalogue gladly furnished which illustrates and describes many other machines built expressly for Box Factories.

Mereen-Johnson Machine Company, MINNEAPOLIS, MINN. U. S. A.

LOGGING LOCOMOTIVES

A logging locomotive to justify its cost must start the required load and keep it going.

The right amount of the right material must be provided in the right place.

Each and every part must be sure to fit not only the locomotive for which it was made, but every other locomotive of the same size and design. Every part must be made to jigs and templets, compelling accuracy, so the machine will not be idle at a critical time for repairs or renewals. Spare parts must be instantly available, made so well as to go into place without a machine shop.

Visit our Works and see how all this is accomplished.

MONTREAL LOCOMOTIVE WORKS, LTD.

Dominion Express Building, MONTREAL, CANADA

CLIMAX Improved Geared LOCOMOTIVES FOR WOOD AND IRON RAILS

A 62-ton Climax Locomotive Designed Especially for Heavy Logging Work.

It Will Pay You

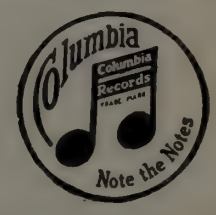
to give your men entertainment after the day's hard work. It will keep them cheerful and contented.

The Columbia Grafonola gives you all the music of all the World, from operatic arias by the foremost singers to the old songs of every country sung by native singers. The grand bands and orchestras of Europe and America are ready to transform the lonely quiet of the forest into a place of gaiety, life and pleasure. Write for descriptive catalogue of Columbia Graphophones and Grafonolas, selling at $17.50, $32.50, $65.00 and on up to $650.00. One for every taste and every purse.

Columbia Graphophone Co.

365-367 Sorauren Avenue
Toronto, Ont.

Creators of the talking machine industry. Pioneers and leaders in the talking machine art. Owners of the fundamental patents. Largest manufacturers of talking machines in the world. Manufacturers of the Dictaphone.



This engine is 13½ ins. x 18 ins. and weighs 35 tons.

The knowledge and experience of fifty years in locomotive designing and construction is what you get in our Logging locomotives. They are specially constructed for logging operations and will stand up to the severe service in which they are expected to run. Oil or coal burning.

They are as carefully designed and built as our 200 ton locomotives. Repair parts may always be obtained on the shortest notice.

May we send you specifications

Canadian Locomotive Company, Limited, Kingston, Ont.

Taylor and Arnold Ltd., Sales Agent, Montreal and Winnipeg

Dominion Timber Regulations

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth :—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long, 1½ cents each.

Railway ties, nine feet long, 1¾ cents each.

Shingle bolts, 25 cents per cord.

And 5 per cent. on the sale of all other products of the berth.

Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

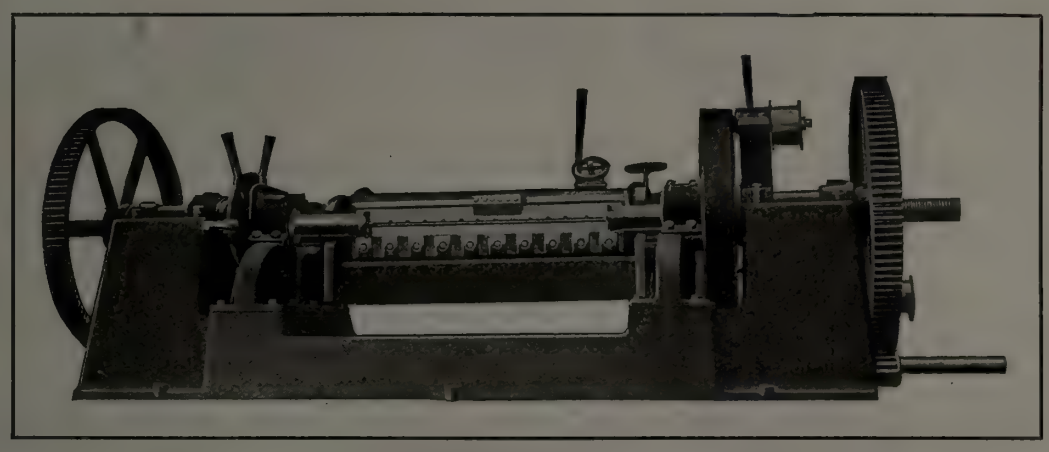
W. W. Cory,

Department of the Interior, Ottawa,
December 20th, 1912.

Deputy Minister.

"MERIT" LINE OF VENEER MACHINES

Standard of the World



The "Merit" Veneer Lathe

built on a **one-piece** frame, open and unobstructed on the top, has a third bearing for each spindle supplied with readily replaced bushing or short sleeve, automatic pitch for knife bar and unique pressure bar. Do you know what this all means and amounts to?

Perhaps not, but there are several hundred manufacturers who do, and we will give you their names if you like. We will also gladly explain it all to you if you will let us know that you are anxious to look into the matter.

The Engineer's Smile

" 'Happy Days' is what the boys around the mill call me ever since we started the new engine running. If I feel good can you blame me? Instead of having to listen to the daily holler for " More Power!" every time they get a big log on the carriage, all I have to do is to keep the oil cups full and she runs along like a watch from whistle to whistle. With *everybody* satisfied—I should worry!"

Waterous Engines

Make your choice of an Engine for the Sawmill the **WATEROUS SIDE CRANK SAW MILL ENGINE.** It is built for the work. With strength and simplicity it combines the ability to be on the job all the time.

There is nothing to get out of order. Parts are few, are sturdily built of the best of materials and are easily gotten at for oiling and overhauling.

All that is necessary to keep the Engine in tip-top shape is an occasional wipe-down and a dose of oil on the wearing surfaces.

We build both Single and Twin Engines of this type in sizes up to 600 H.P. If you want an engine that will give you absolutely reliable service, continuously, under all sorts of conditions, ask us for catalogue and prices.

We furnish Power Plants complete in all sizes and have made a specialty of sawmill installations. Any information we can give you is yours on request.

McKinnon Chain Co., St. Catharines, Ont.

Reduce Your Fire Risk by Using Fairbanks-Morse Internal Starter Motors.

No complicated starting apparatus is required as they are controlled by simply closing or opening a line switch. The varying resistance necessary for starting is secured by varying the pressure on a number of carbon discs which form one of the three resistance units. There being no moving contacts there is no chance of sparking and fire risk is practically eliminated as far as your motor is concerned.

The gradually increasing pressure exerted by centrifugal force on the carbon discs gives a very smoothly starting motor.

A simple screw adjustment of the resistance units allows the starting torque to be changed from normal to 200 per cent. full-load running torque if required with a starting current of about one-half that required by the ordinary squirrel cage motor.

Send for Bulletin No. 210.

Humboldt Redwood

Humboldt Redwood is cut from the forest of North California. Its qualities suit it to almost every purpose for which lumber may be used. It will not check, is fire repelling, beautifully figured and always clear, free from pitch, easily worked, will not shrink, takes finish equal to mahogany and is in every other way a most desirable wood for all purposes.

Its Uses

Among the uses of Humboldt Redwood we mention: Sash, doors, and trim, boats, furniture, toys, pattern lumber, outside building trim, car siding, cooperage, hot bed stock, refrigerators. tanks and silos, buildings, exposed beams, clap boards, lattice, screen doors and windows, theatrical scenery, incubator and beehive stock, turned work and a variety of other uses.

To the Owner of Timber Lands

Far sighted owners of timber lands should take advantage of the times incident to the European wars, and prepare themselves for the day when the demand for timber is suddenly thrust upon them. This is certain to come at no distant day. Therefore cultivate a closer acquaintance with your holdings, and the best method of marketing them. Let us prepare the way for you. Remember, we not only report on the property, but assist in marketing the bond issue when necessary. Send for our booklet.

Machinery and Timber For Sale

The undersigned offer for sale, in large or small blocks all their remaining timber lands, mills and town property situated in the Town of Parry Sound, Ont.; and other Lumber Equipment, including boom chains, plows, sleighs, etc.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

We have the following Sawmill Machinery for sale:

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 8-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.

1 Double cylinder steam nigger, right hand.

1 Log Loader for right hand mill.

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.

1 left-hand steam nigger.

1 Log-loader.

1 Endless chain jack ladder with two kickers complete for right and left hand mills.

2 Roger Gang Edgers for 8-in. cants and lumber.

1 Waterous double edger, 6 saws.

2 2-saw trimmers.

1 20-ft. Slash table.

1 16-ft. Revolving Slash Table.

1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.

1 70-ft. Transfer Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.

1 Lath Mill with bolter.

2 Lath Trimming Saws.

FILING ROOM

1 Automatic Filing Machine for 12-in. D.C. band saws.

1 Automatic Grinding Machine for 8-in. S.C. band saws.

1 Automatic Machine for circular saws.

1 Hand Machine for cut-off saws.

1 Lap Grinder.

1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

POWER PLANT

2 Double Duplex, high pressure Water Pumps.

5 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.

2 125 h.p. Water Wheels.

1 Upright Engine for sawdust conveyor.

1 10 h.p. Engine.

1 Mitts & Merrell Hog.

1 Wood Machine for 22-in. wood.

1 Wood Machine for 16-in. wood.

1 Edger for ripping dry lumber, installed.

1 Edger for ripping dry lumber, not installed.

1 30 h.p. Generator, 250 volt.

1 30 light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and turn-tables, particulars of which may be had on application.

Also, contents of machine shop, containing Planer, Drill, Lathe and Machinery, with tools necessary for repair work.

All of the above open for inspection at Parry Sound.

Master Equipment

Belting, Hose and Packing that Earn Their Way

In the sawmill Belting is put to unusual tests. As hard knotty logs hit the saw a terrific strain is thrown on the belt. Slippage means lost power. Lost power means lost efficiency. And when a belt breaks it means more than the cost of a new belt. It means loss of output and salaries that have to be paid regardless.

Realizing this, men are buying more and more Goodyear Belts for the downright service they give. No Goodyear Belt is ever made to meet a price or a standard. Each belt is made to **set** an unusual service standard.

There are Goodyear Belts for every exact requirement in the sawmill. These range from Belts for the main drive to Belts for small pulley machines.

"Extra Power"

This is the Master Belt for the main drive—edger and planer. It is wonderfully strong. In fact this Belt shows the highest friction pull of any belt we have ever tested—fully 10 per cent. better than the next best high quality belt.

"Extra Power" is made of the heaviest and strongest duck of any Belt we make—all laboratory inspected, tested and passed. The stretch is taken out in the making. The strong serviceable plies are unified by the highest grade rubber friction. There is maximum precaution against ply separation. All Goodyear Belts have the famous Sealed **Seam** and are cured under a heavy, carefully regulated hydraulic pressure, determined by the service. "Extra Power" is made in various widths—made "endless" when desired.

"Imperial"

This is a Goodyear Belt designed especially for high grade speed and small pulley conditions. It is a splendid Belt for trimmer work. Seamless and Goodyear made for its particular purpose.

GOODYEAR
TORONTO
Belting, Hose, Packing

Hose and Packing

Goodyear Steam Hose and Packing are made for exact specific services. There is a particular Goodyear product for every particular need. Exact Goodyear methods insure the best for your money. Goodyear Service means economy.

Ask These Men Buy equipment on a service basis. Back of every Goodyear product is fifteen years successful experience. At the Goodyear Bowmanville, Ontario, Factory are experts who study actual working conditions long before any Goodyear equipment is made. Consult these men when you are about to buy Belting, Hose or Packing. Their advice, freely given, will save you money and insure the service you are seeking. Costs nothing to ask questions.

BATTS' STAVED COLUMNS

Our Columns are made with a special Lock Joint which prevents the staves from opening, and also increases the glueing surface. We use the best water-proof glue obtainable. In connecting the cap and base to the shaft of our columns, both ends are bedded in Mastic Putty. By this method, water or moisture is prevented from getting to the inside.

The Highest Grade Goods at Reasonable Prices, with Prompt Delivery

To Buyers of Camp Supplies

You will be requiring groceries for your next season's operations very soon now, and we would like very much to have an opportunity to show you what we can do—we are giving such splendid satisfaction to many buyers that it prompts us to think that we can do the same for you—for instance ask us to send you a sample of our special Camp blend. This tea is giving universal satisfaction, for it is made up to suit the users of it—the hardy river and bush men who want something that has a taste to it—not at all the same fine mellow kind that is suitable for afternoon and pink teas. Try it. It will go farther and please the men better.

Excellent value in Valencias Prunes and Evaporated Peaches—this latter is the only line that will truly take the place of Evaporated Apples of which the market is bare, and so much cheaper—just fancy a fine quality yellow meaty peach at 7½—get in on these.

Call and see us and get acquainted

RUBBER GOODS FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "Monarch," "Red Strip" and "Lion" are our leading brands for power transmission. (Write for Booklet B-1.)

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable. (Booklet P-1.)

Hose for Steam, Water, etc., etc., in various grades, made especially to give satisfactory and economical service under different conditions. (Booklet H-1.)

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion. (Booklet H-1.)

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $2.00 per year in advance; other foreign countries embraced in the General Postal Union, $3.00.
Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster General for Canada, for transmission as second class matter.

Entered as second class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 34 Toronto, September 15, 1914 No. 18

Should Banks Restrict Production?

Although the situation in connection with the lumber trade to-day is very much the same as it was two weeks ago, the atmosphere has to some extent cleared, and those engaged both in the manufacturing and selling of lumber are commencing to look further into the future than they were at that time. The result is that in the minds of most lumbermen there is to-day a very clear conviction that next year will witness a good demand for lumber, possibly even an abnormal demand, and that at that time there is almost certain to be a shortage of stocks. These two factors together are such as to indicate that those who are in the possession of stocks will be able to obtain a profitable price without any suggestion of unnatural advance. The situation seems to be one which will inevitably bring about high prices, short stocks and heavy demand. In the face of this it is most interesting and to some extent puzzling to note the course which is being adopted by some of the Canadian banks in regard to the discouragement of local operations during the approaching winter. So far as one can gather, the banks have decided to urge their friends in the lumber manufacturing business to reduce their operations greatly. Whether this is entirely a wise move, is open to question, but the fact remains that prominent and successful operators, with extensive bank accounts and high-class credit, have been advised that the banks do not want them to cut any green timber this winter, and that in case they should contemplate doing so they should make their necessary banking arrangements before making any move in the direction of putting in their camps.

Such a step as this is unquestionably a wise one in connection with any firm whose business is done on an extensive credit basis, but it does seem as though the factors now combining toward the goal of higher prices next spring should warrant the banks in limiting their restrictions to some extent to those companies which are likely to over-step the boundaries of caution. The matter, of course, must depend upon the available money supply in the hands of the banks, but current opinion, based upon recent developments, indicates that the banks are in a position to encouarge logging operations to a greater extent than is indicated by the letter referred to above. However, the step has already been taken and it looks as though it is likely to be carried out in the way in which it has been commenced.

That this situation is extremely serious from the point of view of many sound lumber manufacturing companies is indicated by many interviews which the Canada Lumberman has recently had, and also by frequent letters which we have received. Among these letters is one from a long established and successful company in Eastern Canada, in the course of which they say:—

"As you state, it is a little early yet to say what effect the war will have upon the lumber business. One effect however, is apparent in the meantime, and that is the attitude of the banks. The shipments of lumber to Great Britain necessitate the making of sterling bills, and these the banks are refusing to take in any large amounts. As lumber cargoes run in value from £6,000 to £12,000, you can readily see the position that we are placed in at present.

"Again we are given to understand that the banks will refuse to make any advance for new work and that our new lumber operations will come under that category. If this is the case it will mean that we will be unable to go into the woods as very few lumbermen that we know of are in a position to go into the woods for logs, and not borrow from the banks. Now is the time when parties should be going into the bush so as to get economical work done and while personally we have not approached the bank as yet, it has been intimated to us that it is useless to do so, and we would rather wait in the hope that things may be more favorable in the future, than approach an apparent refusal.

"Personally, the writer is of the opinion that the lumber market, so far as Canada is concerned, will be materially improved, and that the demand will be abnormal, the Baltic and Riga woods being shut out. At the present moment 25s. to 30s. per St. Petersburg standard more can be secured for lumber on the other side than was available in the spring. Against this however we have to pay a higher rate of freight, of about 10s., and the war tax.

"As I have stated, my impression is that this is Canada's opportunity in all manufacturing lines and we should take advantage to the full, as a country that is called upon as we are to help defray the war expenses should be a producer to its full capacity. Its people would then be in a better position to pay the extra assessment that will be necessary.

"If the manufacturers in Canada are wise they will use every effort to get their goods introduced where German and Austrian goods formerly held the market and will endeavor to obtain permanent holds upon these markets."

The Square Dealer's Innings

These are the days when many an old time theory is put to the test of practice. One of the favorite theories of many writers in trade journals, and also of many practical lumber salesmen, is that the best way to hold trade is to deal squarely with customers. There are, practically speaking, two classes of salesmen; the square dealer and the man of sharp practices. Both of them make a good deal of money when times are good and business is plentiful, but the sharp practice fellow comes to grief every now and then, in spite of his well known ability to persuade the new prospect to become a customer. One of the favorite methods of making money, as practised by salesmen who are not as scrupulously fair about their business as they should be, is to deliver stock which is off color in some way, trusting that no complaint will be made, or that in case of complaint they will be able to persuade the customer that he is wrong, or to make an adjustment which still leaves them a good profit. This plan, in a wide variety of forms is continually being worked out, and the wonder is that it is successful in such a number of cases, in spite of the increasing tendency towards stricter business methods on the part of the trade as a whole. In times of business activity, the man who treats his customer in this manner does not think so much of the business he may get from this particular customer in the future, as of the good profit

he will make on the single order if it goes through without any complaint. He knows from experience that he will be able to find other customers and that the average volume of trade can be maintained at a level large enough to make it worth his while to continue until some crisis developes. He trusts to his own initiative and skill to come out of such a crisis safely, or to avoid the consequences if they become serious.

To-day a crisis of this nature is in existence, and it is of much greater magnitude than any similar crisis which has ever occurred in the past. The salesman who has indulged in sharp practices in the past finds himself to-day "up against it" in a manner which he never expected. He cannot sell stock; he cannot even get stock to sell. On the other hand, the man who is strictly square in his dealings is getting his reward to-day. Recently the Canada Lumberman was talking with a salesman at a time when trade had declined to almost nothing, according to market reports which had been received. The war had entirely closed off the demand from most of the usual sources of trade. Yet this salesman, as mentioned in a previous issue, intended to go out upon the road in spite of the fact that many others were not doing so, as they felt that they could not make expenses. He, however, believed that he could make expenses and a little profit besides. During a week when everybody was saying that he had never in his life seen so little trade, this salesman succeeded in securing a few good orders which made his firm's business for that week quite equal to the average. Early in the next week, moreover, he secured additional orders by mail, from one of the previous week's customers. He is continuing this policy right along, and believes that he is reaping now the harvest for which he has been sowing for many years, by acting fairly with all his customers. At the present time, although trade has been greatly upset, there is no doubt that a large amount of lumber of many kinds is going into consumption; although, taken in the aggregate, it is a small amount compared with the volume of normal trade. But someone has to produce and someone has to sell this stock, and we venture to say that the man who has been square with his customers in the past is the one who is securing the trade to-day. Moreover, he is picking up an occasional new customer, who formerly bought from other members of the trade.

The case of the individual customer and the salesman to-day affords an interesting comparison with the case of Germany and the Allied Forces. Germany is finding, and will find to much greater extent after the war, that the inhuman treatment she is now meting out to the nations with whom she is struggling, is being set down against her by the commercial world. Her trade is already ruined. Her reputation has gone, and no matter how excellent may be her products, all of her work in the past has been set at naught by the excesses of the past month and a half. Her merchants in the future will have a terrible handicap to face in the markets of the world. Merchants of other countries, which are recognized by the large consuming nations of the world as playing the game of war fairly, and the merchants of those other countries which are not engaged in the war, but which have a high reputation in the markets of the world, are capturing these markets and taking "the place in the sun" of the business world which was formerly occupied by Germany. After the war is over, they will be able to hold their new positions for many a long year, and German merchants will look with vain regret upon the ruin of their country's fair name and of their own profitable trade.

There are no intricate details about this situation. It is a simple one, but one which is fraught with a living and everlasting truth. Fair dealing among individuals, as among nations, is certain to bring great and lasting rewards to those who practise it.

Can Lumber Be Trade Marked and Standardized?

So much that is indefinite and that leads to nothing has been written and said during the last few years about advertising lumber to the consumer and about adopting definite grades in connection with different classes of lumber, and so much that has been written has brought about no practical results, that any new discussion of the subject is likely to meet with indifference, because one expects it to be simply of a theoretical nature, lacking in the practical features which would permit it to be put into useful practise. Nevertheless, there is to-day no more important subject for lumbermen to discuss, because, in spite of the objections that are so often made, nearly every one in the lumber business realizes that somewhere in the dark unexplored regions of this same theoretical discussion there exists a nucleus of practical common sense which is susceptible of being developed into a workable scheme, when the time is ripe and the proper men take hold of it. That nucleus has been located and developed in some districts of the United States in a way which indicates that, before many years have passed, those who are still working in the dark will see light and come out into it.

There is no need to argue about the existence of the troubles of the trade, which movements of this nature are designed to overcome. They are known to everyone. They may nearly all be summed up in the statement that the manufacturer does not know the consumer or his wants, and sometimes has little knowledge of the uses to which his products can best be put. He has been content to follow the old trails blazed in the days when the market for lumber had not been invaded by other materials, and when it was a comparatively easy matter to sell all the lumber any mill could turn out; at the same time, making a good profit upon it. To-day, things are very different, and there are many mills throughout the country which are not able to operate at a profit, and are either closed down or are turning out lumber at a loss. The problem is to reach the consumer in some such way as to awaken once more his old-time interest in lumber and induce him to make more use of it, at the same time giving him a better understanding of its uses than he has today. There is no suggestion in this that the manufacturers need to overlook the retailers, but rather that manufacturers, wherever possible, should co-operate in a campaign of spending money plentifully, so as to put into the hands of consumers throughout the country such information as will make them appreciate to the full, the proper value and use of the different classes of lumber which are available in their districts.

After reading many articles and addresses upon this subject which have led nowhere, and which have been published or delivered during the last few years, it is encouraging to come across one of a different stripe, for which the credit goes to Mr. A. W. Cooper, Secretary of the Western Pine Manufacturers' Association, which recently held its semi-annual meeting. We believe that Mr. Cooper's conclusions upon this question will appeal so strongly to our readers, that we are reproducing them elsewhere in this issue, and we wish to apply them to conditions in some parts of Canada, so as to press the matter more closely home to our readers. Mr. Cooper claims that most lumber manufacturers are many years behind the times in their merchandising methods. While other industries have been using advertising in its many forms, and have been adopting trade marks with which the public are made familiar throughout the length and breadth of the land, lumber manufacturers have been content to turn out stock and to feel that their interest in the use of lumber has come to an end as soon as they shove it into a railway car. If it were not for the frequent kicks coming from consumers and being sent on to manufacturers by retailers, manufacturers might never think otherwise, but to-day, the man who is disappointed in regard to lumber which he has bought, will at once make inquiries as to where he will get some other kind of stock, or where he can even use some substitutes. This tendency is becoming so general, and is so natural a result, that the opportunity of the manufacturer of lumber seems to be clear. The consumer who has been disappointed is practically virgin ground for sowing information about the varieties and uses of lumber. Moreover the consumer who has not been disappointed, and the prospective consumer who has not yet bought any quantity of lumber, but it likely to do so, are all looking for similar information. There is a natural tendency in mankind to use lumber wherever it is suitable, but unfortunately this

tendency has been banked upon too long and its credit has been strained to such an extent that, to-day it must be re-established by vigorous artificial means.

The suggestion made by Mr. Cooper is that the manufacturers of a particular class of lumber should, through their associations, decide to adopt a trade mark to be stamped upon the product of their mills; that the use of this trade mark should be regulated by an employee of the association stationed at each mill, and that this should be vigorously backed up by the adoption and use of standard methods of grading, manufacturing and seasoning. A plan of this nature could be used in Eastern Canada in a manner which would benefit the manufacturers of the several kinds of lumber. Take for instance white pine. No other wood in the world has so good a name and such claims to popularity. By adopting a plan of this sort, consumers would soon be educated to a knowledge of the wood and its uses, and would be calling for it—and what is more, knowing it when they got it—to such an extent as to make a great improvement in the general demand.

White pine is not the only wood for which such a plan will work out satisfactorily. Every other wood which is manufactured in quantities could be handled in the same way. The success which has met the advertising campaigns adopted by cypress and gum manufacturers and by a few others, shows clearly that the consumer is ready to spend money more extensively on any class of wood, if some one will only teach him when and how to use it. A wood which has been standardized as to its grades and which has been trade marked so as to make its presence known wherever it goes, lends itself naturally to a campaign for advertising which will bring results from the first appearance of advertising copy. We recommend our readers to turn to the article by Mr. Cooper and give it more thought than they have given to many other articles upon a similar subject. The question is one which they must solve sooner or later, unless they are content to go on losing trade and profits as they have in the past.

May Put Export Duty on Pulpwood and Pulp

An example of the diversity of opinions and rumours developing out of the effect of the war situation upon trade, is afforded by the case of the pulpwood industry in the various provinces of Canada. A few years ago, when the question of prohibiting the export of pulpwood was under consideration by several of the eastern provinces, and was also brought before the Dominion Government, the opinion was unanimously expressed that the prohibition of the export of pulpwood from Crown lands was entirely a matter for provincial regulation. As the situation worked out at that time, this view prevailed and Ontario, Quebec and New Brunswick passed laws prohibiting the export.

A question of a rather similar nature was brought up recently in the Canadian House of Commons in such a manner as to lead to a definite belief that the government will consider the imposition of a duty on pulpwood as a possible future means of raising additional revenue made necessary by the outbreak of war. Honorable W. T. White, Minister of Finance, when making his announcement respecting the increase of customs and excise duties on coffee, sugar, spirits and tobacco, was questioned by Mr. E. M. Macdonald, of Pictou, N.S., who asked whether the imposition of a duty on fine matches had been considered, and said further: "I am sure that the Minister must have considered the wisdom of imposing an export duty upon pulpwood and pulp. The cost of paper abroad might well serve the purpose of contributing to our revenue. Our great natural resources in that respect will be drawn on, particularly at this time, by reason of the extra demand for paper arising in other countries."

The Minister of Finance in reply said, "So far as an export duty on pulpwood is concerned, that matter was not under my consideration but I should be glad to take it into consideration in connection with any further action we may have to take for the raising of revenue of a special character connected with the war." This is a very definite statement indicating that the Minister of Finance believes that the Government will be able to impose an export duty of this nature. It is probable that in making this statement the Minister was referring to pulpwood taken from private lands which could be exported.

The situation in regard to pulp grown upon Crown lands subject to an embargo against export is apparently very different. According to a recent news despatch sent out from Toronto, the Ontario government will be asked shortly to suspend or repeal the embargo on pulpwood cut from Crown lands, and destined for export to the United States. The move, it is said, would not only be a benefit to the Canadian pulp and logging industry, but would meet the great demand of the moment for governmental provision against unemployment. On the latter score it is likely that the petitioners would have a large mass of public opinion behind them. The Crown lands embargo now exists in Ontario, Quebec and New Brunswick and it is known that the Premiers of these provinces, particularly of Ontario and Quebec are decidedly averse, on more grounds than one, to throwing open the doors to wholesale exports, no matter what temporary reason may arise. However, a petition has not been formally presented and its request may be modified before the government is asked to act. Just now, in Canada, the air is full of suggestions for overcoming unemployment, most of which will evaporate. If the provinces were to remove for a time, the embargo on the export of pulpwood cut from Crown lands, it is probable that any exports, thus brought about, would be liable to such export duties as the Dominion government might impose for war revenue purposes.

The steamer Rober Dollar, which sailed over a month ago from a British Columbia port, carrying 5,000,000 feet of timber, most of which is consigned to Toronto, to be used in connection with the harbor works, is reported to be in harbor at Rio de Janeiro, Brazil, awaiting war developments that will permit her to continue her journey. Originally the Robert Dollar was to have gone by the Panama Canal route, but assurance could not be given as to the time when the canal would be open for traffic, and the vessel was directed around the Horn. As events have turned out, she would have been almost as far along if she had waited in the Bay of Panama, and locked through with the first ships on August 15th. At the same time the company would have saved several thousand dollars in fuel and other running expenses.

An important point has recently come up for discussion among lumber shippers on the coast of British Columbia in connection with the Panama Canal charges. The Canal regulations involve payment for deck loads according to the space occupied on the open deck. This makes lumber shippers pay about 20 per cent. more than shippers of other commodities. For example, if the Robert Dollar had passed through the Canal it would have paid $5,679.60 on its net measurement of 4,483 tons at $1.20 per ton, and also $1,653.60 additional for the deck load of 1,378,000 feet. The ship loaded with heavy general cargo would be down to her plimsoll marks—carrying about 8,800 tons. Loaded with lumber, she would not be quite down to her plimsoll marks. No charge is levied for deck loads on vessels passing through the Suez Canal.

Owing to the closing of the Baltic, there is a great scarcity of pit props in Great Britain, and Mr. Hamilton Wickes, His Majesty's Trade Commissioner in Canada and Newfoundland, with offices in Montreal, has been making inquiries in Canada as to whether Canada can supply these props. He states that there is a demand for 1¾ million props per week; they must be 5 ft. to 6 ft. long and 3 in. to 6 in. diameter, and of sound timber. Mr. Wickes is desirous of getting quotations and quantities, and of knowing whether the supplies can be made continuously. Prices must be f.o.b. Canadian ports.

Canada's exports of forest products during the twelve months ending June, 1914, and during the corresponding periods in the three previous years were as follows:—1914, $43,241,666; 1913, $43,518,571; 1912, $41,743,304; 1911, $43,514,655.

The Reader's Viewpoint on Trade Topics

War's Influence Upon Trade Conditions—Improvement Looked For In Near Future—A Camp Wages Question.

Articles or letters to the Editor of the Canada Lumberman, dealing with trade conditions, or discussing questions of interest to manufacturers, wholesalers, or retailers of lumber are always welcomed by our readers. Here are a few that have been received lately:—

Lumber Trade Situation Certain To Improve

A prominent lumber manufacturer and wholesale dealer, with head office in Toronto, commenting recently upon the general trade situation which has developed since the opening of the war, said that he believed the people of Canada as a whole had formed mistaken views of the effect upon trade to be expected as a result of the war. There was no reason at all for looking upon the situation in a pessimistic way. "Conditions in Canada," he said, "are likely to cause a great increase in business activity. In fact I think that in the United States a similar activity has already commenced. We had more American inquiries during the first three weeks of the war period than we had had in two months previous. Quite a number of these inquiries we have managed to convert, and we are converting others right along. After taking the situation from a business standpoint and analyzing it what reason can you find for lumbermen to become depressed? There is no reason whatever. It is quite true that the banks have issued a letter to the lumber trade, telling them to be very careful about their logging operations and saying that they will not be able to make any credit advances except upon special arrangements for this year's cut. This means that only the firms that are best situated will have any cut at all, and that the total output will be greatly reduced. It is certain therefore, that from now on, stocks of lumber will be reduced and prices will hold steady, with a strong tendency towards advance. This country has got to go ahead just the same as ever as consumers, and, in addition to that, European countries are practically out of the market as producers. This means that Canada and the United States are called upon to supply, not only what they formerly imported, but the deficiency in the manufacturing output of European countries. It means a stimulation of the demand for labor both in Canada and the United States, and when this result has been brought about, there is no possible way of avoiding a similar stimulus to all of our other markets.

"If you sum the whole situation up, you cannot help but conclude that the cut that will be taken out this winter will be very small, and the chief question of importance at present is, how long the war is likely to last. If it drags on for a long period, it means that the market will be cleaned up to meet the enormous demand. Even if the war closes soon and the operations in the woods have been small, as they are sure to be, there must then be an unprecedented shortage of lumber."

Should Camp Wages Cover Rainy Days?

Editor Canada Lumberman: Huntsville, Ont., Sept. 4.

There is one practice among Canadian lumbermen in this northern district which I think is an error, causing friction between the camp foreman and the men unnecessarily.

It has been the custom for many years past to hire camp men by the month. They have been allowed pay for wet days as well as dry. In Michigan and Wisconsin it has been the custom to allow a man his board during wet days and the man would lose the time. I think this is a much fairer and better method. When there is a slight rain, if a man wishes to lose his time there is not such a heavy loss on the company. The man may be subject to rheumatism or some disease such as eczema that compels him to seek shelter from all wet weather. If a man were to lose his time during wet weather the proposition would be up to him whether he went out to work or not. The matter of wages would adjust itself.

I would like to have the views of other lumbermen on this particular subject.—Muskoka Wood Manufacturing Company, Limited.

Canadian Production Should Be Stimulated

Editor Canada Lumberman: Gibson, N.B., August 26.

The shock of the outbreak of hostilities has produced a paralysis of business from which it has not yet recovered. The Baltic supply of wood goods has been cut off entirely, and will probably not have to be considered while the war lasts. Consequently, England, France, South America and South Africa must turn to Canada and the United States for their supply of lumber. The demand for lumber in England and France will probably be greatly reduced, because of the war, and its restrictions in general merchandise production, but this curtailment is not likely to equal the supply heretofore furnished from the Baltic. Therefore, conditions in the Canadian trade should improve in these markets.

A material reduction in the volume of general manufactured goods will undoubtedly take place in England and France, and exportations from these countries will be greatly disturbed, while those from Germany will cease. This should stimulate the production in Canada and the United States, as importations will be reduced and exports increased (except to Europe) and South America will look to Canada for her lumber supply.

The attitude the Canadian banks assume will be of great importance in deciding the volume and business conditions of the lumber trade for 1915. While I do not advocate an expansion of credtt, I think too conservative a policy would be detrimental to the best interests of all concerned. The war has changed the normal conditions of shipping to such an extent that former calculations of the effect of the Panama canal on the world markets will have to be revised and data are lacking to guide one in forming any estimate. The problem has yet to be solved.—York and Sunbury Milling Company, Limited.

Make Arrangements for Business Improvement

Editor Canada Lumberman: Burks Falls, Ont., August 27.

The war situation has already greatly reduced our business and we are afraid it may be still further reduced, but we do not consider that it should affect domestic business if it were not for the panic which necessarily takes hold of people when such events as are now occurring occupy so much of men's thought and affect other countries so disastrously.

We believe that the ultimate result of the war will be very beneficial to Canada's business. The sooner we can settle down calmly and arrange for it, the sooner business will begin to mend. The Dominion Government, and the banks generally, are evidently doing their best to provide means for at least ordinary business, and we are of the opinion that the sooner we take courage and realize that business will soon adapt itself to the changed conditions, the sooner it will improve. To adapt the old saying, it is a case of "You smile and I'll smile and all Canada will smile."—The Knight Bros. Co., Limited.

Parrsboro Shipments Being Resumed

Editor Canada Lumberman: Parrsboro, N.S., August 25.

The first direct effect of the war, so far as Parrsboro is concerned, was the demoralization of the local timber trade and the consequent prevention of a new record being made. Deal shipments stopped entirely for a month, but are about to be resumed. A steamer is due to arrive next Friday and will probably be followed by others, but the time lost cannot be recovered this season.—E. Woodworth.

Conditions Certain to Improve Soon

Editor Canada Lumberman: Jacksonboro, Ont., Sept. 3.

We consider that Canada and the United States have their opportunity in the way of building up industries in both countries. If they fail to embrace the opportunity, it is through lack of backbone and nothing more. The lumber business to-day is decidedly quiet because of everyone talking war rather than figuring out their future policy. We are confident that conditions will change in the very near future and we are looking for good business.—New Ontario Colonization Company, Limited.

Boston Market Conditions Uncertain

Editor Canada Lumberman: Boston, Mass, September 2.

No important changes have occurred in lumber prices in this market. The market is in a very uncertain state owing to the war and we cannot see that there has been any marked change. Everything is uncertain and we cannot look ahead with any feeling of certainty that we would be right. It seems to be considered that spruce may very likely be higher, owing to the English deal situation. We understand that about fifty per cent. of their deals come from the Baltic and the entire supply is cut off for many months to come, if not for years; in which case there should be a very strong demand

for Canadian spruce deals. Nevertheless, spruce is being sent in from Canada at a sacrifice, so that there are two sides to the story. —The Shepard & Morse Lumber Company.

English Trade Improving

Editor Canada Lumberman: New Richmond, Que., August 24.

Our English business has improved within the last week owing to the Baltic being closed, but we are unable to form any idea of what future business will be. We are only shipping laths to the United States this year, and to date theh returns have been satisfactory.—Montgomery & Sons Company, Limited.

Canada's Commercial Opportunity

An appeal to Canadian producers and manufacturers to win a bloodless, but effective victory, by capturing the trade of Germany and availing themselves of other opportunitiese to which the outbreak of war has given rise, has been issued by Sir George E. Foster, Minister of Trade and Commerce.

"Canadians are intensely interested in the gigantic struggle now staged on the battlefields of Europe," says Sir George. "There is being fought out, and there will be decided the mastership of the old world—the control of the seas—the question of liberty and democratic government in Europe." The Minister then goes on to point out that Germany's industrial output has wonderfully increased in past years, owing to her superhuman efforts to build up a strong industrial system and a vast overseas trade. Her sea tonnage has increased from 1,511,579 in 1893 to 3.153,724 in 1913, and her foreign trade from $1,678,780,600 to $4,966,298,400. In 1913 her exports were as follows:

To Great Britain	$ 342,291,600
Canada	14,473,833
Australia	21,063,000
British South Africa	11,162,200
New Zealand	2,546,600
United States	169,741,600
France	187,996,200
Russia	209,440,000
China	29.226,400
Japan	29,202,600
South America	157,960,600
All Other Countries	1,227,862,387
Total	$2,402,967,000

Lost Bulk of Trade

"Under present conditions she has lost for the time being all this trade, her industrial production has been greatly reduced and her commercial marine has been practically swept from the seas. What this means to Germany we all can see: a total loss during the continuance of the war and a long period of struggle after ensuing peace to regain even a part of her former proud and profitable position, and a probable total loss of her expensive and hardly-bought colonial possessions.

"What we do not so clearly see is that this immense void in production and distribution must be filled—others must step into her place to make and distribute what Germany has for the time being been forced to surrender. For the British Empire—home and overseas—the instant pressing duty is to possess itself of a generous share of the production and trade thus lost to Germany, and so to reap the advantage of a great industrial and commercial victory which shall in some measure compensate the costly sacrifice of war. Not only should we fill to the greatest possible extent the void thus created, but we should make our position so strong in these markets as to secure ourselves from being ousted by Germany hereafter. Here is a peaceful field of operation in which we can carry on a bloodless, but most effective and profitable warfare.

"First, let us fill, so far as possible, the call for the $16,000,000 worth of goods, with which Germany and Austria provided us last year, and which will this year be absolutely debarred.

Buy from the Empire

"And what we cannot supply ourselves, let us purchase from Great Britain and other parts of the Empire. Let us covenant together to buy goods 'Made in Canada,' 'Made in Britain' and "Made in the Empire'; thus shall we give employment, and the profits of production to the Empire's home workers. Then let us find the details of what Germany and Austria have produced and sold to other countries, and set ourselves to supply as large a part of this as possible. Here are markets for hundreds of millions worth of products, the making of even a portion of which will keep our industries going and give employment to hundreds of thousands of our people. If consumers determine to buy only Canadian and Imperial goods, and producers to provide them at lowest prices and of good quality, a co-operative work of inestimable value will have been begun."

War Should Benefit Lumber Industry

One industry which should benefit almost immediately from the outbreak of war is that exceedingly important Canadian industry, the lumber business. Pulp and paper mills have already felt the benefit, but the silver lining in this particular cloud should also manifest itself to the saw mills as well as the cutters of pulp wood. The closing up of the Baltic has shut off a source of supply upon which the British market was constantly drawing not only for dressed lumber but also for pit-props used in the mining of coal in Great Britain. Unfortunately for the Canadian lumberman at the present juncture, he has never given much attention to the cutting of posts of the pit-prop variety, though the cut during the coming winter may see an attempt to supply that demand—provided always that the Baltic is not again open to navigation by merchantmen by that time. It is to the product of the land and her natural resources that Canada had better turn her attention at the present time rather than any fervid attempts to build up artificial manufacturing conditions.—The Financial Times.

An Important Freight Rate Case

Canadian railroads, led by the Canadian Pacific, the Grand Trunk, and the Intercolonial, have filed an argument with the Interstate Commerce Commission of the United States, in support of a proposition laid down by them that, with the consent of the Railroad Commissioners of Canada, they may increase their rates for Canadian pulpwood to American points without the possibility of check upon them by the American Government. The argument is made in the complaint of the International Paper Company against the Delaware & Hudson et al.

The complaint against the Delaware & Hudson is based upon the fact that nearly a year ago the Canadian railrods made an increase of one cent a pound in pulpwood rates to American mills in New York and New England. The Canadian Commissioners allowed the higher rates to go into effect.

If the consumer ultimately pays the freight, the increased rates have been paid by American newspapers. The Canadian railroads, however, insist that the Canadian producers of the pulpwood are the ones who have paid the higher rates. They claim that the International Paper Company, in fixing prices on pulpwood, quotes them f.o.b. mills, that is if the price per cord is $3 and the rate 18 cents the seller of wood gets $2.82 for what he sells. The International Paper Company, however, insists that it pays the freight. Therefore, coupled with its demand for a lowering of the rates to their old level is a demand for reparation amounting to the difference between the old and new rates.

Attorneys for the Canadian roads argue that the American commission should dismiss the complaint on the ground that the traffic originates in Canada and nearly all the transportation service is rendered in Canada and all but a small division, which accrues to the Delaware & Hudson, goes to Canadian roads. Therefore they say it is a matter outside the jurisdiction of the American commission.

Another ground upon which they argue for dismissal is that of international comity. They assert that the issues and the parties in this case are precisely the same as presented in a case before the Canadian commissioners, who came to the conclusion that the higher rates proposed by the Canadian railroads would not be unreasonable. They claim the principle embodied in the "full faith and credit" clause of the Federal Constitution operates to close the doors of the American commission to them.

The American Railroad Commissioners themselves are quoted as authority for allowing the Canadians to be the sole judges of what is a reasonable rate for American consumers of wood pulp to pay for getting their raw material from Canadian woods to American mills. In passing on a question as to soda ash rates from Wyandotte, Mich., to Canadian points the American commissioners said: "These American lines should be required to secure to these American manufacturers (in Canada) a fair rate until the Canadian authorities, which have jurisdiction over the greater part of this transportation service, have acted in the premises, or until by the action of some carrier to which our authority does not extend it has become impossible to comply with our requirements."

The Canadian roads calim that the situation now meets that condition absolutely. The Canadian roads have increased the rates, the Canadian commissioners have refused to enjoin them and they are in effect, with all the benefit, except a small division going to the Delaware and Hudson, accruing to the Canadian lines.

It is admitted by the Canadians that the American commission has jurisdiction over the parts of the through rates paid to the American lines, but that is not a practical matter because the New York Central and other American roads which participate in the haul get none of the increase, and the amount going to the Delaware and Hudson for its haul south from Rouse's Point is so small as to be negligible.

Reinforced Concrete Log Chute and Dam

Extensive Improvement Works by James MacLaren Lumber Company at High Falls on the Lievre River, Province of Quebec

By Frederick Davy

There has recently been put into successful operation by the James MacLaren Lumber Company, Ltd., of Buckingham, Que., a reinforced concrete log chute, the only one of its kind in Canada—and perhaps in the world. The structure is at High Falls, on the Lievre River, in Quebec, and it is now reported to have been in satisfactory operation for several months. From the standpoint of efficiency in delivering logs, it has recorded a great advance over the old timber chute which it replaced, and requires much less water for operation. Moreover, the discharge of the logs is more efficient, as they are delivered parallel to the river surface, thus preventing the fraying and splitting of the ends through striking the gravel of the somewhat shallow shore. The Lievre River is a stream of good volume and drains an area of 4,000 square miles. At the approach to High Falls it flows over a bed of granite and the sudden drop at that point is about 160 feet. At the head of the Falls the stream is naturally divided into two channels by a rocky island. The smaller of the two is the north channel and in nature the main or south current discharged itself over a rocky precipice in a white foaming mass. The safe delivery of logs over such a place was impossible, so, for years they had been carried down in an old rectangular-bottomed timber-built chute. In 1910 the lower section of this structure went out, after doing duty for many years. In planning a replacement it was thought that the fact that the MacLaren limits could be made perpetual justified a permanent structure. The company then decided upon a concrete chute to replace the old one and the discussion of the details concerning it revived a long-cherished desire to improve the advantages of the splendid water power so that it might be utilized so soon as a profitable opportunity presented itself. So, in making the designs for the new chute, it was incorporated as part of a large and excellent scheme of conservation and development.

James MacLaren Lumber Company's dam and log chute at High Ealls.

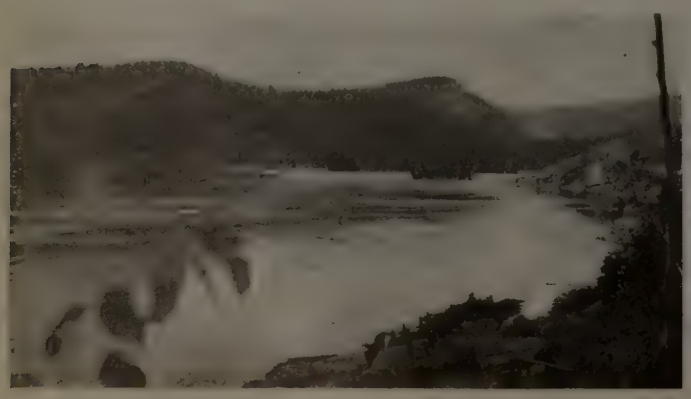
The scheme included two dams. The more important was across the main or south current. In it were the log chute outlet, the flood gates and provision for five power flumes each capable of furnishing water for a 10.000 h.p. unit. The north dam was designed as a regulating dam and was so constructed as to provide escape for the discharge of exceptionally high water. The log chute was placed to the south of the whole structure.

In 1910-1911 the lower section of the new concrete chute was built and connected with the old section above. As the workable structure thus stood, it comprised 375 feet of concrete and 1,500 feet of timber. Economy in the use of water had to be a guiding principle, as the more water went over the slide the less there would be for power. The V-shape was therefore adopted for the chute, as it was considered by far the most saving and adaptable. The design of the chute took into consideration the natural narrowing of the current in the gathering speed of the descent and the height of the sides was gradually decreased towards the foot. The maximum slope of the chute was fixed at 1 in 4, except at the lower end. There, about forty feet from the mouth, the gradient was sharply lessened and changed from a straight line to the arc of a circle of 225 feet radius. The change of grade being near the point of discharge, the retarding of the speed was so small as to be negligible and the result as designed was to throw up the lower end of the log and cause the drop to be made horizontally to the water. The upper end of the concrete chute was finished in July, 1912, and used for the discharge of the logs that year, but it was not until the completion of the whole work that the full efficiency was realized. This year the working of the permanent structure has more than justified the expectations of the engineer and the company. The new structure uses less water, discharges more logs and requires fewer men. The old slide required from fourteen to sixteen men to operate it and it discharged from 12,000 to 15,000 logs in ten hours. The new slide can be worked by six men and will discharge 50,000 logs every ten hours. The velocity of the logs in the 1 in 4 grade has been calculated to be 55½ feet per second. The total length of the slide over all is 635 feet. Its pier supports number eight. The admission gate for the logs consists of pine stop-logs bolted together. They are ten feet long, twelve inches thick and twenty-four inches deep, and are lifted and lowered by a hand winch.

Everything about the structure is of the most permanent nature. When the foundation trenches were blasted for the dam a ledge of the country-rock (grey granite) was left and against this the footing of the dam abuts. The dam has three regulating sluices. The piers between them are approximately in the shape of a long ellipse. The stop-logs for the regulating sluices are of Douglas fir and are twenty-two feet long, thirty-six inches deep, and vary from fourteen to twenty-two inches in thickness. The stop-log winch for handling them is operated by a two-cylinder steam engine which was built by the Victoria Foundry Company, of Ottawa.

The five entrances to the power fore-bay are submerged sluices covered by a reinforced concrete apron to prevent logs from being drawn in. The apron turns the logs to the slide and is carried sufficiently low to be below the point of lowest water. The draught to the power sluices cannot therefore affect the logs and the dam is so constructed that they are brought to the slide at all levels of the water.

The plans for the full structure were made in 1911 and the contract was let to Messrs. Haney, Quinlan & Robertson for the con-



North dam at High Falls, showing outlets for overflow.

Upper section of concrete log chute.

Typical section of log chute.

struction of the new dam and the completion of the log slide. Pouring concrete was started in the spring of 1912. In the whole work there are 100 tons of steel and 21,400 cubic yards of concrete. The total cost of the structure was $250,000.

The work here described is but one of several important power development structures that have been designed by Mr. J. B. McRae, of Ottawa, the engineer for the work. One of them is the dam and power house at Ragged Rapids on the Severn River, which were built for the town of Orillia. Mr. McRae designed the dam and power house (now building) for the Electric Reduction Company, at Buckingham, QQue. He was also associated with William Kennedy, Jr., in the design and construction of the splendid dam at the Chaudiere Falls on the Ottawa River, which was undertaken for the large group of power owners of the cities of Ottawa and Hull.

An Important Log Driving Decision

Privy Council Finds Association Liable for Damages Caused by Drive Which Broke Adrift—Fraser v. Dumont

A decision of much importance to lumber driving associations was recently given by the Judicial Committee of the Privy Council in the case of Fraser and others versus Dumont. This was an appeal by special leave from the judgment of the Supreme Court of Canada reversing a judgment of the Court of King's Bench for the Province of Quebec, and restoring a judgment of the Superior Court for that province whereby judgment was entered for the respondent against the appellants for $2,500 damages. The respondent is an owner of mills and land on each bank of the Cabano River in the Province of Quebec, and he brought his action to recover from the appellants the damage done to his property by timber which in April 1910 got adrift while floating down the Cabano River in the actual charge of Olivier Guerette. In the trial by Cimon, J., it was proved that extensive damage was done to Dumont's property and that it was caused by the negligence of Guerette contributed to by negligence on the part of the respondent. The Judge then held that the appellants were responsible for the negligence of Guerette and he divided the damages and gave judgment for the respondents and against the appellants for the sum of $2,500 being a part of the damage actually done. This judgment was reversed by the Court of King's Bench of Quebec, and the latter judgment was again reversed by the Supreme Court of Canada, from whose judgment the appeal was taken to the Privy Council.

The principal question was whether the appellants were responsible for Guerette's negligence. If they were responsible, no other question arose, but if not, a question of great importance arose, namely, whether persons using water courses for the transmission of timber are liable for damage done to the property of riparian proprietors, without proof of negligence. It was on account of this point being supposed to arise that special leave to appeal was given. The Privy Council however, held that the appellants were responsible for Guerette's negligence and therefore the other question did not arise.

Referring to their reasons for finding the appellants liable, on the facts, for the negligence of Guerette, the Privy Council outlined these facts. The appellants were a firm carrying on the business of lumbering and manufacturing of lumber at Cabano, and were owners of a comparatively small part of the timber forming the drive by which the damage was caused. The timber was all under the actual charge of Guerette, and it all broke adrift, blocked a bridge and caused the flood. The court held that all the owners were liable "jointly and severally," so that it was immaterial that the other owners were not joined with the appellants as defendants in the action. The liability of the owners depended upon whether Guerette was an independent contractor or whether the owners or the appellants, who, through their managing partner Mr. Archibald Fraser, took the more active part in the matter, had such control over Guerette as to make them liable for his negligence.

The timber owners in this district were in the habit of joining together in many of their operations and had joined together to form an incorporated company under the name of the "Cabano Log Driving Association." At a meeting of this association, a resolution was passed that the driving of logs on the Cabano River "be sold" to Archibald Fraser for the base price of 80 cents per M. It had previously been resolved that this meeting should be held and this resolution appeared to have been advertised, or in some way to have come to the knowledge of Guerette. He, being unable to be present, had requested Archibald Fraser to bid for the drive on his behalf. Shortly after the meeting it was agreed between Guerette and Archibald Fraser that he, Guerette, should conduct the drive and receive 80 cnts per M. feet as remuneration. The whole case turned upon the terms of this agreement, and they were by no means clear. The Privy Council held that it was clear that the owners of the logs did entrust them to the conduct of Guerette on the terms, whatever they were, of the arrangement made between him and Archibald Fraser. Therefore, it was of no importance whether the acts done in bringing about that result by the officers of the Log Driving Association were to be considered as acts of the corporation, or the acts of the individuals. Guerette was a man of experience in log driving but of no means whatever. The money required to pay the men who worked under him was found by the appellants. It was said that this would ultimately have been set against the 80 cents per M. The Privy Council agreed with Mr. Justice Cross that there was no bona fide contract such as would relieve the owners of the logs from liability, and that Guerette remained under the control of the owners or of Archibald Fraser acting for the owners. They decided therefore that the appeal should be dismissed with costs both before the Privy Council and below.

Lumberman's Building and House of the Hoo-Hoo

The structure which is planned for immediate erection at the Panama-Pacific International Exposition, by the "Concatenated Order of Hoo-Hoo" as a meeting place for the lumbermen of the world, will undoubtedly attract the attention of hundreds of thousands of visitors to the exposition. The "Lumberman's Building and House of the Hoo-Hoo," as the structure is officially entitled, will be located in the South Gardens of the Exposition, close to the Palace of Horticulture, just within the main entrance gate to the grounds. In designing the building, the architect has given his creative fancy full swing. The whole is a combination of trees, woody plants, shrubs, ferns, mosses, bark, lumber, shakes, shingles and logs.

The columns of the peristyle and pergola will consist of logs of all the different commercial species of the coastal states in diameters from 24 in. up to 40 in., and in conjunction with the logs from the mature trees will be planted saplings from the several species, giving visitors the opportunity to trace the characteritsics of the young and old growth; while within the building the manufactured lumber will be exhibited. These exhibits will include California redwood, sugar pine and white pine, Oregon spruce, white cedar, Douglas fir, hemlock and red cedar of both Oregon and Washington. The interior will be fitted up for the combined purpose of providing homelike surroundings with rest rooms, writing rooms, smoking rooms, and assembly rooms. All of the coast woods will be shown in an attractive manner within the building, the purpose being to give each specie equal representation in different portions of the structure.

Supplemental to the exhibit will be the service of a regular attendant in the building who will be competent to discuss intelligently any question that may be raised by visitors. It is also expected that the Coast lumbermen, particularly those in San Francisco, will so arrange their time as to devote considerable personal attention to explaining the merits of their particular wood to the visiting lumber men and importers.

Organizing to Capture Trade

A representative meeting of the Toronto Board of Trade, presided over by President W. P. Gundy, and including members of the board from almost every industry and class of business, was held in the council chamber of the Board of Trade recently to discuss ways and means of fostering Canadian trade. It was felt that the present was a very opportune time for Canadian manufacturers to extend their markets and to manufacture new lines heretofore imported into Canada, and that the stimulation of Canadian manufactures in this way would necessitate full staffs, and consequently relieve unemployment to a large extent. Those present resolved themselves into a special committee for the study of the question, and unanimously appointed Mr. A. O. Hogg chairman. Messrs. A. O. Hogg, H. C. Boulter, C. D. Daniel, M. C. Ellis, E Holt Gurney, Arthur Hewitt, Henry H. Mason, Miles Vokes and C. H. Willson were appointed an Executive Committee with power to add to their numbers, to nominate sub-committees for the gathering of statistics and securing suggestions from all lines of industry as to the best method of attaining the object in view.

B. C. Loggers Want Lower Export Charges

A report from Vancouver, B.C., states that the British Columbia Government has decided to remove the restrictions upon the export of a major percentage of logs lying in British Columbia coastal waters. This will permit a large number of logs to be sent to the State of Washington. In regard to this raising of the ban on longs, members of the B. C. Loggers' Association state that very little, if any, relief is afforded by the Government's action, on account of the low price the loggers would receive after the charges demanded by the Government had been paid. The Government was asked to allow exportation of 125,000,000 feet free of all charges except the royalty of 50 cents a thousand, but could not see its way to grant this. The scale of export charges proposed, loggers declare, will render it impossible to sell logs at Washington prices profitably.

Lumber and Its Interests at the C.N.E.

Manufacturers and Dealers in Lumbermen's Equipment, Machinery, Etc., Made Excellent Showing—British Columbia's Fine New Exhibit

The lumber industry was, as usual, represented at the Canadian National Exhibition, at Toronto, this year by a varied and interesting display of equipment of various kinds for sawmills, lumber camps, woodworking factories, etc. These exhibits, on account of the fact that they represent so many different lines of industry were shown throughout the many buildings at the Exhibition. Nothing in the nature of a combined exhibit was possible. Nevertheless, the exhibits were so well placed and prominently displayed that it was an easy matter for those who were interested to locate them.

One of the most unique and interesting exhibits from the lumberman's point of view was that of the government of British Columbia which was under the direction of Mr. W. A. Lang, Exhibition Commissioner for the B. C. Government. The resources of the province were shown in an attractive form, and the lumbering industry was given prominence over all. B. C. fir, doors, veneers and panels, as well as B. C. shingles were attractively displayed. A canopy of fir was arranged over the whole exhibit and demonstrated the beauty of this wood to splendid advantage. A small office building was erected, which was built of B. C. fir from the shingles on the roof, to the floor, and at the side of this building were placed samples of all kinds of fir panels, doors, etc. A large sign prominently displayed drew attention to the fact that British Columbia's output of forest products now annually amounts in value to $30,000,000.

The Autographic Register Company of Canada, Limited, of Montreal, had an attractive exhibit which included their "Shouperior" Manifolder, a practical and useful device for relieving office managers of the extensive detail work in connection with the keeping of accounts. The "Shouperior manifolder" is especially adapted to the retail lumber business. The register issues three or four complete records for every sale with one writing and every record is printed separately and numbered consecutively alike. The order is written on the manifolder. The office retains the invoice and charge copy and sends the last or driver's copy to the shipper who prepares the goods and makes delivery, sending along with the driver the delivery ticket to be signed by the recipient of the goods as an acknowledgement of receipt. When the driver brings back his copy and turns it into the office, it is compared with the invoice in the charge copy, which is then mailed to the customer. The account is charged from the office copy, which is then filed alphabetically while the delivery ticket is filed numerically. In this way the "Shouperior" manifolder eliminates the order book, driver's book and day book, as well as providing the invoice for the customer.

Mahaffy Trucks, shown by W. F. Mahaffy, Plymouth Avenue, Toronto, were examined closely by owners and managers of lumber yards, planing mills and woodworking plants. Trucks have become one of the most important factors in labor-saving in connection with factories of every description, and this company's production attracted particularly wide attention. It included warehouse and factory trucks of every description, including an ingenious and practical truck designed upon a tilting principle, the centre wheels being higher than the end wheels, and the truck being equipped with loose posts. The end wheels of this truck travel on a steel axle furnishing complete facilities for turning corners. This is a principle possessing many advantages over the swivel wheel. It has been thoroughly tested for many years by European manufacturers. Mr. Mahaffy has recently issued a very comprehensively illustrated catalogue and any one interested in trucks should send for a copy.

Beal Bros., Limited, Toronto, tanners and manufacturers, had a very attractive exhibit of the well-known line of "Round Knife Brand" harness, horse collars, blankets, rugs, etc., which attracted interest from all who were concerned in lumbering operations. Among their products was an excellent display of oil tan moccasins and sporting boots. These moccasins are now sold in large quantities, among many of the lumber camps of Canada. With their excellent tannery at Uxbridge, Ont., this company can accept any quantity of orders, and they pay particular attention to filling all orders satisfactorily and rapidly.

The Positive Clutch and Pulley Works, Limited, 11-15 Jarvis Street, Toronto, whose factory is located at Aurora, Ont., showed an interesting line of their products in the Machinery Hall. Among these were their all-wood separate pulley and combination pullley and their multi-disc gas engine clutch. These lines have secured much favor among lumbermen. Another interesting feature of their exhibit was an automatic fire hose reel, which permits of all the water force being turned on instantly without the removal of any of the hose. Thus a full stream can be directed upon a fire immediately, while the hose is being uncoiled.

The Bishopric Wall Board Company, Limited, Ottawa, Ont., had an excellent exhibit of lath and stucco boards for interior and exterior use. This wall board is claimed to be equally suitable for schools, residences and stores, being non-inflammable, weather proof and comparatively inexpensive. The well-known Bishopric sheathing has equally wide favor among contractors, chiefly because of the ease with which it can be applied, and also because of the attractive panelling effects produced by its use in residences.

The Brantford Roofing Company, Limited, Brantford, Ont., made a unique exhibit of their well-known roofing and galvanized sheathing, insulating and building materials of all kinds. The exhibit also included an interesting display of Brantford asphalt shingles, which attracted much favorable attention. They also showed an interesting line of paints including "Roofleak" paints and "Superior" roof coating which can be used upon cement, metal, steel and woodwork.

The Preston Woodworking & Machinery Company, Preston, Ont., had excellent exhibits in the Machinery Hall showing a number of important lines of woodworking machinery to splendid advantage. Woodworkers who know the importance of good machinery in a plant, are continually increasing their interest in this company's products and spreading its good reputation.

The James Morrison Brass Manufacturing Company, Limited, Toronto, exhibited a full line of steam specialities in the Process Building. One of the special features of this exhibit of interest to lumbermen was their Board Measuring Register. This device can be attached to saws or planers and it automatically and continuously measures the lumber, giving the result in lineal or board measure as desired. It can be used either for filling small orders, or for totalling the day's run. The register consists of a measuring wheel which travels over the cut lumber as it comes from the machines, and the revolutions of this wheel are recorded by a standard counting apparatus. The totals given by the register represent the actual number of feet of lumber run.

The Shurly-Dietrich Company, Galt, Ont., one of the earliest and most consistent exhibitors at the C. N. E., followed their previous practice of displaying their excellent lines of saws and tools upon a large section of wall space in the Industrial Building. This method of exhibiting rendered the display one of the most noticeable and attractive at the exhibition and indicated at the same time that the productions of this company must be among the very finest of their class. The Shurly-Dietrich Company claim to be the largest manufacturers of saws in the British Empire. Moreover, their complete line of products is entirely of Canadian make.

The Canada Machinery Corporation Limited, exhibited, in the Machinery Hall, many of their widely known lines of woodworking machinery including molders, tenoners, chain mortisers, etc. The lumbering and woodworking industries have become familiar with this excellent line of machines, and many visitors took a keen interest in the exhibit.

The Tallman Brass & Metal Company, Hamilton, Ont., exhibited in the Industrial Building and showed an especially wide range of productions, including their carburetor for gasoline engines. Among their other lines which were of special interest to the lumber trade were special "Arctic" babbit for sawmill and lumber machinery, manganese bronze casket and XXX genuine "Arctic" metal for heavy machinery. This company also showed a splendid assortment of electric fixtures.

Cowan & Company, Galt, Ont., had, sas usual, one of the most interesting exhibits in Machinery Hall which attracted the attention of many owners and managers of woodworking companies. Their exhibit included most of their well-known line of products and was studied closely by many lumbermen.

Gutta Percha & Rubber, Limited, Toronto, displayed a splendid line of belting, packing and hose in the Process Building. Their well-known lines of "Monarch," "Red-Strip" and "Lion" belting, were shown, as well as their "Redstone" high pressure sheet packing.

The Canadian Hart Wheels Limited, Hamilton, Ont., whose booth was located in the Machinery Hall, had an interesting display of their well-known Corundum wheels. One of the features of this exhibit was the demonstration of an Improved Automatic Hart Saw Sharpener. These machines have been in continuous use in the lumbering industry of Canada for the past thirty years and have abolished the

old manner of hand filing in all up-to-date plants. By the use of this machine every tooth of the saw is turned out in exactly the same size and shape as all the others.

The Cling Surface Company, Buffalo, N.Y., had a specially attractive exhibit in which they demonstrated the advantages of their products in connection with the use of machinery belts. So efficient has this product proved itself to be that belt users are realizing that by its use they can save a great deal of expense in power transsion. The company, as a result, is rapidly increasing its already large list of customers in Canada.

Batts Limited, Toronto, exhibited an especially attractive assortment of doors, columns and interior finish in the Industrial Building. One of the interesting features of their display was the handsome new catalogue they distributed. It is profusely illustrated and shows an exceptionally wide range of sash, doors, trim and interior woodwork generally.

The Dominion Belting Company, Limited, Hamilton, Ont., exhibited their widely known "Maple Leaf Belting" in the Machinery Hall. This was shown in a number of sizes and thicknesses. The lumber trade is already thoroughly acquainted with the good features of "Maple Leaf Belting" and has been responsible for a large volume of the orders sent to the company's factory in Hamilton during the past year.

Henry Disston & Sons, Toronto, showed a splendid assortment of saws of every description for use in connection with the manufacturing and working of lumber. This company's products cover an exceptionally wide range and their excellence is such as to have made them a standard for comparison. Their booth attracted a great deal of interest and was most attractively arranged.

The Sasgen Derrick Company, of Toronto, showed a splendid line of their hoists and derricks which are finding favor among the Canadian trade. This concern make several lines of lumber derricks and although operating their Canadian factory a little over a year their lines are to be found in all the larger centres throughout the country.

A. R. Clarke & Company, Limited, of Toronto, tanners and manufacturers of lumbermen's and sportsmen's clothing, had a most attractive exhibit of gloves, mitts, mocassins, mackinaw clothing, etc., in the Manufacturers' Building. This large and progressive firm manufacture from the hide to the finished product and their lines are sold from coast to coast.

The Pratt & Whitney Company of Canada, Limited, Dundas, Ont., exhibited a full line of their small iron tools, taps, dies, reamers, drills, etc., in the Machinery Hall. One of the attractive features of their booth was a large Maple Leaf formed entirely of the tools manufactured by this progressive firm.

The Chapman Ballbearing Company, Limited, Toronto, exhibited their well-known lines of bearings, which have become widely used by manufacturers who are interested in the maintenance of efficient transmission equipment in their plants.

The Laidlaw Lumber Company, Toronto, made an interesting display of the excellent lines of doors, interior trim, etc., which they handle.

The Commercial Oil Company, Limited, Hamilton, Ont., had a large display of their well-known greases, oils and lubricants which are so favorably known to the lumber industry.

The Jos. Dixon Crucible Company, of Jersey City, N.J., exhibited in the Transportation Building, their widely known "Silica Graphite Paints," which attracted a lot of attention.

The Chisholm Milling Company, Limited, of Toronto, had an interesting display of Canuck Oats and also the well-known Purina feeds for horses, cattle, etc. Their tent on the grounds was visited by a large number of people interested in these lines.

The Garlock Packing Company, Limited, Hamilton, Ont., showed complete lines of their packings and mill supplies in the machinery hall. Their representative was one of the busiest men at the Exhibition, answering inquiries regarding this widely-known line of goods.

The Dodge Manufacturing Company, Limited, Toronto, showed a splendid line of transmission goods, pulleys, etc., in their spacious booth in Machinery Hall.

The Canada Metal Company, Limited, Toronto, had a large line of their products on exhibit in the Machinery Hall. "Everything in metal," is their motto and it was well borne out by the comprehensive nature of their exhibits.

Mr. G. P. Magann, Toronto, the well-known railroad contractor has suggested that the Government should either finance lumbermen to put in pulpwood cutting camps in the bush of Northern Ontario, during the coming winter, or else should take charge of the work themselves, so as to provide work for the unemployed, and help to relieve the scarcity of raw material for the production of paper, which is now very keenly felt.

"If You Want Markets Go After Them"

Sir Geo. E. Foster, at one of the luncheons given by the Directors of the Canadian National Exhibition, delivered a stirring and practical reference to the new trade situation created in Canada by the war. This was no time for despair, he said. It was a time for opportunity. The day had come when Canada should not only see to it that the wheels of commerce and industry were kept running within her own borders, but she should branch out into the markets of the world and enter into competition for that trade which Germany today was unable to handle. In emphasizing the "enormousness" of the war, the Minister of Trade and Commerce pointed out that nearly 900,000,000 of people were engaged in warfare through their allegiance to the flags of the different belligerent nations, and these people constituted the most intelligent, most progressive and most productive of the nations of the world. The effect has been to put all countries into "watertight compartments," commercially speaking. In this respect the world was never before tied by so many strings.

Sir George then asserted that this dislocation was entirely different from annihilation. It was only temporary. When the war broke out the sea routes were "studded with peril," "but since that time the great dislocation had been swept aside and the commercial routes of the ocean were pretty nearly as safe now as they ever had been. This had been followed by a financial dislocation, and although the world had been temporarily turned upside down, it would right itself again, and in the righting it would produce a better condition of things than before.

Canada was fortunately situated, continued Sir George, to go through a period of depression without great dislocation. He pointed out that Canada's exports of "primary" products last year amounted to $432,000,000. The estimated value of the field crops was $552,000,000, and there was no reason to suppose that this year's harvest would fall much below that figure. "Let us keep before us this broad-based distinction. Let us make our position in Canada absolutely better than that of any other "primary" producing people." While a primary producing people, Canada also stood in the position of a manufacturing community. One of the immediate resutls of the war would be the need for rehabilitation. While this was the farmer's day more than ever before, there was the question of continuing the industrial development of the country. In twenty years Germany had developed a great military system and a great industrial system. Germany's foreign trade last year amounted to $2,420,000,000. To-day, Germany's commercial fleets had been wiped off the seas, and to-day, even if she could sell her products, she would not be able to deliver them.

This German foreign trade was now open to three nations—Great Britain, United States and Canada. "Do you want markets, you manufacturers? Then go after them. What better could you ask than to have a fair competition for these markets?"

In the face of these opportunities it was the duty of labor and capitalist, of employer and employed to set their heads together and by proper co-ordination and organization to go after these markets. "Let us be of good courage," said the Minister. In this way patriotism could find its expression in patronizing the home markets. The manufacturer should buy his raw materials, where obtainable, in Canada, even at a slightly increased cost. The Canadian consumer should see to it that he bought the Canadian product.

The bankers, said Sir George, were looking at the question in the right way, and it was their duty to see that no honest, well-based industry should go to the wall for the lack of financial help. He thought the bankers were prepared to do that. The Government had gone a long way to put the bankers in a position to do that, and he believed it was their aim to work along those lines.

Quebec Cullers' Report

The following comparative statement of timber, measured and culled to date, is furnished by the Supervisor of Cullers' office, under date of Quebec, September 4:—

	1912 Cubic Feet	1913 Cubic Feet	1914 Cubic Feet
Waney white pine ...	830,280	216,600	546,240
White pine	1,400	7,560	.....
Red pine	1,400	960	1,040
Oak	73,520	115,840	292,560
Elm	275,280	211,520	299,280
Ash	480	1,000	680
Birch and Maple	38,640	47,680	50,800

Ottawa Company's Improved Facilities

New Duke Street Plant of the McAuliffe Davis Lumber Company— Modern Equipment and Practical Layout

Head Office McAuliffe Davis Lumber Company, Ltd., Ottawa.

Interior of McAuliffe Davis plant at yard A, Ottawa.

Readers of the Canada Lumberman have already become familiar through our columns with the interesting developments and improvements which have been made by the McAuliffe Davis Lumber Company, Limited, of Ottawa. A description and plan of their yard "B" and plant on Chamberlain Avenue, was published in our issue of March 1st. We are pleased now to be able to show our readers interesting illustrations of the new plant at Duke street which the company have recently completed. The head office of the company is located in connection with this plant and also what is known as their yard "A." This yard extends about 600 yards x 200 feet in depth with a frontage on Duke street on one side and on Britannia street on the other side. At this point the company conduct a very extensive business. Yard "A" handles a great deal of stock for contractors and is used as a basis for shipping mixed cars to lumber dealers within the radius of territory which it can cover. Also, at this point, the company do a large amount of milling work both for their own and for foreign accounts. This has necessitated the installation of the most modern equipment and convenient facilities.

The buildings at this plant are of the semi-fireproof type with solid brick walls. The mill has been laid out with the machines in series, so as to get the best possible results. For instance, on stocks to be resawn, in order to save re-handling, the re-saw is located at a point which permits of the stock being passed through a matcher after leaving the re-saw, without any unnecessary re-handling. Each machine in this plant has a unit motor drive. The company have entirely dispensed with overhead shafting and belting. One of the accompanying illustrations gives an excelelnt idea of the clear space provided around the machines, showing the moulding racks in the distance, and it also affords an idea of the convenience with which stock which has been run can be passed along on two-wheeled trucks to the bins in which it is to be stored.

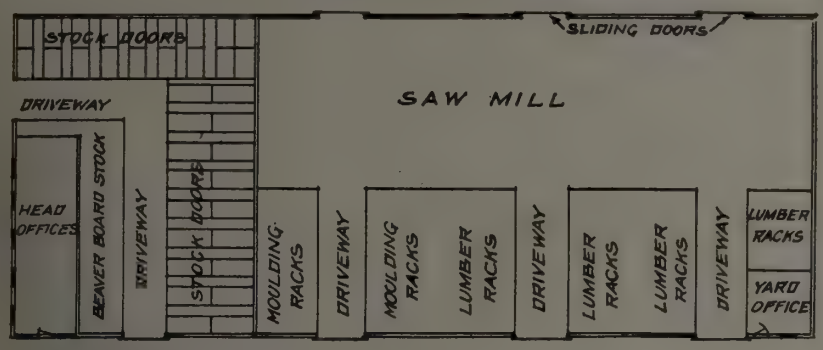
Another illustration gives a good idea of one section of the dressed lumber shed which is brightly lighted from overhead, and convenient in every way, both for loading in and loading out. An interesting detail which will be noted by all practical lumbermen is shown in one of the illustrations in the form of a "no smoking" sign. These

Section of dressed lumber shed, McAuliffe Davis' yard A, Ottawa.

Interior of McAuliffe Davis plant at yard A, Ottawa.

signs are placed at noticeable intervals throughout the plant and all employees are requested to assist the company in keeping the fire risk down to a minimum.

Another illustration shows one side of the mill including the rip-saw and showing lumber on two-wheeled trucks ready to pass through.



Plan of Yard A. and Mill—McAuliffe Davis Lumber Company, Ottawa.

On the right in this illustration is shown the side of the shavings vault, the exposure of which is on the back street and quite outside of the building. Another illustration shows the outside of the head office of the McAuliffe Davis Lumber Company, Limited.

Forestry Director's Annual Report

The annual report of the Director of Forestry for the Dominion of Canada, for the year 1913, has just been issued and contains much material of importance to those who are interested in forestry matters. The report shows that the appropriation for the Forestry Branch during the year 1912-13 was $364,500. The expenditure was divided as follows:—Salaries at Ottawa, $12,000; travelling expenses, $5,000; forest reserves, $169,300; fire ranging, $99,000; printing and stationery, $10,000; tree planting, $49,500; forest surveys, $13,000; statistics and products, $4,700.

From statistics which have been published by the Department in separate bulletins it is estimated that the total value of the different classes of forest products in Canada annually is about as follows: lumber, lath and shingles, $84,000,000; firewood, $50,000,000; pulpwood, $12,000,000; posts and rails, $10,000,000; Cross-ties, $8,000,000; square timber exported, $1,900,000; cooperage, $1,700,000; poles, $1,200,000; logs exported, $1,100,000; tanning material, $1,000,000; round mining timber, $600,000; miscellaneous exports, $300,000; miscellaneous products, $10,500,000; total, $172,300,000.

An appendix to the report shows that important work has been done in determining the boundaries of the forest reserve to be situated north and west of the Fraser River in the B. C. Coast district of the Dominion railway belt—a territory approximately forty miles wide and 130 miles long. It is, of course, not possible to give an accurate estimate of the timber in the Coast district, as only a comparatively small portion has so far been examined. However, approximately 25,000,000,000 to 30,000,000,000 board feet would be a fairly conservative estimate. Of this, 15,000,000,000 to 20,000,000,000 feet could probably be found in the proposed forest reserve.

It is estimated that the timber in this coast district consists of approximately 65 per cent. Douglas fir, 18 per cent. red cedar, 15 per cent. Western hemlock and 2 per cent. other species.

Canada's Trade with Germany

In the year ending March 31, 1913, Canada imported from Germany goods worth $14,473,833, and she exported to Germany goods to the value of $3,402,394, a total trade with Germany of $17,876,227. With Austria-Hungary Canada carried on a total trade to the value of $1,828,943, of which $1,674,349 consisted of imports and $154,594 of exports. It is thus seen that these countries, especially the former, had obtained a material foothold in the Canadian market which will be lost during the progress of the present war and probably for many years thereafter.

Mr. Stanley Cook, secretary of the Montreal Lumber Association and assistant secretary of the Montreal Board of Trade, is recovering from a serious attack of erysipelas. The illness developed at Sixteen Island Lake (where Mr. Cook has a summer residence), and for some days it was of a dangerous character.

Alderman W. K. Grafftey, head of the Montreal Lumber Company, was among the first "young men between the ages of 18 and 60" to enrol as members of a new regiment being raised in Westmount, P.Q.

Frank H. Harris Married

Frank H. Harris, Toronto.

The accompanying portrait will be recognized by many lumbermen in Ontario because it represents one of the best known men in the trade, Mr. Frank H. Harris, of the Frank H. Harris Lumber Company, Limited, 32 Church Street, Toronto. The reason for the publication of the portrait is one which will be read with interest by all of Mr. Harris' friends, who will be pleased to learn that on September 5th, he was married to Miss Gertrude Louise Park, only daughter of Mr. and Mrs. Andrew Park, of Toronto. The ceremony was performed by the bride's father, Rev. A. Perry Park, who returned from Valcartier for that purpose. After the ceremony, Mr. and Mrs. Park held a reception at their home, and the bride and groom then left on a trip to Buffalo, Detroit and Chicago. On their return they will reside on St. Clair Avenue East, Toronto.

Mr. Harris started in the lumber business at Toronto for himself and four years later the present company was formed, the president of which is Mr. W. H. Harris father of Mr. Frank H. Harris.

Retired from Active Service

R. H. H. Alexander, the veteran assistant manager of the B. C., M. T. & T. Co., Vancouver, B.C., has laid down the active management of the company with which he has been so closely identified for many years, and will now act in an advisory capacity. Mr. Alexander is one of the sturdy lumber pioneers of the Pacific Coast, and has a host of friends. Arthur J. Hendry, who has accepted the position as assistant manager, has resumed the duties heretofore borne by Mr. Alexander. Mr. Hendry has been actively connected with the business for many years and is eminently qualified for his new position. P. Hamber is the manager of the company. He is a son-in-law of President John Hendry. Mr. Alexander has recently returned from a visit to England.

New British Columbia Export Mill

The new mill of the Newcastle Lumber Mills, Limited, at Nanoose Bay, B.C., has a capacity of 125,000 feet in ten hours and is running steadily. It is modern and completely equipped. A planing mill, operated in connection with the sawmill, is electrically driven, each machine being equipped with an individual motor. The plant is located on the Esquimalt & Nanaimo Railroad, fifteen miles north of Nanaimo. Manager A. E. McIntosh announces that a wharf will be constructed at once, with facilities to accommodate the largest vessels. By reason of its advantageous location the company will engage extensively in the export trade. Line yards have been established at Nanaimo, Parksville, Qualicum and Victoria, all on Vancouver Island. The company also has connections with the Canadian prairie and Atlantic seaboard trade. The company is a subsidiary concern of the Merchants Trust & Trading Company, of Victoria, B.C. They own about 75,000 acres of timber and agricultural lands in the vicinity of Nanoose Bay, The timber is of excellent quality, being nearly all fir, with a small percentage of cedar. The company is making special efforts to attract farmers, the land being prepared for settlement as soon as the timber is removed. A large proportion of the settlers are of the well-to-do class from England. Manager McIntosh is an experienced lumberman, having held positions of importance with Washington companies. For three years prior to his taking the management of the Newcastle Lumber Mills, Limited, Mr. McIntosh was general manager of the Index Galena Lumber Company, of Index, Wash.

S. T. Easterling, who with E. C. Sessions operated the Short Leaf Lumber Company of Newton, Miss., has disposed of his interest in the company to Mr. Sessions and departed for Montreal, P.Q., where he will be associated with the Prendegast Lumber Company. Mr. Easterling is well known in Mississippi lumber circles and has a host of friends who will be glad to hear of his success in Canada.

Government Prices of Stumpage in B.C.

A Concise and Interesting Outline of the Method Recently Adopted to Determine Values—Address Before Pacific Logging Congress

By H. R. MacMillan, Chief Forester for B. C.

THE business man has usually no great difficulty in knowing what price to put upon whatever he has for sale, for he can be guided to a decision by the phices asked by other men for more or less similar articles. A government, however. which is called upon to fix the price of timber on a total area of ten million acres scattered in square mile units throughout a province of twenty-five times that size, is in a very different position; especially when it has already transferred this immense property to a partnership composed of itself and nine hundred or a thousand lumbermen and investors, and six years have passed without a definite sale price for the transferred timber having been established. A government holding of this magnitude cannot be compared with current offerings of stumpage by private holders, and, as the Province of British Columbia realized in 1913, the task of deciding what the proper average charge should be for all this timber was one of the greatest difficulty. On the one hand, the Government was trustee of this great property, and in the interest of the public revenue was bound to get a thoroughly fair price for what it sold. So important was this revenue that, for many years, it provided every penny which was spent on the building and upkeep of roads, bridges and wharves throughout the province. On the other hand, it was the government's business to help develop the most important industry in British Columbia; the one employing the most labor, involving the most capital, and creating the most wealth by its annual output—I mean the lumbering industry. Financial conditions in the west had been changing rapidly; the building up of logging and saw-milling enterprises on a large scale required more complicated financing than in years gone by; and a system of holding options upon government timber from year to year which had worked very well in the old days was no longer suited to these modern conditions. To obtain working capital, the holders of licenses to cut Crown timber needed something more than the fixing of the government's stumpage price for the current year, which was all the security they had. They needed stability of tenure, so that shareholders and bondholders would be able to invest their money in the lumbering business with a full knowledge of what stumpage would cost them in years to come.

In February, 1913, the Hon. W. H. Ross brought the matter before the Legilsature. Committees representing the Coast and Mountain Lumbermens' Associations and other holders of timber licenses were appointed; and a very careful investigation of the whole subject was carried on during the whole of last year. There were two separate questions to be decided. The first was a comparatively easy one, namely, the fixing of a price for government timber which should be reasonable at the present time and for a few years hence. The second was most difficult since it meant the invention of some method which would give stability to the lumber industry by fixing stumpage prices for thirty or forty years ahead without depriving the people of the province of their fair share in the future increase in value that must certainly be expected in the two hundred billion feet of merchantable timber they were sharing with the licensees.

Present Increase

In view of the present depression in the lumber business the investigation showed couclusively that it was unreasonable to make an immediate heavy increase in the average price of government timber, which had remained at 50 cents per thousand feet for so many years. It was decided to increase this figure to 85 cents upon Nos. 1 and 2 Douglas fir, cedar, spruce, pine and cottonwood where the timber was cut west of the Cascades, no change being made in the existing figure of 50 cents for other grades and species. In the southeastern portion of the province a similar increase was effected in a different way. So far the Doyle rule has been in use in that territory. By changing to the B. C. rule an increase for all grades and species of something like 15 cents a thousand was provided for. For the northern interior of the province a rate of 75 cents on the B. C. scale was established. In order to give business conditions time to adjust themselves to these changes, it was provided by the Legislature last winter that they should not become effective until January 1st next.

Future Increases

The question of how to fix stumpage prices for the next thirty or forty years was, as I have said before, the main difficulty. The Government and the licensees were partners in the stumpage value, and it was necessary to define just what share each should claim of the future increase in value—of what usually passes under the name of the unearned increment. One proposal was that the Government should ascertain each year the average cost of production and the average selling price of lumber throughout the province, and as the difference between these two figures was found to increase the Government should take some definite proportion of the increase. In theory this proposal was sound enough, but, as a practical matter, the working out each year of the average cost of production per thousand feet would have meant continual inquisition into the financial standing of every milling company by an enormous staff of forestry officials, in a way that no government could reasonably attempt. On the other hand, the average wholesale selling price of lumber each year could be calculated from confidential returns furnished by each company and checked by government accountants, with comparatively little difficulty or friction. The idea of using the average selling price as a guide to stumpage value was then put forward.

An increase in the selling price of lumber may be offset by increased cost of production; in which case there is no change in stumpage value. Or again, cost of production may remain stationary, and then increase in price represents increase in stumpage. The truth, in any particular, will be somewhere between these two extremes. The selling price of lumber is thus by no means an ideal barometer for stumpage values. On the otherhand, it affords a far sounder basis for future readjustments of stumpage prices than any other method that could be reached by so sharing the increase in lumber price that a portion of it is set against possible increase in manufacturing cost, the remainder being divided among the stumpage owners—who, in the case under consideration are the Government and the licensees. This was the principle finally adopted by the Government of British Columbia. A starting price was agreed upon. Whenever prices should go above that level the Government was to take a definite percentage of the increase, by increasing its stumpage prices. The arrangement was to hold good for forty years.

The Timber Royalty Act was, therefore, passed by the Legislature last winter in accordance with this principle. In view of the fact that an increase was to be made in the existing stumpage of 50 cents at the end of the present year, it was provided that no further increase should be made until the average selling price of lumber had passed the figure of $18. Thereafter the following increases are to be effective:—

Twenty-five per cent. of any increase in the wholesale selling price of lumber above $18.

During the 5-year period 1920-1924 25 per cent. of any increase.
During the 5-year period 1925-1929 30 per cent. of any increase.
During the 5-year period 1930-1934 30 per cent. of any increase.
During the 5-year period 1935-1939 35 per cent. of any increase.
During the 5-year period 1940-1944 35 per cent. of any increase.
During the 5-year period 1945-1949 not to exceed 40 per cent. of any increase.

During the 5-year period 1950-1954 not to exceed 40 per cent. of any increase.

With the settlement of this important question in a manner that protects the public interest, while definite conditions of tenure are afforded to the holders of Crown timber, there has ceased to be any conflict of interest between the lumbering industry and the Government. The deed of partnership in 200 billion feet of merchantable timber has now been drawn between these two. The Government obtains an annual rental of some $2,000,000 until the timber is cut. No matter how long a time may elapse before this takes place—no matter how much conditions may change and stumpage values increase—the public treasury—at the time of cutting—will receive fair prices for the timber used. On their side the lumbermen have definite conditions of tenure upon which to base the financing of their enterprises. Under the schedule I have quoted above they are no longer subject to arbitrary changes either in the carrying charges or in the final payment on their timber. Far more than ever before the Government revenue is bound up with the prosperity of the lumbering industry; and in the dual campaign for the better marketing of British Columbia lumber in foreign countries and for the profitable development of new wood products in which the Provincial Government is now taking an active part, the Government and the lumbermen work together in a common cause. I do not know that any country in the world can show a more satisfactory relation between a government and an industry.

The Red Cedar Lumber Industry in B. C.

As yet red cedar lumber forms but a small percentage of the total lumber cut of British Columbia, the production being confined largely on the coast to a few mills making more or less of a specialty of the cedar business, and in the interior to the mills along the main line of the Canadian Pacific Railway and the Arrow Lake region, or the "wet belt," as it is sometimes called.

On the coast, as the forests on the west coast of Vancouver Island and those north of the Seymour Narrows are opened up, and as the loggers get further back up the deep valleys and higher up the hillsides, the percentage of cedar will likely increase somewhat, though it is probable that the coast cedar will always be more valuable as a shingle timber than a lumber timber. In the interior the construction of the Grand Trunk Pacific and Canadian Northern Pacific Railways will open up certain new areas of cedar, and thus production will be stimulated in that region.

In the interior the production of cedar lumber differs little from that of any other lumber. The timber is not so large as the coast timber, and though running largely to low grade it is much sounder knotted timber than the coast timber, thus giving a much larger percentage of No. 1 common lumber and making it chiefly useful as a yard stock. Lower freight rates to the prairie markets and its light weight when dry enable this timber to be disposed of at profitable prices where it would be impossible to ship other woods of similar grade.

On the coast the production of cedar lumber is a little different matter. Lacking the hardness or strength of Douglas fir and hemlock, it cannot be classed as a structural wood, and the prevalence of loose, rotten knots, heart check, rotten heart, splits and other defects in the bulk of the timber, has rendered it suitable for little else than shingles, where clear blocks can be cut out between the knots. To attempt to manufacture the bulk of the coast cedar into lumber, with the heavy freight to the nearest market and the extremely low grade of the bulk of the product, would be only to court disaster. It is therefore practically only the butt or clear logs that can be converted into lumber profitably, and this is done largely in what are known as "combination" mills, that is, combined lumber and shingle mills, where the clear logs are cut into lumber and the knotty hearts of the clear logs and the rougher logs are cut into shingles. At present there are six combination sawmills on the coast, though owing to unsatisfactory market conditions and the difficulty of obtaining a supply of the proper quality of logs three of these mills have never operated. A fourth mill is closed down at present, so that there are really only two combination mills in operation. In addition there is one sawmill cutting cedar exclusively and a number of other sawmills which specialize more or less in cedar.

To handle the enormous butt logs, many of them from six to ten feet in diameter, requires the heaviest and most modern equipment. Most cedar mills are short log mills, that is, built to take logs up to 24 feet in length only, as it has been found advisable, in order to obtain the maximum amount of clear in the logs, to saw them in short lengths. As much of the lumber as possible is also sawn vertical grain in a further endeavor to avoid the knots as far as possible. Even with the most modern machinery the exceptionally faulty nature of the timber, the large amount of waste, the fact that it must all be cut into inch lumber, and cut for quality, not quantity, all make for small outputs and high operating costs. Owing to unfavorable climatic conditions on the coast very little of the clear lumber is air-dried, all the cedar mills having extensive dry kiln facilities by which the lumber is thoroughly dried for from one to two weeks. Lastly comes the planing mill, where the lumber is still further reduced in size—much of it to half inch—and finally finished before shipment. The whole operation is therefore much more complicated than sawmilling in the east, and indeed probably more than twice as much labor is expended per thousand in the manufacture of cedar lumber as in fir on the coast.

Cedar Ideal for Outside Use

Owing to its weather resisting qualities and its ability to take paint well, red cedar makes the ideal wood for all outside use, wherever a smooth surface and long life are required. Its soft grain allows it to be nailed without splitting or checking, and it is not liable to shrink, warp or twist. As a siding wood it stands pre-eminent, and this applies to it whether in the form of bevel, angle, rustic, or novelty sidings, drop siding or bungalow siding. It is also largely used for outside finish of all kinds, door and window casing and mouldings. In interior trim its soft color and pleasing grain have made it popular for door stock, casing and base, ceiling, partition and panelling. Among its special uses may be mentioned boat lumber, windmill fan stock, water tank stock and moth-proof chests, its strong odor making it particularly suitable for this latter use. The common grades are largely run into shiplap and boards for cheap sheathings. A limited amount of the common is also used locally for culvert timbers, road and sidewalk plank and other similar uses, for which its ability to resist decay even when in contact with damp earth make it especially valuable.

As with the fir mills, the chief market for the cedar mills at the present time is the Canadian Northwest, though quite an important trade is done with Ontario in siding and wide finish. A good deal of bevel siding is also shipped to the United States markets, its light weight allowing it to be shipped even across the continent at low cost. The short length problem is partially solved by the demand for cedar clapboards in the New England states. Practically all the common, on account of its low value and increased weight, is either consumed locally or shipped to the prairie markets.

Little or no export business has been done in cedar other than to the United States, and what little demand there has been was chiefly for special sizes and lengths very difficult to obtain in so faulty a wood as cedar. It is unlikely that much export can be done in cedar in the ordinary sizes, as few countries use the wooden house to the same extent that America does.

The removal of the United States tariff last year will ultimately prove of considerable benefit to the lumber industry as the supply of raw material in Washington becomes exhausted, but at present that market is in so depressed a condition that it offers little encouragement for increasing production. The opening of the Panama Canal will probably mean the increasing of the production of cedar by the opening up of cedar areas at present lying undeveloped through lack of transportation. Much of this lumber will probably be shipped by cargo in the rough to the Atlantic seaboard in competition with the southern cypress, and finished there. Little if any of the present finished product will likely find its way to the east coast by water, as the difference in freight owing to its light weight will be very slight.

No fear need be entertained as to the ultimate future of the business, as with an abundant supply of raw material and good transportation facilities it is only a case of finding a market, and this is, in sight, so that in future the cedar lumber industry of British Columbia will occupy a much more prominent place than in the past.

Some Observations on Twin Band Saws

It is the custom of some saw manufacturers in shipping saws for use on twin band mills to send them in pairs— right and left.

In the filing room it would be well to study saws received for use on twin re-saw machines, particularly machines of the crowding wheel type.

It is not necessary and, indeed, it is not the wisest thing to do to continue running band saws in pairs as they are mated in the first instance. Study the saws. Note their tendency to dish either way. Very often a complete rearrangement of your order of pairing saws will save lots of hammering, and be the means of giving you more efficient saws.

Saw filers who got their training in saw shops, who are sawmakers as well as saw filers, know that in working band saw blades many of them will show more resistance to the hammer on one side of the blade than the other, and that there will be a tendency to take dish on one side, and that it seems to be the disposition of such a blade to return to this condition as often as it is leveled.

There is but one way to successfully meet this annoying condition; that is, to keep the blade dished on the opposite side, then after a time it will yield.

The tendency of band saws to return to this original dish will be noted while rolling with the stretcher.

Very often filers say, "My roll is dishing my saws." While it is possible for the rolls to do so, owing to poor alignment, in nine cases out of ten it is nothing more than the peculiar stubbornness of the blade noted above.

Light gauge saws in use on twin re-saw machines, running overcrowding the wheels develop this dish quite rapidly; hence the advantage of studying them and changing them about, if necessary, to overcome the trouble, thereby getting better all-round results.—J. J. M. in The Simonds Guide.

For the year ended June 30 last, the net profits of the Laurentide Company, Limited, Grand'Mere, P.Q., were $730,774, a decrease of $27,311. The sum of $161,267 was spent on capital account for the enlargement and improvement of the pulp and paper plant. The timber lands of the company are valued at $2,512,057, logs and supplies at $766,903, and merchandise at $344,342. At the annual meeting Mr. G. Chahoon, Jr., vice-president and manager, dealt with the paper situation. Newsprint, he said, was selling at the highest price in his experience. The price was $9 to $10 above that of last year, which gave double the net profits received two years ago. Market conditions were difficult to speculate on, but efforts will be made to renew contracts at better prices than the old ones.

Workmen's Compensation Act Results

Chairman of the Washington Commission Gives Report Upon Three Year's Operations—Good Results Secured

The recent enactment of a workmen's compensation act in the Province of Ontario, in the framing of which the Washington State act was to a large extent used as a guide, makes a report recently presented in connection with the work of the Washington State act of much interest. At the recent logging congress which was held at Bellingham, Wash., an address upon this subject was delivered by Mr. F. L. Daggett, Chairman of the Industrial Insurance Commission of the State of Washington. Mr. Daggett said in part:

"This is an era of intelligent application of the principles of compensation to injured workmen in the various industries of the country, rather than the cold-blooded manner of dealing through casualty insurance or other mediums, because there is a humanitarian side to this question. The injured workman is a man like ourselves. He has his place in the community; he has his obligations, both social and industrial, just as we have—and is entitled to the same consideration that his fellowmen, either employer or otherwise, is entitled to. The day of the workman being considered a part of the machinery of any given enterprise is past, and the employer has found and is finding that even from a purely business standpoint, it is desirable to treat this question from a humanitarian aspect. There was a large social, and to my mind, industrial loss in the former method of treating injured workmen through the medium of casualty insurance. Whenever a workman is deprived of earning power or his family through his death, of support, there is a distinct loss to the community because this lack of earning power or support must be supplemented from the general public and cannot be gotten rid of. It is therefore wise to endeavor to solve this problem through some beneficial agency.

Compensation—Not Insurance

"Workmen's compensation is not insurance and should not be confused with the insurance idea. Insurance means a contract between the insured and the insurer. This may mean that the employer through some insurance agency provides specific indemnity under certain regulations and under certain conditions. These regulations are limited and prescribe limited indemnities, usually well sprinkled with provisions for non-liability. A workmen's compensation act means compensation for accidental injury and loss of earning power upon a monetary basis by the industries through which the injury is sustained, withdrawing the same from the domain of private controversy and from the jurisdiction of the courts.

"On the first of the coming October, the Washington law will have been in force for three years. Being experimental in that it blazed the way for a new method of dealing with injured workmen, it is a compliment to the framers of this law that it has worked out so successfully and that the operation of the act has demonstrated its practicability; and that there is no disposition on the part of any one, employer, employee or administrative buerau, to change the theory of the law. Experience has shown that a few minor changes will be advisable and it is the intent of the Industrial Insurance Commission to recommend some such changes; but there is nothing in the amendments proposed by the commission, that will change the theory of the act.

Theory of Washington Act

"The theory upon which the Washington Workmen's Compensation Act is constructed is that mutual concessions were made by employer and employee. The employer gives up his right to plead defences on the ground of personal negligence, fellow servant fault or assumption of risk upon the part of the workman, and agrees to compensate the injured workman for any accident happening in the course of employment without regard to whose fault it was. On the other hand, the workman in consideration of being compensated for all accidents occurring in the course of employment gives up his right of suit against his employer. Therefore, the result is that every employer in a hazardous occupation as contemplated by the law, is compulsorily under the law, and must contribute to the accident fund and must acord with the provisions of the said act. The injured workman likewise must accept the compensation provided in the act in lieu of any or all other claims that he may have against his employer. The operation of the law means that 100 per cent. of the accidents are compensated, whereas, under the old liability system, there were not more than 5 to 10 per cent. of the injured workmen who received any direct remuneration for accidents incurred, unless by some arrangement with his employer such as hospital and medical attendance, to which the workman usually contributed.

Statistical Experience—34 Months' Operation

Accidents reported	40,828	
Files incomplete	784	
Files complete		40,044
Claims Disposed of		
Final settlements	29,280	
Fatal cases	869	
Total permanent disability	27	
Rejections (for cause)	1,789	
Suspensions (pending receipt of claimant's address, etc.)	1,121	
Suspensions (claims not filed by workmen; trivial cases)	6,478	
		39,564
Claims in process of adjustment	243	
Monthly payments continued 7-31 (disability still existing)	210	
Partial payments continued 7-31 (account of reduced earning power	27	
		40,044

Contribution of Employers

"At the close of business, July 31, 1914, being 34 months' operation, the total amount paid in by the employers of the state is $4,021,-152.37; of this amount $2,251,476.29 has been paid directly to injured workmen, $197,002.47 has been paid in pensions, and a pension reserve set aside to pay pensions already allowed, amounting to $1,-073,576.32. There was a balance on hand in the various class funds of $468,858.99. As nearly as statistics can be obtained the employers of the state, previous to the inception of this law were paying out $1,250,000 per year in casualty insurance. It would be fair to assume that employers of the state who did not carry casualty insurance would have paid at least a half million more, thus making one and three-fourths millions per year that it was costing the liability companies. During the time the law has been in operation, the employers of the state have not paid as much in premiums as they would have paid under the old system. From the same source of statistics, the operation of the Washington act will show that the workmen as a whole have received directly or in pension reserves, more than three times what they would receive under the old system; therefore, I cannot see that there can be any question as to the beneficial qualities of our present system over the former method of dealing with our injured workmen. If the injured workman can receive more than three times the amount he formerly did at no greater cost to the employer and the public receive the benefit of the elimination of personal liability litigation from our courts, there must be a direct benefit to all concerned, namely, the employer, the employee and the public.

Funds

"There seems still to remain an impression on the part of some employers that the accident fund is paying for the administrative expense. There are two separate and distinct funds. The accident fund is recruited by contribution from the employers in each class and out of this fund is paid the compensation to the injured workman for such class. For instance, take class 10 in which logging and milling operations are listed, you are asked to contribute your proportion of the necessary funds to meet the demand for payment of injuries received by workmen engaged in your class only. Coal mining, being a distinct class, does not receive any benefit from your contributions to the accident fund, nor do you receive any benefit from theirs. It is just as distinct and separate as if you were working on entirely different propositions. No part of the accident fund is used for administrative expense. The maintenance or administration fund, is a sum appropriated by the state legislature from general taxation. This is not more than the former expense to the taxpayers for court costs in personal injury litigation and is therefore no additional burden to the taxpayer. It may be interesting to note that the ratio of expense for the first thirty months based upon the amount contributed by the various firms, is 7.57 per cent. This amount will vary a little each month on account of being based on the amount of contributions, these amounts varying according to whether demands are actively coming in or not. But it is continually running at, or under the percentage just quoted. We feel that the taxpayers of the state can be well satisfied with the expense ratio of this department. The department is organized and run upon commercial business principles,

and we believe will compare favorably in its operation as to efficiency and expense with any similar commercial enterprise.

Pension Reserves

"Some of our friends are still a little hazy as to the manner of handling these pension reserves and the cry is still sent up by some of our casualty friends that the pension reserve will accumulate to a point where the cost will be prohobitive, but they fail to take into consideration the system upon which we are working. As soon as a claim for pension accrues, whether for permanent total disability or a dependency pension on account of the death of a workman, an amount is immediately set aside from the current fund based upon the expectancy of the pensioner according to the accepted mortality tables, not to exceed, in any event, the sum of $4,000. In some intsances, this $4,000 will not meet the requirements but there is a provision in the act whereby any surplus on a pension, that is, if a pensioner dies before the amount is exhausted, or a widow remarries, this surplus is returned to the accident fund. Twenty-seven widows have remarried since the beginning of the operation of the law. Again, the law provided that where there is any deficit in the reserve set aside, the additional will be paid out of the current accident fund. These amounts should easily offset each other, so that it will be readily seen that the pensions do not accumulate from year to year in the sense that they are a greater burden from time to time, but the current fund cares for the pension reserves.

Foreign Dependents

"The question has been raised as to whether foreign dependents should receive the same amount as those living in this country. It is argued that the purchasing value of a certain sum of money is nearly double in the foreign lands to what it is here, and also that it takes money out of this country that ought to remain in it. As a counter argument to this, it is stated that if the workman comes to this country and is accepted by the employer upon the same basis as the American workman, that he should be likewise compensated. It is also held that if any difference were made in the treatment of foreign workmen, there might be a tendency to exclude the American as against the foreigner, or the foreign single man. Some states having workmen's compensation acts do make a difference. This is a matter that will undoubtedly be discussed in the next legislature and I am simply suggesting the topic for your consideration.

First Aid, or Medical Attendance

"The present law does not provide any medical or hospital attendance. At the time of the preparation of this address, it would appear extremely probable that the initiated "First Aid Bill" will be found to have enough signatures to entitle it to a place upon the ballot at the coming election in November. Should this law become effective, it will take care of this situation without any action by the state legislature. In the event that it does not, the commission will prepare and recommend, a medical attendance amendment to the present law, together with either a waiting period or a form of participation by the workman in the expense of this medical attendance. It is the judgment of the commission that a reasonable medical attendance under the operation of the law, is not only desirable but necessary. It should be safeguarded thoroughly to see that it is not abused, intentionally or unintentionally.

"Safety First"

"One of the unique and humane phases of workmen's compensation is accident prevention. It has become a well-known fact that it is much better to prevent an accident and retain the earning power of an individual even from a wholly economic standpoint, than to have the accident occur and the loss of earning power ensue. There is no argument at all from the humanitarion side of the question but what accident prevention is a desirable thing and, as has been said, it appeals to us from an economic standpoint."

A despatch from Victoria, B.C., states that the British Columbia Government is considering the confiscation of $9,000,000 worth of timber limits owned by the firm of Alvo von Alvensleben, a large trust company backed chiefly by some of the largest banking houses in Germany. This firm took over control of the Vancouver Timber & Trading Company about two years ago and has other large financial and industrial interests throughout the province. It is said that one of its chief clients is the German Emperor.

Robert Cox & Company, Liverpool, England, in a recent lumber trade circular say: "In handing you particulars of pine goods now on the quay we strongly recommend you to replenish your stock at the present low rate of freight and before a revision of prices is necessary. High rates are being quoted for late shipments, and owing to the accumulation of food stuffs only a limited amount of space will be available for lumber. With the exception of red pine goods, our list prices remain unaltered until further notice."

The Bonus System in Logging Operations

By H. Syverson

The gradual change witnessed in the methods of logging on the Coast in the last twenty-five years has been interesting because of the marked improvements in the manner of handling the timber. Where, in the early days, oxen and horses were toiling laboriously with a string of logs on the skid road, we now behold the latest types of logging engines handling the largest logs with ease. Where, in the past, a 40-acre tract usually constituted a summer's logging, this can now be disposed of in a few days.

This gradual evolution in the logging industry, however, has been confined largely to the machinery and mechanical lines, while the condition of the men performing the labor in the woods has remained practically unchanged. The wages are higher, but this is partly offset by the present high cost of living. Men still carry their blankets when seeking employment and are usually assigned to a bunkhouse that can hardly be compared with a Dutch kitchen; with no accommodations for men to keep clean, and often infested by a horde of walking delegates, which will tackle the most muscular logger without fear or favor. The men do not get the rest and comfort needed, and the result is a feeling of resentment against their employer. They "loaf on the job" when they can, and usually only stay a short while.

In some of the prominent camps of Oregon and Washington this condition has been improved upon by furnishing iron bunks and a flunkey to keep the camp houses clean. Aside from pride of a well kept camp, the employer realizes that rest and some comfort when off duty are essential to good labor, and this creates confidence in him and a feeling that he has their interest at heart.

But the most important step towards gaining and retaining an efficient and intelligent crew, is the percentage, bonus or profit sharing system. This is not theory or experiment but an actual fact. It has been tried and established by a few camps in the West and by many factories and large concerns in the east and has proven a success, with gratifying results to all parties concerned.

To the man of self interest, this may seem an undesirable remedy, but on trial he soon will be convinced that the profit sharing system will amply repay him in the confidence, contentment and good will of his men, as well as in hard cash resulting from the increased efficiency of his crew.

Labor troubles would be unknown and the employer would have the satisfaction of having men that would have his interest at heart and knowing that the work would go on as well in his absence as in his presence.

Working under the bonus system now in use by the Portland Lumber Company, every man uses his best effort towards getting out logs and, so far as known, their camps hold the record for yearly output. The foreman is informed if any dilatory tactics are in vogue among the crew, as the men feel it is to their interest to have the best men at the different jobs, because of increased earnings. The bonus system has the effect of creating harmony among the men themselves and developing the spirit of assisting one another in order to facilitate the work. It creates a sense of security among the men and with it a desire to save their money and eventually to own homes of their own.

The Hill Logging Company, at Bunker, Wash., will soon adopt a system of this kind. The company have purchased forty acres of tillable land which will be cut up in one-half and one-acre tracts and sold at a reasonable price upon small payments. Lumber for houses can be obtained on the same basis and, if for any reason a man wishes to discontinue his payments, his money will be returned to him, with the exception of a small interest charge. Men are invited to express their ideas as to improvements in the work and often their ideas are of value.

In the above, the writer speaks of "Intelligent Crew." A stupid man is not profitable because his mistakes may cause more loss than his labor amounts to. An ignorant man is suspicious that whatever is proposed on his behalf, may be to his disadvantage. Men of this kind are not worth while.

The saying that men with "strong back and weak mind" are needed in the woods is a fallacy in these days when logging is approaching science. Men of intelligence and brains are needed in the woods as well as in the office to perform the work to best advantage and to avoid accidents.

The tendency of the times seems to indicate that we will see great changes along this line and that the profit-sharing system, when adopted, will prove of universal satisfaction.

Enquiry for Telegraph Poles

A firm on the list of contractors to the British post office for supplies of telegraph and telephone poles report their desire to obtain quotations for large quantities of these posts from Canada. In the past these poles have been drawn entirely from Scandinavia and the Baltic, which are, of course, advantageously situated for freights.

New Lumber Merchandising Methods

Can Trade Mark and Official Standards be Made to Promote a Better Trade Situation?

By A. W. Cooper*

In the last few years countless papers have been read and countless articles written pointing out that the lumber manufacturer was not a good merchant. Why he is so far behind other industries in this respect is largely a matter of history. Improvements probably only come when they are forced by necessity and the necessity of being a good merchant did not exist for the lumber manufacturer of twenty-five years ago. In fact this period has witnessed a remarkable change in the merchandising of commodities whether it be boots or shoes, safety razors, cement or sugar. This change has all come about as a part of the vast industrial expansion produced by the growth of the country and increased means of transportation and communication between its various parts. Today the lumber manufacturer of the country is beginning to wake up to the fact that the merchandising of his product is subject to the same economic laws as that of any other commodity and that he may apply the principles that have proved so successful in marketing generally.

It seems to me that to sum it up briefly the new thought in the lumber world is "Reaching the consumer." Now by this I do not mean selling direct to the consumer, which of course is not practical, but I do mean recognizing his existence and recognizing also the fact that the consumer is, in the last analysis, the market. I think it is no exaggeration to say that the lumber manufacturer generally, has entirely lost sight of the consumer. He has allowed the retailer to build up a wall between himself and the man who finally uses his goods and unconsciously he has come to regard the dealer as the market.

The dealer in other words, has become the end instead of the means and a barrier between producer and consumer rather than a medium of communication between the two. This is not blaming the dealer as it is the manufacturer who has really been to blame. The dealer who has grown up under this condition has finally come to believe he has certain inalienable rights, one of which is selling the consumer any wood he sees fit and he naturally sees fit to sell him the one from which he can derive the greatest profit. Not only has this opened the door for substitutes for lumber, but it has made it possible to play the majority of woods against each other to such an extent that the natural talking point and advantages of each individual wood have been lost sight of. Certainly every commercial wood of wide distribution in this country has its proper uses in the general scheme of things, but what has the manufacturer ever done to see that the right wood was used in the right place or what has he ever done to study the virtues or failings of the wood which he himself manufactures or to educate the consumer along these lines? He seems to feel that his responsibility ends when the lumber is shoved into the car door and if the dealer to whom he ships it doesn't kick about the grade, all is well. He has become the victim, however, of his own indifference and allows the wood that he is interested in to become the plaything of the man who has nothing at stake. We see this in the countless misrepresentations of our own woods that are made by jobbers and dealers the country over.

Misrepresentation Injures Wood

Now the great feature of the Forest Products Exposition and to some extent of the last National Association meeting was that they brought the consumer and the manufacturer face to face, so to speak, and drove home the lesson that every time the wrong wood is used for a given purpose, all woods suffer,—that every time our woods are misrepresented we all suffer,—that every time the names of our woods are distorted and twisted to the confusion of the man who might use them, we are losing ground. I might instance as an example of this laxness on the part of the manufacturers the case of the southern pine mills. The south produces, as you know, three pines,—the long leaf, short leaf and the loblolly or old field pine. The long leaf is the strongest and heaviest wood of the three and is the one that has made southern yellow pine so valuable for heavy timbers and construction purposes. The strength of this class of timber has repeatedly been tested and actual figures showing the stresses and strains it will bear are available to all architects and engineers and are naturally used by them whenever they are planning a structure. The manufacturer, however, has ignored this fact and seen fit to ship the other two pines more or less mixed with the long leaf and oftentimes sold them all for long leaf. The natural result of this is that the architect and engineer has become fearful of the product that is often sold as long leaf pine and the whole proposition has injured southern pine generally.

Our own woods are being hawked about in the eastern markets under such a variety of names that the man who might buy them is utterly at sea and solves the puzzle by refraining from buying any of them.

Granting that the conditions that I have outlined exist, the next question is, what are we going to do about it? One of the first attempts to remedy the present defects in merchandizing was the cypress advertising campaign. This recognized for the first time in a broad way, that the consumer was the market but even the cypress people when they went into it, did not realize half what they do now. Their advertising has not only advertised cypress, but has taught the manufacturer of it, the possibilities of his wood.

Another example of the attempt to solve the problem is the advertising of the coast fir people. Now in a general way, I think this advertising campaign was undertaken because advertising is the method generally pursued to educate the public and to market any other wares, but I doubt very much if many manufacturers who spent their money for the advertising knew much about all of its possible phases. I know that some of them were not very well prepared to advertise, as they did not know enough about the real qualities of their own wood. Furthermore, in all the advertising, so far as I know, there has been no consistent effort to protect the consumer and by so protecting him, protect the good name of the wood advertised.

Anybody can manufacture fir, and while the good effects of the advertising last, can profit by it, and unload mismanufactured, poorly graded or unseasoned lumber to the ultimate detriment of all fir. This leads me to what I believe is the proper solution for any district, particularly a district no larger than our own.

Adopt Trade Mark

Briefly, my suggestion would be to start a broad advertising campaign along the lines pursued by the coast and cypress people and at the same time spend some money and effort in gaining a proper knowledge of the uses, good qualities and defects of our own woods.

Secondly, have the association as an association own a registered trade mark that could readily be stamped on each piece of lumber we ship and then advertise not only the wood but the trade mark.

The use of the trade mark would be open to all members, but to see that its integrity was maintained the association could keep a man at each mill in its membership, the man to be in the employ of the association and to have the right to say that the trade mark should not be used on any given shipment. The reason for this would be obvious. If a man wants to ship green stock because he has got an order and has not got any dry stock to fill it with, all well and good,—let him ship it, but not with the trade mark on it, because if he did it would injure the reputation of the trade mark just that much when the man who used the stock found that it shrunk badly and perhaps that it caused him serious loss. Also the same is true of grades and mill work. If a mill isn't going to grade uniformly and manufacture its stock properly that is its privilege, but it should not be allowed to use the trade mark. In other words, this is a provision for protecting the integrity of the trade mark. It would also be necessary to have a slightly different make up for the trade mark on western pine and white pine, probably including the name of each, but otherwise being the same. We could then consistently get behind the trade mark and boost it in every way possible and wherever the Inland Empire woods went and made good, the Inland Empire mills would reap the benefit and we would be, at the same time, protecting the interests of the consumer, and making our advertising conform with the actual merits of our woods by avoiding misrepresentation and exaggeration. I believe in a very few years we could secure such a wide solid market for our product that most of our troubles would be ended.

Producer Should be Proud of His Product

This may seem like a rather high flown theory to some, but, gentlemen, I firmly believe that the day is not far distant when woods, the producers of which are not ashamed of them will carry a trade mark just as much as any other class of manufactured product.

What I would like to see is the Inland Empire leading in this field. Trade marked goods are not a novelty. They have been tested out and found to be the best means of protecting the interests of

* Secretary Western Pine Manufacturers' Association.

manufacturer and consumer alike. If anyone will show me a good reason why the same principle cannot be applied to lumber I would like to know.

I foresee that a good many of you will think that perhaps this might be done as individuals but as a district it is not feasible. Let me say right here that as individuals you never would have any widespread standing with the consumer even if you could afford to reach him. You will continue as individuals to the dealer naturally, but with the consumer your trade mark can only be Idaho White Pine and Western Soft Pine from the Inland Empire and not Potlatch White Pine or Grande Rounde Western Pine. I know some of you think you have a better quality of one wood or the other than the other manufacturers in this territory. Perhaps you have, but to a large extent the general inequalities of the lumber are evened up by our grades and for one man who prefers the product of some one individual mill, a dozen others can be found who would prefer to get it from some other mill.

Maintain Individuality of the Mills

Furthermore under the plan that I suggest no mill need entirely lose its individuality. All it is interested in is in seeing that all the other mills who use the same trade-mark with it, grade, manufacture and season their lumber rightly.

Now gentlemen, in conclusion let me say that if the Forest Products Exposition taught anything it certainly should teach us that we have two woods that we can be proud of in our Idaho White Pine and our Western Soft Pine, and that we need not be afraid to inaugurate an advertising campaign to exploit their merits to the consumer nor to put a trade-mark on them that would indicate where they were manufactured. And further, if we are going to hold our own with other woods and if we are going to do our share toward seeing that all wood holds its own against the substitutes we have got to get into the game of merchandizing along modern lines. Every other industry of importance does this to-day and the extent to which some of them go in educating the consumer and in helping the dealer to educate the consumer, to sell their product is amazing. It is certainly up to lumber to join the procession.

Hoo-Hoo Annual Held at Winnipeg

Large Attendance at Twenty-third Meeting—Lumber Trades Benevolent Association to be Formed

The twenty-third annual meeting of the Concatenated Order of Hoo-Hoo was held at Winnipeg, Man., from September 8th to 11th, and was, as everyone expected, a remarkable success. The attendance was very large and the interest was exceptionally keen.

The address of the Snark, Mr. John H. Kirby, of Houston, Texas, who was unfortunately prevented from being present, by a meeting of the State Legislature, outlined the work of the year and the progress which has made during the past year. Referring to the lumber trade, Snark Kirby said: "The conditions existing in the business world, especially in the lumber and allied industries, have not been all that we could desire during the past year and to these conditions more than to anything else is due the apparent lack of interest and enthusiasm of our members. I feel sure that improved business conditions will show an increased interest and enthusiasm for Hoo-Hoo. Our reports will show a large number of Concatenations held and that we have initiated many members this year. Had business conditions been even normal our success would have been greater. It is, however, very gratifying to report that during the current year many of our old members, who from one cause or another, have permitted their enthusiasm and interest to lapse have reinstated their membership and are now working with us to make our Order the success we all desire it to be."

The address also drew attention to the fact that advance steps had been taken toward the formation of "The American Lumber Trades' Benevolent Association" along the lines suggested by Mr. John C. Spry, of Chicago.

Referring to the Death Emergency Fund, Snark Kirby stated that it had continued its beneficent work during the year and only two calls had been issued. It had been of great value in uniting the order, and had carried into many homes encouragement and comfort in the hour of sorrow and need. He asked everybody's co-operation in this fund.

The Imminent Distress Fund was also referred to briefly. This fund is entirely separate from the Death Emergency Fund, and helps to relieve the temporary necessities of Hoo-Hoo members who may need brotherly assistance. A vast amount of aid had been extended by this fund in the past.

The Scrivenoter's Report

The Scrivenoter in his annual report stated that the outlook for the future success of Hoo-Hoo was very bright, and that all that was necessary to insure a splendid success was that each member of the order should take a little more active interest in its work, and give to the Supreme Nine, and to the Vicegerent Snarks their loyal and hearty support. The Scrivenoter's report included details of the operation of the Imminent Distress Fund, Death Emergency Fund, the Special Hoo-Hoo Relief Fund, and reports upon concatenations, the work in the various vicegerencies, the work in the various jurisdictions, an analysis of work and membership according to States, and much other information of value to Hoo-Hoo.

A number of interesting suggestions and recommendations were also included in the Scrivenoter's report. Among these was a repetition of his recommendation made at the Twentieth Annual Meeting to the effect that the amount of dues should be increased from $1.65 per year to $2.00 per year, the difference to be set aside in a separate fund for some special purpose, such as the establishment of a Chair of Forestry in some college, or some other undertaking which might meet with the approval of the members.

In referring to the Imminent Distress Fund, the Scrivenoter said: "I find that the purpose of this fund is not thoroughly understood and appreciated by our members generally. This fund is one of the greatest features of our Order and is worthy of the support of every member. This is a voluntary fund and no member is required to contribute thereto, but I believe that if the good that can be accomplished through this fund is thoroughly understood, a large number of our members would be glad to contribute their share to this worthy fund. Give this fund your careful thought and discuss it freely and decide whether or not we shall continue this work. I recommend that it be continued and that a call be issued each year around Christmas. This fund is kept separate from other funds, and list of contributors should be published and a complete record kept by the Scrivenoter of all receipts and disbursements, but names of no one receiving assistance should be published. Information, however, as to whom assistance has been given should be furnished by the Scrivenoter on request of any member."

The Scrivenoter expressed his appreciation of the extensive publicity given to the order and its members by the lumber and trade papers, and stated that members should do all in their power to advance the interests of the lumber and trade papers, and give evidence of their appreciation of this assistance. "We should subscribe for, advertise in, and in every way possible, advance the interests of our lumber and trade papers, especially those papers which have given Hoo-Hoo the attention and support it deserves as a lumber organization" said the report.

American Lumber Trades' Benevolent Association

One of the most interesting developments of the Twenty-third Annual Meeting of the Concatenated Order of Hoo-Hoo, recently held at Winnipeg, was the announcement of the appointing of a committee to organize "The American Lumber Trades' Benevolent Association." The committee is one of the strongest ever selected for anything in connection with the lumber industry, and consists of Robert H. Downman, New Orleans, La.; William D. Gill, Jr., Baltimore, Md.; Everett G. Griggs, Tacoma, Wash.; John H. Kirby, Houston, Texas; John C. Spry, Chicago, Ill., John H. Himmelberger, Cape Girardeau, Mo.; Julius Seidel, St. Louis, Mo.; George H. Grayson, Graysonia, Ark.; and Thomas N. Nelson, Indianapolis, Ind

A preliminary meeting of this committee will be held in Chicago on October 9th. This is the largest and most important proposition ever inaugurated by the Concatenated Order of Hoo-Hoo, and it deserves the hearty co-operation of everyone engaged in the lumber industry who has the interest of his fellow men at heart. A similar association has been in existence in Great Britain for many years and has done remarkably effective work. It is the intention to incorporate The American Lumber Trades' Benevolent Association as a separate organization to be conducted entirely free from any other organization. The Concatenated Order of Hoo-Hoo simply stands as godfather to the new movement, and will do all it can to assist in its development of the splendid ideas involved in the formation of the Association.

During the year ended June 30 last, the Province of Quebec received the sum of $1,777,220 on account of lands and forests, while the disbursements of the department amounted to $413,064.

An Interesting Shipment of Pine to England

Mr. Robert Vestal, of the Atlantic Lumber Company, Manning Chambers, Toronto, reported recently that on August 24 he booked with Mr. Pepal, foreign freight agent of the Grand Trunk Railway Company, one car of pine lumber from Waubaushene to Liverpool. Space for this shipment was arranged on the White Star boat leaving Boston on Saturday, September 8th. The car was to be loaded and go forward at once. Mr. Vestal in reporting this transaction said that it would probably be of interest, as he thought it possible that it was the first shipment of pine from Ontario to the Old Country since the war started.

WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (14 agate lines make one inch.) ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

WANTED a competent man to look after bush operations. Apply, F. W. Brennen & Company, Hamilton, Ont. 18-21

WANTED a partner who will manufacture pulp from logs delivered at a mill site on a deep water harbor in Newfoundland. For further particulars apply to F. W. Brennen & Company, Hamilton, Canada. 18

Business Chances

Retail lumber business for sale, a going concern, prospects good, splendid chance for live man. Apply Geo. W. Mortimer, Niagara Falls, Ont. 18-20

Timber Limits For Sale

Can be quickly and profitably disposed of by advertising them on this page. This is where buyers of timber property look for opportunities to invest. If your "ad" is here the investor will see it. Canada Lumberman, Toronto, Ont. tf

Tenders for Fallen and Burnt Timber

Tenders will be received by the undersigned up to and inclusive of the 15th day of September, 1914, for the burnt and fallen timber on Berths 2 and 4, Township of Nipissing.

Also tenders will be received for Berths 2 and 4, Twp. Nipissing and Berth 4, Twp. Gurd.

The highest or any tender not necessarily accepted. For particulars address

ALEX. BLANCHARD,
Box 265 North Bay, Ont.
15-18

Sale of Pulp Timber

Sealed tenders will be received by the Minister of Lands at Victoria, B.C., not later than noon on the 30th day of November, 1914, for the purchase of nine (9) pulp licenses, situated on the Coast of British Columbia, and estimated to contain the following:—

Hemlock	87,301,000 ft. B.M.
Balsam Fir	44,444,000 ft. B.M.
Spruce	43,244,000 ft. B.M.
Cedar	27,779,000 ft. B.M.
Douglas Fir	2,779,000 ft. B.M.
Total	205,547,000 ft. B.M.

This timber is within ten miles of salt water and is tributary to Vancouver.

Thirty (30) years will be allowed for the removal of the timber.

For full particulars and maps address H. R. MacMillan, Chief Forester, Victoria, B.C. 17-20

For Sale

Rare bargain. Band mill located in best lumber and log center on Puget Sound. Rail and cargo shipping facilities. Excellent log pond. Ten and a half acres of land. Price one-fourth of appraised valuation. Must sell quick. Box 765, Canada Lumberman, Toronto, Ont. 8-t.f.

Miscellaneous

Portable Mill and Complete Camp Outfit For Sale

50 H. P. engine and locomotive boiler mounted on skids, only used three months. 54-in. circular saw mill, three saw edger, cut-off saw, shingle mill, belts, shafting, pulleys, etc. Also camp outfit, blankets, sleighs, waggons, chains, etc. Will sell right. Terms arranged or will take lumber in part payment.

C. H. ROGERS,
Care Peterborough Canoe Company,
18-21 Peterborough, Ont.

Saw Mill Machinery For Sale

Sawmill near Sellwood, Ontario, daily capacity 60,000 feet. All machinery including:—Log Ladder, Bullwheel, Steam Kicker, Log Loader, Stationary Steam Nigger, 42-in. Steel Carriage, 10-in. Steam Feed, 8 ft. Double Cutting Bandmill, Cast Iron Lumber Table, 5-Saw Slab Slasher, 48-in. Big Champion Edger, Trimmer, Transfers to Edger and Trimmer Tables, Sorting Tables, etc. Also, Independent Lathmill, Filing Room Outfit and Power Plant complete. This machinery is of the latest design, practically new and in excellent condition. Offers will be accepted for all or any part of this machinery, where it stands or F.O.B. cars Sellwood.

The Waterous Engine Works Company,
22-t.f. Brantford, Canada.

Do You Want to Buy or Sell?

If you wish to purchase or dispose of a particular stock of lumber or logs, a mill property or timber limit, or some second-hand machinery, the CANADA LUMBERMAN AND WOODWORKER will bring quick returns. Use our "Wanted and For Sale Department."

U. S. Production in 1913

"A year of overproduction" is the manner in which the preliminary report of the government on the lumber cut of the United States for 1913 characterizes the situation. Although the cut showed a reduction of about three quarters of a billion feet under 1912, considerable increases were made in the Mississippi Valley states and on the Pacific Coast. The cut of over four and a half billion feet for Washington alone is the greatest ever reported for any state.

It is stated that in 1913 over 8,000 less sawmills reported than in the previous year, but as many of this number had either cut out entirely or had very small capacity, it was not believed that the total of the cut reported would have been materially affected. The report goes into detail as to market conditions more freely than has been usual, saying that for the first three months of the year trade in all lines was excellent. Slackness prevailed for the remainder of the year, and the enforced curtailment, especially in yellow pine and Douglas fir, is given as the only reason why the production for the year did not exceed that of 1912.

The total production of all lumber is reported as 38,387,009,000 feet reported from 21,394 mills. Of this amount cut 30,302,549,000 board feet were softwoods. As usual yellow pine leads all the other woods in point of production, with Douglas fir second, oak third, white pine fourth and hemlock fifth.

As stated before, Washington leads all other states in lumber production, with Louisiana second, Mississippi third, Oregon fourth and Texas fifth.

The Utilization of Waste

At many mills the timber is so poor and the waste so great that the disposal of refuse matter is a serious problem. When, however, a part of the waste is utilized in the manufacture of some profitable by-product, and when a dry kiln is installed, which calls for additional boiler power and nearly doubles the amount of fuel consumed, the problem is reversed and the mill refuse is not sufficient to supply the furnace. The usual practice is to buy an occasional car of low-grade coal, there being a prejudice against attempting to utilize tree tops or other refuse from the logging camps, the custom established by our grandfathers being to burn such stuff in the clearings. However, anyone who wishes to work on a modern plan will be interested in one adopted by J. F. Mahoney, of New Orleans.

Mr. Mahoney says: "Wood fuel is scattered over the entire belt alongside any of the logging tracks. To make this available it is necessary to send out crews with teams and tools to gather it up and stack it along the track, or do this work by contract

"To overcome all difficulties we devised a machine consisting of a boiler, small hoisting engine, drag saw and splitter, all mounted on a flat car 12 x 40 feet. The cull logs are then loaded on cars and brought alongside and cut and split into 2-foot lengths. This machine is located at the concentration point, and all the unpleasant features of wood fuel are eliminated. The attractive elements are a constant and certain supply of fuel where needed, at a low, uniform cost.

"The operation involves seven men on the machine and five

stackers and splitters on the ground, all common labor, which in our country is about $1.25 per day. This machine and crew will turn out about 40 cords per day, and, after the cost of skidding and loading is added, the cost is well below $1.00 per cord. Stumpage is not considered, because if not utilized in this way it is allowed to go to waste.

Importance of Strong Bench Vises

The importance of providing bench vises heavy enough for the work to be done, thereby obviating loss of effect because of work being inadequately supported, was forcibly brought out by an incident occurring recently. A great deal of case-hardening of small parts is done in this shop. The inspector customarily tests the work on an old vise by holding one of the pieces of the lot in the vise and striking it with a hammer in order to observe the depth of case. He recently used a much larger and heavier vise when testing a lot of case-hardened parts, and did not immediately consider the effect of the larger and heavier vise. He noticed that the piece struck by the hammer snapped off very easily, and for the time being assumed that the pieces were case-hardened to a depth that made them brittle, but as the depth of case appeared to be normal he tried another piece with the same result. Then the thought occurred to him to employ the same conditions as formerly, and taking one to the old vise he found that it broke with the customary number of blows.

This little incident indicates again the well-known truth that a given blow has the greatest effect on work that is massive or massively supported. This holds true no matter what the work is —chipping, filing, etc. Workmen too often are inclined to think that a vise is a vise, overlooking the fact that weight and rigidity of vises are an extremely important factor in efficient bench work. Of course, the vise must not be too heavy and too cumbersome for light work, but in all cases it should be chosen with due regard to weight and strength as compared with the work to be done.

Cleans a building of Rats and Mice in short time, keeps it cleaned, for it is always ready for use. Made of galvanized iron, can't get out of order, lasts for years. Large number can be caught daily. Go to Catcher mornings, remove device inside, which only takes few seconds, take out dead rats and mice, replace device, it is ready for another catch. Small piece cheese is used, doing away with poisons. Catcher is 18 inches high, 10 inches diameter. When rats pass device they die, no marks left on them. Catcher is always clean. One of these Catchers set in a livery stable in Scranton, Pa., caught over 100 rats in a month. One sent prepaid to any place in Canada or United States upon receipt of $3. Catcher, 8 in. high, for mice only, prepaid $1. On account of shipping charges being prepaid, remittance is requested with order.

Review of Current Trade Conditions

Ontario

It is practically impossible to report anything in the way of developments in the lumber trade in Ontario during the past fortnight. One might visit any number of wholesalers and invariably find the same report, viz.: that trade is very quiet and prices are unchanged. In spite of the fact that there is little trade in progress, comparatively speaking, there is unquestionably a fair volume of lumber changing hands, and the firms which were first to realize this fact after the opening of the war, and to regulate their business accordingly, now find that they are receiving sufficient orders to keep them going along comfortably. There are, however, other firms which report that their trade has practically come to a standstill. It would be useless to specify any particular lines, as either active or quiet. At this time of the year, trade is generally quiet, but there is quite an active anticipation of improvement in the early fall. Some wholesalers who have been keeping their ears closer to the ground than others, state that there will be an appreciable improvement in Ontario trade within the next month or two. They estimate that the excellent crops and the abnormal demand for the product of Ontario farms will furnish farmers with sufficient means to come into the market for a larger quantity of lumber than usual. Under such conditions they count upon an active trade, if not almost a return to normal conditions.

The lumber trade at Ottawa continues on the same quiet basis as has been in existence since the opening of the war. Prices show no alterations of late, and are not expected to do so for some time. A slight increase is reported in the movement of stock to Great Britain. The large Ottawa Valley manufacturers have very few men in the woods as compared with previous years. Several of them have not as yet made their plans for the winter's operations.

Eastern Canada

Montreal wholesalers are more cheerful than they were a fortnight ago, about trade conditions. No important improvement in business is reported, but better trade is anticipated in a few localities, and the general feeling is mort optimistic. A gradual restoration of confidence is thought to be probable. Contractors are considering methods for inducing capitalists to go ahead with building operations. Shipments to the Old Country are fairly large, but are held back to some extent by lack of room in vessels for Liverpool. To other ports the facilities are better and shipments are in fair volume. Exporters are expecting a much better trade on account of the removal of the competition of the Baltic stocks. The pulp and newsprint situation is strong, with supplies low and prices high.

A steady demand is reported for 2/3 and 2/4 random spruce at Boston, which are quoted at $20.50 to $21 and $21.50 to $22 respectively. For 2/5, 2/6 and 2/7, the price remains at $20 to $21. There is a little more inquiry for 2/8 with a few sales at $23, which is 50c more than the recent regular quotation. Spruce covering boards are rather dull, most manufacturers still asking $21.50, but some of them taking a little less. The demand for lath at Boston is a little easier. For 1⅝-in. $4.10 is asked and some business is reported at $4 and $4.05. The lowest quotation for 1½-in. lath is $3.80. The demand for shingles is moderate and prices are steady. Best grades of white cedar extras are selling at $3.60 to $3.65. Clears are quoted at $2.85 to $3.10, and second clears at $2.60 to $2.65. Choice Vancouver red cedar shingles are offered at $3.63 to $3.75, and some fair Washington extras are quoted as low as $3.35.

Great Britain

Reports from London, England, state that the past fortnight has seen a remarkable amount of activity in the lumber trade. Anyone who has been fortunate enough to possess stocks has been able to dispose of them easily. Numerous transactions have been reported at prices which would have seemed incredible a month ago. The upshot of the present situation is that a very severe shortage of wood goods is certain to develop during the coming winter, which will be a handicap to a number of industries which use wood. The demands of the War Office and of other departments are so large and so important that they are creating gaps in many varieties of stocks on hand. Deliveries at London docks during the week ending August 22nd, amounted to 3,519 standards, as compared with 5,176 standards in the corresponding week of 1913.

A return of confidence is reported in connection with the lumber trade at Liverpool. The freight market has not shown any very extensive advance and a few charters from spruce deal shipping ports have been reported on a basis of 52s 6d to 55s per standard. This includes the East Coast of England and Scotland, which hitherto have not been direct consumers of New Brunswick and Nova Scotia spruce deals. While the Baltic is closed, and supplies of white deals are cut off, the usual importers will have to fall back upon spruce from the Colonies. Inquiries are being made from the East Coast for deals to supply the place of the "Riga whites," the supply of which has now been stopped, and it is likely to remain so for many months. The London Timber Trades Journal states that it is probable, even after the close of the war, that the Riga white deal trade will not be the important competitor it has been against the Colonial trade in spruce. The same journal says that some cargoes of spruce deals from the Miramichi have still to come forward, which were bought before the declaration of war, leaving the purchasers in a very lucky position. They, however, are only asking fair prices and are meeting their customers in a friendly spirit.

An upward movement is reported at Liverpool in c.i.f. spruce values on account of the appearance in the market of East and South Coast importers. Freights are now steady and war insurance is normal, so that a fair amount of business is being done at much advanced figures. Spot values are still firmer and are likely to stiffen. Stocks are only about sufficient to supply the demands which are expected.

No arrivals of pine deals from Canada were reported during the past fortnight and few more are now expected. Canadian red pine deals are selling well in the absence of Baltic reds.

At Manchester, spruce deals are held very firmly. Scantlings are at about £12 per standard and other sizes in proportion. It is reported that this attitude on the part of sellers is not encouraging much business. Red pine goods have advanced about £2 per standard.

The market at Glasgow remains unchanged, and trade is very quiet, with a tendency towards increased inquiry.

United States

Lumber trade channels in the United States continue to be seriously congested, as a result of the disturbance in financial and industrial conditions arising out of the war. The first adverse condition was the increase in money rates, which has caused considerable reduction in domestic consumption. The next adverse condition was the disturbance in the export trade, which is awaiting arrangements for financing purchases and providing vessels for transportation. Previous to the war, trade was gradually improving, but since the war it has fallen back again to its former basis which consists practically of transactions for filling immediate wants. There is no looking ahead in anticipation of increased business. The Southern pine market is not so strong as it was early in August, but there has been no general lowering of prices, Buyers of northern pine continue to conduct their business on a conservative basis. Farmers in the north are busy with threshing, and the retail trade is therefore quiet. Good business is looked for during the fall, as the result of high prices received for grain. In the hardwood trade the effect of the European war is greatly felt, but manufacturers expect an improvement as the season advances. The demand for hemlock has improved. Country retailers are increasing the size of their hemlock orders and producers are expecting an active fall trade.

A "Short Length" Long Pencil

One of the bright methods adopted by the Long Lumber Company, Hamilton, Ont., for keeping their customers interested in the excellent products which they handle, is by furnishing them occasionally with thick lead pencils which are of practical utility both in the office and in the yard. The pencils bear the well-known trade mark of the Long Lumber Company. One of the company's customers who received a favor of this nature, wore it down till it became a "short length" and then came back at the Long Lumber Company with the following letter:—

"Dear Sirs:—This Long pencil is short. If the same were longer, I should remember Long longer, and if you knew how I long for this Long pencil to be longer you would not linger longer but would send me a longer Long pencil with no longer delay. In short this Long pencil has been of great use to me and I would greatly appreciate another."—**W. W. Lovell.**

The Canada Lumberman agrees with the Long Lumber Company, that the writer of the above letter would probably find some Irish blood in his ancestry if he searched far enough back.

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Montreal Trade More Cheerful

Montreal, September 10th (Special to the Canada Lumberman): On the whole reports by local wholesalers are of a more cheerful character. While business has not improved to any marked degree, here and there trade has picked up considerably, and a more optimistic feeling generally prevails. Collections, however, are still difficult. The outbreak of the European war naturally caused much alarm, and lumbermen, in common with those connected with other industries, took prompt measures to curtail expenditure and to reduce operations. Confidence is now being gradually restored, although it is not likely that business will expand to any great extent this season unless contractors find means of re-starting on a large scale. This they are attempting to secure, and a committee of the Builders' Exchange has been appointed to consider methods of inducing capitalists to go ahead with new buildings and to withdraw orders to stop work on structures in course of construction. This will depend on how far workmen are prepared to co-operate with contractors in reducing the cost of building; some contractors are willing to build without profit, but they also ask the workmen to accept lower wages.

The building permits for last month of course show a considerable reduction. The total was $1,114,745, a decrease of $1,203,927; for the year to date the total is $12,158,177, or a loss of $1,658,445.

Although shipments to Great Britain are not on a large scale the outlook is fairly good. Birch and pine continue to go forward in moderate quantities the scarcity of freight room to Liverpool being the one serious drawback. Room for shipments to other United Kingdom ports is up to requirements. Stocks on the other side are being depleted, and as there is no likelihood of shipments from the Baltic for a long time, it is probable there will be a satisfactory call for Canadian lumber, especially of the lower grades of pine and of spruce. The competition of Baltic lumber has of late years hit our red pine trade severely, but now that the former is shut off, inquiries are being made again in this country.

The pulp and newsprint position is practically unchanged. Supplies of these commodities are scarce and prices remain high. It is expected however, that there will be sufficient pulp to supply needs, there being considerable stocks on hand prior to the heavy demand. The chances are that quotations will strengthen within the next few weeks, as the consumption of pulp and newspaper will probably increase, the export demand for the latter being an important factor in the situation. The supply of foreign sulphite will also be limited consequent on the war, so that everything points to the maintenance of a strong market.

Ottawa Market Report—Logging Operations Reduced

Ottawa, Sept. 7; (Special to the Canada Lumberman):—Owing to the water in the Ottawa River being so low J. R. Booth was compelled to close down his timber mill and one of the pulp mills nearly two weeks ago and thereby approximately 1,000 men were thrown out of work. During the past week, however, there have been some exceptionally heavy rains, which have heightened the water and the firm will, it is understood, resume operations on the normal scale in the course of a few days.

Locally, trade is rather quiet and the prospects on account of the money stringency due to the war, are not as bright as lumbermen would like. There have been no alterations in prices lately nor are there likely to be for some time. Watson & Todd report that there has been some movement in exports to Great Britain. Last week Shepard and Morse shipped to Liverpool 600,000 feet of medium grades. Some idea of the effect the war has had already on British trade is given in figures cabled to the Dominion Government today from the British Board of Trade. Imports for August this year compared with the corresponding month a year ago show a decrease of $65,000,000, while exports have fallen off nearly $100,000,000.

In comparison with this time last year, there is very little doing in the lumber camps. The comparatively few men whom the Colonial Lumber Company, of Pembroke, had working in the bush a month ago have been recalled. The Pembroke Lumber Company have only one camp working. The W. C. Edwards Lumber Company, of Ottawa, have no men in their limits yet and they are undecided, so Senator Edwards told your correspondent, whether they will operate any camps at all this season. In other years they have worked ten to fifteen camps. Employment agents here have been instructed by lumbermen not to hire any natives of the countries that are at war with Britain.

Quite a number of men who were working in the shanties came out when they heard of the war and enlisted with the Canadian contingent now in training at Valcartier. Several of these men told the military authorities here that the first knowledge they got of the war was from old newspapers they got in the camps. The E. B. Eddy Company, of Hull, P.Q., have announced that the firm will keep open the positions of any of their men who go to the front.

It has been repeatedly reported lately that the Fraser Lumber Company, of Deschenes, Que., intended to move its entire plant to Hurricanaw this fall. Officials of the company have told the Canada Lumberman representative here that these reports are not true. Mr. F. A. Gendron, who is a member of the firm, states that the company is erecting a large sawmill in the Hurricanaw district, but the Deschenes plant will not be interfered with in any way.

In an official statement issued by the government a few days ago, the declaration is made that there has been no undue increase in the cost of living in Canada since the outbreak of war. "The trade in lumber was at first reduced by the war, but soon improved as insurance rates became cheaper and trade routes were opened. Spruce deals declined slightly at St. John, N.B., as no vessels were to be had for a time," is one extract from the statement in question.

St. John Market Quiet—English Deal Stocks Low

St. John, N.B., September 7th; (Special to the Canada Lumberman):—Very little of an encouraging nature can be said of the lumber industry at the port of St. John during the past month. It has remained stagnant, and at the present time shows very little signs of improvement. It is not a question of price, but of finding a buyer. Three of the saw mills belonging to J. E. Moore & Company shut down about the first of the month, due to shortage of logs, and it is said they will not resume until the last of this month, when enough logs will have come through the booms to keep them at work until November. Chas. Miller has closed his lime kilns and shingle machines, because of the demand for lime having dropped to nothing. The shingle trade is also bad and shows no signs of improving. At present this leaves only six mills in operation, viz., Messrs. Stetson Cutler & Company, two mills; Murray and Gregory, Chas. Miller, Warner & Company, and Randolph & Baker. With the exception of Messrs. Stetson Cutler & Company, these are all sawing English deals.

No large stocks of English deals are on hand as most of the mills are idle and therefore the accumulation since the war began is not heavy. Previous to that date stocks were well shipped up. Stock on hand at city mills would not exceed nine million feet, all of which is sold.

Prices for deals show no decline, in fact they are a little better, but there are no stocks offering for sale.

In the American market business is yet very slow and orders are hard to get. Prices are $1 per M. less than quotations of early spring, when the base was about $24.50 per M. delivered Boston points. The price at which ordinary specifications of two inch are now selling will leave about $15.50 per M. on sellers' wharves at mills.

As yet very little planning is being done for cutting logs for the coming year. People are waiting for the war to take some certain course, and unless it is known before late fall which way the tide will turn, the cut will be very small, but there is yet time enough for planning and it is to be hoped that things will so shape themselves as to make more or less certainty regarding prices and quantity of next year's business.

The water in the St. John River is very low not having reached so low a mark in ten years. This has made the rafting operations very slow and it will be October before the operations are closed up, whereas the work should have been completed by September 1st.

Prices of shingles and lime have fallen and demand is practically nil. Local work of all kinds is about at a standstill and will probably show about on this basis until spring of next year, or until such times as the war clouds break.

The Turner Lumber Company, Limited, have moved their office from 25 Toronto street, where they have been located for a number of years, to the second floor of the new Stevenson Building, corner of Church and Lombard streets, Toronto.

"None So Deaf

As those who won't hear."

If you hear, you will understand; if you understand you will buy; if you buy you will know what we mean by Fenderson value.

You must see the Fenderson Spruce, the smooth dressing, the dryness, the high-line, uniform grade to appreciate Fenderson Value. It is not sold on a competitive price basis, but on a competitive Value basis.

It's a pleasure to handle Fenderson Spruce—from the time you first look into the car 'till long after the last piece has been sold,—it's good, uniformly good,—you will like it,—your customer will like it,—the Goodwill resulting from the sale of this Quality Stock is an asset worth having.

Make that next car a Fenderson car.

Fancy Woods and Veneers

THEIR ORIGIN, VALUE AND USE—COMMENT AND VIEWS ON AN IMPORTANT BRANCH OF THE TRADE.

Grading of Veneer Logs

In an address at the annual meeting of the National Basket and Fruit Package Manufacturers' Association, Stanley L. Wolfe, who is in charge of veneer investigations for the U. S. Forest Service, took up the question of log specifications and the utilization of waste from rotary veneer mills. While two subjects are here included, each may be considered somewhat independently of the other.

The speaker said that in preparing any set of specifications the basis to work upon is usually defects, and nearly all specifications for wooden products at least are primarily statements of defects allowable in certain classes or grades of material. The case of veneer logs is no exception and defects in these logs should form the basis for grading them. In all the replies received from veneer men in answer to letters requesting information as to the specifications in use, probably not a single one contained an enumeration of all the defects affecting the value of the logs. However, from a study of all the material at hand a fairly good lineup on the situation was obtained, and the important defects which affect the value of logs for veneering purposes are briefly enumerated as follows: knots, shakes, cat faces, rot, double hearts, heart grown to one side, crook, season checks, frost cracks and seams, worm holes, stained sap, hollows and crooked grain.

There may be good grounds for dispute as to whether or not all these are in reality defects but in considering the entire field of veneer manufacture, each of them is objectionable in one class of veneer or another. Some of them are obvious and recognized throughout the trade. For instance knots are always a defect in veneer and in nearly every kind manufactured must be clipped out. Of course small knots are allowable in vegetable and fruit package materials, but large ones must be eliminated in all cases.

Shakes are also defects in practically all classes of veneer, as are also cat faces, due principally to the discolored or rotten wood or checking accompanying them. Rot in all cases is a defect, but where the centre of the log is rotten, if well centred and of a size which will be covered by the machine chucks with sufficient sound wood present to insure the grab of the chucks, such rot should not be considered a defect.

If the heart centre or pith is so far grown to one side as to fall without the disc of the machine chucks so that the pith centre will be cut through in cutting the veneer, such heart is considered a defect. This includes also double heart.

Crook is always a defect, since a considerable waste in scraps is entailed in cutting a crooked log down to a perfect cylinder, and hollows in logs act in a similar way.

Season checks and frost cracks or seams are defects in that the veneer comes from the machine in small pieces and there is always a certain amount of discoloration present in such material. Worm holes are always defects in face veneers, but are not in core stock or cheaper veneers.

Stained sap is usually a defect and must be clipped out of face stock, box, panel material and nearly all other kinds of veneers. There are other special defects such as presence of sapwood in black walnut logs but those given above are the most common.

With a good line upon defects it is feasible to standardize them and prepare rules for grading logs. Specifications should be as simple as possible, however, so as to be readily interpreted, and yet they should be specific. The difficulties to be overcome can be briefly summarized as follows:

The differences in requirements in logs for different classes must be reconciled.

The availability of raw material in different regions and its effect on requirements must be taken into account.

The diameter requirements of mills in different parts of the country turning out different classes of veneer must be considered.

The differences of opinion in regard to defects must be reconciled.

Summarizing, the advantages accruing by the use of standard specifications are as follows:

The quality of logs received at the mill will always be uniform.

The amount of waste can be gauged.

The amount of raw material necessary to produce a given quantity of product can be easily determined.

The veneer manufacturer will have the advantage of an open log market.

General loggers can cut veneer logs for the general market.

Logs can be ordered and inspected at destination. That will do away with inspection and buying in the forest.

Buyer and seller can get together on an equitable and established basis with few disputes and rejections.

The speaker said that about three grades of logs are sufficient to meet the requirements for all grades of veneer. The Forest Service was working on a set containing three grades of logs, No. 1, No. 2 and Culls, and expected to submit them to the veneer trade in a short time. However, in preparing these tentative specifications, it was borne in mind:

That they should be applicable to all classes of veneers.

That they should be serviceable in all regions.

They should be simple and easily interpreted.

They should be specific.

They should contain standard defects clearly defined.

They should specify sizes.

The specifications for No. 1 logs were framed allowing defects so that the waste in clippings making first grade face stock should not exceed 15 per cent. while the waste in No. 2 logs should not exceed 33 per cent., and in culls a maximum of 50 per cent. With other classes of stock the waste would be considerably less than the percentage just given.

The Three Ply Box

It is something like twenty years now, since the three ply veneer box made its entry into the wooden package world, but it is only during the past few years that it has made much active progress. It has been growing, however, during the past few years and is today not only an accepted item of the box trade, but is coming to be quite an important factor.

There is quite an interesting story in the history and development of the three ply box idea. Like many a new idea which has enough good points in it to produce success eventually, it proved disappointing at first, and for a while was given up and pretty generally accepted as a failure. Good ideas, like good men, however, simply won't stay down. So it came back again and the present indications are that it has come to stay and to play an important part in box business in the future.

Several causes contributed to the failure of the earlier efforts. One cause that is urged sometimes is, that it came before its time and that the making of three ply lumber proved too expensive in competition with solid lumber and that what was needed to make a success of it was a time in the lumber industry when the price of solid lumber would reach the point where it would be just as cheap to make three ply.

There is something in this point of view, yet not so much as one might suppose, because today, three ply box shook is making good progress in the face of the fact that solid lumber is comparatively low in price, in fact nearly as cheap as it was in the early days. It is of somewhat lower quality but it goes to show that the price is not the only thing, at least the price of lumber is not the only factor.

Construction Has Changed

One of the noticeable differences between earlier efforts to promote the three ply veneer box and the later and more successful work along this line that perhaps has not received quite as much attention as it should, is a difference in construction. In the early days the proposition was that of making three ply lumber of practically equal thickness, and to be used in the same manner as solid lumber, whereas in the new idea in three ply boxes it is a different story entirely. The three ply stock used is very thin and the box strength is obtained by cleating. In other words a cleat or frame work of strips is made for strength and the panels are made of thin three ply stock, often only half as thick as was used in the earlier days. Not only is the stock very thin but it is made in even larger panels than were attempted in the earlier days. Conspicuous among the three ply veneer boxes are big dry goods boxes with panels three and four feet square and often less than three-eighths of an inch thick. It is never practical to make a panel this way in solid work. Not only was it impossible to get the size but the strength is not there and the strength is one of the strong points of three ply stock.

There is really not much more difference between the comparative cost of three ply built-up stock today and lumber, than there was twenty years ago. True, lumber costs a little more than it did twenty years ago, even though it has been unusually low during the past

year. It does not cost any more though than the increased value in stumpage and we should remember that this increased value of stumpage also adds to the cost of veneer for built up work. Indeed it is probable that, so far as raw material is concerned, the veneer costs more today compared with lumber than it did twenty years ago. At that time gum timber had practically no value and cotton wood brought very little so far as stumpage was concerned. The main cost was cutting the timber and transporting it to the mills. Now, however, all timber has value in the stump and this makes the raw material for the veneer cost considerably more than it did twenty years ago. The only points of economy in the matter of cost that have been developed in twenty years are those of cutting facilities and of equipment for handling, gluing and pressing the veneer work. There we have made wonderful progress. Glue spreading machines have been improved and new glues have been developed. The hydraulic press has become common in this work, taping machines have been invented to facilitate slicing and all around us there have been mechanical inventions to help out the work. These have unquestionably contributed quite a share to the progress and success of the three ply stock in the box industry today as well as to its prominence in furniture and cabinet and millwork.

What seems to be the most important point to be gleaned from a study of progress in three ply box work, however, is that of its lightness, permitting the use of very thin three ply stock reinforced with cleats instead of the heavier three ply stock which, it was thought, would be the right thing in the earlier days. There are some uses of heavy three ply for box ends and there are some heavy three ply boxes made throughout for cartridge boxes and boxes of very severe requirements. The great progress of the three ply box, however, has been in light weight packages with very thin panels of three ply reinforced with cleats and at times wirebound.

It is not only to be seen in the big dry goods boxes of the east, furnishing two important elements, those of strength and of lightness, but today it is an important factor in the whisky box trade. The whisky box, in its territory, is one of the most important and expensive boxes made. The trade demands good quality, also strength and service. This has called for good lumber in the past, and good workmanship. Lately a thin panel three ply box with cleated frame has invaded this field and has made quite a commendable record, receiving special indorsement from railway traffic managers, for it seems to hold, to stand up to the service and at the same time to be about as light as it is practical to make a substantial package.

For the maximum of strength with a minimum of weight the three ply veneer box seems to have the best of everything that has so far been offered, and this fact is contributing more to its present progress than any other. For this reason it has been able to come back into the game after its earlier failure, and prove itself worthy and make such progress as to put it in the ranks of important factors in the packing box trade.—Packages.

Important Trade Opportunities in China

The Canadian Trade Commissioner in China in a recent report states that during 1913 a large increase took place in the imports of foreign soft wood timber into China, as compared with the previous year. The gross total imports of soft wood lumber in 1913 was 161,375,117 square feet, while those for 1912, not including the amount re-exported, were 78,912,408—an increase of over 100 per cent. during the year, notwithstanding the heavy imports of 1912.

The cause for the large increase in the importations during 1913 was partly the extensive construction of public buildings during that period, also the fact that the city of Hankow had to be practically rebuilt after the sacking and burning of that city in 1911. Nanking was also almost destroyed during the rebellion of last year, and is now undergoing reconstruction in a much more substantial and foreign-like manner than formerly, and in every provincial capital extensive building operations are going forward at this moment, and much imported lumber is being used. In addition, railway construction has demanded many thousands of sleepers and much heavy timber.

It is extremely regrettable that with this heavy increase of lumber imported into China, Canada has taken so little part in supplying the demand, for no increase is shown in the imports of lumber from Canada in 1913 over those of 1912. China, however, is only beginning to build, and lumber and building material of every description will be required in increasing quantities year by year for some time to come.

In order to secure her share of this very large and increasing business, Canadian manufacturers and shippers should consider the following points of the trade: A special study should be made of the grade of lumber which is now being sold in China, and which is called China grade. It is neither No. 1 nor No. 2. Shipping and freights, the loading and discharging of cargo, time charters, etc., and the system of sales and cables, base rates and flat rates, etc., are also points of the business which are being worked out by competitors and which should not be overlooked. It would seem, too, that the Timber Inspection Bureau is of much assistance to Puget Sound shippers.

As to shipping and freights and the loading of cargo, the British Columbia merchants are probably at a disadvantage when compared with those on Puget Sound. Business arrangements have been made here, and business connections, too, should be established to handle and distribute the timber at this end. The China Import and Export Lumber Company have been of late improving their position and greatly extending their business. This firm occupies large piling grounds on the water front, has branch agencies in Hankow and Nanking, and business connections throughout the whole of Central China.

A large demand for doors and window frames, stairs, mouldings, etc., must arise in China. There are exceedingly few woodworking factories in China, and these are of very small extent and capacity. The Chinese carpenter is a slow worker and his tools are exceedingly primitive, so his dimensions are never accurate. He does not see the necessity of having his door frames quite plumb, and as windows are never made to slide up and down, a little off the actual perpendicular does not seem to matter. Considerable orders for doors and window frames have recently been sent to Birtish Columbia mills and several inquiries have been made for information and prices, so further orders may confidently be expected to follow. This business should develop extensively and eventually attain large proportions.

Business in the west of Scotland timber trade, which had hardly got more than started after the holidays, has been brought to almost a standstill by the war news. There is considerable speculation as to its effect on values, which will be to a large extent influenced by the supplies on hand. Of the woods largely used in this market in two instances only (pitch pine and Oregon pine) can the supply be described as ample, they representing about a half of the entire stock of timber of all descriptions on the Clyde at present. Speaking broadly, the position of affairs may be said to be that on a basis of the first six months' consumption; the total amount of timber in the Clyde represents approximately from four to five months' supplies. Stocks in some instances are exceptionally light, the most notable probably being Canadian and Russian spruce deals, teak, birch, mahogany and furniture woods generally. The position appears to be that the lightly stocked woods at least will advance in value if for no other reason that the impossibility of replacing them except at a considerable addition to the cost.—Weekly Trade & Commerce Report.

An Interesting Moisture Testing Machine

An instrument of much importance and interest to the lumber trade, which is manufactured by the Morton Dry Kiln Company, Chicago, Ill., is described in a recent attractive catalogue published by this firm under the title of "Troemroid Scalometer, An Instrument for Testing Materials to Determine Amount of Moisture."

In referring to this instrument the catalogue says: "It has been the custom in buying or selling lumber to give but little attention to its moisture contents when considering its market value. The mills designate the stock as green from the saw, or 3, 6, 9 or 12 months air dried as the case may be. While this gives the purchaser a general idea as regards its moisture condition, it sometimes proves very misleading as lumber that has been air-dried in one locality or under favorable yarding conditions might air dry more in three months than it would in another locality or under unfavorable yard conditions in 6 to 9 months.

The time of the year the lumber is cut or piled on the yard also has a great influence as to its rapidity in air drying. A great number of woods will shrink in volume from 10 to 15 per cent. from green to kiln dry.

"It would be much more just to the buyers," the catalogue says, "as well as to the seller of lumber, if a basis could be established for marketing this product so that both parties could know the exact moisture condition as well as loss in volume due to shrinkage.

"The mill that can offer for sale lumber that contains only 15 to 25 per cent. of moisture should command a premium over the mill that is offering lumber with 30 to 35 per cent. moisture, as the purchaser is getting more lumber and less water, also a saving on freight and securing stock that can be put through his kilns in less time and with less loss in shrinkage.

"What may seem like well air-dried lumber to one person or firm may not appeal to another. Think of the arguments and disputes that could be eliminated in this way alone if buyer and seller both knew the exact moisture contents of the lumber at the time the sale was made."

The Troemroid Scalometer is claimed to fill the above requirements fully, and the company will be pleased to hear from any of our readers who wish for further information upon the subject.

Hardwood in the Retail Yard

The consumption of hardwood lumber of various kinds by planing mills and through retail lumber yards has reached the point now where those who are exploiting these products may well give more attention to the systematic cultivation of this field. It might even be urged that for the past few years this field of trade has not yielded so large returns as it should have because hardwood manufacturers have not sought to cultivate it so thoroughly or so attentively as they might. There has been too much inclination to regard it as a small incidental trade that fills in and helps one but not worth serious effort to follow up and cultivate, says J. C. T. in Hardwood Record.

Illustration of what may be done along this line is furnished by a case in the veneer industry where a manufacturer of high-grade hardwood veneer turned special attention to the development of trade with the planing mills having glue room departments. This trade seemed so small and insignificant with each individual mill that veneer people heretofore have not sought it. This man concluded to try it out thoroughly, and after a year or two cultivating this trade with close attention, he said that it was proving to be the best business he had. There were not a great many carload orders, in fact, most of the trade was in small lots, but he found at the end of the year that the aggregate not only amounted up to a goodly total but that his best profits had come from these small lot sales.

Another illustrative case may be found in connection with oak flooring. There has been a fair amount of exploitation of maple flooring before the retail trade but many of those making oak flooring through special channels, through individual agents who take contracts for and lay and finish the floors. There is not much question either but what a certain part of the parquetry and of the oak flooring trade will continue through this channel, especially such as show window work, but just the same in the face of this tendency and these special agents and contractors, a progressive retailer in one of the large cities has taken up this hardwood flooring idea as a strong feature. He has put a man well acquainted with the hardwood trade on this kind of business exclusively—that is the selling of hardwood flooring and of hardwoods of various kinds to the local trade at retail. The result so far seems to have proven entirely satisfactory and to have demonstrated an argument made in these columns heretofore, that a retailer, by carrying a proper stock of oak flooring and giving attention to its exploitation, can get a lot of business he had missed before, and in time can develop the trade so that local flooring contractors and layers will come to him for their supplies instead of having local shipments made for each job from the factory.

A remarkable change is coming over the retail trade and its attitude toward oak flooring and hardwoods in general. Only a few years ago the secretary of one of the retailers' associations brought the subject of oak and parquetry flooring to the attention of a meeting of the board of directors which was made up of influential retailers from various sections of the state. He pointed out to them that they were missing a certain share of the lumber trade and forcing manufacturers of oak and parquetry flooring to go direct to consumers with their product when they might buy this product and carry it in stock. One of these progressive retailers made the statement that he didn't care to bother with it and would rather see it go direct. Since that time, though, there has been a change of feeling on this subject. It is being realized that the hardwood flooring, and especially oak and parquetry in certain sections of the country, is coming to be an important part of practically every good home built, and is therefore an item well worth carrying in stock by retailers.

Meantime there comes a much more extensive use of hardwood for interior trim. From the North we have birch trim in standard patterns which many retailers are now carrying in stock; on all sides of us the planing mills are working birch, oak, gum, chestnut, maple and other hardwoods into casing, base, stairs, paneling and making various kinds of hardwood trim and millwork to order. Meantime here come the gum people boosting gum for millwork as well as for furniture. Their investigators have shown that very likely one reason why more gum is not used for interior trim is because it is very expensive when bought and made up to special order for each individual job, whereas other woods, especially pine, are offered much cheaper in standard patterns made in quantity at the mills.

This opens up one of the questions that should be seriously considered by the entire hardwood trade and that is the question of putting in kilns and planing mill equipment and making standard patterns in hardwood trim for sale through the retail yards.

It would not only enlarge the possibilities for marketing, by having this stuff worked to pattern as the pine people do lots of this work, but it would make easier the carload shipments and competitive prices with the softer woods. One thing that makes the retailer hesitate about buying gum or any other hardwood trim or mouldings is that he does not care to buy a carload of it at once. In buying his pine he has long since been schooled to the habit of making up mixed car orders, in which he can include anything in the way of casing base or other special worked stock, and then have the carload made up of flooring, boards or framing.

With the hardwood millman in a position to furnish flooring, casing, base step stock and various other worked items as well as rough lumber, the chances for trade in carload lots become much better in dealing with retail yards. Practically all retail yards carry some quantities of rough hardwood. Often the man furnishing oak lumber may be in a position to furnish poplar siding and dressed poplar boards. Then if he can include oak flooring, oak for casing and base dressed to pattern and oak for window sills his chances for carload trade in mixed orders are exceptionally good. The gum manufacturer has some of the same chances, that is for siding both of the bevel type and of the drop siding type, gum boards, rough and dressed, gum for flooring, and for interior trim and for ceiling. If these are made up in quantities to standard patterns there is almost as good an opportunity to sell mixed cars in hardwood to the retail trade as there is to sell yellow pine, and there is a splendid talk for the hardwood in the fact that it makes a trim and takes a finish which compares with cabinet work for which people do not think of using the soft woods.

Taking the retail yard trade through and through, it offers splendid opportunities for the exploitation of a wide range of hardwood products. Moreover, during the spring months some of the hardwood lumbermen of the South have admitted that were it not that the planing mills and retail yards, those catering to the building trade, have been liberal buyers of hardwood this spring the hardwood business would have been decidedly dull. This is pretty conclusive evidence that the yard and planing mill trade has grown to be an important factor. Indeed, it seems important enough that it should receive the serious consideration of the entire hardwood trade.

Loss of Output in Saw Mill

A very frequent cause of the reduction in the quality and quantity of the output in a saw mill arises from the variation of the speed of the engine, either from lack of power to withstand heavy, suddenly applied loads or inefficient governing. By the introduction of direct electric motor drives something has been done to remedy this variation in speed, but in many of the older mills there still remains much room for improvement.

If the number of revolutions of an engine running at, say, 100 revolutions is only reduced three revolutions, it will effect a planing machine running at 4,000 revolutions on the cutter-spindle some 120 revolutions, which is quite sufficient to affect the quality and quantity of the output, which in the course of a year may amount to a considerable item. Again, after a load has been removed, if the governing is not prompt and efficient the speed of the machines may be increased to a large extent.

Even when an efficient governor is fitted, to ensure steady running it is important that its gear be kept in first-class order and carefully lubricated. If it is allowed to run dry, or if an oil is used that is given to gum up, it will run unevenly. If the governor is driven by a belt, unsteady running may be caused by its slipping or not running true, and possibly bearing hard against a pulley-flange. The belt should be of ample width, be evenly jointed and kept pliable. We have seen many governors so placed that they had to be driven by a very short belt, which had therefore to be kept unduly tight. In these cases chain gearing can often be substituted with success, the slip being thus done away with. When the joints or gear show signs of wear have them seen to, as, to be effective, the whole governor should be in a thoroughly sensitive condition. Keeping the engines and machines in a mill up to a standard speed is a highly important economical factor, but is one that frequently does not receive the attention it deserves.—Timber Trades Journal.

An Important Waterous Bandmill Catalogue

An attractive new bandmill catalog has just been issued by the Waterous Engine Works Company, Limited, Brantford, Ont. The catalog not only gives illutsrations and descriptions of Waterous bandmills, but also includes a large amount of important information regarding the various parts and their functions. Excellent illustrations of these parts are included, also useful illustrations of foundation plans which will be of great assistance to those who are installing Waterous equipment.

The Waterous bandmill, which was placed on the market in 1909, departed in many ways from accepted standards in bandmill building practice. Its principal features—the spring balanced saw tension, tilting device, the method of supporting the upper wheel, and the design of the upper and lower guides, are worth notice. The steam raising and lowering device for upper saw guide has been added recently and is specially illustrated and described. This feature is of special benefit in speeding up and simplifying the operation of the mill.

OPPORTUNITIES

WE own and offer for sale on attractive terms a few especially well selected tracts of timber running from 50 million to one billion feet that are ready for immediate operation, having a good local demand at high prices.

The timber on the Pacific Coast is the last stand of the great forests. Well selected timber in British Columbia is the best investment on this Continent and offers especially attractive inducements for manufacturers.

EDGINGS

Ontario

E. A. Le Bel, of Sarnia, Ont., wholesale lumber dealer, has made an assignment.

The Algoma Timber and Lumber Company, of Michigan, has secured incorporation in Ontario, with authorized capital of $120,000.

The Cleveland-Sarnia Saw Mills Company, Limited, suffered a loss of about 250,000 feet of lumber in a fire in their yards at Sarnia on the 8th inst.

The Algoma Timber and Lumber Company, of Sault Ste. Marie, Ont., has been incorporated with authorized capital of $120,000. Mr. William E. Brown is the Attorney for the company.

The Field Lumber Company, Limited, Field, Ont., has been incorporated with an authorized capital of $50,000. Those interested include Z. Morean, Sturgeon Falls, and J. U. Lamarre, Field, Ont. They are given power to conduct a general lumber business.

A recent report from Niagara Falls, Ont., states that the city council have decided to purchase about $1,000 worth of electric light poles. The superintendent of the Electric Light Department is Mr. George Foster, and the city clerk is Mr. W. J. Seymour.

The Spanish River Lumber Company, Limited, have 22 camps operating in the woods this year and will cut 60,000,000 feet. This is ahead of any previous year's cut and shows the confidence of the men behind the concern in the future of the lumber business in Canada.

A stave mill at St. Thomas, Ont., owned by the Sutherland, Innes Company, Limited, of Chatham, Ont., was recently destroyed by fire. The mill had been for sale for some time, and practically all the machinery had been removed. The loss is covered by insurance.

The Wallaceburg Lumber Company, Wallaceburg, Ont., whose notice of incorporation was recently published in the Canada Lumberman, are the successors of McNairne Bros., Wallaceburg, Ont., whose business they purchased. They will carry on the regular lumber and building business of their predecessors.

E. B. Foss & Company, Bay City, Mich., who formerly owned and operated the mill of the Hope Lumber Company at Thessalon, Ont., which was destroyed by fire in 1912, have purchased the mill of the North Channel Lumber Company at Thessalon. They have not as yet announced any plans in connection with the operation of this plant.

A recent dispatch from Little Current, Ont., states that there is a serious probability of the Indians upon the Island becoming a Government charge during the coming winter. These men have depended upon logging operations for their winter's employment and it is expected that there will be scarcely any work of this nature upon the Island during the coming winter.

On account of the cutting off of the supply of European pulp and print paper, Canadian pulp mills are working at fullest capacity to meet the greatly increased demand. Mr. W. E. Stavert states that the plants of the Spanish River Company and of the Lake Superior Paper Company have been working at 100 per cent. capacity. The Spanish River Company's year ended on June 30th, and the annual meeting is to be held this month.

Eastern Canada

The sawmill owned by B. F. Smith at Florenceville, N.B., was recently destroyed by fire.

A large quantity of lumber at the plant of the Richards Manufacturing Company, Campbellton, N.B., was recently destroyed by fire.

A brisk demand for the product of the paper and pulp mills in the interior of Newfoundland has resulted from conditions growing out of the war in Europe. Steamers are rapidly arriving to take on board cargoes for England. It is expected that the mills will be obliged to supplement their present equipment and it is anticipated that new pulp and paper concerns will shortly be in operation. The demand is due chiefly to the increased needs of the news papers in London and other British centres.

The saw mill of the St. Lawrence Pulp and Lumber Corporation, Chandler, Gaspe, P.Q., is now in operation. The company have 25 miles of railroad graded, and 15 miles of track laid, while another ten miles will be laid before the frost. There are two locomotives of the Shay type and one side rod engine of the Mogul type, and these keep the saw mill continuously furnished with logs. When the pulp mill begins operations in December or January, additional locomotives will be required. The log loaders used in the bush are the American log loaders. The cars are all steel, with 5 feet trip stakes. The pulp mill is nearing completion so far as the building is concerned, and the installation of machinery will commence next month. The company's townsite is practically finished, there being between 60 and 70 houses occupied. In addition, new houses are in course of erection by tradesmen and labourers.

Western Canada

Arbuthnot Brothers' sash and door factory at Victoria, B.C., was recently destroyed by fire, the loss being $10,000.

The A. B. Cushing Company, Limited, has been incorporated, with head office at Vancouver, B.C., and authorized capital of $20,000.

The White Pine Lumber Company, Spokane, Wash., will build a large mill at Westbridge, near Greenwood, B.C., where they have a townsite.

The North Battleford Manufacturing Company's sash and door factory at North Battleford, Sask., was recently destroyed by fire, the loss amounting to $25,000.

The factory of the Sunset Sash & Door Company, 724 Broadway West, Vancouver, B.C., was recently destroyed by fire. The loss is placed at $10,000 which was partly covered by insurance.

The Canadian Pacific Lumber Company, Port Moody, B.C., recently lost about 1,500,000 feet of lumber by fire. The total loss is estimated at about $20,000. The mill and dry kilns were not damaged.

The shingle mill belonging to Messrs. Langs & Roddis at South Sumas, B.C., was recently destroyed by fire, together with about three carloads of shingles. It is not yet reported whether the company intend to rebuild.

A. Williams, of Vancouver, is president of the Colonial Sash and Door Factory, which recently started operations at Huntingdon, B.C., R. L. Gallinger, the manager, has had thirteen years' experience in the Puget Sound country, while H. M. Morris, another associate, is a practical man from England.

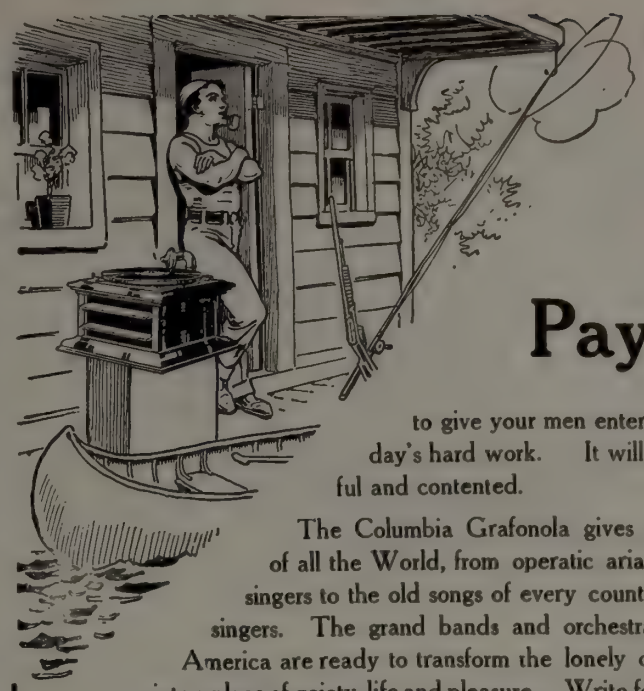
The Fernridge Lumber Company, of New Westminster, B.C., who recently lost their plant by fire, report that the loss was approximately $200,000, and the insurance amounted to $92,000. At present they have not decided whether they will rebuild, but they say that they have a large quantity of timber, about six miles of standard gauge railway, and all their logging equipment, so that it is more than likely that they will rebuild.

Sealed tenders are being received by the Minister of Lands at Victoria, B.C., up to noon on the 30th day of November, 1914, for the purchase of nine pulp licences, situated on the coast of British Columbia, and estimated to contain the following:—Hemlock, 87,301,000 feet B.M.; balsam fir, 44,444,000 feet B.M.; spruce, 43,244,000 feet B.M.; cedar, 27,779,000 feet B.M.; Douglas fir, 2,779,000 feet B.M.; total, 205,547,000 feet B.M. This timber is within ten miles of salt water and is tributary to Vancouver. Thirty years will be allowed for the removal of the timber. Full particulars and maps may be had from H. R. MacMillan, Chief Forester, Victoria, B.C.

The plant of the Skeena City Mills, Limited, of Skeena River, B.C., is located at a point 32 miles from Prince Rupert, on the Grand Trunk Pacific at the mouth of the Khyex River. The timber is fir, cedar, spruce and hemlock. The mill is a circular with a capacity of 50,000 feet. Two 10 x 12 donkey engines are used for logging. A dry kiln with a capacity of 30,000 feet of lumber or 35,000 shingles will be added. Two shingle machines are used and another Schaake upright will be installed later. It is also contemplated to add 24 x 48 Corliss engine and another 160 horsepower boiler, vertical band resaw, 14 x 14 sizer and a heavy outside moulding machine. The mill has a siding into the yard and a six-cent rate to Prince Rupert, a city of 6,000 people, with a 60-cent rate to Toronto. The officers of the company are E. W. Lesson, president; L. Manson, vice-president; I. Jordan, managing-director; J. H. Stanton, secretary-treasurer, and John F. Clark, general superintendent. I. Jordan, the managing director, is interested in the Prince Rupert Lumber Company, which operates a yard in Prince Rupert. It is the intention of the Prince Rupert Lumber Company to establish additional yards at Wainright, Fort George and Smithers stations on the Grand Trunk.

The Galt Knife Company, Limited, Galt, Ont., have issued an excellent illustrated catalogue of their productions, which are widely known and very popular among all users of machine knives of every description. In addition to a very complete set of illustrated descriptions of their various productions the catalogue contains a useful set of blank forms for use in connection with machine knives by means of which operators may keep track of the knives they use. Copies of this catalogue, which are sure to be appreciated by users of machine knives, may be obtained by writing to the Galt Knife Company, Limited, Galt, Ont.

A report from Chatham, N.B., states that the lumber trade situation has improved considerably during the last few weeks. Several vessels have been chartered, some having already arrived, for export loads. The market in the Old Country is reported to be encouraging. Freights have advanced, but the prices of lumber have also gone up, and a profitable trade is expected, unless the war dislocates commerce to a greater extent than it has up to date.



It Will Pay You

to give your men entertainment after the day's hard work. It will keep them cheerful and contented.

The Columbia Grafonola gives you all the music of all the World, from operatic arias by the foremost singers to the old songs of every country sung by native singers. You Need a Brake This Season

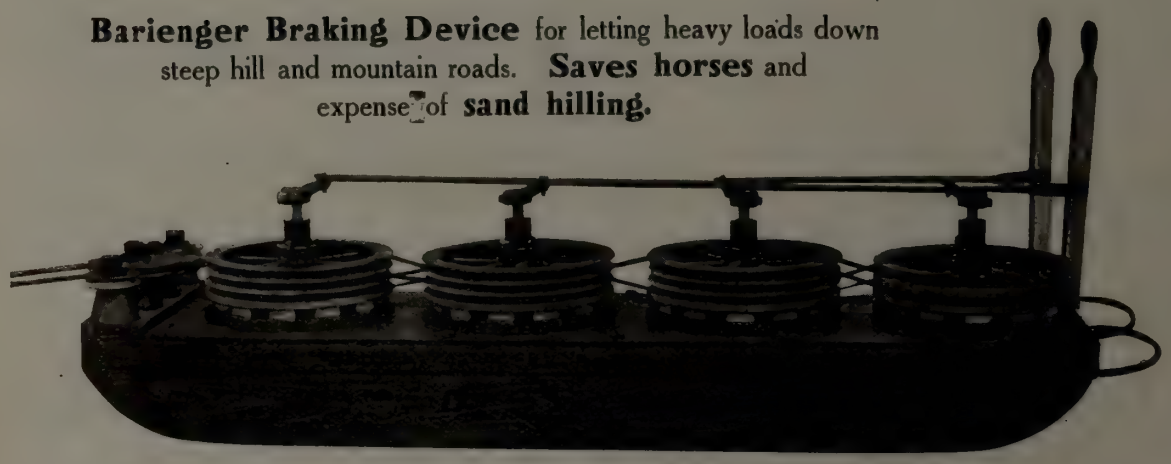
Barienger Braking Device for letting heavy loads down steep hill and mountain roads. **Saves horses** and expense of **sand hilling.**



Now is the time to consider the use of this brake for another season before hauling roads are planned and built. By using this brake lumbermen are able to work much steeper roads, and in consequence, shorter roads, and there is a considerable saving in the cost of building roads.

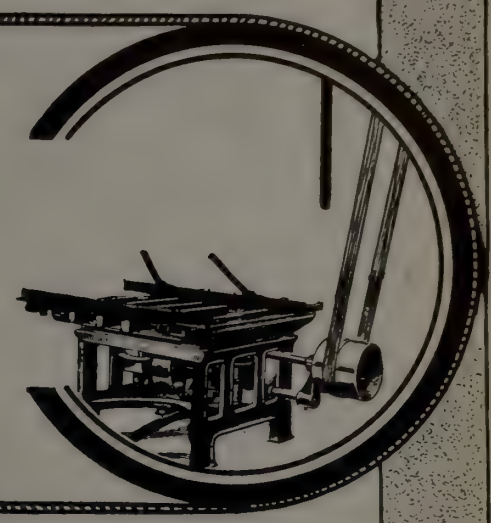
"Wilson Bros." Hardwood Flooring

is the Flooring that is manufactured expressly to supply the demand for the best. It is made by modern machinery from carefully selected stock, and every precaution is taken throughout our entire system to make it fulfill the requirements in every particular. Write us for prices.

Wilson Bros., Limited - Collingwood, Ont.

GOODHUE BELTING



FACTORY TO YOUR MILL

TO the saw mill and woodworking industries we offer an unusually good belting value in our "Acme Waterproof." This belting is specially made from the best hides to run in wet places where only the best quality belt can "make good." If you require any belting you should enquire into the merits of "Goodhue Belts" then you will buy a "Goodhue."

According to the conditions under which a belt has to run we recommend "Extra," "Standard" or "Acme Waterproof"—each brand the best quality but each made for a different service.

Send for particulars and prices **J. L. GOODHUE CO., LIMITED, Danville, Quebec**

If You Use Cross-Cut Saws You Should Have This Book

It contains valuable information on the "fitting" of Cross-cut Saws, shows the action of the Raker Tooth and explains how it leads to faster cutting. It also illustrates and describes the different popular types of Disston Cross-cut Saws.

It will aid you in selecting the proper style of tooth and saw for your particular work, for there is a Disston Cross-cut Saw to meet every condition. After reading this book you can better understand why Disston Saws are found in most of the lumber camps of the world and why they

Run Easiest, Cut Fastest and Last Longest

Rutherford's Stock Millwork

KLIMAX

If it's made of wood we can supply it. Our line of stock millwork embraces an immense variety of patterns in doors, newels, mouldings and other trim. Buy from our stock catalogue and you can save money and be sure of prompt shipment.

We are also equipped to cater for special detail work and keep a large plant in operation for this purpose.

The stocks we carry will always be found right up to the minute, and prices will be lower than obtainable elsewhere.

Write us for catalogue.

Not altogether what we say but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

West & Peachey - Simcoe, Ont.

THE SAW FILER WHO IS ONTO HIS JOB THINKS FIRST OF HIS GRINDING WHEEL. WILL IT CUT CLEAN, FAST, AND COOL—WILL IT HOLD ITS SHAPE AND CUT QUIETLY WITHOUT CASE-HARDENING THE SAW—WILL IT SHOW ECONOMY BY ITS LONG LIFE?
OF COURSE THERE IS SUCH A WHEEL—ITS THE ALOXITE SAW GUMMING WHEEL MADE RIGHT, RIGHT GRIT, GRADE, SHAPE, AND SIZE TO MEET ANY SAW-GUMMING CONDITION—AND ALOXITE IS THE GREATEST OF ALL STEEL GRINDING MATERIALS.

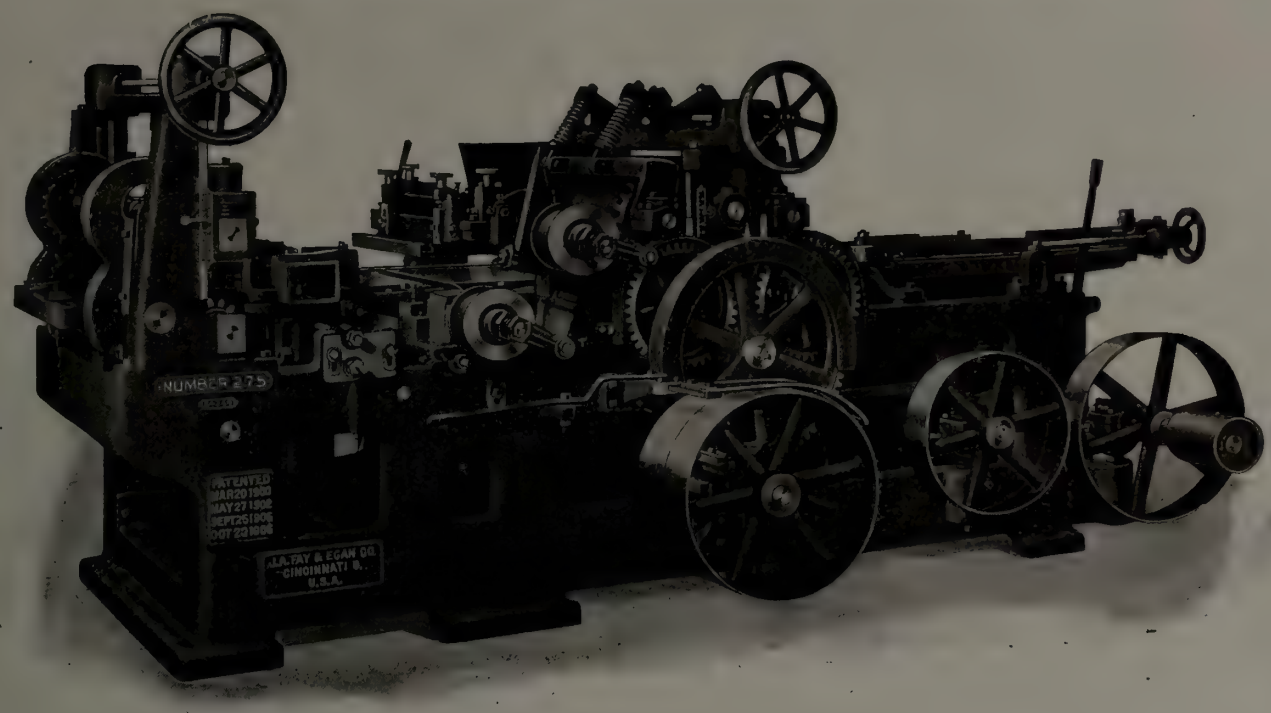
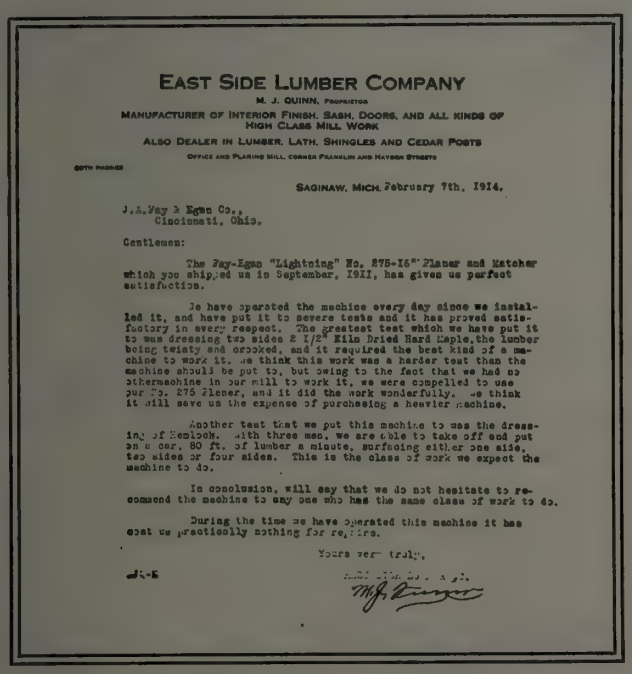
More Proof of the Value of this Medium Weight and Medium Priced Matcher FAY-EGAN "LIGHTNING" No. 275



Satisfied Owners everywhere are telling us how the 275 is doing all that we claimed for it, even more—it will do the same for you.



EAST SIDE LUMBER COMPANY

M. J. QUINN, PROPRIETOR

MANUFACTURER OF INTERIOR FINISH, SASH, DOORS, AND ALL KINDS OF HIGH CLASS MILL WORK

ALSO DEALER IN LUMBER, LATH, SHINGLES AND CEDAR POSTS

OFFICE AND PLANING MILL, CORNER FRANKLIN AND HAYDEN STREETS

SAGINAW, MICH. February 7th, 1914.

J.A.Fay & Egan Co.,
Cincinnati, Ohio.

Gentlemen:

The Fay-Egan "Lightning" No. 275-16" Planer and Matcher which you shipped us in September, 1911, has given us perfect satisfaction.

We have operated the machine every day since we installed it, and have put it to severe tests and it has proved satisfactory in every respect. The greatest test which we have put it to was dressing two sides 2 1/2" Kiln Dried Hard Maple, the lumber being twisty and crooked, and it required the best kind of a machine to work it. We think this work was a harder test than the machine should be put to, but owing to the fact that we had no other machine in our mill to work it, we were compelled to use our No. 275 Planer, and it did the work wonderfully. We think it will save us the expense of purchasing a heavier machine.

Another test that we put this machine to was the dressing of Hemlock. With three men, we are able to take off and put on a car, 80 ft. of lumber a minute, surfacing either one side, two sides or four sides. This is the class of work we expect the machine to do.

In conclusion, will say that we do not hesitate to recommend the machine to any one who has the same class of work to do.

During the time we have operated this machine it has cost us practically nothing for repairs.

Yours very truly,

JK-E

In fact, every one of the 275 we have put out has more than satisfied the purchaser in both quantity and quality of production.

The letter, herewith, shows how they use their 275 and what they think of it. We have others from all parts of the country proving it to be the Greatest General Purpose Planer and Matcher on the market.

The 275 is just the machine for your mill or factory. It is medium in price and weight, low operating cost, a fine Matcher and Floorer, a great surfacer, as well as an Inside Moulder.

Accessibility to all parts is a feature of the 275, a necessity of the general purpose machine.

If you need a General Purpose Machine why not get the Greatest—a 275. Write today.

J. A. FAY & EGAN CO.

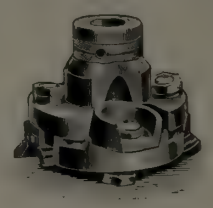
The

Shimer Cutter Heads

For Door and Sash Work

These Heads are designed especially to meet the requirements of Door and Sash makers—to save all the hand fitting. The shape of the mould desired is turned into the Circular Bits, guaranteeing a uniform pattern, and that there will be no trouble in framing door and sash parts when matched with Shimer Cutter Heads. Prices are as follows:



Door Head in solid section, complete with Bits to work 1 to 1¼ in. Doors	$18.03
Door Head with Expansion feature complete, extra	2.60
Bits for heavier doors $7.28 to $9.36 per set.	
Sash Head in solid section, complete for 1 to 1¼-in. Sash	17.91
Sash Head with Expansion feature complete, extra	2.60
Bits for heavier sash $7.00 to $7.66 per set.	
Cope Heads without Bits, each	6.45
Cope Bits moulded to pattern, $1.43 to $1.56 each.	

If you wish to reduce running expenses it will pay you to study the advantages offered by the Shimer Cutter Heads. There is nothing like them for strength—for Reliability—for Fast Cutting—for Quick Adjustment—for all-round work and lasting qualities.

These tools are turned out of Solid Steel Forgings—have the Shimer "make-ready" which saves you all the fitting and trying—keep your work up to the standard

Your Lumber Horse Needs

A talk with the Lumberman of Canada on the modern and sanitary system we have installed to serve your requirements.

FINANCIAL RESPONSIBILITY.—We are in a position this season to supply the lumber trade with the finest heavy horses suitable for camp work. We have shippers in the very best heavy horse district in Western Ontario, who make personal selections and take only the best. Every horse we ship out is guaranteed to be just as represented by us as to age, soundness, weight and quality—there is more than two million dollars behind this guarantee. These horses can be delivered off the incoming cars and transhipped in an hour from our yards.

SERVICE.—Our barn accommodation is up-to-date in every particular and has stabling accommodation for 500 horses. A track is also maintained for exercising horses while on the company's premises.

SANITATION.—Believing that prevention is better than cure, and to give the very best service possible we have this year employed a veterinary surgeon under salary. A daily and most thorough inspection is made by him of the entire barns and in this way the slightest indisposition is noted and the animal suffering immediately removed to the hospital on the grounds. "Safety first" is our motto in this respect.

TRANSPORTATION.—Our premises being directly on the lines of the C. P. R., G. T. R. and C. N. R., our rail facilities are such that we are in a position to ship on an hour's notice, and loading and unloading chutes are located right at the barn doors.

We gladly invite inspection of our entire system. Come and let us show you the most modern and sanitary system in Canada.

Dixon's Graphite Water-proof Grease

A single trial of this splendid heavy bodied mixture of mineral grease and flake graphite will convince you of its superiorities, both as a lubricant and as a rust preventive, over any other grease on the market. No saw mill plant should be without it, for the protection of slides, open bearings, chains and wire ropes.

Send for Booklet No. 238 on "Waterproof Grease."

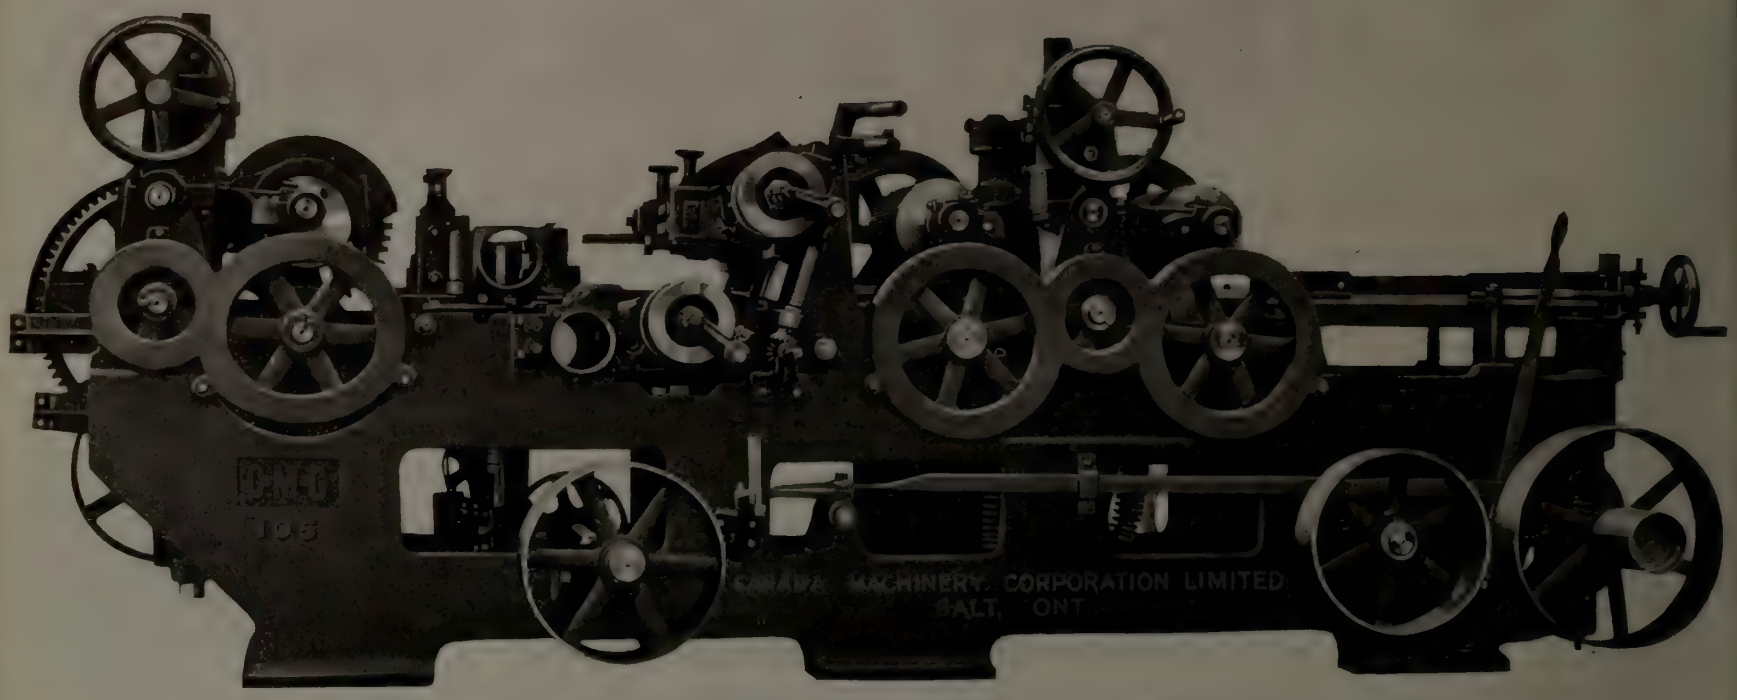
Joseph Dixon Crucible Co.

Established 1827

Planer and C.M.C. Matcher



No. 105—15″ Double Cylinder Planer and Matcher

A Medium Weight, Medium Speed and Medium Priced Machine for General Planing Mills

The following desirable features are found in this machine:

Top Rolls have a **positive** paralleled lift, cannot bind under any condition.

The Delivery Rolls are driven by single belt drive eliminating the usual long train of gears.

All Gears run on shafts mounted in bearings.

There are no gears hung on studs on this machine.

The machine can be quickly and readily set for either single or double surfacing.

Produces excellent work at all speeds up to 100 feet per minute.

Immediate shipment from stock.

Full description and specification sent on request.

THIS GUARANTEE PROTECTS YOU

We have such complete confidence in our sawmill machinery that it is all sold with the following guarantee.

These machines are guaranteed against defective materials and workmanship for the period of one year, and their proper and successful operation is also absolutely guaranteed. Should any part fail through defects, we will replace them free of charge, or should any machine not work properly, we will remove it at our expense, and refund any part of the purchase money which may have been paid to us.

You take no chances when buying our machines, and it is the only kind of machinery you want in your mill.

We build everything needed for a sawmill.

Let us get together

William Hamilton Company

Peterborough - Ontario

Morgan Machine Company

ROCHESTER, N. Y.

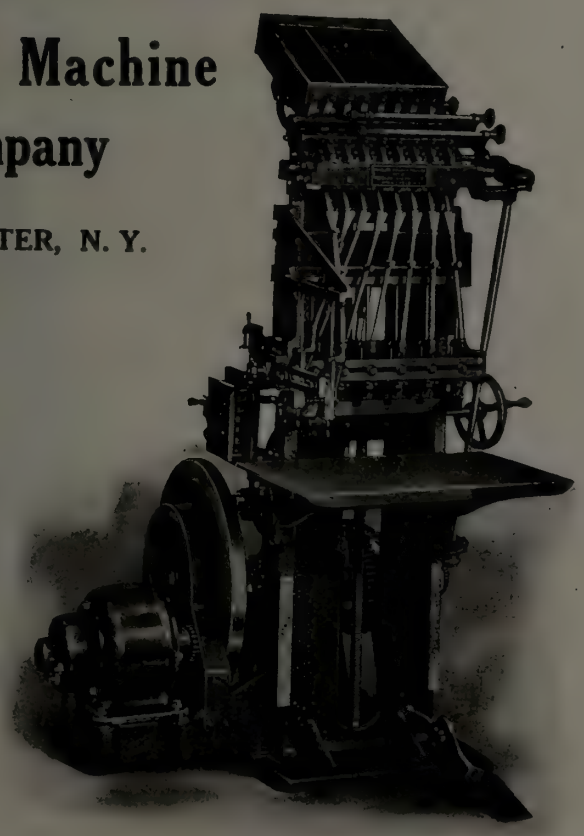
Manufacturers of—

Nailing Machines,

Lock Corner Box Machinery,

Box Board Matchers,

Box Board Printing Machines.

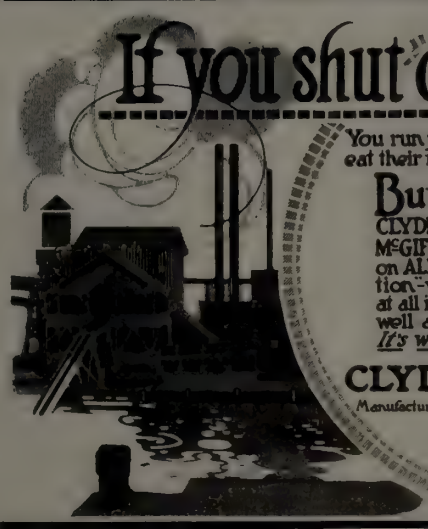


Every manufacturer of boxes; every manufacturer who has nails to drive in any article, or packages of any kind to manufacture, should write the Morgan Machine Company for latest developments in machinery for the Box Industry.

Morgan Machine Company

ROCHESTER, N. Y.

If you shut down your mill



You run your *teams* into the stables to eat their fool heads off *and the feed bill is a dead loss.*

But when you shut down your CLYDE REHAUL SKIDDERS and McGIFFERT LOADERS you shut down on ALL expenses except depreciation—which actually doesn't happen at all if you grease the machines up well and run them in under a roof *It's worth considering!*

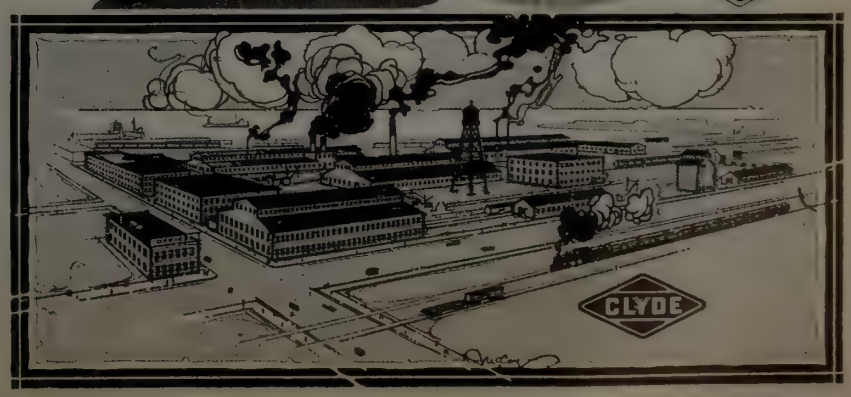
CLYDE



Clarke's Clothing

For

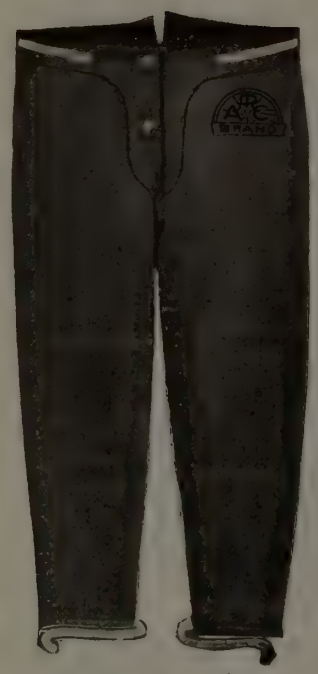
Lumbermen

The A. R. C. Brand of clothing contains every garment necessary for the complete outfitting of the lumberman for winter work in the woods.

Illustrated are a few of the A. R. C. garments. They are roomy in design, perfect in workmanship and are made of the best material.

Our illustrated catalogue contains full information about the A. R. C. line

Write us today.



Mackinaw Pants

The materials in these pants are the best that money can buy. The workmanship is on a par with our other goods.

Mackinaw Coats

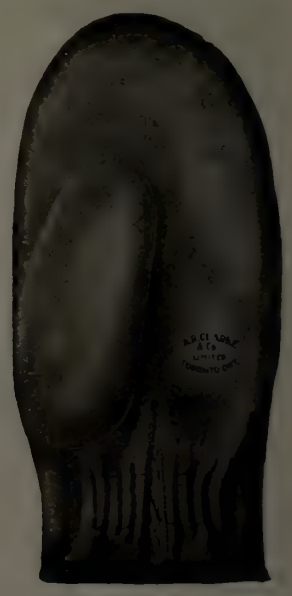
Well tailored from mackinaw cloth and suitable for street wear.

Plymouth Glove

The best made for all kinds of hard wear. Peccary hog leather is a favorite with lumbermen. The toughest and best wearing glove it is possible to make.

Bullhide Moccasins

Are steadily gaining in favor owing to their warmth and wear resisting qualities.



Pullover Mitt

Made in burro, sheepskin, horsehide, and peccary hog leathers. Specially adapted for lumbermen, rivermen and miners.

BERLIN RESAWS Assure More Profits—Every Hour of the Day, Every Day of the Week, Every Week of the Year.

Berlin Resaws Produce Economically

These resaws are especially adapted to Canadian Planing Mill and factory conditions. No. 341 has 54-inch wheels and tilting feed works. No. 342 is a 64-inch, short saw machine with large capacity and powerful feed works.

There's a Berlin resaw especially designed for your work. There are single verticals for light, medium or heavy duty and a twin vertical for long shook stock; the single horizontal and the twin horizontal for resawing short shook stock, besides the slab resaws. All Berlin band rip and resaws and band mills are simple in design and operation and easily kept in order. Whatever ripping or resawing you want to do can be done at lowest possible cost on a Berlin.

Easy to Operate

On Berlin resaws the conveniently placed operating devices make maximum results easy to obtain. That's why any average workman can successfully operate them and also why reduced cost is assured.

The wheel tilt and quick cross-line adjustments are especially conveniently placed. The top saw guide adjusts from the front of the machine; a throw of a lever changes the speed of feed. The rolls are positioned by a quick, accurate set works.

Easy to File For

Filers say that blades on Berlin resaws endure longer runs at fast feeds—that our very sensitive Knife-edge straining device is assurance against cracked blades. The saving made because of low upkeep cost of blades and machine is one reason for installing Berlin resaws. Before you decide on any particular resaw, investigate thoroughly the merit of Berlin "Quality" built band sawing machinery. Berlin resaws are working in many Canadian mills. See one in operation.

We'll send you complete data and the address of your neighbor user if you'll drop us a card request.

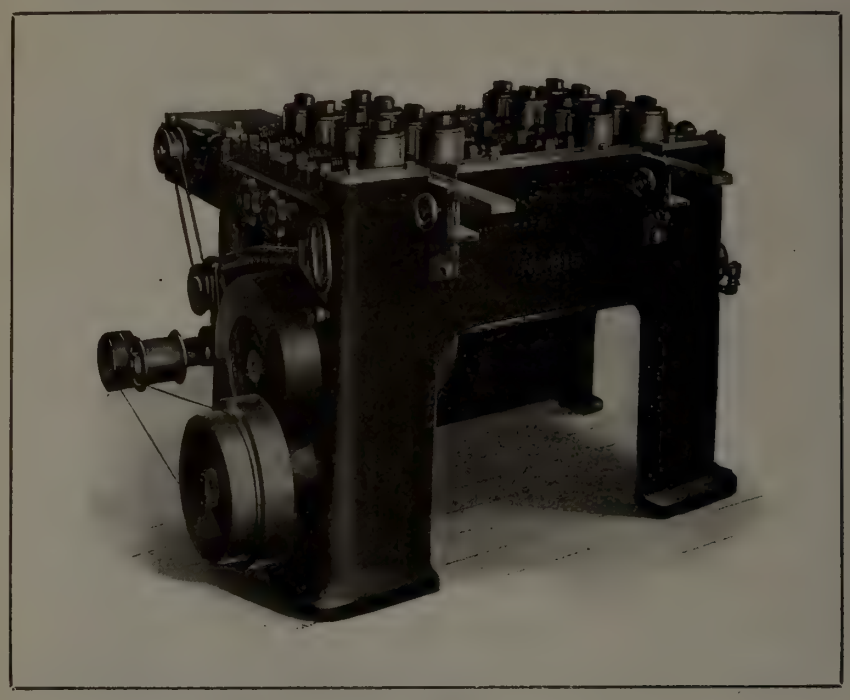
Improved Box Board Matcher



16 driven feed rolls, 4⅛ in. in diameter, each one of which can be adjusted independent of all others.

4½ in. between centres of first and second pair; 5½ in. between centres of second and third pair (the cutters work between this pair) and 4¼ in. between centres of third and fourth pair.

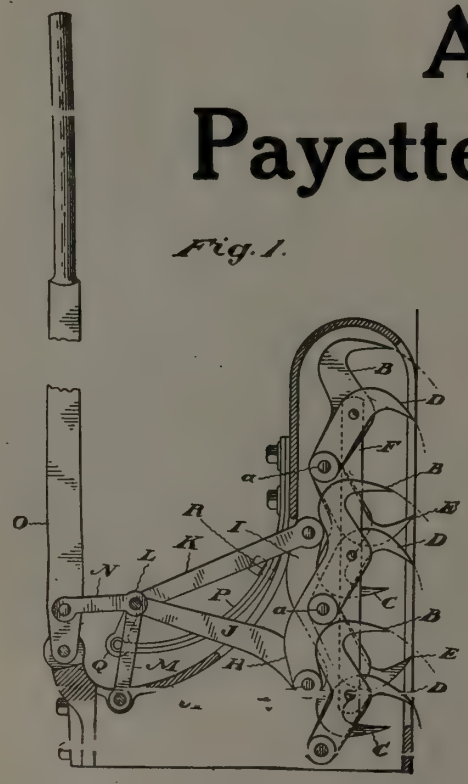
This Matcher is compactly and rigidly constructed with every part readily accessible and the operators are close together when working.

Catalogue gladly furnished which illustrates and describes many other machines built expressly for Box Factories.

Mereen-Johnson Machine Company, MINNEAPOLIS, MINN. U. S. A.

A Boon to Lumbermen
Payette's Famous Patent Mill Dogs
650 Sets already sold

Fig. 1.



BECAUSE

(1) They will dog with perfect ease and safety in any class of timber.
(2) Will dog just as easily, frozen maple or hardwoods of any description.
(3) Will dog the last board, just as easily as they dogged the first one.
(4) They do not tear the board or stock.
(5) Many other reasons, too numerous to mention here.

Write us for full particulars and booklet on same.

We also manufacture the following High-Grade Saw-Mill Machinery;—New Modern Saw-Mill Carriages, with either three or two head blocks; P. Payette's New Patent Saw-Mill Dog, for use in either winter or summer. P. Payette's Grip-Set Works; Steam Feed Valves, Steam Lifter and Loaders, Valves. Five different class and style of Edgers, for either light or heavy duty. Combined Gang-Circulars and Edgers, or Independent Gang Circulars.

Steam-Canters, Steam Lifters and Loaders, and a general line of saw-mill machinery. Detachable Chain-Sprockets, Castings of Gray-Iron, Semi-Cast Steel, and brass castings for general use.

Descriptive Booklet and prices mailed free upon request.

Federal Engineering Co., Limited
Toronto - Montreal

This engine is 13½ ins. x 18 ins. and weighs 35 tons.

The knowledge and experience of fifty years in locomotive designing and construction is what you get in our Logging locomotives. They are specially constructed for logging operations and will stand up to the severe service in which they are expected to run. Oil or coal burning.

They are as carefully designed and built as our 200 ton locomotives. Repair parts may always be obtained on the shortest notice.

Grey Iron Castings—any size or shape—ordinary or intricate—made promptly. New foundry, splendidly equipped. We would be pleased to quote on castings—singly or by contract. We also make drop forgings of all descriptions.

MAY WE SEND YOU SPECIFICATIONS?

Canadian Locomotive Company, Limited, Kingston, Ont.
Taylor and Arnold Ltd., Sales Agent, Montreal and Winnipeg

Dominion Timber Regulations

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth :—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long, 1½ cents each.

Railway ties, nine feet long, 1¾ cents each.

Shingle bolts, 25 cents per cord.

And 5 per cent. on the sale of all other products of the berth.

Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

W. W. Cory,

Department of the Interior, Ottawa,
December 20th, 1912.

Deputy Minister.

A Lumber Piling and Unpiling Machine

A Hilke 30 ft. PILER working in the yard of the Shevlin-Clarke Co., Limited, Fort Francis, Ontario.

This machine will pay for itself from one to six times per annum, all depending on the scope of its opportunities.

It reduces by half your cost of piling and unpiling lumber.

It saves half your cost of alley floors or roads.

It reduces by half your number of pile bases.

It cuts squarely in two your costs of roofing lumber.

It saves just half your yard space and this always means much even where land is very cheap, because it costs money and lots of it to haul lumber round a yard.

It takes lumber down from high or low piles with perfect freedom from breakage or injury.

It sets the pace for your men and helps them do much work with little labor.

It is as mobile as the men who operate it and when placed in front of a pile is instantly ready for work.

It removes at once and forever the need of using elevated tramways with their great first cost, impaired circulation and imperfect drying below their surface.

It is a maker for efficiency because it is itself so efficient that it naturally turns your mind toward other yard economies of which there are usually many never before observed.

Patented in the United States and Canada by H. C. Hilke.

Built by

The Hilke Stacker Company

No. 1 Broadway, New York City, N. Y.

The Engineer's Smile

"'Happy Days' is what the boys around the mill call me ever since we started the new engine running. If I feel good can you blame me? Instead of having to listen to the daily holler for "More Power!" every time they get a big log on the carriage, all I have to do is to keep the oil cups full and she runs along like a watch from whistle to whistle. With *everybody* satisfied—I should worry!"

Waterous Engines

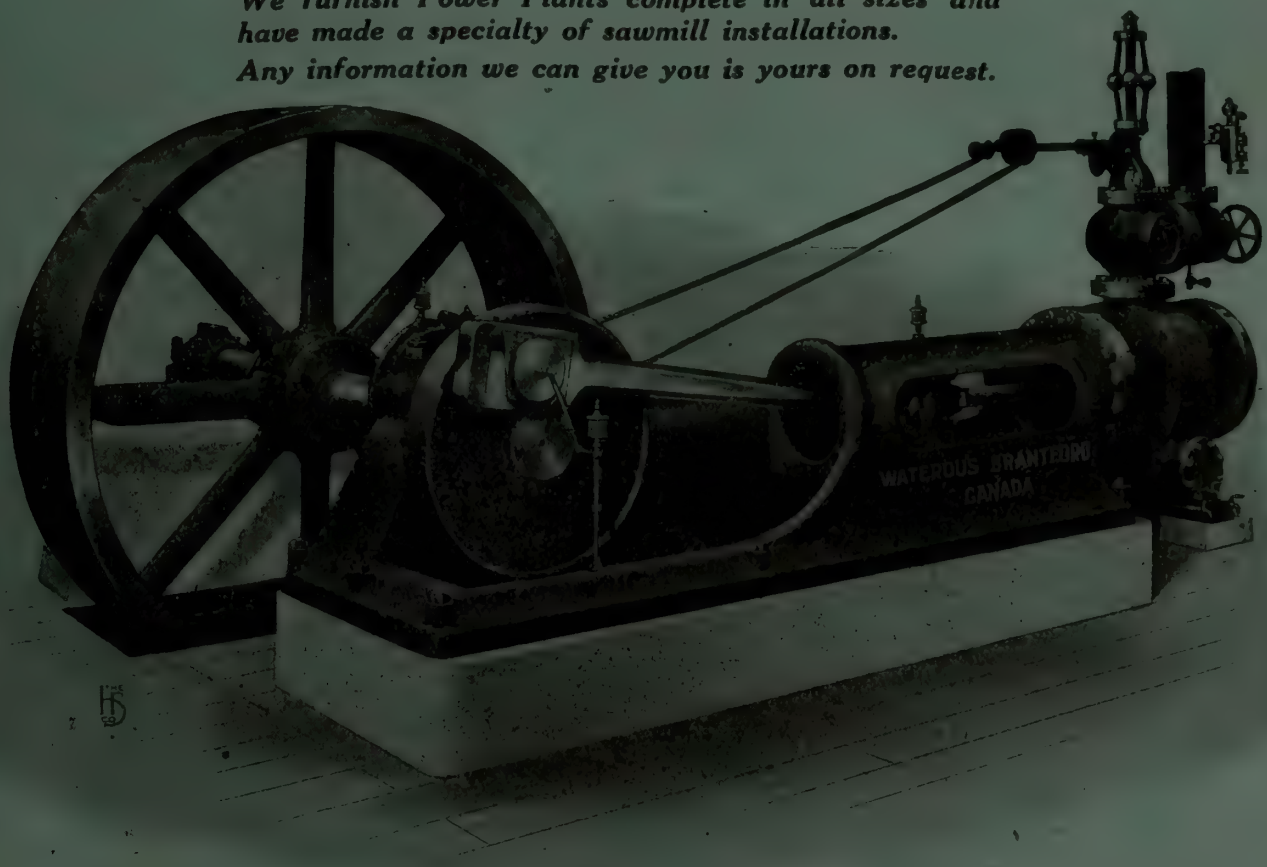
Make your choice of an Engine for the Sawmill the **WATEROUS SIDE CRANK SAW MILL ENGINE.** It is built for the work. With strength and simplicity it combines the ability to be on the job all the time.

There is nothing to get out of order. Parts are few, are sturdily built of the best of materials and are easily gotten at for oiling and overhauling.

All that is necessary to keep the Engine in tip-top shape is an occasional wipe-down and a dose of oil on the wearing surfaces.

We build both Single and Twin Engines of this type in sizes up to 600 H.P. If you want an engine that will give you absolutely reliable service, continuously, under all sorts of conditions, ask us for catalogue and prices.

We furnish Power Plants complete in all sizes and have made a specialty of sawmill installations. Any information we can give you is yours on request.



The Waterous Engine Works Co., Limited

Humboldt Redwood

Humboldt Redwood is cut from the forest of North California. Its qualities suit it to almost every purpose for which lumber may be used. It will not check, is fire repelling, beautifully figured and always clear, free from pitch, easily worked, will not shrink, takes finish equal to mahogany and is in every other way a most desirable wood for all purposes.

Its Uses

Among the uses of Humboldt Redwood we mention: Sash, doors, and trim, boats, furniture, toys, pattern lumber, outside building trim, car siding, cooperage, hot bed stock, refrigerators. tanks and silos, buildings, exposed beams, clap boards, lattice, screen doors and windows, theatrical scenery, incubator and beehive stock, turned work and a variety of other uses.

To the Owner of Timber Lands

Far sighted owners of timber lands should take advantage of the times incident to the European wars, and prepare themselves for the day when the demand for timber is suddenly thrust upon them. This is certain to come at no distant day. Therefore cultivate a closer acquaintance with your holdings, and the best method of marketing them. Let us prepare the way for you. Remember, we not only report on the property, but assist in marketing the bond issue when necessary. Send for our booklet.

Quality Talks

Arkansas Soft Pine Qualities talk profits to retail lumber merchants. These talking qualities of our products have convinced dealers. Today the dealers, to whom we were talking our lumber, a year ago, are talking it to their customers.

Here is one of the talks:

"For the living room finish you should use Arkansas Soft Pine. Do not be deceived into thinking this is a cheap wood and class it as ordinary yellow pine. It is different. It costs more than the ordinary yellow pine, but it's worth it. 'We have hunted the south over for a fine finish for just such a house as this.' It is more easy to work than oak or other hardwoods but when properly stained will give a pleasing and desirable effect; in fact better than most hardwoods. Do the hall in panel work of the same wood but stain it walnut for the massive, solid effect."

You need not "hunt the south over." There exists one original source of supply. Arkansas Soft Pine may be procured from the concerns that make it. It will make money for you as it is making money for others.

Master Equipment

Belting, Hose and Packing that Earn Their Way

In the sawmill Belting is put to unusual tests. As hard knotty logs hit the saw a terrific strain is thrown on the belt. Slippage means lost power. Lost power means lost efficiency. And when a belt breaks it means more than the cost of a new belt. It means loss of output and salaries that have to be paid regardless.

Realizing this, men are buying more and more Goodyear Belts for the downright service they give. No Goodyear Belt is ever made to meet a price or a standard. Each belt is made to set an unusual service standard.

There are Goodyear Belts for every exact requirement in the sawmill. These range from Belts for the main drive to Belts for small pulley machines.

"Extra Power"

This is the Master Belt for the main drive—edger and planer. It is wonderfully strong. In fact this Belt shows the highest friction pull of any belt we have ever tested—fully 10 per cent. better than the next best high quality belt.

"Extra Power" is made of the heaviest and strongest duck of any Belt we make—all laboratory inspected, tested and passed. The stretch is taken out in the making. The strong serviceable plies are unified by the highest grade rubber friction. There is maximum precaution against ply separation. All Goodyear Belts have the famous Sealed Seam and are cured under a heavy, carefully regulated hydraulic pressure, determined by the service. "Extra Power" is made in various widths—made "endless" when desired.

"Imperial"

This is a Goodyear Belt designed especially for high grade speed and small pulley conditions. It is a splendid Belt for trimmer work. Seamless and Goodyear made for its particular purpose.

GOODYEAR
TORONTO
Belting, Hose, Packing

Hose and Packing

Goodyear Steam Hose and Packing are made for exact specific services. There is a particular Goodyear product for every particular need. Exact Goodyear methods insure the best for your money. Goodyear Service means economy.

Ask These Men Buy equipment on a service basis. Back of every Goodyear product is fifteen years successful experience. At the Goodyear Bowmanville, Ontario, Factory are experts who study actual working conditions long before any Goodyear equipment is made. Consult these men when you are about to buy Belting, Hose or Packing. Their advice, freely given, will save you money and insure the service you are seeking. Costs nothing to ask questions.

Machinery and Timber For Sale

The undersigned offer for sale, in large or small blocks all their remaining timber lands, mills and town property situated in the Town of Parry Sound, Ont.; and other Lumber Equipment, including boom chains, plows, sleighs, etc.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

We have the following Sawmill Machinery for sale:

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 3-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.

1 Double cylinder steam nigger, right hand.

1 Log Loader for right hand mill.

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.

1 left-hand steam nigger.

1 Log-loader.

1 Endless chain jack ladder with two kickers complete for right and left hand mills.

2 Roger Gang Edgers for 8-in. cants and lumber.

1 Waterous double edger, 6 saws.

2 2-saw trimmers.

1 20-ft. Slash table.

1 16-ft. Revolving Slash Table.

1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.

1 70-ft. Transfer Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.

1 Lath Mill with bolter.

2 Lath Trimming Saws.

FILING ROOM

1 Automatic Filing Machine for 12-in. D.C. band saws.

1 Automatic Grinding Machine for 8-in. S.C. band saws.

1 Automatic Machine for circular saws.

1 Hand Machine for cut-off saws.

1 Lap Grinder.

1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

POWER PLANT

2 Double Duplex, high pressure Water Pumps.

5 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.

2 125 h.p. Water Wheels.

1 Upright Engine for sawdust conveyor.

1 10 h.p. Engine.

1 Mitts & Merrell Hog.

1 Wood Machine for 22-in. wood.

1 Wood Machine for 16-in. wood.

1 Edger for ripping dry lumber, installed.

1 Edger for ripping dry lumber, not installed.

1 30 h.p. Generator, 250 volt.

1 30 light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and turn-tables, particulars of which may be had on application.

Also, contents of machine shop, containing Planer, Drill, Lathe and Machinery, with tools necessary for repair work.

All of the above open for inspection at Parry Sound.

Gentlemen:-

We take great pleasure in handing you herewith our order for twenty-four half page advertisements to appear in your publication to start with your September 15th issue.

In giving you this business, we wish to state that the advertising which we did with you last fall produced very satisfactory results. For this reason we believe that your paper must be read by the Saw Mill men throughout the Dominion. And therefore we anticipate that the present advertising will be very beneficial to us.

Yours truly,

HS/ET

WmE Hill Co.

SIMONDS
STANDS
FOR
STANDARD
IN
SAWS

PROFIT

In the use of a Saw to obtain profit by lumber cutting, everything tending toward that Profit must be considered.

Important points are: how long a Saw will cut with each filing; how straight a line a Saw will cut; how small a kerf a Saw will cut; how little delay for fitting up a Saw will occasion; and how long a Saw will wear before a new one must be purchased.

It is by excelling on these points that Simonds Saws have become the lumberman's standard. Write for catalog and prices on any size Band Saw, Solid or Inserted Tooth Circular Saw, Gang Saw, Shingle Saw, or Planer knife.

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $2.00 per year in advance; other foreign countries embraced in the General Postal Union, $3.00.
Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster General for Canada, for transmission as second class matter.

Entered as second class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 34 **Toronto, October 1, 1914** **No. 19**

England Needs Our Mining Timbers

Reference was recently made in the Canada Lumberman to the possibility of an extensive market in Great Britain for pit props and mining timber, as a result of supplies from Sweden, Norway and France having been reduced by the war. The Timber Trades Journal of London, in a recent article, says:—"Unless colliery owners can obtain considerably enhanced supplies from Sweden, Norway, and France to eke out what can be obtained in the United Kingdom, we confess to a certain amount of doubt as to how the demand is to be met. The supply of these goods from Norway and Sweden is barely half what it was ten to twelve years ago, so that the immediate outlook from these countries is not encouraging, and a heavy rise in values is hardly to be avoided. It must, however, be taken into consideration that ample supplies can be obtained in Norway and the Southern Provinces of Sweden, at a price. The question is too obscure at present for us to express an opinion as to what that price will have to be. Much will depend as to whether the British Fleet is able to keep the Upper portion of the Baltic clear of German cruisers, and as to whether props, etc., are to be considered contraband or not. What is termed International Law, as to what is absolute contraband, and what is conditional contraband, is in so chaotic a state, that each hostile power interprets the cases that crop up in this connection, to suit its own purposes."

Some lumber manufacturers in the Southern States have no misgivings as to the results of the war in Europe upon their business. Mr. Martin Lindsey, president of the Escambia Mill Company of Pace, Fla., is keeping his mill running on full force and is quoted as saying; "the big armies tearing up bridges and destroying thousands of buildings on the continent will need lumber and need it quickly when this war is ended, and furthermore, I believe that the war will end shortly."

"Business as Usual"

There is nothing particularly warlike in the slogan, "Business as Usual," but the principles for which it stands are playing a part in the affairs of the Empire second only in importance to the operations in the actual theatre of conflict.

The vast resources which make ultimate British victory certain were built up by men whose close attention to business was as productive for Empire as the dauntless courage of military and naval heroes.

Considering the present safety of trade routes, and having in mind the glorious achievements of British arms during the first month of the war, there is no ground for panic. There is every encouragement for work and confidence.

The general consensus of opinion is that this war will lead to the permanent advantage of British trade. In this advantage Canada must obtain a proportionate share. Events move quickly. Opportunity comes and is gone. Already British and United States manufacturers are concentrating their attention upon the chances afforded them of establishing themselves in colonial and neutral markets in certain lines of trade in which our enemies have hitherto transacted large business.

This is a time of testing. False steps at this juncture will imperil us individually and weaken us nationally in the commercial world. The qualities we must produce under test are perseverance, confidence, and stability. Perseverance will arise out of a determination to stick to the guns of commerce; confidence will assert itself naturally; stability will be maintained unconsciously.

The Dominion Government and other authorities have committed themselves to the policy of continuing public works. These public works must be supplemented by private enterprise. Sacrifice at such a time is unavoidable. It will be felt least if distributed evenly throughout the whole community. With factories running and constructional operations in progress, the sacrifice will be reduced to a minimum.

The lumbering industry covers a wide field and gives employment to a vast amount of labor. Lumbermen, in common with all other employers of labor in Canada today, have a great responsibility to meet. Example counts for much. Pessimism spreads —so does optimism. An optimistic lumberman can do much to keep trade moving by the encouragement of his own attitude and by intelligent argument and advice inspired by confidence and the spirit of "Business as Usual." Remember that every contract placed, every sale or purchase made now, serves to increase the general measure of confidence and that every retrogressive step exercises an adverse influence upon the community at large.

Are the Banks Helping the Lumber Trade?

In the Canada Lumberman of September 15th an editorial article appeared dealing with the attitude of the banks towards the lumbering industry since the outbreak of the war. What we said at that time has been amply substantiated by the utterances of the daily and periodical press throughout Canada and the banks of Canada are now well aware of the fact that the course which many of them adopted is meeting with disapproval and severe criticism in many quarters. We have been accustomed to speak highly of the Canadian banking system and to point out many of the features which render it one of the most flexible and successful banking systems in the world, and yet, now that it is put to the supreme test of fulfilling its most important mission, it, or rather those who are in charge of the policies of some of the important Canadian banks, are evoking public censure of a very strong type.

There has been a practically unanimous assertion on the part of manufacturers and business men throughout Canada that we have a great opportunity to seize and a great duty to perform in connection with developing our resources during the present crisis and helping to furnish the raw materials and manufactured articles which the outside world is at present so greatly in need of; the supply of which from the great producing countries of Europe has been cut off. Our government realized this and quickly passed legislation, calculated to assist the banks in doing their share to enable Canadian industry and commerce to take advantage of these opportunities. The action of the government was also prompted to a large extent by a desire to prevent commercial disturbance resulting from any interruption in the circulation of money. The legislation introduced by the Minister of Finance is exceptionally liberal towards the Canadian banks. It amounts to the government standing behind the banks individually by discounting those securities upon which they cannot at present realize, and issuing Dominion notes to the banks in place of the securities. The banks moreover, are given permission to issue bank notes, not only to the full amount of their paid up capital, but far in excess of it. In other words, the credit of the country has been placed behind the banks to the utmost limit. There was only one object in this, namely, that the banks in turn might realize their responsibility and their power to come to the assistance of the industry and commence of the country and so prevent anything in the way of business stagnation. And yet many business men are complaining that the banks will not give them such assistance as they feel entitled to. Moreover, it is the general belief that now conditions are favorable for reviving business activity if the assistance of the banks can be secured. One hears this statement every day and also hears many a business man assert that the banks have not done their duty.

The lumbering industry is one of the great industries of Canada, upon which depends the employment of thousands of Canadians, whose employment further, means business activity in many other industries and lines of commerce. Moreover, the lumbering industry is in the presence of a great opportunity and at the same time a great crisis. Markets in which Canadian lumber formerly met with keen competition are now crying for the product of the forests of Canada. Stocks of lumber in Canada are small. Next year there will be an unprecedented demand for lumber, unless the opinion of nearly every lumberman to-day is mistaken. Many a successful lumber manufacturer to-day has come to the conclusion that any stocks which he can take out of the woods this winter will be a good source of profit to him next year. Under these conditions one would expect the banks at least to give the usual amount of assistance to operators in the woods. We hear from many quarters however, that operators have been told by the banks to reduce their operations during the coming winter. Exporters who take their shipping bills to the bank have been refused money upon them, although they had orders, stock, and vessels waiting to ship it. Many builders have been obliged to stop the erection of houses, office structures and warehouses, because they have not been able to secure the customary assistance from banks and loan companies.

Is there any call for such a policy? The action of the government in coming to the assistance of the banks clearly announces that there is none. The opinion of every business man one meets is to the same effect. Lumbermen who have sufficient private means to do so are backing their judgment by purchasing stocks of lumber and are looking forward to profitable results. We hear everywhere that there is a great opportunity in front of the people of Canada to-day and yet we hear also that many are prevented from taking advantage of it because they cannot find the necessary sinews of commerce. The opinion is expressed widely throughout the business community that the banks have gone beyond the limit of caution and that either they should alter their attitude, or the government should step in and see that the advantages contemplated when assistance was given to the banks, reach the people for whom they were really intended.

Frequent bitter criticism has been directed against the banks of late in this connection. Matters possibly have not developed far enough for the banks to work out a definite policy and it may be that before long they will see the situation in much the same light as their critics see it to-day. But it is the urgent duty of the banks to act quickly and not let their policy lag behind the development of events. The people of Canada expect the banks to take a prominent place in the campaign for business revival. The surest method of doing this will be to adopt such policies as will encourage legitimate and profitable lines of business to reach out and grasp the opportunities which are now presented.

In connection with this it is interesting to note the views expressed by an English M.P., Mr. L. G. Chiozza Money, in the London Daily News and Leader. At the end of an article upon the situation in England, entitled "Wanted Common Sense Moneylending," the writer says:—"There need be difficulty in the matter only as long as we choose that there shall be difficulty. It would be the simplest possible matter for the state to take this matter of credit into its hands, and to back every individual worth backing in the country. The state might act either independently of the existing banks or through them. If the banks would not afford facilities with backing from the state, then it would be quite easy for the government to show the banks that it could get on without them. It is all very well to talk about capturing the £300,000,000 worth of German export trade, which has been cut off by our navy. If it is to be captured there must be not only manufacturing enterprise exhibited, and science called into aid, but there must be liberal banking facilities afforded. Our chancellor of the exchequer has already, in the House of Commons, warned the banks that they must rise to a great occasion; our banks, however, are so exceedingly conservative and have been such a hindrance to our trade in time of peace, that one must not be surprised that they are not doing their duty in time of war. It is for the government to decide whether they will stimulate the banks to action by some guarantee or backing, or whether they will proceed independently of them."

It is interesting to recall, under present conditions, the effect of the Franco-Prussian war in 1870 upon the timber trade, says Mr. J. H. Kerner-Greenwood in an English exchange. "At that time the Baltic ports were not all closed, whereas now they are. Only the German ports were closed, and the prices of timber went up with a tremendous leap, but came down after two months' time to quite a normal figure, and prices did not again advance. The scarcity of European timber was counterbalanced by the importation of more American spruce and pitch pine. Some of your readers will probably know that good spruce is quite as useful for building as white deal, and architects would do well to place an alternative clause in their specifications for best quality spruce to be used, because we cannot expect to be taking any timber from Sweden or Finland for another twelve months, although it is possible that the fortunes of war might clear the way in less than a month."

Canada's exports of forest products during July, 1914, were valued at $5,097,065. In the corresponding months of 1913 and 1912 the values were $4,938,716 and $4,484,675 respectively. For the twelve months ending July the totals were as follows:—1914, $43,400,015; 1913, $43,972,612; 1912, $41,092,560.

Effect of the War Upon Great Britain's Lumber Trade

The possible effect of the war upon the lumber trade of Great Britain was briefly and clearly indicated in an article recently published by The Timber Trades Journal, London, England, from which we reproduce the following extracts:—

"At the commencement of a great war like the present it is manifestly impossible to do more than trace the broad outlines of its effect on the supply of building and mining timber to this country even for the immediate future. If we turn first to the requirements of soft woods for building purposes we find that, according to the Board of Trade Returns, we imported in 1913 of sawn or split, planed or dressed wood:—

From Russia (including Finland) ..	1,018,892	Ptbg. Stds.
From Sweden	415,454	" "
From Norway	89,278	" "
From United States	154,725	" "
From Canada	291,375	" "
From Other Countries	41,226	" "
Total	2,010,950	Ptbg. Stds.

"According to the Board of Trade Returns the quantities of sawn and planed wood imported up to the end of July this year were as follows:—

From Russia (including Finland) about	316,986	Ptbg. Stds.
From Sweden about	162,874	" "
From Norway about	41,387	" "
From United States about	72,607	" "
From Canada about	105,946	" "
From Other Countries about	26,158	" "
Total (say)	725,958	Ptbg. Stds.

"Therefore we may calculate that we shall require further before the summer of 1915:—

From Russia (including Finland) about ...	701,906	Stds.
From Sweden about	252,580	"
From Norway abdut	47,891	"
From United States about	82,118	"
From Canada about	185,429	"
From Other Countries about	15,068	"
Total about	1,284,992	"

"This quantity of 1,284,992 standards appears a formidable total for the market to be deprived of under the supposition of a normal consumption and, if there were no compensating features, would portend a very heavy increase in values. Under the presumption, however, that sawn and planed wood will not be held as "conditional contraband of war," and that the British Fleet will be able to afford efficient protection to our Flag on the Atlantic, the Upper portion of the North Sea, and the White Sea, there is reason to believe that the increase in cost of soft woods may be kept within limits, which, if sufficiently onerous, will not altogether stop building operations.

"It may be taken for granted that Canada, the United States, and Norway will be able to send us full supplies, and the same is the case with the White Sea, if the drain of men from the last-named district permits of sawing and loading being carried on to any appreciable extent. The extent of the advance in prices will be largely determined by the position in the White Sea. If the shippers there can obtain labour they will naturally strain every nerve to get their goods away. An advance of £2 to £3 per standard on the normal f.o.b. value is quite likely to be realizable, and somehow or other, by the transfer of the older hands that have passed the mobilization age, from the mills closed in other parts of Russia, or otherwise, the White Sea mills may be kept running. The annual shipment of sawn wood from the White Sea mills is fully 300,000 standards, of which a very large proportion for the present season remains unshipped, probably more than half, and which would go a good way to save the situation, if available.

"As regards supplies from St. Petersburg, Riga, and other ports of the Russian Baltic Provinces, it is doubtful whether our Admiralty will be inclined to risk our heavy battleships and cruisers in the narrow and shallow waters of the Baltic in the dark autumn nights, at all events not until our Navy is able to secure a decided preponderance in the North Sea, so that it will hardly be prudent to calculate on any appreciable quantity of sawn wood from there this year, unless the war should be finished quicker than we anticipate. The same reasons apply with equal, or even greater force, to Finland.

"Sweden remains. As to this country there seems to be no valid reason why shipments of wood goods in Swedish or other neutral bottoms should not be made as usual. Since Great Britain declared war, shipments to that country have ceased, for fear of capture, but as the Swedish Government has arranged a scheme whereby this risk can be covered, it is to be hoped that shipments to the United Kingdom may become feasible again at an early date. If this turns out to be the case, and the White Sea stocks can be got to market, the inevitable advance in c.i.f. values for sawn and planed wood ought not to be ruinously heavy. It must be borne in mind that Germany, France and Belgium will be partially out of the market in the meantime, and our consumption also considerably reduced on account of the enhanced prices and the partial stagnation of trade. The scare which caused Swedish shipowners to stop communications from Gothenburg to the North-East coast of Britain (and likewise to the West coast and Ireland) was excusable, but the want of coals and certain other commodities will force a restarting of the regular services, when the war risk question is settled; more especially when the Swedes see what a rich harvest the Norwegians are securing by keeping open their ports on the West coast of that country. Were prices for sawn and planed wood to rise over £2 10s. per standard, it will pay some of the Swedish shippers in the Sundswall district to send the better class goods by rail to Hommelvik and Drontheim, and ship them to the United Kingdom from there. Considerable quantities of Swedish goods will also doubtless find their way to the British market via Gothenburg and Christiania. Whether it will pay for some of the Upper Finish shippers to lighter goods to Lulea for transport by rail to Narvik is, however, doubtful. That the Finns will do a great deal to obtain cash before winter is certain, so that this method of obtaining it is not so fantastic as it may appear at first sight.

"What the Panama Canal can do to make an opening for the American and Canadian mills on the West coast, to the United Kingdom market, we may be sure will be done. Altogether we are by no means so pessimistic as some of our importers, with regard to the outlook for obtaining supplies of sawn wood; without the necessity of paying prices calculated to stop or even to seriously curtail building operations.

"The pulp and paper trades can pay a higher rate of transport than the sawn and planed wood trade, and these commodities will find their way to market easier; more especially when the enormous demand for paper is taken into account."

A unique form of advertising the natural resources of British Columbia with special reference to the products of the forest has been adopted by the provincial government in the form of a small piece of 3-ply British Columbia fir about the size of an ordinary business card, bearing printed information on both sides.. One side contains the following information:—

British Columbia's population is 539.850. Its production in 1913 was valued as follows:—Agriculture, $24,000,000; lumber, $30,000,000; mining, $30,000,000; fisheries, $15,000,000; manufacturers, $45,000,000.

The other side bears the following information:—The annual cut of timber in British Columbia amounts to 2,000,000,000 feet. There are 794 logging camps and 425 mills employing 60,000 men. These produce lumber, lath, shingles, poles, masts, spars, railway ties, boxes, barrels, wood pipe, pulp, street paving, sash, doors, veneer, etc. British Columbia has the greatest stand of shingle material in the world. The annual cut exceeds 2,000,000,000 shingles. One hundred and twenty-five new shingle machines were installed in 1914.

Exports of lumber from British Columbia, Washington and Oregon to foreign countries during the first six months of 1914 totalled 285,644,265 feet, as compared with 275,742,926 feet for the corresponding period of 1913, a gain of 9,921,339 feet, according to the returns just completed by the Pacific Lumber Inspection Bureau.

Canada Flourishes in Spite of the War

Hon. W. T. White, Minister of Finance, Foresees a Quickening of Canadian Industry —Adjustment Progressing Favorably—The Outlook Promising

So far as Canada is concerned, we have been passing through a period of dislocation. Readjustment is taking place favorably and the outlook is distinctly promising. Many of our industries have suffered, but the first and worst effects will gradually wear away. Others have been greatly quickened and stimulated. The higher prices for grains and other agricultural products will more than neutralize this year's shortage in amount. For the future, agricultural production should be immensely stimulated and this, for years past, has been the great need in Canada. This will solve the problem of the high cost of living, the over-crowding of cities and consequent unemployment. It will also enable Canada to greatly increase its exports, thus ensuring payment of our interest and other obligations abroad and the preservation of our national credit. With so many men offering their lives for the Empire and undergoing hardships, privation and suffering at the front, it is the duty of every man at home to put forth his utmost effort to increase production, to add to the national wealth, that the wastage of war may be repaired and the strength of the nation be increased to meet whatever of struggle and stress may lie before us.—Hon. W. T. White, Minister of Finance.

The Hon. W. T. White, Minister of Finance, in an address before the Gananoque Board of Trade, on September 21, spoke in no uncertain tone of the financial, commercial and industrial situation in Canada. His views are those of an expert financial analyst and will go far towards instilling confidence in the Canadian business world.

The Minister of Finance referred to the change which had come over the face of the world since January last. At that time international money markets were slowly convalescing from the effects of the terrible Balkan Wars and anarchic conditions in Mexico. By midsummer, conditions had begun to show improvement. Our great railway systems had given large orders for material to steel and other industries. Trade was increasing and altogether the outlook had been most encouraging. After the long-continued liquidation our financial institutions were in an unusually strong position to meet the commercial requirements of the community. In the twinkling of an eye all this prospect had been changed. War had broken out among the great nations of Europe and international commerce had been prostrated by the shock. The marvel was that it had been so well sustained. Of all the factors entering into the recovery which has so far taken place the most important by far was the silent victory of the British navy which had kept the seas open to commerce. Had the British navy failed in this what would have been the financial and commercial conditions of Canada and the United States today? Financial expedients had been promptly adopted by the Canadian and other governments, which had acted as efficient shock-absorbers. This was the function of such expedients—to absorb, cushion and buffer shock. They were not intended as permanent measures.

In Canada the first effects of the war had been necessarily of a serious character. Being a borrowing country, Canada had experienced an almost complete cessation of the money flow, from which her immense capital expenditures, governmental, municipal and corporation had been largely financed. Canada, from the sale of corporation securities in Great Britain and United States had been in receipt of funds aggregating about four hundred million dollars a year, or over thirty million dollars a month. All great public works, whether by the Dominion, Provincial or Municipal governments or by railway or other large corporations had depended for their financing upon the capital so raised abroad. The result had inevitably been curtailment of programme on the part of all these public and corporate bodies. The instinctive Canadian caution which could always be depended upon in times of crisis had met the situation by prompt contraction and panic had been avoided. He had talked with representatives of provinces, of municipalities, of railway and other corporations, and they were all of the same sound view, not on the one hand to close down construction, nor on the other to attempt to carry out the full programme they had planned. Either course would be most unwise. The sound policy was the middle course, and this he believed was being generally adopted. Construction programmes should be so revised as to give the greatest amount of employment for the funds available. While international markets were at present closed, no doubt borrowing, although on a much reduced scale, would be possible later, and increased thrift on the part of the public would be a material factor in furnishing new national capital. The spirit with which the Canadian community had met the situation was wholly admirable.

So far as Canada is concerned, we have been passing through a period of dislocation. Readjustment is taking place favorably and the outlook is distinctly promising. Many of our industries have suffered, but the first and worst effects will gradually wear away. Others have been greatly quickened and stimulated. The higher prices for grains and other agricultural products will more than neutralize this year's shortage in amount. For the future agricultural production should be immensely stimulated and this for years past has been the great need in Canada. This will solve the problem of the high cost of living, the over-crowding of cities and consequent unemployment. It will also enable Canada to greatly increase its exports, thus ensuring payment of our interest and other obligations abroad and the preservation of our national credit. With so many men offering their lives for the Empire and undergoing hardships, privation and suffering at the front it was the duty of every man at home to put forth his utmost effort to increase production, to add to the national wealth, that the wastage of war might be repaired and the strength of the nation increased to meet whatever of struggle and stress might lie before us.

England Wants Canadian Mining Timbers

An event of unusual importance to the lumber producing world of Canada is the recent appointment of a special commission by British colliery owners and the British Board of Trade, to confer with Mr. Hamilton Wickes, British Trade Commissioner at Montreal, regarding the possibility of securing a supply of timber props for British coal mines. These props hitherto have been supplied from Baltic ports from which the traffic has been interrupted by the war. According to Mr. Harrison Watson, Canadian Trade Commissioner in London, England, the value of this trade is $20,000,000 annually and it is therefore of great importance to Canadians that they should make an effort to obtain a good share of the business. Mr. Harrison Watson has expressed some fear that Canadian exporters may make their prices prohibitive, thinking that Great Britain is wholly dependent upon Canada during the war for these products. He states that suitable timbers can be procured from the south of France and from Portugal. Moreover, Russian Baltic ports have been supplying about half the imports of props hitherto, and Russia, being an ally, the trade would probably revert to these ports after the war unless Canadian prices are made attractive. Mr. Watson also pointed out that another reason why the Canadian quotations should be kept at a moderate figure is that the Atlantic freight rates are considerably higher than those from the Baltic ports, and, therefore, the Canadian dealers should make this a consideration if they wish to obtain and retain the trade. Another important question which the commissioners will be called upon to decide is whether the Canadian timber is suitable from the standpoint of breaking strength.

The five commissioners who sailed on the Royal Elward on September 19th, are: W. Windham, representing the Board of Trade; N. Cummings and D. B. Harrower, of the Timber Trade Federation of the United Kingdom; E. B. Whalley, of the Mining Association of Great Britain, and R. Gomme, secretary of the Board of Trade. They will be met at Quebec by Mr. Hamilton Wickes. The commissioners may visit Newfoundland before their return, but they will not decide definitely on all their movements until their arrival in Canada. Mr. Watson reports also that British timber merchants and creosoting works are enquiring for Canadian wood sleepers suitable for railway construction. Large orders have already been placed in British Columbia, and he thinks that a good share of the trade is procurable for Eastern Canada if the prices and other conditions are made attractive

---

War's Effect Upon U. S. Lumber Export

An estimate of the effect of the war upon the lumber industry is contained in an article by Bristow Adams in the September number of American Forestry. It is pointed out that, while there may be an appreciable increase in the demand for those kinds of lumber useful for military purposes, the laws against contraband will make shipments risky while the falling off in the demand for timber used

in the arts of peace cannot possibly be compensated. Mr. Adams writes in part:

"There may be, in countries at war, an increased demand, as with the Balkan ammunition boxes. But it is scracely likely that the lumbermen of the United States can profit through these demands bebecause all such lumber would be contraband. Ship timbers have always been regarded as contraband by Great Britain, and Germany is not going to be far behind in taking a similar view. In the contraband lists already made public it has been shown that all lumber which might even remotely be utilized in war or in distinctly related projects is seizable.

"There is no conjecture about this part of the situation. Already the shipment of lumber from the Southern ports is entirely paralyzed. Great losses have already been sustained through the seizure of vessels which were on the high seas when war was declared, or through cargoes diverted to points at which the timber cannot readily be sold, because lumber intended for export to one country is very seldom in such shape as to be readily saleable in another.

"In actual figures, the countries directly or indirectly involved in war take, in round numbers, 700,000,000 board feet of United States timber, of which about 650,000,000 is Southern yellow pine. Already, most of the firms cutting yellow pine for export have either closed or have greatly curtailed their product. With Japan carrying belligerency into Asia, and the Pacific, the 50,000,000 board feet exported from the northwest coast is likely to be temporarily cut off from market.

"During the twelve months ended June 30 United States exports of timber to France, Germany, Italy and the United Kingdom amounted in value to $6,164,371; and sawed lumber exports were worth $17,-607,011. By far the larger part of this yearly income, which takes no count of furniture and other materials made chiefly of wood, amounting to $23,671,882, or nearly $2,000,000 a month, is going to be lost to American producers while war continues."

The Annual Convention of Hoo-Hoo

A preliminary report of the 23rd annual convention of the Concatenated order of Hoo-Hoo which was held in Winnipeg from September 8th to 11th, appeared in the Canada Lumberman of September 15th. Delegates were present from all parts of the United States and Canada, the total attendance including delegates and their wives amounted to 524. A private business session was held on September 8th at which the following officers were elected to the Osirian Cloister:—High Priest of Osiris, Frank W. Trower, San Francisco; High Priest of Ptah, E. L. Tennant, Winnipeg; High Priest of Ra, H. J. Miller, Everett, Wash.; High Priest of Iris, John M. Kirby, Houston, Texas; High Priest of Sher, P. S. Langan, Cairo, Ill.; High Priest of Thoth, W. M. Stephenson, St. Louis, Mo.; High Priest of Hathor, George Grayson, Grasonville, Ark.; High Priest of Seid, R. W. England, Denver, Col.; High Priest of Ankibis, W. J. Woodward, Norfolk, Va.

A business session of the Osirian Cloister was also held at which 23 kittens were initiated.

In the evening a banquet was given for the Osirians and their ladies at the Fort Garry hotel. Several interesting addresses of welcome and messages of greeting were delivered, among them an interesting address by Sr. Hoo-Hoo E. D. Tennant, of Winnipeg, who made an address of welcome which was to have been delivered by Sir Douglas Cameron, Lt.-Governor of Manitoba, who unfortunately was unable to be present. Mr. Tennant spoke feelingly of the spirit of good fellowship developed by Hoo-Hoo. He referred also to the existance of the war in Europe, in connection with which many Hoo-Hoo of Canada were already performing their duty and about to go to the front. This gave him an opportunity to refer forcibly to the Concatenated Order of Hoo-Hoo and its objects. "Our organization," he said, " is international in character and, meeting under these extraordinary conditions, I think the lumbermen of the North American continent have a great opportunity to show the world at large that military-cursed Europe has nothing in common with us. We are engaged in peaceful, industrial occupations and we believe that we should go on and strengthen the bonds that bind us together. Our countries, at peace, are united by bonds of friendship that will ever grow stronger as the years pass, and will develop the best that there is in mankind. While you may find the minds of your hosts divided between thoughts regarding the security of our nation and the desire to develop Hoo-Hoo, you will find that we are supremely confident as to the final outcome of this gerat struggle."

A reply to Mr. Tennant's welcome was made by Mr. Frank W. Trower, High Priest of Osiris.

There was an interesting discussion as to the place of meeting for the next annual convention, invitations being received from Denver, Col., Atlantic, Mass., New York, N.Y., Chicago, Ill., Columbus, Ohio, San Francisco, Cal., and Great Falls Mont.

The choice of the delegates resulted in a decision to meet next year at San Francisco.

On the evening of September 9th the delegates were entertained to a luncheon by the city of Winnipeg. Over 600 guests were present. After the luncheon a concatenation was held at the Fort Garry Hotel and the ladies were entertained to a theatre party.

On the morning of September 10th a private business session took place at which several new members were initiated.

One of the most interesting events of the convention then took place in the arrival of the founder of the order, Mr. Bolling Arthur Johnson, of Chicago, who was introduced by Sr. Hoo-Hoo E. D. Tennant.

Mr. Johnson was received with great applause and delivered an interesting address.

In the evening a formal entertainment was held at the Fort Garry Hotel at which about 400 guests were present, including the mayor, and several members of the Board of Control and City Council of Winnipeg. At 11 p.m. the diners retired to the 7th floor of the hotel and indulged in a dance programme.

At the afternoon session the election of officers for the ensuing year took place and resulted as follows:—

E. D. Tennant, Winnipeg, Man., Snark of Universe; E. H. Lewis, New York, N.Y., Senior Hoo-Hoo; W. P. Lockwood, Seattle, Wash., Junior Hoo-Hoo; R. A. Hiscos, San Francisco; Bojum Hoo-Hoo; F. R. Verkerke, Grand Rapids, Mich., Custocatian; L. D. May, Jacksonville, Jabberwock; G. H. Murray, Ashville, N.C., Arcanoper; G. H. Grayson, Graysonia, Gurdon; W. M. Stephenson, St. Louis, Mo., Scrivenoter.

The New Snark of the Universe

Mr. E. D. Tennant, the new Snark of the Universe was initiated into Hoo-Hoo in 1902. During the years 1909-10-11 he served as Vicegerent Snark for the district of Manitoba. In 1912 at the Ashville, N.C., convention he was elected Supreme Junior Hoo-Hoo. In the following year at the convention which was held at St. Louis, Mo., he was elected to the office of Senior Hoo-Hoo, and this year at the Winnipeg convention was chosen for the highest position in the gift of the order, that of Snark of the Universe.

Woods Operations—The Waste Problem

Editor Canada Lumberman:— Woodstock, N.B., Sept. 7.

The problem of avoiding waste in woods operations and in the mill furnishes a very broad question, the solution of which differs materially in different localities. In our logging operations we cut practically everything that will make 2 in. x 4 in. and laths, where it is on a short haul. This pays alright, but if you should have a long haul it would not pay to handle such lumber at all. However, we believe in taking the whole of the tree; that is, to cut low on the stump and not leave a third of the top in the woods, as I have noted in some cases.

My personal experience is that the logger has to use his best judgment as to the course to persue, depending largely upon the locality. There is no hard and fast rule laid down in the matter, and I find that the same applies, in a measure, to the operations of the mill.

Here we have an excellent demand for all the waste wood and even the sawdust. For this we get a price considerably above the cost of handling it. We take all the lath possible out of the slabs and the trimmings and other large pieces too short for lath wood we manufacture into barrel heads. Therefore we consider that we get all the money out of our stock that is possible. In a different locality, however, our methods might not prove so successful, as the conditions might be different from those existing here.

However, after twenty-six years in the manufacturing of lumber, I believe that the greatest care should be exercised in conserving the forests, as well as in using its products to the best possible advantage. Undoubtedly our forests are among the greatest natural resources of our country.—W. M. Smith (Smith Lumber Company).

Sale of Large Tract of Timber

It is reported that timber limits extending over 115 square miles along the foreshore of Seymour Inlet and adjacent waters in British Columbia, including 3,000,000,000 feet of high-grade cedar, were recently transferred to a syndicate of capitalists from the United States. It is said to be the intention of the purchasers to begin logging operations on the limits in the near future, and the plans contemplate placing several sawmills on the property. The scarcity of cedar and the increasing price of high-grade timber in the United States have caused American millmen to turn their attention to British Columbia, which has the largest compact area of merchantable timber on the continent. The abolition of the duty on Canadian shingles and other forest products has encouraged and given impetus to the shingle industry, which has made great progress in the Province recently.—R. E. Mansfield, U. S. Consul General at Vancouver, B.C.

South African Lumber Trade Prospects

Large Possibilities for Increasing the Demand for Canadian Products— Details of the Baltic Shipments to Durban

The importance of the lumber trade of South Africa will be recognized when it is stated that in 1913, by no means the largest year of import, 187½ millions feet b.m. were imported into the country, of which almost 115 million feet was pine; and 47½ million feet consisted of flooring and ceiling boards, manufactured for the most part out of the same raw material, says the Canadian Trade Commissioner at Durban.

The distribution of the imports are as follows:—

	Ft. B.M.	$
United Kingdom	3,864	180
Canada	7,728,480	155,364
United States	25,038,660	534,656
Sweden and Norway and Baltic ports	81,653,724	1,879,453
Other Countries	287,064	9,503
Total	114,711,792	2,579,158

The figures from the United States include a great deal of pitch pine, which cannot be procured from Canada; but the bulk of what arrives from the Baltic is material that could come from the Dominion. It will be seen that the respective figures are 7 millions and 81 millions, a difference of 74 millions in favour of the Baltic ports.

Timber Trade With the Baltic

The system in vogue as regards the Baltic timber trade is that agents for the mills quote customers all over the country, including farmers, and small dealers in the small towns of the interior. These are forwarded to the mills which ship same on steamers running at regular intervals. A copy of the general shipping conditions from the Baltic as regards wood goods has been forwarded to the Department of Trade and Commerce, Ottawa, and it will there be seen that the freight rate to Durban, which is, perhaps, the chief lumber port of the Union, is approximately $19.35 per standard of 1,980 feet B.M., or

On July 1, quotations for Baltic lumber, c.i.f. Durban, are:—

	$	$
Deals, 3 x 9	69 35 per std.	or 35 00 per 1,000 ft. B.M.
Scantlings	62 05 per std.	or 31 00 per 1,000 ft. B.M.
⅞ x 6 flooring	66 91 per std.	or 33 45 per 1,000 ft. B.M.
½ x 6 ceiling, beaded	69 35 per std.	or 35 00 per 1,000 ft. B.M.

Allowing $19.35 freight per standard (or $9.70 per thousand feet B.M.), it will be seen that a minimum of over $20 is left to pay the mill, insurance, and for putting the lumber at ship's side in cases where the ship will not call at the mill; and for paying the agent his commission. The lumber is manufactured from common grade stock, and is full of knots, some of them very large. That is the grade of lumber that this market calls for. The difference between grades is difficult to distinguish; but it may be summarized in the words of the dealer, who said, "Sometimes we get a better lot than at another time, and in that case we place our next order with the same mill."

Imports From Canada

As regards the trade from Canada, apart from comparatively small consignments, it is made up for the most part of cargoes per sailing ship from Vancouver or Vancouver Island ports. This timber is mostly for the South African Government railways, and consists of baulks running from 12 x 12 to 18 x 18, and deals 3 x 9 and 4 x 12. The railways also require from time to time consignments of clear pine, averaging about 200,000 feet a year; and they also buy shelving grade. There has been forwarded to the Department of Trade and Commerce, Ottawa, a specimen Tender Form, together with the conditions of timber contracts, which will be of service to those who may wish to enter the trade and deal direct with the government.

The Canadian lumber trade should remember when dealing with South Africa that the basis of calculation is different. Where the United States and Canada always speak of feet board measure, importers here ask for Baltic standards, which are, approximately, two thousand feet B.M. (actually 1,980 feet or 165 cubic feet). Large timbers again are calculated heer by the cubic foot, while flooring and ceiling are often asked for retail in running feet or 100 feet squares.

Then again there are differences in sizes cut at the mills. The Canadian mills cut logs into 2 x 4, 2 x 6, 2 x 8, 2 x 10 (occasionally), and 2 x 12; and the differences between the two trades will be appreciated by the following quotations taken from the principal South African lumber firms. Prices are per running foot:—

	6 to 8 Ft. Cents	9, 11, 13 to 17 Ft. Cents	10, 12 and 18 up Cents
Deals—			
3 x 11	14	14.4	15.2
4 x 9	14.3	16.1	16.7
3 x 9	10.6	11.1	12
Boards—			
2 x 9	7.6	8	8.1
1½ x 9	5.6	6	6.1
¾ x 9	3	3.1	3.2
1 x 9	4	4.1	4.3
Scantling—			
3 x 6	7.2	7.6	8

The above will suffice to show the sizes and method of selling. Other scantlings measure 3 x 4½, 3 x 3, 2 x 6, 2 x 4½, 2 x 3, 2¼ x 3, 1½ x 6, 1½ x 4½, 1½ x 3. It will be seen that for the main the 3 x 9 plank is the basis of cutting, and from that the above are cut out as follows:—

Flooring is cut into ⅞ x 6, ⅞ x 4½, 1⅛ x 6, and is sold at the running foot, the price ranging from 2¼c. for ⅞ x 6, 6 to 8 feet in length, to 3¼ for 1⅛ x 6, 10, 12 and 20 foot lengths and above that length. Other lengths of flooring are 9, 11, 13 and 19 feet.

Ceiling is cut ½ x 6, and is sold in 8 feet lengths at 1½c. per running foot; 9, 13 to 19 feet lengths at 1¾c. per running foot; and 10, 11, 12 and 20 and up at 2c. per running foot.

Pine shelving, dressed four sides, 1 x 12 is 7.1c. per running foot, $71 per M.

Clear pine, dressed four sides, ½ x 12 is, 10c. per running foot, $200 per M. 1 x 12 is 13.2c. per running foot, $132 per M. 1½ in., $142 per M. 2 in., $142 per M. 3 in., $152 per M.

Poplar, dressed four sides, ½ x 12, $212 per M. 1 x 12, $142 per M. 1½, $152 per M. 2, $152 per M.

Swedish mouldings, 2-in., 2½-in., 3-in., 4-in., 5-in., 6-in., per lineal foot, 1½c., 1¾c., 2c.

Architrave, 2c., 2½c., 3½c., 4c.

Cornice, 1½c., 2½c., 3½c., 4c.

Finials, 3 x 3, 80c.; 4 x 4, 80c.

Pitch pine, per cubic foot, 80c., $66 per 1,000 feet B.M.

Oregon pine, per cubic foot, 60c., $50 per 1,000 feet B.M.

Oregon pine deals and scantlings, same price.

The following prices for doors are not for No. 1 grade. They are not better than No. 2, often worse, and they are for pine or spruce or fir 4-panel doors:—

	6' 6" x 2' 6" $ c.	6' 8" x 2' 8" $ c.	6' 10" x 2' 10" $ c.	3' x 7' $ c.
1¼ DM American	2 30	....	....	
1½ DM American	2 55	2 89	3 04	3 40
1¾ DM American	....	3 65	4 01	4 25
Half-glass Doors, Swedish	3 77	4 25	4 62	5 00
Batten door	1 46	1 46	1 58	1 58
Door frames	1 95	1 95	2 00	2 00
Jambs, 1½ x 10½	2 06	2 06	2 12	2 12

Frames and sashes (Swedish pattern, local manufacture)—12-lights, 7 x 9, $4.14; 8 x 10, $4.25; 10 x 12, $4.50; 10 x 14, $5.10; 12 x 14, $5.60; 12 x 16, $5.95; 14 x 16, $6.57.

Margin lights—20 x 20, $5.95; 24 x 26, $6.93; 24 x 30, $7.78. 4-lights, 15 x 24, $5.47; 15 x 30, $5.84; 16 x 32, $5.20; 18 x 36, $6.68.

French casements (margin lights)—3 ft. 6 in. x 6 ft. 8 in. x 1½ in., $6.32; 3 ft. 6 in. x 7 ft. x 1½ in., $6.93; 4 ft. x 7 ft. x 1½, $7.18; 4 ft. x 7 ft. x 1¾, $8.64.

Casements—6-lights, 8 x 10, 91c.; 10 x 12, $1.10; 12 x 14, $1.40. 4-lights, 8 x 10, 80c.; 10 x 12, 97c.

Casements and frames—6-lights, 8 x 10, $2.20; 10 x 12, $2.68; 12 x 14, $3.05. 4-lights, 8 x 10, 79c.; 10 x 12, $2.31.

Fanlights—1½ frames, 2 ft. 6 in. x 16 in., $1.22; 2 ft. 8 in. x 16 in., $1.22; 2 ft. 10 in. x 16 in., $1.34; 3 ft. x 6 in., $1.34.

The above prices will suffice to show what the price of factory goods are. Discounts are small as compared with Canada, 10 per cent. being about the limit, while 5 per cent. for cash within thirty days is the general rule. These are to the wholesale trade, but to the ordinary buying public, outside builders, etc., prices are net cash.

Demand for Oregon Pine

Speaking more particularly of Oregon pine, which forms the bulk of importations from the Pacific Coast, these are determined in the

main by the needs of the South African railways. If the tender form forwarded herewith it studied it will be found that sawn pitch pine logs, which come mostly from the Southern States, timbers 10 x 10 up to 15 x 15 are asked for, with a minimum of 35 cubic feet per log, equal to 420 ft. B.M., or a log 12 x 12—35. The quotations must be at per cubic foot.

In the schedule for Oregon pine prices are asked for at per load of 50 cubic feet ex ship at ports stated. After delivery to wharf the railway takes delivery. Deals are at per running foot.

Just recently the writer was told that the Government was paying $50 per M. ft. B.M. (2s. 6d. per cubic foot) for Oregon pine, and this price is 30 per cent. less than is paid for same by private firms. The grade required by the Government is "merchantable," that is strong sound timber, free from shakes, large, loose, or rotten knots and defects that impair its strength or are incompatible with merchantable grading. Sizes run from 12 x 12 to 18 x 18, and lengths from 20 to 40 feet, but average length is less than 30 feet. Deals are 3 x 9 and 4 x 12, and from 12 to 40 feet in length, with the average of parcels for different ports 18 to 25 feet in length.

It will be noticed that all lengths are taken.

With regard to Pacific coast cedar. There could be a market worked up for same for boat building purposes, but the total amount would not be many thousands of feet per year unless the price was reasonable. At present spruce and fir of common grade, with sound knots, are used; but the proper material is, of course, clear grade. The advantage of cedar is that it is light, and as the class of sailing boat built calls for extreme lightness, cedar would oust both spruce and fir. Some 1,000 feet of clear 1-inch full rough cedar at $70 landed on wharf at Durban will be required in October. The length of the planks should be 28 feet, so as to allow of the boat's planking being in one piece.

To suggest how Canada is going to enter this trade is to show how the Swedish mills have built up their business. This has been developed along the following lines. Many of the mills have agents here who indent for lumber for smaller firms in quantities of 10, 15, 20 or more standards, or, in B.M., 20 M., 30 M., 40 M. or more feet. A regular steamship line has been inaugurated, and its vessels steam from mill to mill, picking up what parcels may be offering. It makes no difference how small the parcel may be, the steamer will pick it up or send for it. The general shipping conditions attached to this trade are being forwarded and may prove useful.

Freights are fixed by agreement, and, as will be seen, are high, Durban's rate being about $18.85 per standard, or $9 per M. ft. B.M.

Grades of Lumber Required

In deals, boards, and dimension lumber generally there is only one grade, common and often worse. The same applies to ceiling and skirting, which are nearly all OG in pattern. Bull nose and other casing are unknown here, the simple non-lust-collecting lumber for internal finish not having been introduced. Flooring is also worse than No. 2 flooring as understood on the Pacific coast. It is ordinary common lumber, grooved and tongued. The town hall at Durban, which cost over a million and a half dollars, is floored with material full of small knots, and the same fault applies to the best of Baltic flooring, the knots being often not even sound.

There is little sentiment in business here, but if Canada can give a better article for the same price than can be had now, there is a large market. There will, however, be competition here from firms which are bound up to a certain extent with the Swedish mills. People will need to know that Canadian lumber is better, can be procured as required, and that there will be regular sailings on which they can depend. From the east coast there is already a monthly service, but from the west coast there comes a full cargo only three or maybe four times a year.

N. B. Cut May be Only Slightly Reduced

The Chatham, N.B., Gazette in a recent issue says:—Most of the lumber companies are preparing for the winter operations in the woods on about the same scale as usual, and those who are in touch with the lumber situation feel that business will be on a good footing next season. The stoppage of shipments from the Baltic has made the Canadian supply more in demand and prices are good. Freights are up, but not sufficiently to alter profits materially. Provisions are, of course, higher and it is going to cost more this winter to get out the same quantity of lumber than in any previous year. For this reason wages have taken a drop and the employees are meeting this with a very good grace. The general run of wages this year will be about $24 to $28 per month as against $30 to $34 last season.

Other press reports however, state that the output will be comparatively light, and that many of the big operators have not yet decided how much they will cut. The North Shore lumber concerns are sending in crews to begin the winter operations. The Bathurst Lumber Company, Shives Lumber Company and Richards Lumber Company all sent crews into the woods recently, and while none of the above-mentioned will cut as large an amount as last year the cut will be larger than at first expected.

Price Bros. & Co.'s New Saw and Rossing Mills

The accompanying illustrations represent two mills which were erected last spring in the Lake St. John district by Price Bros. & Company, Limited, Quebec, P.Q. One of these, the St. Gedeon mill, is situated at the north of the Belle River where it flows into Lake St. John. The Quebec and Lake St. John railway division of the Canadian Northern Railway passes by the mill and has a siding in the mill yard. This mill contains a circular saw and carriage, two edgers and two resaws, one of which is a Waterous steam feed resaw, also five

Price Bros. & Co.'s new mill at St. Gedeon, P Q.

Waterous barkers. The mill has a capacity of 8,000,000 feet of sawn lumber and 4,000,000 feet of rossed pulpwood per annum. Its logs are secured from limits situated on the Belle River and on the Lake at the head of the river and total in all 150 square miles.

The lumber is shipped by the Quebec and Lake St. John Railway to Chicoutimi where it is piled on the company's wharves, shipment from that point being made by water. The pulpwood is shipped by rail to the Kenogami Paper Mill of Price Bros. & Company, Limited.

The other illustration represents the Metabetchouan mill located at the mouth of the Metabetchouan River on Lake St. John. This

Price Bros. & Co.'s new pulpwood mill on the Metabetchouan.

mill contains ten barking machines which are operated day and night upon wood which is subsequently used at the Kenogimi Paper mills.

The two mills are run under the control of the Chicoutimi agency of Price Bros. & Company, Limited, of which Mr. J. McDowall Grosart is manager. This agency covers the logging and lumber department for the Lake St. John, Chicoutimi and Saguenay districts of Price Bros. & Company's operations. For the coming year this agency has given out contracts for 80,000,000 feet of logs.

Mr. J. E. Ray, Canadian Trade Commissioner at Birmingham, England, reports that the effect of the war upon the timber trade is not yet fully apparent, but that the cessation of shipments from Great Britain's chief sources of supply in Europe will show itself unmistakably during the next few weeks as stocks become depleted.

The New Snark of the Universe

The new Snark of the Universe, E. D. Tennant, Winnipeg.

Mr. E. D. Tennant the new Snark of the Universe of the Concatenated Order of Hoo-Hoo was born in Brantford, Ont., in 1879, and comes of a Scotch Canadian family. He was the second son of the late James Tennant, who for many years was a prominent figure in the lumber business in Toronto, where he received his education and business training. Upon deciding to enter the lumber business Mr. Tennant went to Fort William, Ont., in 1896, and entered the services of the Graham & Horne Company. He was, while with this firm, given the opportunity of mastering thoroughly every detail of the business. He also had four or five years' experience in the mills and lumber camps on the north shore of Lake Superior. In 1900 Mr. Tennant became connected with the Rat Portage Lumber Company of Winnipeg, Man., in the capacity of sales manager. He was also manager of the sash and door factory until 1912 when he severed his connections with this firm to take over the management of the business of Turnbull and MacManus of Winnipeg.

Mr. R. H. Campbell Back from the War Zone

When war broke out between France and Germany R. H. Campbell, chief of the forestry branch of the department of the interior, was in Chambray, France, with comparatively little French money in his pocket. He had some Swiss currency, however, and with this hurried over to Geneva, where he was able to purchase a railway ticket to Paris. He took the train from Geneva for the French capital August 11, and the journey was made without any unusual experiences. As soon as Paris was reached he, like every other tourist, had to hasten to the prefect of police to get a permit to allow him to stay in Paris. The next day he had to get another permit from the same source to enable him to leave for Boulogne, there to take a boat to England. At Boulogne he saw British troops arriving from England and leaving for the front. He remained in London two weeks before he returned to Montreal. Mr. Campbell went to Switzerland to look into the work of re-afforestation in that country, but war prevented him from completing his investigations.

Personal Paragraphs

Mr. George Nicholson of Austin & Nicholson, Chapleau, Ont., visited Toronto recently on business.

Mr. Hermann H. Hettler of the Hermann H. Hettler Lumber Company, Chicago, Ill., visited Toronto recently on business.

Among lumbermen recently visiting Toronto was Mr. H. J. Bartlett, of Ogdensburg, N.Y., a member of the firm of Skillings, Whitneys & Barnes.

Mr. Robert Vestal, manager of the Atlantic Lumber Company, 110 Manning Chambers, Toronto, has left on a protracted visit to Southwestern Texas, for the sake of recovering his health, which has recently been poor. Mr. Vestal expects to be back in Toronto in the early spring. In the meantime Mr. J. W. Jacobson will be in charge of the company's business at Toronto.

The marriage of Mr. C. P. Waterous, superintendent of the Waterous Engine Works Company, St. Paul, Minn., to Miss Fanny Nagle, daughter of Mrs. F. A. Nagle, 61 Chesterfield Avenue, Westmount, P.Q., took place at Westmount on September 16. Mr. Waterous is the grandson of the founder of the well-known Waterous Engine Works Company, Limited, Brantford, Ont., of which the St. Paul plant is a branch.

Logging Congress Officers

At the closing session of the Pacific Logging Congress recently held at Bellingham, Wash., officers were elected as follows:—President, J. J. Donovan, Bellingham, Wash.; vice-president, A. W. Laird, Potlatch, Idaho; secretary-treasurer, George M. Cornwall, Portland, Ore.; executive committee, Arthur J. Henry, Vancouver, B.C.; A. W. Peed, Eureka, Calif.; H. M. Strathern, Post Falls, Idaho; George F. Weisel, Missoula, Mont.; A. H. Powers, Marshfield, Ore.; E. G. English, Mount Vernon, Wash.

Wistar, Underhill & Nixon's New Canadian Representative

Gilbert B. Woodhull.

The accompanying portrait represents Mr. Gilbert B. Woodhull, the new representative in Canada of the widely-known firm of Wistar, Underhill & Nixon, wholesale hardwood lumber dealers, Philadelphia, Pa. It is interesting to note that this firm was organized in 1898, and that all of its members are experienced lumbermen and merchants, who had extensive training in various fields of the industry before the firm was organized. Every member of the firm is active and aggressive, and as a result of their energy, business methods, and knowledge of the details of the lumber trade, they have advanced to a position in which they hold the confidence and the respect of the trade.

The firm has a well equipped and well stocked hardwood yard at Nashville, Tenn., and another at Basic City, Va. They own a controlling interest in the timber and sawmill of the Penn Sumter Lumber Company, of Sumter, S.C., of which Mr. Wistar is president and Mr. Underhill treasurer. They have also a number of contracts with some of the finest sawmills in Arkansas, Mississippi, Louisiana and Georgia for products of yellow pine and cypress. They make a specialty of the widely-known "Golden Rod" kiln dried, soft short leaf yellow pine. This stock is grown in one of the choicest forests of the finest short leaf pine in the United States. It is manufactured on a first class band mill and its excellence is appreciated by the trade which recognizes the value of high class lumber. The firm ars also extensive shippers of poplar, oak, chestnut, maple, cypress, and white and yellow pine.

For a number of years the firm were represented in Canada by Mr. W. J. Anderson, of London, Ont., who had gained and retained many warm personal friends in the Canadian lumber trade. Mr. J. W. Anderson, who has been identified with the house for many years and who was a son of W. J. Anderson, has also made periodical visits to the lumber trade in Canada. The death of the father, Mr. W. J. Anderson, made it necessary for the firm to arrange for other representation, and they selected Mr. Gilbert B. Woodhull, who for some time had been their representative in New York State. Mr. Woodhull has already made many friends among the Canadian customers of Wistar, Underhill & Nixon, and his pleasing personality, courteous manners and fair methods are certain to gain for him a constantly increasing confidence and regard, which are the basis of all good business. Mr. Woodhull has had excellent training for the position. He is a graduate of Cornell University, and has been identified with the lumber trade since his youth, inasmuch as his father has been a lumberman extensively engaged in the lumber business in Brooklyn, N.Y. For a number of years Mr. Gilbert B. Woodhull successfully represented Gouverneur E. Smith, of New York City.

Mr. Woodhull will, for the present, make his headquarters at the Prince George Hotel, Toronto, but can be reached permanently by mail at P. O. Box 54, Toronto, Ont.

The Pacific Lumber Company's Extensions

Mr. John D. Mershon, of Saginaw, Mich., has just returned from his semi-annual trip to California, and reports that The Pacific Lumber Company have nearly completed the extensive improvements which have been undertaken to take care of their rapidly growing eastern business. These improvements at Scotia, California, are put in with a view to taking care of the business direct from Scotia, as soon as the Northwestern Pacific Railroad is completed to the mill, which will be within two or three months.

The Pacific Lumber Company have erected the largest planing mill that Mr. Mershon ever saw, it being 230 feet wide by 660 feet long. This mill will be free of belting and shafting, and each machine will be operated by an independent electric motor.

They have also erected a storage shed for dry lumber, 200 feet by 660 feet long. The lumber is moved about the plant in units by a monorail system, and as soon as business becomes normal, after the upheaval caused by the European war, they will be ready to do business direct from Scotia.

The John D. Mershon Lumber Company, Saginaw, Mich., are the exclusive eastern representatives for The Pacific Lumber Company.

Death of W. S. Rogers

Many readers of the Canada Lumberman will learn with deep regret of the death of Mr. W. S. Rogers, general manager of the Canadian Western Lumber Company, who was one of the most prominent lumbermen on the Pacific Coast. Mr. Rogers passed away at his home in Fraser Mills, B.C., after a lingering illness and in the presence of a number of relatives. He is survived by a widow, a mother, eight brothers and two sisters.

The late Mr. Rogers had been prominently connected with the lumbering business practically all his life, and since the opening of the large plant of the Canadian Western Lumber Company at Fraser Mills, eight years ago, had been actively engaged in connection with it. Acting as superintendent of the local plant until some two years ago, he had filled that important office so successfully that he was made general manager of the entire concern with direct supervision of all the departments of the company. He was greatly respected and liked by all who were employed under him and had an engaging personality which endeared him to all with whom he came in contact. His death is a great loss to the whole community.

Mr. Rogers was born in Menominee, in 1870, and while still a young man went to the west and settled in Washington, where he soon became prominent in the lumber world and widely known as a man

The late W. S. Rogers, manager of manufacturing of Canadian Western Lumber Co.

of exceptional executive ability, with an especial aptitude for handling large concerns. For several years he was the active head of the Anacortes Lumber & Box Company and was also manager of the Columbia River Lumber Company, Golden, B.C. It was as general manager of the Canadian Western Lumber Company, however, that he became most widely known to the lumber world of the Pacific Coast. He was prominently identified with the Weyehaueser interests and was manager of the Everett plant of that company from 1900 to 1906.

Mr. Rogers was a prominent mason and was also identified with the Elks.

Opening the Pacific-Atlantic Lumber Trade

A direct steamship service between Puget Sound and Boston has been inaugurated by the Steamship Atlantic of the Emery Steamship Company which sailed out of Boston recently with a general cargo, to its full capacity of 9,000 tons, for Pacific Coast ports. It will return with a cargo of Oregon fir. The Pacific, a sister ship of the Atlantic is nearly completed and is expected to be ready for its first voyage within a few days. These ships are each of 9,000 tons and were specially designed for lumber carrying. The first cargo of Oregon fir is expected at Boston early in November. Several eastern firms have already sent representatives to the mills around Puget Sound to look over the situation and make preliminary arrangements for bringing cargoes of Oregon fir to Atlantic ports by way of the Panama Canal. It is expected that the Atlantic's first cargo will be about 2,000,000 feet at least. Her cargo for the Pacific Coast includes about 7,000 tons of steel shipment to Boston by rail from Pittsburgh. Mr. Frank W. Lawrence, of Lawrence & Wiggin, wholesale lumber dealers of Boston who have been active in developing this trade states that he believes freight rates can be kept at a point that will make the selling radius extend as far west as Chicago.

Recent Ontario Timber Sales

Several sales of timber berths were recently completed by the Ontario Department of Lands, Forests and Mines as Follows:—

Certain limits in the township of Dana, to Geo. Gordon & Company, Cache Bay, Ont., at the following prices: red and white pine $4.10 per thousand feetin addition to the Crown dues of $2 per thousand feet.

Township of Marshay to Duncan McLaren, Toronto, at the following prices: red and white pine $4.65 per thousand feet; Jack pine $2 per thousand feet, each of these being in addition to the Crown dues of $2 per thousand feet; Jack pine tiese 8c per tie in addition to 5c per tie of Crown dues.

Three berths in the district of Algoma, to Austin & Nicholson; Chapleau, Ont., as follows:—

W. D. 5: red and white pine $4.75 per thousand feet, which includes Crown dues; Jack pine $3.25 per thousand feet, which included Crown dues; spruce $3.50 per thousand feet, which included Crown dues; Jack pine ties 8c per tie, which includes Crown dues.

East half of township 24, range 22; red and white pine $4.75 per thousand feet, which includes Crown dues; Jack pine $3.50 per thousand feet, which includes Crown dues; spruce $3.50 per thousand feet, which includes Crown dues; Jack pine ties 8c per tie, which includes Crown dues.

Northwest quarter of township immediately east of township 24, range 22: red and white pine $5 per thousand feet, which includes Crown dues; Jack pine $3.50 per thousand feet, which includes Crown dues; spruce $3.50 per thousand feet, which includes Crown dues; Jack pine ties 8c per tie, which includes Crown dues.

B. C.'s Forest Revenue for August

The total amount of forest revenue of the Forest Branch of the B. C. Lands Department for the month of August, 1914, was $150,698.80, which was made up as follows:—

Timber Licence Fees	$118,656.15
Timber Licence Transfer Fees	150.00
Timber Licence Penalty Fees	1,430.00
Timber Lease Rentals	4,636.15
Timber Lease Transfer Fees	20.00
Timber Mark Fees	55.00
Handlogger Licence Fees	875.00
Scaling Fees	1,042.01
Scaling Expenses	39.80
Timber Royalty	15,593.68
Timber Tax	2,571.70
Trespass and Penalties	882.34
Timber Bonus	4,437.00
Exchange	1.11
Miscellaneous Revenue	8.75
Timber Sales Rentals	116.88
Timber Sales Cruising	77.58
Timber Sales Advertising	29.60
Seizure Expenses	46.05
Scalers Examination Fees	30.00
	$150,698.80

Collections for the Forest Protection Fund from Timber Licencees, Leseees, etc.	$10,742.44	
Contributed by Provincial Government	10,742.44	21,484.88
The Forest Protection Expenditure during month of August amounted to		$69,394.80

The total amount of timber scaled in the provincial districts was as follows:—Saw logs 77,344,307 feet B.M.; piles and poles 624,497 lineal feet; railway ties, shingle bolts and cord wood, 30,040.99 cords. The quantity exported was as follows:—5,875,804 feet B.M. of saw logs and 161,400 lineal feet of piles and poles.

Timber sales for the month of August amounted to 2,854,000 feet B.M., and 1,856 ties, the estimated value being $4,852.29.

Mr. W. J. Foye, of Omaha, Neb., was a recent visitor to Toronto.

Business Points of Value to Millmen

Well-Known Salesman Offers Suggestions and Criticisms, and Views the Manufacturer From the Retailer's Standpoint

By J. W. H.

We hear many complaints from retail lumbermen regarding deliveries made by our friends in British Columbia. In fact the opinion held by the retailer of the business acumen displayed by some of these friends is not of a very high order. The chief trouble is delivery, and failure to keep promises. Many other causes for complaint are heard, and a recital of a few of these complaints might at this time be opportune in order that the millmen may be able to clean house during the next few months.

The lumber industry of Canada is probably one of the most liberally advertised industries in the Dominion, and in order to get the full advantage of that advertising it must be backed up by service. Your customers are probably buying from you because he considers that you give him better service than the other fellow can. In order to hold that business you must continue to give them service, otherwise you will be in the unhappy position of watching your business go across the road to your competitor. The lumber industry must follow the lead of the large department stores in the cities, and literally speaking, ship the order on the same day. The majority of retailers are cutting their stocks to the lowest possible point, and when they order they usually require the goods delivered at once. It is therefore up to the millmen to speed up their office departments, as in nine cases in ten it is found that delays in shipment are caused in the office. Many firms consider the office a necessary evil. It is nonproductive and is usually carried as a burden charge when making up cost of production. We claim that the office, if well managed and run on progressive lines, will be the means of making the business a success. Too often we see firms starting in business in which the principals are practical men and nothing more. They are able to manufacture excellent products, but are unable to sell those products because none of the principals have sufficient business acumen. In order to make money you must sell goods. Many firms say "Why, we should sell more lumber than our competitors, because we have the best sales department in the business. We are paying more money to get business than any of the other firms." But then the following quetsions arise: Are you getting a fair return from the money you have invested in that sales department? Are your salesmen taking advantage of every opportunity to make your firm indispensable to your customers? Are they getting all the business they should? Do you furnish them with a stock list each week advising them what you have on hand, and what stock you desire moved quickly? Do you back your salesmen with the promised delivery?

We will now deal with these questions separately.

The Personal Trade Fallacy

Are you getting a fair return for the money invested in your sales department? This question can best be answered by referring to your books. Look into the record of each man, and see whether you consider that he is earning the money that you are paying him. You must at the same time take into consideration trade conditions generally, for it is not good business for your salesman to load up a customer with material that he will not be able to move for some time. Actions of this nature, although they help to swell the salesman's record, are inclined to leave a bad taste in the mouth of the customer, and he will be careful when ordering from your firm again. While your man is signing a contract, he should be thinking of the orders your firm expect to get from this man in the future, and doing the ever necessary missionary work connected with each sale. This too will answer the next question: Are your salesmen taking advantage of every opportunity to make your firm indispensable to your customers? The salesman is the mouthpiece of the firm. He is the man who comes in contact with the customers. If he does not treat your customers as you would yourself, then he has failed in his object. He should be the representative of your firm, and carry out its policies consistently. Many firms consider personal trade in a salesman a very desirable thing. By personal trade we mean that business that is supposed to follow the salesman wherever he is employed, and many salesmen will make this point a strong one in applying to you for a position on your staff. The writer has had considerable experience with salesmen who have claimed to have personal trade, and generally speaking they were good fellows who did most of their business over hotel bars. Now business of this class is not worth the paper it is written on, as some other good fellow with a little more money to spend is liable to come along and land the next order. Now a salesman is expected to be sociable, yet at the same time he should not consider sociability to be his chief stock in trade. Your salesman should not be allowed to build up a business for himself. You are employing him and therefore you should see to it that he employs all his time building a business for you. Personal trade counts for nothing unless the man can hold the business and assure you that he can.

Missionary Work and Advertising

Are they getting all the business they should? Each week your men should turn in to your office a list of customers that they have called on. Also of any new prospects in the direction of any development work contemplated, for which plans are in progress. This should be done in order that you may keep posted, and also that you should be able to keep in touch with the principals of the new work through the medium of your advertising department, and the mails. You should constantly endeavor to get news of new work planned, and send this to your salesmen. You will find that in this way you will increase the efficiency of your sales force. Many firms consider their men are armed with a sort of magic wand, by means of which he can produce orders at will. But it will soon be seen that co-operation with the sales force will increase their efficiency, and with that increased efficiency they will of course be able to turn in to your office a larger volume of business.

Missionary work is the work that must be done before a sale is made, and under this heading the most important factor is advertising. By advertising you make your firm known to the many people interested in your products, and when your salesman comes along you are already known to these people. Your prospect knows the class of goods that you specialize in. This in itself will save your man time. Then again the standing that advertising gives a firm counts for a great deal. Many firms advertise in a paper because it is their trade journal and they support it for that reason, and that reason alone. They consider that all papers are blood suckers and blackmailers and give out their advertising as if they were paying hush money. A trade journal justifies its existence by the fact that it tells you what the other fellow is doing and often tells you how he does it. It keeps you up-to-date and shows the latest methods of doing business. The advertising pages of any good trade journal will introduce you to the best and most progressive firms in the business. Please do not consider your trade journal an evil. If it was it would not have lasted so long as it has, and probably some firms would not be using the up-to-date methods and labor-saving devices now in use. Therefore you must consider that journal one of the greatest assets you have in the industry.

Personal letters written from time to time to your customers will give him the impression that you will give him personal service, and will pave the way for your salesman. These letters should be short and state in a few words all that you want to say. Your advertising man can look after this work. The chief object of these letters is, of course, to let your customer know that you are still doing business at the old stand, and that you solicit his enquiries. This is a very important feature, and care should be taken in composing and also in mailing these letters. Your salesman undoubtedly covers territory in which you have a number of customers. He will no doubt visit each town at a certain date, and the advertising department should time those letters to get to the customer a few days in advance of your salesman. By doing so you will aid him materially in his introduction.

Salesmen spend the greatest part of their time in finding a buyer. They should therefore endeavor wherever possible to find out what the other fellow knows, and many good leads can be obtained from the most unexpected sources. It is surprising the amount of new business a salesman can get who is of an inquisitive turn of mind, and many large orders have been booked by men who were able to worm out information before it was generally known.

Stock Sheets for Salesmen

The next question speaks for itself: Do you furnish your salesmen with a stock list each week? This you will find an excellent means of selling slow moving stock, and as your salesman is the man you depend on to move those goods for you, why should he not be advised approximately how much you can handle. The claim has been made that the millmen do not know how much stock of each size of lumber they have on hand themselves. So how can they be expected to advise their salesmen? In fact a case in point would indicate this to be the case. A retailer went to the yard of a well-known millman, saw the stock he wanted, and told the millman that he would send a team to get it. The team was sent within a few hours, and after remaining at the yard for half a day returned with the intima-

tion that they had no such stock on hand. The retailer, to satisfy his curiosity, journeyed again to the yard and found that the stock that he had selected in the morning was still lying in the yard where he had previously seen it. This instance would indicate something radically wrong with the stock keeping department, and incidentally something wrong with the management. The delivery of orders is the final process, and we venture to say the most important. Many firms have lost good business reputations through slow delivery, or rather failure to keep the promised delivery date. We will put the shoe on the other foot for a few minutes and then we shall see how it fits. Suppose, for example, the crank shaft or any other vital part of your main engine was to break, you would at once wire for a new one to be shipped to you at once and you would get everything ready in order that this part could be replaced on arrival. Now the firm you wired to could not ship for ten days or two weeks, did not advise you of this fact, but simply accepted the order and let you wait. You would not have a very good opinion of them, and would undoubtedly go somewhere else on the next occasion. If you are unable to make delivery when called for in the order the first duty you owe to the customer is to advise him of the fact. He will think more of you if you treat him the way you yourself would like to be treated. If a man asks for delivery in two months he wants it then, not three weeks or a month later. Had he wanted it then he would have said so in the order.

Value of Complaints and Criticism

A few words regarding the duties of the manager. He should be supreme head of the business and as familiar with the work in the office as he is with that in the mill. He should make a rigid periodical inspection of each department. Only by doing this can he hope that the organization under him is working smoothly. He should see that there is no friction between departments, and while it is hardly possible for him to keep in touch with each order, yet he can demand from each department a report to the work done each day. And above all he should demand that every order behind schedule should be reported to him at once in order that he may give it his personal supervision. Pay attention to complaints and do everything in your power to obviate others of a like nature. When a man complains he is criticising your business. Look into these criticisms. It will pay you.

Canadian Western Report Shows Improvement

Considerably less lumber was manufactured by the Canadian Western Lumber Company, Fraser Mills, B.C., according to its monthly report, during July, 1914, than in the corresponding month of 1913, and less than in June, 1914. Sales produced $169,601, the amount of lumber sold being 11,931,000 feet. Out of 80,170,000 feet of lumber manufactured since January, 75,673,494 feet have been sold, the price realized being $1,117,841. This compares with $1,791,871 twelve months ago. In June of this year the amount of lumber manufactured was 16,748,000 feet, of which only 9,782,000 feet were sold, producing $140,507.

The statement of operations is as follows:—

July	1914.	1913.	Decrease.
Feet manufactured .	12,939,000	21,981,000	9,042,000
Feet sold	11,931,000	13,406,000	1,475,000
Price realized	$ 169,601	$ 234,497	$ 64,896
Seven months.	1914.	1913.	Decrease.
Feet manufactured .	80,170,000	115,139,000	34,969,000
Feet sold	75,673,494	104,685,000	29,011,506
Price realized	$1,117,841	$1,791,871	$ 674,030

Lumber an Important Item of Sweden's Trade

Next to agriculture the forests of Sweden form the largest source of income. In point of value, lumber and lumber products form the largest single item of exportation from the country. In 1913 over 8,276,665 cubic yards of hewn, sawed, and planed lumber were exported from Sweden, besides $1,146,772 worth of joinery products. Large quantities of wood are consumed in the manufacture of wood pulp for export and for the domestic paper mills. Despite the heavy domestic production and exportation, Sweden imports considerable quantities of firewood, masts and spars, and certain hardwoods. In 1912 (the latest statistics available) the importation of firewood amounted to 115,340 cubic yards; masts and spars, 443,079 cubic yards; aspen wood, 70,713 cubic yards; mahogany, 2,429 cubic yards; other foreign woods, 1,656 cubic yards; lumber, sawn, 36.827 cubic yards; other more or less worked, valued at $876,315; veneer of mahogany, 201,803 pounds; veneer of walnut, 165,508 pounds; other veneer, 418,290 pounds. The importation of wood from the United States, mainly pitch pine and hardwoods, amounts in value to approximately $100,000 per annum.

The Robert Dollar Delayed at Rio de Janeiro

The Canadian Government has interested itself in the case of the steamer Robert Dollar, which the British Consul at Rio de Janeiro refused to clear because it had come in under the new American registry law. The Robert Dollar was registered at Ottawa, and the Canadian Government failed to notify the British Consul at Rio when the ship was turned over to American registry under the emergency law enacted to attract ships of the belligerent nations to the American flag. The British Consul refused to recognize the ship as an American vessel, and consequently it has been held in Rio at great expense to its owners, the Robert Dollar Steamship Company of San Francisco. The Robert Dollar is carrying a cargo of timbers from British Columbia, which are to be used in the harbor improvement works at Toronto.

Creosoting Industry Affected by War

The use of creosote oil in connection with the preservation of timber has grown to such large proportions that the wood preserving industry in North America is seriously affected by shortage of of stocks of creosote oil as a result of the war. Pacific Coast States, in which a great quantity of creosote timber preservation is carried on, are very short of this oil, and, at the same time, many important harbor developments are being planned which will require a greatly increased supply. Last year, thirteen plants on the Pacific Coast imported 4,844,053 gallons of creosote from Europe as compared with the use of 152,000 gallons made in the United States. This oil was used by thirteen plants treating 2,624,958 railroad ties, more than 2,286,000 feet of piling, nearly20,000 poles, about 171,000 square yards of paving blocks and 8,171,589 feet of timbers.

Dry Weather Causing Fire Danger in B. C.

Reports received early in September from British Columbia points stated that four forest fires of considerable size were then engaging the attention of Dominion forest fighters, the most serious being near the Chilliwack River, which however, had been successfully placed under control. Another fire near Huntington was reported to have crossed from United States territory. The third fire in the vicinity of the Timberland Lumber Company's plant was confined to logged-off lands. A long dry spell of weather had rendered the entire country dangerous from the forest fire point of view and the various forestry departments were anxiously watching the whole situation.

Work of the Forest Products Laboratories

Some native species of trees, little used until now, will be tested at the Forest Products Laboratories at McGill University, Montreal, to see whether they are suitable for pulp and paper manufacture. For this purpose the largest non-commercial paper machine in the world will be installed. The work is under the direction of the Dominion Forestry Branch. Detailed records of the process of manufacture of the different grades of paper will be kept. In this way Canadian pulp and paper manufacturers by adopting the same methods may achieve similar results. Another very important feature of the work of these laboratories will be the investigating of various methods of wood preservation. By such processes the life of railway ties, posts, poles and construction timber will be in some cases doubled. It is expected that it will be proved possible to use many of the most common Canadian woods for purposes to which, except for their non-durability, they are admirably adapted. Birch, for instance, if treated with creosote or zinc chloride, or with a little of both of these preservatives, makes an ideal railway tie or paving block, being cheap and also very resistant to the wear and tear of traffic.

Forest Protection on Lower Ottawa

The Lower Ottawa Forest Protective Association, which was organized last spring, has had a very active season, due to the dry period of May, July and August. The association employs 49 permanent rangers, four inspectors and as many temporary laborers as may be required for the control of individual fires. During the dry spell in May, more than 500 extra fire fighters were on duty at one time in the employ of the association. Since the organization of the association the area protected by it has been increased by 2,000 square miles, through the accession of new members. The total area now guarded is 11,812 square miles, or upwards of 7,500,000 acres. The association has recently secured convictions against 40 settlers in the Ste. Agathe, Mont Laurier, and Maniwaki districts for setting fires. In all probability, the excellent results secured by the Lower Ottawa and St. Maurice associations will lead to the formation of similar associations in other sections of the country.

Electricity in Logging Operations

Advances Which Have Already Been Made—Probable Important Development in the Near Future—Advantages over Steam Power

By Andrew Bloom *

The early settlers of this country built their houses from logs and split or hewed from the log such material as was absolutely necessary for the primitive furnishings of roofs, windows and doors, but as civilization progressed need of greater quantities of lumber began to be felt and seeing the possibility of financial gain, some of the most enterprising settlers began to specialize in furnishing their neighbors with different kinds of lumber needed. Such was the beginning of the lumber industry in this country and the ever-present and most important problem in connection with this industry has been, and now is, the problem of preparing and transporting logs from forest to mill. This problem has presented different aspects according to locality. In countries presenting a comparatively level surface as in the states of Maine, Michigan, Wisconsin and Minnesota, where roads could be built as close to the timber as was deemed necessary, the problem of transporting logs from the stump and assembling the same on skidways was usually the easiest part of the logging operation. The main problem being how best to transport the logs from skidway to landing. Where the country was dotted with lakes and swamps, where the chief means of locomotion was oxen or horses, where the logger had to depend upon cold weather and a short season, it required considerable forethought and an unlimited amount of energy and hustling to clean the skidways before the breakup in the spring. But as the logger gradually worked his way further into the forest and the distance to the landing correspondingly increased, it became apparent that the horse would be unequal to the task of profitably hauling over the long roads and that some means must be found whereby several loads could be transported at one time. This led to the introduction of the steam log hauler. The horse up to this time having been the only means of transporting logs, it was but natural in developing the steam log hauler that the inventor's mind should be bent to imitate his mode of locomotion. Propelled by a great drum to which gigantic horse shoes were fastened intended to firmly grip the ice surface, with five or six great loads of logs trailing in its wake, the steam log hauler created considerable interest among the loggers and some of them felt sure that a lasting method of cheap log transportation had been found; but for several reasons the steam log hauler proved to be more of a curiosity than anything else. I can remember how, after returning from an inspection of a steam log hauler which was operating in northern Wisconsin, one prominent Minnesota logger declared that he was going to have a steam log hauler too, but, he said, "I am going to put rails under mine;" and thus did the logging railroad come into general use.

Although the above is all history, I have referred to it simply to point out the difference in problems confronting a logger. In this mountainous region the conditions are entirely reversed. The logging railroad is built as far as the topography of the country will permit and after that it is up to the operator's ingenuity to devise ways and means to bring the logs down the slopes of the mountains to the track, a distance which may vary from one-quarter of a mile to two miles or more. To accomplish this work economically several methods are in use. Where the distance is not very great and where the stand of timber is heavy and the ground comparatively level, horses are as cheap a means of skidding logs as any, but where the distance is over a quarter of a mile steam donkeys have proven to be the best and most reliable means of getting logs to the skidways; but on account of the difficulty of hauling logs along the ground, over hills or down a hillside, this method has not proven altogether satisfactory and it has been the ambition of the logger to evolve something better, if possible. To judge from the number of papers read before last year's Logging Congress by some of the most up-to-date loggers, it is clear that the idea of transporting logs by suspended cableways is not any one man's idea but seems to have developed simultaneously in many men's minds. This would be natural, for you all know how many times you have stood looking anxiously at the nice timber high up on the mountain side and instinctively you said to yourself that the only way that timber can be brought down is by an overhead cable of some sort, your mind set itself to work out the problem and thus we find different systems, each designed to meet the requirements of local conditions.

The Potlatch Lumber Company having equipped to operate their Elk River sawmill by electricity, the late Wm. Deary, then general manager, conceived the idea to utilize the extra energy for operating logging donkeys and accordingly an order was placed with the Willamette Iron & Steel Works, of Portland, for the construction of two electric logging donkeys. These machines were fuly described in papers read before the last year's Logging Congress by E. J. Barry, electrical engineer, and by E. F. Whitney, the Portland representative of the General Electric Company, and therefore, I will only comment briefly in a general way on the performance of these machines during the past year.

In the operation of any kind of machinery the first consideration to be taken into account is the practicability and economy in operation, and these questions would naturally suggest themselves to any one that is interested in the subject of log transportation, and in this as in everything else local conditions must be the determining factor. Had it been necessary to develop power especially for electric logging or to buy it from some commercial power company and transmit the same a long distance it would be perhaps safe to say that the cost of electrical application to logging would be prohibitive, for the present at least, but in our case where the power was already developed, where the distance from the power house to the scene of operation was only three and a half miles, where the initial cost aside from the donkeys was merely the cost and installation of the transformers and the construction of the power line at a total of not to exceed $8,000, it was but natural that we should be willing to try the experiment and I can truly say that in view of the experience we have had so far with the electric donkeys, they have fulfilled every expectation. To say that we have not experienced any trouble would not be stating the truth, as we have had breakdowns and difficulties of different kinds, most of them due to mechanical defects, which naturally will develop whenever something new is tried and which only time and experience can overcome. As has been pointed out by Mr. Barry in his paper previously referred to, the cost of operating an electric donkey as against a steam donkey is greatly in favor of the former. The electric donkey is operated by two men, the motorman at $3.75 and the hoisting man at $2.75 per day, making a total of $6.50 in wages per day as against a daily operating cost of $11.25 for the steam donkey—engineer $3.50, fireman $2.75, wood bucker $2.50, night watchman $2.50, and in addition to this it is often necessary to employ an extra man for wood cutting. Next comes the cost of hauling and stumpage for wood, the last item sometimes amounting to more than all the other expenses taken together as it oftentimes happens that on some settings there is no dead timber suitable for wood, and it becomes necessary to burn white pine that would bring $20 per thousand and upward. The cost of the fuel for the steam donkey would, of course, be partly offset by the cost of current for the electric donkey, which in this instance amounts to 6½ mills per kilowatt hour, the figures being the cost figures as charged against the plant and includes interest, depreciation, insurance, taxes, salaries, oil, etc. The daily consumption of electric current averages 366 kw. hours per donkey at a cost of $2.37. Aside from the advantages mentioned in favor of the electric donkey, the one conspicuous item is the absence of fire risk in the dry season and it is only those who have been menaced by forest fire, as we have for the past five weeks, that can fully appreciate how satisfying it is to feel that when the day's work is done you can leave an electric donkey and be absolutely sure that as far as any fire originating from this source is concerned, you can be sure to find it the next morning just as you left it. This factor will be appreciated more and more according as the timber grows more valuable and will be sure to be taken into consideration by the future logger. Another advantage in the electric donkey is the ability to operate without the use of water, and, according as the timber tracts suitable for ground line logging are cut, the necessity for sky-line logging on steep mountain sides will become more and more apparent and in such places where water is not to be had electric power will be a real necessity.

I also venture to predict that in a short time where electric power is available, the scarcity of suitable labor for falling and cutting trees into log lengths will cause the resourceful logger to invent some device light and portable enough to make it possible to do such work by electricity and just as it has supplanted many other forms of energy and been of inestimable value to mankind in almost every field of its endeavor am I confident that electricity will gradually supplant steam as motive power in the logging industry.

In order that sky-line logging may become a complete success much will depend upon the trolley for carrying the logs, and this part

* Address delivered before recent Pacific Logging Congress.

is now receiving attention from manufacturers as well as loggers on the Coast and elsewhere. The Potlatch Lumber Company is just about to try out a trolley built according to the idea developed by our Mr. Jones, logging superintendent at Bovill, but as yet it is too early to say whether it will prove to be a success or not, but the main idea is to be able to operate it by the haul-in and haul-back lines only and to use a single line for the load and to have such a large working radius that it will only be necessary to move the main line half as often as at present. I sincerely hope that some one will come forth who has been more successful in this direction than we have, but in the meantime we will continue our experiments.

Advertising Lumber to the Factory

Very little relation exists between the class of forest products advertising that is intended to educate the general public to the more extensive use of wood as a building material and the class of advertising that may be calculated to produce a demand for lumber for factory consumption. Inasmuch, however, as any complete advertising campaign in behalf of forest products must take into account the marketing of all woods, and of factory lumber as well as other grades, due consideration must be given to the importance of reaching the factory buyer.

Lumber buyers of this class know—or think they know—what they want in the way of grades and varieties of stock. More often than otherwise they think they know, and there is no field where prejudice is a greater barrier to the introduction of new materials or where there is greater inclination to demand stock that is not especially suited to the purpose involved but which has been used from time immemorial and therefore is regarded as good enough.

Every lumberman who sells this class of trade knows that the introduction of a new wood for an old purpose is fraught with trouble and that only long, arduous effort and low prices combined will do the work.

It is to the best interest of the lumberman and the consumer that lower grades and woods of inferior value be used wherever they can be employed with satisfactory results. Nearly always it is true that there is ample demand for high grade lumber and very frequently the chief difficulty of the manufacturer is to move the lower grades. At such times the buyer who demands a better grade than he needs is contributing to an abnormal and unsatisfactory market condition and is wasting his own money.

In the factory field advertising must be designed to instruct the buyer with reference to the uses of various woods and of the various grades of such woods, but it must be borne in mind that the buyer who thinks he knows resents the insinuation that he does not know. Hence such educational work must be diplomatically handled to produce the best results. The buyer who has always used cork pine for a purpose to which woods now less expensive are adapted, but who clings to his demand for cork pine simply because he is afraid to change, must be made to understand that economy in his own business and the conservation theory as well require that he accept some other lumber and that he leave the white pine for the buyer who really requires it.

One of the greatest needs in connnection with this department of a general campaign is a standardization of lumber grades—something that is fairly well accomplished in the softwood trade, but far from realized in hardwoods. When such standardization exists it will be possible through judicious advertising to acquaint the factory buyer with lumber grades and by such educational process to eliminate much of the sleight-of-hand work that exists to-day. It is but natural that confusion should result when the factory buyer finds that no two of the lumber concerns with whom he deals agree as to the grade or kind of lumber he ought to buy, and it is still worse when he finds that they disagree in practice as to the specification of a particular grade.

In this field especially is room for practical and profitable experimenting to the end that the uses of the various woods and grades may be authoritatively determined. What woods, for example, make good butter tubs? What woods are suitable for wine casks? What wood and what grade can be used to best advantage and with least waste in the manufacture of a certain step-ladder? What wood makes the most satisfactory core for a piano case? What wood will best take and hold an ebony finish? A thousand such questions come up every day in the wood-using factories of the country and a very large percentage of these questions, when answered, would furnish a splendid basis for good advertising copy.

No other material is so generally used in manufacturing operations and so little understood. The fact that practically every branch of industry employs wood to some extent, of course, renders it impossible for the lumber industry to advertise its products in such way as to reach all classes of consumers or to undertake the education of all, but it should be possible through publicity to correct erroneous ideas held by important consumers; to bring out the fact that there is plenty of good lumber for all purposes, and that there is no economy in using better lumber for any purpose than is needed, and to teach the buyer that the moral hazard involved in buying from irresponsible concerns can be dispensed with.

Had the lumber industry been equipped with efficient facilities for spreading dependable information about wood, steel and aluminium would not have displaced yellow poplar in the automobile body industry. If efficient publicity facilities were available to-day many other classes of factories would be adding to their woodworking machinery equipment rather than discarding it for metal working tools. In this field, as in the field of the ordinary consumer, the idea has taken firm root that the supply of lumber will be at an end shortly and it is, of course, the business of every manufacturer of substitutes to confirm this impression at every opportunity. Factory buyers also are generally puzzled over the question of grades, largely because they fail to discriminate between responsible and irresponsible sellers and through dealings with the irresponsibles acquire the notion that a car of lumber is a dependable quantity only after it has been inspected at destination.

It is not the business of the lumber manufacturers of the country to guarantee each individual manufacturer's grades, but there should be in the lumber business, as there is in the steel business, some established standard and some recourse for the buyer who finds that he has not been fairly treated. Inasmuch as these problems have been worked out by associations representing manufacturers of certain kinds of lumber it is not unreasonable to suppose that a system of standardization might be worked out in such way for all kinds of lumber sold by those who are participants in the proposed campaign. Advertising in this field also should be devoted to some extent to the task of cleaning up unethical trade practices and placing upon them the stamp of disapproval of the industry, and as rapidly as it is possible to effect such a radical change in practice the responsible manufacturer should be urged to brand his output in some way so that lumber handled through legitimate and responsible channels may readily be distinguished from lumber that is just lumber and nothing more.

Advertising in this field should serve to convince the factory consumer that the lumber industry places at his disposal its best facilities; that it is prepared to furnish him the stock he needs in his business, to insure the performance of its contracts, and in other ways to protect him in his lumber transactions as fully as he is protected in the buying of other commodities.—American Lumberman.

New Hardwood Lumber Directory Issued

A new edition of the Hardwood Lumber Directory or Buyers' Guide, issued by the National Hardwood Lumber Association is now ready, and copies have been sent to members. The membership list included in the directory is the largest and the strongest ever presented by the Association. The support of the Association in Canada is growing surely and steadily, as is demonstrated by an appreciable increase in the Canadian list of members. The demand for national inspection, and the calls upon the service departments of the association from Canada have been much greater during the past year than ever before.

Newcastle Trade Doing Well

E. A. McCurdy, Newcastle, N.B., manager of the Royal Bank of Canada at that place, reports that the lumber business is flourishing at Newcastle. Prices are more profitable than they were a year ago even with the added cost now of war risks and increased freights. The lumber from the Baltic has been cut off, which has decreased the supplies, and left more room for the product of Canadian forests. Another industry that is more prosperous because of the war is the manufacture of hemlock bark extract for tanning, a factory for which is located at Newcastle. Prices of this product are higher than before the war.

Ontario Workmen's Compensation Board at Work

The Workmen's Compensation Board for the province of Ontario held its first session on September 21st when plans were discussed for the active work of the Board. Mr. F. W. Hinsdale, the Washington expert, who was employed by the Ontario Government in getting the organization into shape was also present at the meeting. The first and most important task at present before the Board is to determine the provincial assessment upon industries that will provide the initial fund. The Board has not yet decided whether to assess on the basis of last year's wage roll or the estimated roll for next year.

WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (14 agate lines make one inch.) ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

Sale of Pulp Timber

Sealed tenders will be received by the Minister of Lands at Victoria, B.C., not later than noon on the 30th day of November, 1914, for the purchase of nine (9) pulp licenses, situated on the Coast of British Columbia, and estimated to contain the following:—

Hemlock..	87,301,000 ft. B.M.
Balsam Fir	44,444,000 ft. B.M.
Spruce	43,244,000 ft. B.M.
Cedar.	27,779,000 ft. B.M.
Douglas.. Fir	2,779,000 ft. B.M.
Total	205,547,000 ft. B.M.

This timber is within ten miles of salt water and is tributary to Vancouver.

Thirty (30) years will be allowed for the removal of the timber.

For full particulars and maps address H. R. MacMillan, Chief Forester, Victoria, B.C. 17-20

Miscellaneous

Portable Mill and Complete Camp Outfit For Sale

50 H. P. engine and locomotive boiler mounted on skids, only used three months. 54-in. circular saw mill, three saw edger, cut-off saw, shingle mill, belts, shafting, pulleys, etc. Also camp outfit, blankets, sleighs, waggons, chains, etc. Will sell right. Terms arranged or will take lumber in part payment.

C. H. ROGERS,
Care Peterborough Canoe Company,
18-21 Peterborough, Ont.

For Sale

Rare bargain. Band mill located in best lumber and log center on Puget Sound. Rail and cargo shipping facilities. Excellent log pond. Ten and a half acres of land. Price one-fourth of appraised valuation. Must sell quick. Box 765, Canada Lumberman, Toronto, Ont. 8-t.f.

Saw Mill Machinery For Sale

Sawmill near Sellwood, Ontario, daily capacity 60,000 feet. All machinery including:—Log Ladder, Bullwheel, Steam Kicker, Log Loader, Stationary Steam Nigger, 42-in. Steel Carriage, 10-in. Steam Feed, 8 ft. Double Cutting Bandmill, Cast Iron Lumber Table, 5-Saw Slab Slasher, 48-in. Big Champion Edger, Trimmer, Transfers to Edger and Trimmer Tables, Sorting Tables, etc. Also, Independent Lathmill, Filing Room Outfit and Power Plant complete. This machinery is of the latest design, practically new and in excellent condition. Offers will be accepted for all or any part of this machinery, where it stands or F.O.B. cars Sellwood.

The Waterous Engine Works Company,
22-t.f. Brantford, Canada.

The Fireproofing of Wood

Fireproofing of wood was known even to the ancient Romans, who tried to make their wooden towers and defences less inflammable by coating them with vinegar or alum solutions. Covering wood with a fireproof coating serves only to surround it with an insulating coat, making it difficult for fire to reach the wood, which is necessary for combustion.

Most important requirements of fireproofing solutions are durability and power of expansion. Wood expands and contracts with changing temperature, and the fireproofing solution must keep step with the wood or else lose its protective powers. Wood is hygroscopic, and coating must not peel off through moisture. Another requirement is sufficient porosity, as there must be constant balance between air and wood, otherwise the wood will decay.

In the vacuum process the wood is placed into air-proof chambers from which the air is exhausted. Then an impregnation liquid, usually a mixture of ammonium sulphate and ammonium borate, is pumped into boilers. Pores of wood being in a vacuum and void of air absorb the mixture, and the wood is then dried in open air. Wood impregnated in this way is fireproof down to core, and is fireproof even after ten years, as tests have shown. It suffers a trifle in its elasticity through the process, but compressive strength is increased materially. Wood does not change its structure or color either, thus keeping it useful for interior decorating.

Steel is not substituted for wood in the building of ships for certain purposes. The little vessel in which Sir Ernest Shackleton will shortly sail from England en route to the South Pole is well named the Endurance, for she is built to endure, in sturdy oak and plant pitchpine. Her "wooden walls" are two feet thick of almost solid oak, and at stem and stern there are five feet of the same tough timber.

Creosote apparently does not preserve peace. England and Germany are the leading producers of creosote oil. The war finds the Pacific Coast States very short of this oil and with extensive port developments demanding a greatly increased supply. Last year thirteen plants on the Pacific Coast imported 4,844,053 gallons of creosote from Europe, as compared with the use of 152,000 gallons made in this country. This oil was used by thirteen plants in treating 2,624,958 railroad ties, more than 2,286,000 feet of piling, nearly 20,000 poles, about 171,000 square yards of paving blocks and 8,171,589 feet of timbers.

Car Surplus Decreases

A shrinkage of 24,520 in the net surplus of idle freight cars on the railroads of the United States and Canada on August 15, compared with the close of the preceding fortnight, is reported in the latest bulletin of the American Railway Association. The bulletin gives the net surplus of freight on American and Canadian railroads on August 15 as 172,145, compared with a net surplus on August 1 of 196,665. The gross surplus of freight cars on August 15 stood at 174,260, compared with 198,998 on August 1, while the gross shortage stood at 2,115, compared with 2,333.

The predictions that had been made that the congestion of export traffic in foodstuffs which has prevailed for the past two weeks would bring about an increase in the number of idle cars failed to materialize during the first half of the present month, although the shrinkage of 24,520 cars in the net surplus may be due somewhat to the fact that some cars have been utilized for storage purposes. The details of the report on the railway situation, however, reveal the interesting fact that the box car surplus on August 15 was larger instead of smaller than it was at the beginning of the month. The grain exports being congested at seaboard ports, it was generally expected that cars would be tied up all along the lines and thus produce a decline in the number

of available cars. The fact, however, that the trunk lines place a limitation to domestic bills of lading on shipments destined to export points may have averted that very situation.

A Chance for American Walnut

Things seem to have been "breaking" in favor of American black walnut of late, says Hardwood Record. Perhaps the walnut men are unusually shrewd, and have been looking ahead; or, on the other hand, they may merely be lucky. At all events, their proposition has been profittble from some of the trade developments that have been recorded rtcently.

Take the movement toward brown woods, for instance. It black walnut was being revived, and made it easy to get started on it. Now the European war has bobbed up, and one of the first results is a shortage of Circassian walnut, actual or potential. People who use this wood are tndeavoring to cover their requirements, of course, and may be able to get enough ahead to take care of their wants for the immtdiate future; but there is not a great deal of Circassian in the country, the stocks at Liverpool are light, and the movement from the Caspian Sea has already been cut off, according to reliabit information.

The natural result will be that those who have been using the imported walnut will turn to the American variety. It is possible to get effects with black walnut veneers that art not very far from Circassian, while both of them belong to the walnut family and the brown group of woods. It is hard to se, therefore, how the walnut men can help profiting from the latest development.

Of courst, if importations of mahogany, which can be supplied from Mexico and Central America as well as Africa, are seriously interfered with, there may be an even bigger rush in the direction of American black walnut, and quartered oak should be similarly helped. But there is not the definiteness to prospects in this connection that attaches to the Circassian walnut situation.

Laurentide's Forestry Survey

The Forestry Division of the Laurentide Company, Limited, has just finished a survey and map of 2,350 square miles showing all drainage, roads, portages and trails, lookout stations, telephone lines and timber conditions. This is the first complete map ever made of this section and in order to be of use about 500 square miles of contiguohs territory has been mapped. The average error of closhre of traverses is one in 300 and the scale of the finished map is two miles to the inch. Maps of each sertion of 50 square miles on a srale of three-quarters of a mile to one inch have also been completed showing the location and the amount of green timber, the burnt and cut over areas, etc. This company is also importing reindeer from Dr. Grenfell's herd in Newfoundland to take the place of sled dogs which are very troublesome to keep in summer and are not very efficient in winter. This experiment is being watched with much interest. If successful some of these deer will be supplied to the Indians who are finding the game supply getting pretty short.

164 St. James Street, MONTREAL

Cleans a building of Rats and Mice in short time, keeps it cleaned, for it is always ready for use. Made of galvanized iron, can't get out of order, lasts for years. Large number can be caught daily. Go to Catcher mornings, remove device inside, which only takes few seconds, take out dead rats and mice, replace device, it is ready for another catch. Small piece cheese is used, doing away with poisons. Catcher is 18 inches high, 10 inches diameter. When rats pass device they die, no marks left on them. Catcher is always clean. One of these Catchers set in a livery stable in Scranton, Pa., caught over 100 rats in a month. One sent prepaid to any place in Canada or United States upon receipt of $3. Catcher, 8 in. high, for mice only, prepaid $1. On account of shipping charges being prepaid, remittance is requested with order.

Review of Current Trade Conditions

Ontario

It is hard to report any new developments in connection with the lumber trade in Ontario, yet one can say that there is a fair volume of trade, especially in the larger cities. The critical situation brought about by the war has not affected those people who are putting up large warehouses and the better class of dwellings. These people, in most cases, are able to command sufficient means to continue their work without interruption. The situation however, has affected those who are putting up smaller houses and particularly the speculative builder. These people cannot get the loans they require. As they constitute quite an important factor in the lumber trade, the result is a considerable drop in the movement of lumber. The trade resulting from the larger builders however, is keeping up a fair amount of movement and, while the volume is not as large as last year, and possibly not quite so profitable, there is a fair amount of trade. Wholesalers report a somewhat better feeling and a more general inclination to take a hopeful view. Hemlock is on the soft side and so is common pine. These have been selling off fractionally but prices in general are being fairly well held. British Columbia shingles are steady and unchanged.

The export trade at Ottawa is still quiet. It has been almost at a standstill for some time owing to the fact that 25 trans-Atlantic steamers have been taken off by the Dominion Government for use in transporting the Canadian contingent to England. Prices are unchanged and the probability is that they will continue so. There is a plentiful supply of labor and wages are low. J. R. Booth's mill is still closed down on account of lack of water.

Eastern Canada

Improvement is reported in the lumber trade at St. John, N.B. There is a fair local demand now for lumber and it is hoped that this may continue throughout the rest of the fall. Prices of all wood goods continue firm, particularly local prices. Stocks at present are large in some lines, but on the whole they are not as heavy as in 1913. A few mills only are operating at present. The American trade continues very unsatisfactory, and base prices for dimension have receded recently from $23.50 to $23, Boston rate. Latest reports indicate that the cut of logs on the St. John will be considerably smaller than in former years. Prices for English deals are strong and the indications are that 1915 prices will be equal to those of 1913 or 1914. Shingles are dull and hard to sell. The box trade is slow.

At Montreal, trade shows little change. Business is dull but a more hopeful view of the immediate future is developing. A few moderate sized contracts have been given out lately and others are pending.

Great Britain

Reports from importing ports in Great Britain state that a reaction has set in after the first burst of activity consequent upon government orders. As one prominent firm of importers puts it, "There is a natural and very widespread inclination to spend money, which reflects very quickly on the building and contracting trades." There is also a good prospect of Swedish supplies coming forward in suitable quantities since the Swedish Government has undertaken the war risk. This, it is thought, will have an important effect upon the attitude of importers in fixing their quotations. White Sea shipments have not come up to expectations. There are still three months during which cargoes may be shipped from lower Baltic ports however. It is important also to remember that Great Britain's two largest customers for sawn goods, outside of herself are France and Germany, which are now unable to continue their commercial business. Various important government measures which have been taken have done something towards restoring confidence and enabling steamers to be chartered from the White Sea, Sweden and Norway.

Considerable activity is still reported in the spot market at London, chiefly in connection with direct government requirements. Apart from these it is reported that the demand for wood goods at present prices is very intermittent. Spot goods are still advancing in value and good white pine and spruce are now difficult to obtain, although it is thought that shipments of spruce from Canada will be fairly plentiful between now and the close of navigation. Deliveries from London docks for the week ending September 5th amounted to 5,768 standards as compared with 7,980 during the corresponding week of 1913. At Churchill & Sim's recent auction sale 3 x 9 5th Quebec spruce brought £12 10s. and £12 5s. 3 x 11 first Montreal yellow pine sold at £46 and 3rds brought £17 10s. Three-inch Quebec birch planks sold at 1s. 7d. and 2-in. at 1s. 8½d.

At Liverpool, the curtailment of the supply from the north of Europe has directed attention towards Canada, and London and east coast firms which have also been finding their usual supply of Baltic goods reduced have been making efforts to secure substitutes. The Timber Trades Journal in its issue of September 12th says:—"While it is a fact that several cargoes of Canadian spruce have of late been sold to other United Kingdom ports than the West Coast at greatly enhanced prices, it is equally true that the Canadian export is limited, and it is a physical impossibility to materially increase it at the eleventh hour. In fact, we understand that practically all the Canadian product for this season is placed. Even if there were more available, tonnage would be an important factor with wheat taking precedence, although we have no doubt that if the timber were there, freight room could be secured at a rate which would compensate the operators when the enhanced value is taken into consideration." The spruce deal market at Liverpool continues firm and is expected to do so for the balance of the year. Stocks are very light compared with those of a year ago. One large firm of Liverpool importers of spruce deals are practically sold out of yarded stock and are dealing rapidly with cargoes now at sea. Very little movement is reported in Canadian pine deals with the exception of 4th quality, of which stocks are practically cleared out.

United States

There is little or no change to report in connection with lumber trade conditions in the United States during the past fortnight. Manufacturers in practically all sections of the country are showing a disposition to curtail their output and it is expected that the reduction thus caused will be much greater than the actual decrease in the export business resulting from the war. There is a fairly hopeful feeling that, when the first alarm wears off, building operations will resume to a fair extent. No increase is reported in the demand for Northern pine and hemlock. Country yards are only buying in limited amounts. The prices for pine are holding well at recent quotations. The hemlock trade appears to be rather dull. Reports from the mills however, are more favorable than a short time ago. Further decline in price is not expected. The yellow pine market is feeling the effect of the restricted export trade. Many of the southern mills are curtailing their output and there are no surplus stocks to menace the market. The movement of Northern pine is slow. Business seems to be very conservative and no one ventures to look very far into the future. Actual volume of movement in northern pine, while not large, is about as good as can be expected. Fundamental conditions are considered to be sound, as farmers are harvesting crops of normal volume and are obtaining good prices.

The hardwood trade reports slow business, but more encouraging prospects are reported than a short time ago. More than half of the southern hardwood mills are shut down and this restriction in the production is expected to result in firmness in prices. Stocks at northern producing points are not too large. Conservatism among larger buyers is holding things back more than anything else. There has been practically no repudiation of contracts, which is considered an excellent sign of a sound market. Among the northern hardwoods, oak has been a good seller. Birch is steady and in fair demand and the same applies to maple.

Argentine Timber Imports

Imports of unmanufactured timber into the Argentine from Canada during 1912 amounted in value to pesos 2,266,257 (a peso being equivalent to 96.5 cents of Canadian currency). The total import of unmanufactured timber into the Argentine for that year amounted to pesos 18,037,115, of which the United States supplied pesos 13,151,551, and Germany pesos 292,332. The great bulk of the importations of timber from Canada are made up of spruce. Of this timber Germany supplied 52,472 pesos worth in 1912. The importation into Argentina of manufactured timber amounted in value to 6,141,857 pesos. In this case the withdrawal of Germany's supplies will have a more appreciable effect; her sales amounting in 1912 to a value of 1,631,423 pesos, of which pianos accounted for 644,869 pesos, and furniture for 319,706 pesos. Canada's sales of manufactured timber to the Argentine were but inconsiderable.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

St. John Trade Improving

St John, N.B., Sept. 21 (Special to the Canada Lumberman): Conditions in general round and about St. John, are no worse than they were two weeks ago. If any thing they are somewhat improved. A fair demand for local lumber has again come forward, and it is hoped that it will continue for the balance of the fall. Of course, as winter comes along, we cannot expect very much trade, as the cold weather generally retards building work. No large buildings outside the Tuberculosis Hospital will be started this fall, and probably winter work at the factories and yards will be light.

Prices for all wood goods remain firm, especially locally. While the stocks are large in some lines, taken as a whole they will not be as heavy as in 1913. Only a few mills are operating here and whether the balance of the mills will resume work this fall remains to be seen, but even if they do, the stocks of English deals will be only normal.

The American market seems to be getting worse instead of better, and the base price has receded from $23.50 to $23.00 Boston rate. This took effect September 12th, and is about as low as dimension has been sold for some years. It is not a question of price, but getting a buyer. This year, taken so far, has been very unprofitable for the American mills, doing business here. They will probably cease operations as soon as cold weather comes and not keep running all winter as they have done for some years past.

The cut of logs for St. John for next season will not be as heavy as usual. One concern expect to cut only about half as many as last year. What the other mills will do for woods operations has not been decided; but it is expected that in the next two weeks they will decide upon what basis to carry on their work.

Prices for English deals are good and it is said that last year's, or 1914 prices, are obtainable for next year's outputs, but, whether or not these prices can be obtained, the manufacturer here cannot sell for any less and come out of it with a profit, as logs are costing as much if not more than last season, and supplies are very much higher than last season.

Shingles are very dull and higher grades are impossible to sell, while only a fair demand exists for low grades of 2nd clears and extra number one's.

The lime business is about at a standstill.

The box trade is very slow and hardly any orders are coming into the factories. The fish catch on Grand Manan to date has been very small, the fish being of a very small size, going largely into sardines.

Ottawa Trade News—Export Trade Quiet

Ottawa, Sept. 21 (Special to the Canada Lumberman): When J. R. Booth closed down his saw mill two weeks ago owing to lack of water in the Ottawa River, about 1,000 residents of Hull were thrown out of work. Last week the Hull City Council appointed a deputation to wait upon Mr. Booth to ask him to try and find some way to reopen the mill as most of the men thrown out of work are none too well provided for. Mr. Booth assured the deputation that everything possible would be done to have the mills running again at full time. The water situation however, has not improved lately and it looks as if other lumbermen in this district will have to curtail their operations as a result.

Since the outbreak of the war, the export trade has not been very brisk. It is now practically at a standstill owing to about 25 trans-Atlantic steamers engaged in the Canadian-British trade, being taken off by the Dominion government for use in transporting the Canadian contingent to England. Prior to the temporary cancellation of these steamers there was a little business in medium grades of red and white pine, with Great Britain.

There is not likely to be any change in prices for some time, consequent upon the lack of demand for lumber, which is hardly likely to increase while the war is on. Labor is very plentiful and good men can be hired for as low as $1 per day. Not a few men have offered to pay their far to the camps in order to get work.

The new mill, which has recently been built by R. & T. Ritchie, Aylmer, Que., will commence operations in a few days and will give employment to about 150 men. This mill was built to replace the one burned down several months ago.

The Shepard and Morse Lumber Company are replacing the engine, which broke down in their saw mill a few weeks ago, with a new 700 horse-power, Whillock compound steam engine. At present the mill is being run by an electric motor and a 200 h.p., steam auxiliary engine. The one which broke down was 350 h.p. Fraser and Company, of Aylmer, had a similar accident to the engine in their saw mill a few days ago. By this latest accident 200 men were thrown out of employment. Repairs are being made as rapidly as possible.

Some of the most generous givers to the Canadian patriotic fund and other patriotic objects have been leading lumbermen in Ottawa. Besides giving several thousands of dollars to help in equipping an automatic machine gun battery Mr. J. R. Booth and Sir Henry Egan have given liberally to the patriotic fund, the former giving $20,000 and the latter $10,000. Sir Henry Egan, head of the Hawkesbury Lumber Company is chairman of the Ottawa branch of the fund and Mr. Frank Hawkins, secretary of the Canadian Lumbermen's Association, is secretary.

John Manuel, who for many years was associated with the late Colonel Alan Gilmour, of The Gilmour Lumber Company, died in Ottawa a few days ago at the age of 84. He left an estate, said to be valued at $5,000,000 most of which was left him by the late Col. Gilmour. Mr. Manuel was a bachelor all his life and as he died without any nearer relative than a nephew, James Manuel, of Ottawa, his estate will have to pay 10 per cent. on all over $10,000. Had he left a closer relative he would have had to pay in succession duty 5 per cent. on all over $50,000. The bulk of the estate has, it is understood been left to his nephew.

Montreal Trade Still Quiet

Montreal, September 25 (Special to the Canada Lumberman): Conditions in the lumber trade remain much about the same. While business is slow, lumbermen are in many instances inclined to take a more hopeful view of the immediate future. The cancellation of building contracts at the commencement of the European trouble naturally caused a wave of pessimism, particularly as many firms not connected with the building business began to reduce operations. But that feeling is gradually passing away. Contractors are not busy, although lately some moderate sized contracts have been given out, and others are pending. The efforts of the Builders' Exchange to arrange for work on a lower cost basis have not made much progress, owing to opposition from within and without to a reduction in workmen's wages. There is a surplus of labor, but the Unions have intimated that they are not willing, at present, to co-operate if this involves smaller pay.

Export business is picking up. For a time there was a scarcity of tonnage, and also uncertainty as to sailing dates, but there has been an improvement in the former respect. The Government have taken a large number of vessels for transporting the troops from Valcartier, and a certain amount of room for ordinary cargo has been reserved. The practical closing of the Baltic has resulted in a brisker demand in Great Britain for Canadian red pine, and stocks on the other side are reported to be moving more freely.

The sulphite market continues to be very firm, although prices have not further materially advanced. Owing to shortage of coal and other commodities, and the lack of men, together with the general war conditions, Europe has been sending only about sixty per cent. of the normal supplies of pulp. Buying, too, is of a hand-to-mouth character. With stocks on hand, the output of domestic mills, and the importations, the market has been fairly well supplied.

News print keeps up in price, the demand being still excellent.

Several Montreal and Quebec lumbermen have been generous contributors to the Canadian National Patriotic Fund. These include G. A. Grier $5,000; G. A. Grier & Sons, Ltd., $1,000; E. H. Lemay, $1,000; Campbell-MacLaurin Lumber Company, $500. W. & J. Sharples, J. F. Burstall, and Dobell, Beckett and Company, of Quebec, also contributed $1,000 each.

North Shore Output Will Be Light

Thessalon, Ont., Sept. 17 (Special to the Canada Lumberman): There will be a considerable reduction in the output of logs along the north shore this season. Nearly all the firms on the shore will cut mostly down timber this season. There is no sale for lumber at the present time, on account of the war. The yards at the mills are filling up and no lumber is being shipped. Although the entire cut is sold in most cases, shipments are not being made. Men are very plentiful at the present time. Camps are filled up and wages are about 20 per cent. less than in former years. Camp supplies however, are more expensive.—Algoma.

Getting Acquainted

Is somewhat of a problem, at times, occasionally decidedly unpleasant You have probably found it so in both your buying and selling experience.

Why take a chance of having your pride, feelings or temper ruffled—stick close to your old friends, not quite the excitement maybe, but there's that peace of mind, that satisfaction in knowing that they can be depended upon.

There is no more dependable place on earth to get your Dressed Spruce, than Fenderson's—the value is in it—beautifully dressed—excellent grade—bone dry—you can bank on its being good when you place the order.

If you would help your business grow, handle better stock than the other fellow, your customers talk it over, if pleased, they build your business—if not pleased, they tear it down. Be jealously careful of your strongest advertising medium.

Remember

The most value for every dollar.

Each car chuck full of satisfaction.

Make that next car a Fenderson car.

You'll like it.

Spruce Firmly Held at Liverpool

Farnworth & Jardine in their monthly wood circular under date of Liverpool, September 1st, report in part as follows:—

Business during the past month was naturally erratic, but in volume fairly satisfactory. Stocks, with few exceptions, are moderate, and values generally are increased. Of spruce deals the stock, with the cessation of Baltic whites, will all be required, and prices have strongly advanced.

Canadian woods.—Pine timber.—Arrivals came forward more freely, chiefly on contract, but there is no improvement in the demand to report; stocks are sufficient; values unchanged. Waney pine.—First class: The arrivals have been on a larger scale, for merchants' account, and landed entirely at Manchester; the deliveries have been fair, but stocks for present requirements are ample; values steady. Second class: There is only a very limited enquiry. Red pine is seldom enquired for. Oak.—Moderate imports, which are going direct into consumption; the demand continues slow, but stocks are not heavy, and values firm. Elm.—Arrivals amount to about 7,000 cubic feet to Manchester; the deliveries have been fairly satisfactory, but stocks are adequate; values rule high. Pine deals.—Imports have been on the moderate side, but the demand is slow, and the deliveries disappointing; stocks, though ample, are not too large under present conditions, and values are firmer. Red pine deals.—Small import; there has been more enquiry, and prices have advanced; stocks are light.

New Brunswick and Nova Scotia Deals.—The import to the Mersey (including Manchester) during the past month amounted to 6,010 stds., which is light, especially compared with the very heavy import of 22,440 stds. during the corresponding month last year; the demand locally has been active, and the consumption slightly exceeded the arrivals; stocks are now in a much more moderate compass, and firmly held. Owing to the war, there has been a strong advance in values, but there has also been an advance in freight rates of 20 per cent. to 25 per cent.; however, tonnage is offering freely, and rates are again easier. Pine deals are in fair request; stocks are light, and prices steady.

Birch.—Logs.—There have been no arrivals; the demand is quiet, and the deliveries only fair, but stocks are moderate; values firm. Planks.—Imports have been on a moderate scale; there has been rather more enquiry, and deliveries have been fairly satisfactory; stocks are not excessive; prices are firm.

British Columbia and Oregon Pine.—Arrivals amount to about 17,000 cubic feet on contract, which has largely gone into consumption; the demand is only limited, and stocks are heavy.

Liverpool Softwood Prices Advance

Alfred Dobell & Company, Liverpool, Eng., under date of September 1st, report as follows: The general dislocation of business early in August has gradually given place to more settled conditions than could have been anticipated. Arrivals during the past month have been swollen by several shipments diverted from the Continent. Owing to the stoppage of supplies from the North of Europe and to increased freights, values of softwoods have materially advanced. One or two articles have been in good request mainly for government purposes, but the general demand has been inactive, and shippers should exercise caution, and refrain from sending consignments forward indiscriminately.

Canadian woods—Waney board and square pine—The import of waney to Manchester was on contract. Stocks are more than ample for present requirements. Oak—The arrivals were light and demand steady. Stock within reasonable compass. Rock Elm—The consumption practically absorbed the light import. Birch—Logs were in moderate request at unchanged quotations. Planks—The limited import met a good consumption. Values firmer. Pine deals and boards—There was only a quiet demand. Stocks are more than ample. Values firm. New Brunswick and Nova Scotia spruce deals—To the Mersey and Manchester the main feature in this month's return is the drop in import to the extent of 16,430 standards. The consumption under the circumstances is quite fair, showing a reduction of only 2,440 standards. The combined stocks total 10,870 standards less than at this time last year, all of which and more will be required in view of the situation in the Baltic. The price has shown a very material advance; whether this advance will not continue remains to be seen.

Trade Conditions at London Becoming More Normal

Churchill & Sim, London, Eng., in their monthly wood circular under date of September 3, report as follows:

The deliveries in London for August amounted to some 23,000 standards against 44,000 standards for August, 1913. The partial cessation of shipments from the North of Europe more than accounts for this great reduction, some 23,000 standards less being delivered overside in comparison to last year's total. The market for practically all sizes and qualities of deals and battens in red wood and white wood showed a sensational rise in values, partly owing to fears of the supply being practically cut off, and partly owing to a run upon the stock available in the country to meet the sudden heavy demands of the government and their contractors. As the month progressed, business began to revert to more normal conditions, the action of the authorities preventing an undue rise in the value of money, and, as the situation cleared, enabling buyers to charter, although at increased rates, for their White Sea and Swedish purchases. There is little doubt that the general importation from the North must be curtailed, and that the special demands must be heavy for some considerable time, but shippers and merchants alike need not be reminded that, apart from this, there is a natural and very widespread disinclination to spend money, and that this fact reflects quickly upon the building and contracting trade. There has been practically no business concluded ahead, buyers being too busy in trying to solve the numberless questions raised through the country being in a state of war, but towards the end of the month some enquiry for Swedish shipments is evidence of a shortage in the stocks. Freights have risen considerably, and several charters have been concluded on the terms demanded by shipowners.

The stock of timber, deals, etc., at the public docks on tht 31st of August included:

	1914.	1913.	1912.	1911.
Colonial Pine Deals and Battens in Pieces.	479,000	484,000	419,000	439,000
Red Pine, in pieces	35,000	16,000	24,000	41,000
Spruce ditto, in pieces	514,000	490,000	536,000	502,000
Oak Timber, in loads	.....	.....	.....	32
Oak Planks, etc. (American) in loads..	3,975	1,915	1,338	1,884
Birch Timber, in loads	289	310	261	386
Birch Planks, in loads	3,585	4,100	2,106	3,004
Elm Timber, in loads	2,009	969	47	786
Ash Timber, in loads	48	2	.....	11
Yellow Pine Timber, in loads	634	1,082	167	250

From the St. Lawrence the importation has been:—
Pine deals, 152,000 pieces against 278,000 pieces in 1913.
Spruce deals, 172,000 pieces against 347,000 pieces in 1913.
Birch planks, 63,000 pieces against 220,000 pieces in 1913.
and from New Brunswick, etc.—
Pine deals, 3,000 pieces against 15,000 pieces in 1913.
Spruce deals, 139,000 pieces against 323,000 pieces in 19133.
Birch planks, 338,000 pieces against 287,000 pieies in 1913.

Supply has been small, but there is no improvement in the demand for pine deals. The price of spruce cargoes has risen very quickly and some considerable business has been arranged both from Quebec and from the lower ports to ports in the United Kingdom. The Canadian and American shippers are greatly helped by the partial cessation of supply from the North of Europe, and by the heavy demands made upon the existing stock in this country.

Barbados Market Report

S. P. Musson, Son & Company, Barbados, report under date of September 20th as follows:—Lumberstuffs.—White pine—There have been no arrivals during the fortnight, and we think there will be an opening for a cargo or two a little later on. Spruce—Market is getting bare, and a couple of cargoes would sell to good advantage. Pitch pine—No receipts but market is well stocked. Shingles—The Schr. "Adriatic" arrived on the 18th instant from Bonaventure, with 1,672,000 extra No. 1's, which have been sold at $2.50. Other cargoes are on the way, and the market is heavily stocked both with this description and Long Gaspe. Shooks—Receipts consist of 21,000 bdls. Portland packs by the "Lydia M. Deering," all of which had been previously contracted for.

St. John Exports During August

The shipments of lumber from St. John to transatlantic ports, although small, were actually greater during August, 1914, than in August, 1913. The shipment of spruce deals amounted to 7,544,545 superficial feet, compared with 5,089,129 superficial feet in August, 1913, and of birch plank 404,335, compared with 60,553 feet. Taking the whole year, from January 1 to August 31, this year's shipments are only a little more than 8,000,000 superficial feet less than for the corresponding period in 1913. For the eight months' period the shipments of spruce deals are as follows, with comparisons:

	1913.	1914.
W. Malcolm McKay ...	28,639,687 Sup. Ft.	28,718,830 Sup Ft.
J. E. Moore & Co., Ltd.	14,993,070 Sup. Ft.	9,837,055 Sup. Ft.
George McKean	12,228,073 Sup. Ft.	11,109,585 Sup. Ft.
Other shippers	6,569,173 Sup. Ft.	4,030,176 Sup. Ft.

The total quantity of birch planks exported during the eight months' period in 1913 amounted to 4,487,468 superficial feet, compared with 5,771,368 superficial feet in 1914. The shipments of birch timber during the two periods were comparativtly 1,589 tons and 1,411 tons.

General Trade Improvement Reported by R. G. Dun

Dun's Review reports that despatches from the branch offices of R. G. Dun and Company in leading trade centres of Canada are more encouraging and indicate a general trend towards improving conditions. Montreal reports that retail trade is rather quiet, but that distribution at wholesale is in fair volume. There is a fair movement of staple commodities at Quebec and the outlook appears to be favorable. There seems to be a revival of confidence at Toronto with some increase in business in a number of lines. Both the wholesale and retail trades are quiet at Hamilton, and manufacturing concerns are working at reduced capacity. In the far west and northwest, business is becoming steadily more active as a result of the good crops and the high prices at which they are selling. Winnipeg reports state that retail business is in fair volume, but wholesale lines especially in hardware and lumber are hardly so favorable, although the outlook as a whole is regarded as promising. Calgary reports that business in the small towns is responding to the splendid prospects in store for farmers and this is stimulating the wholesale demand in the city. General business is rather quiet at Vancouver, but the feeling prevails that conditions are satisfactory, taking all lines into consideration.

Export Market Assisting B.C. Loggers

A despatch from British Columbia states that the recent order-in-council of the lieutenant-governor raising the embargo against exporting British Columbia timber has already had the effect of stimulating lumbering. The Coast office of the government timber department is being besieged with applications to export timber cut on Crown lands, and the scaling department is kept busy regarding the timber to come within the schedule of rates imposed by the order-in-council. The raising of the embargo not only is bringing in funds to the loggers, but is also providing funds for the government. Among the concerns to profit largely by the removal of the embargo is the Ocean Falls Company, now in liquidation. At the time of the assignment to Mr. Archer Martin, about 40,000,000 feet of timber were in the company's booms. Some of this has been sold to Skeena River mills and some to the Powell River Lumber Company. All that is left is now being built into huge crib booms and is being towed down to Anacortes, where it is finding a ready and profitable market.

It is estimated that the amount of lumber at present lying in Coastal waters of British Columbia, in log form is about 200,000,000 feet and that British Columbia mills own about 75,000,000 feet of this, the remainder 125,000,000 feet belonging to loggers. It is stated that there is a good demand in Washington and Oregon for logs. The prices at Puget Sound advanced $2 per thousand recently.

Opportunity for Wood Pulp Trade

The sudden cessation, as a result of the war, of German exports of sulphite pulp to the United States has had the effect of diverting to Canada many contracts relating to the supply of paper, says The Monetary Times. The Dominion is capable of producing unlimited supplies of wood pulp, and owners of timber rights of a suitable character, no less than actual manufacturers of pulp in Canada, are receiving a large number of valuable orders from the United States, the volume of which seems likely to increase. The production of wood sulphite, says the London Financial Times, has during recent years been a precarious industry; that is to say, the profits have been small and the risks great. Germany, however, with that ability for adaptation to commercial conditions which is so important a factor in her industrial success all over the world, has contrived to obtain a virtual monopoly of the wood sulphite business, and apparently has made money out of it. Fortunately, Canada now has a chance of securing practically the whole of the trade. It is no betrayal of business secrets to state that paper manufacturers all over the world are searching for supplies of raw material now that the German market has been closed, and are paying whatever prices are asked in order to fulfil their contracts. If the Canadian interests are wise they will not exact exorbitant terms, but will stand out for contracts covering a period of years on a fair level of prices.

The Increasing Demand for Newsprint

The situation in connection with the market for newsprint paper was outlined recently by the Boston News Bureau as follows:—"There is no question that higher newsprint prices are in sight in the United States. Fortunately for the publishers there are no expiring contracts of any size until late fall, and the most of the contracts do not come up for renewal until late December or the first of January. There is already talk in the newsprint industry of renewal prices higher than 2¼ cents per pound. But as no contracts have been made or are likely to be made for some months, this is purely academic. At the same time the war is building up a considerable foreign demand for American newsprint, and what is even more important it is taking much of the Canadian surplus with the possibility that Canadian supplies, which now furnish about 20 per cent. of the newsprint used in this country, may in time largely go to other countries. In that event American mills will have to enlarge their production to supply the demand. With newsprint four cents a pound in England, it is only natural that Canada should be rushing its product to that centre."

Pacific Coast Trade will Benefit

The Timber Trades Journal of London, England, in its issue of September 12th, in its Liverpool correspondence says:—"There is no doubt that the present position will give a fillip to the development of the Pacific Coast lumber business, but this will apply to the future, and any imports from British Columbia and California can have little effect upon the present import season. Great preparations are being made by those engaged in the lumber trade on the Pacific Coast with a view to the development of traffic via Panama. There is a very large demand on the Eastern seaboard, and the high transport charges have hitherto prevented that expansion, for which the enormous resources of the West are more than adequate. In fact, a few months ago there were many inquiries for tonnage to take shipments from British Columbia to the St. Lawrence, and since then it is known that good progress has been made. Exporters in Western Canada are also making arrangements for the transport of timber in large quantities to New Zealand and Australia, but it is by way of Panama that the greatest activity is likely."

A Splendid Advertising Letter

One of the most practical and subtle advertising pamphlets which have recently come to our attention is one which has been issued by the Graton & Knight Manufacturing Company, oak leather tanners and belt makers, Worcester, Mass., who have sent out a very attractive four-page illustrated letter in pamphlet form, directed to everyone who is upon their mailing list. The letter is designed in a very attractive manner, and, in keeping with the harvest season, is suggestive of the good fellowship and good cheer which so frequently prevail at this time of year. The color scheme of the pamphlet is a soft yellowish brown upon a straw colored background and it is illustrated with attractive pictures of harvest scenes and village events. The whole conception of the pamphlet is such as to create in the recipient pleasant memories of boyhood or vacation days, and the subtle feature of the whole scheme is the fact that, in this way, the Graton & Knight Company "get under the skin" of their trade friends in such a manner that they will not be readily forgotten.

CAMP SUPPLIES

We have a splendid stock of Prunes, Dried Peaches, Apricots, Apples, Raisins, Currants. In fact everything in the eating line suitable for the Camp, and we would appreciate a line from you asking for our prices which we can assure you are as low as the present condition of supplies will warrant, and very much lower than we could offer if we were compelled to go into the market and buy today.

Sanitary Logging Camps Always Pay

Comfortable Quarters and Good Food Make the Men Satisfied and Bring Dividends to the Company

By C. W. Buckner*

The topic of "sanitary logging camps" is one that, I must say, deserves a great deal of careful study and thought. I know the opposition that a discussion along this line always stirs up. You all remember some of our past discussions regarding Y. M. C. A. work in our logging camps, and at every turn in the discussion we meet that conspicuous interrogation mark which, in that case, means without further investigation, "Does it pay in dollars and cents?" And I believe most of our larger logging operators have come to the conclusion that we may now safely change that sentence to read, "It does pay to have Y. M. C. A. work in our logging camps."

I am thoroughly convinced that every dollar we invest in making our camps more sanitary and comfortable for our men will more than show its share of dividend.

If we decide to buy a new donkey engine, locomotive, or flying machine, just see how much time we take to decide the best type of machine to buy, and if convinced that one particular make will stay with us longer than some other, see how quick we are to select that make, and also how readily we part with a few extra hundred dollars to get the machine that will stay with us longest. How much more important it is for us to select men who will stay on the job as long as possible. When we get a good piece of machinery we are always anxious to improve working conditions so that the repairs will be as light as possible. Why not look around and see if there is not some place about our camp where we can make it more sanitary, and thereby lighten the repairs and prolong the usefulness of our human machines.

We assemble here once each year to try to help each other out on the vexing problems that confront us from time to time, and spend about seventy per cent. of the time considering electric logging, flying machines, oil burners, large firebox donkeys, gasoline donkeys, cable systems, and various other mechanical appliances, then go home and pay out about thirty per cent. of our cost of logging in machinery, depreciation, etc., and the other seventy per cent. in wages to the men to whom we have given about thirty per cent. of our time while assembled here.

Mr. Donovan, our president, last year gave us a glimpse of an ideal logging camp. How many of us went home and said, that it is easy for Mr. Donovan, he has a large camp, and expects to be in his present location for years to come and he can well afford to spend the money, but how can we small operators be expected to give our men the conveniences that he has.

Now I am speaking to you from the standpoint of the small operator. I dare say I have charge of as small a camp as anyone present, and I want to tell you that every dollar I have spent for the convenience and better treatment and feeding of our men has shown its share of dividend to the company I represent. A little later I am going to tell you about our small camp.

What comes to my mind just now is the second paper read by our friend Mr. O'Hearne last year, and the lurid description of the logger as discovered by Mr. Cornwall in 1909, and I am afraid that some of us still entertain the same idea of the logger to-day. I am not going to confine myself alone to the recommendation of a bathtub and electric lights for our men, but also to the good wholesome food properly cooked and put on the table so that it looks celan, and such as we should not be ashamed to give to any of our friends here should they happen to be in our camp at meal time; something to read, some technical papers, The Timberman, and a few copies of the proceedings of the Pacific Logging Congress. (I bought about twenty extra copies containing the report of last year's proceedings, and most of them went to my men.)

I am going to tell you some of my experiences in the logging camps in the yellow pine belt, south of the Mason & Dixon line. Several years ago I was offered a position as superintendent of a logging operation which employed two to three hundred men, and almost half as many Missouri mules. These mules were our electric motors, gasoline donkeys, flying machines, etc. I went over to spend a day or so looking the proposition over, and the first night there I saw two fights; ine one of them a Barlow knife of fair dimension was used with good effect. There were at least a dozen drunken men. Now I had known more or less of Missouri camp life ever since I had been large enough to earn twenty-five cents a day as water boy, but it seemed to me that this was going it rather strong, so I asked my host why so many men were drunk, and where they got their liquor (as this was in a dry county). He replied "Oh! this is nothing unusual they have nothing else to do when their day's work is over and as there are too many of them to stay in the sitting rooms at the boarding houses, they go over to the blind tiger (there were two within quarter of a mile of camp) and get full." Now in this western country we have no blind tigers we call them blind pigs instead. I suppose the difference in the disposition of the two animals is represented in the difference between the class of Scotch and rye whiskey disposed of by our blind pigs, and the real White Moonshine corn whiskey doled out by our blind tigers down there. However, the superintendent told me it was impossible to better conditions as the men would get drunk and break up the furniture in a boarding house, and that it was out of the question to get men to stay any length of time.

After taking charge of this operation, the first thing I did was to make more room for the men, and make them more comfortable, and then get rid of our pets the tigers. Men called me a crank, a preacher, an idealist, in fact everything but a sane business man, but I soon got around me a crew of sober, hardworking men, men who stayed on our pay roll year in and year out, men many of them with families, men on whom I could depend to go and get out the four million feet each month that we required, men, many of whom stayed with me for the four years I remained there, and would no doubt have stayed longer if we had not cut all the timber in the county, and been compelled to break up the camp. Did it pay in dollars and cents? I only wish I could now make as much out of our logging operations as we made there out of our commissary department alone.

Now getting back to our own problems on the Pacific Coast. About three and a half years ago I was engaged as superintendent at the lumber camp by the company I am now with. I was put in charge of the logging, the sawmill, and in fact manager of the lumber end of the business (the firm's main business is building contracting).

When I went there I found the bunk house very untidy to say the least, and divided off into four large rooms. These were to accommodate about twenty-four to thirty men, the only lights, a few small oil lamps with number one burners. If the men wanted a bath they could go and sneak a fire bucket or walk two miles to the river. The beds were thin excelsior mattresses thrown on rough bunks without any springs; we had a Chinese cook and not a good one at that; I was taking my meals at the cook-house myself and if some of you had come in I should have hesitated about asking you to eat with me.

I got a carpenter busy and divided the large rooms into small ones, part of them accommodating two men and some of them only one. I purchased a supply of combination box mattresses and springs, put two large neat tables in the lounging room, and put some magazines, a few lumber journals and a daily paper on these tables. I installed electric light in each room, a good strong one or two in the lounging room, and later I put in a bathtub, piped the cold water into it, and then ran a small steam pipe into it so they could heat their cold water with a little steam and have a decent bath. I afterwards planted out a small flower garden, and I believe these rough loggers enjoy the bouquet of flowers that are most of the time on our dining table as much as you and I enjoy them on our dining tables in our private homes. After firing about half a dozen Chinese cooks in about as many weeks I hired a white cook and paid him a decent wage and told him to feed my men. He is with me yet and I believe we have a pretty fair reputation as far as our boarding house is concerned.

A good many of my men have been with me veer since I took charge. They are satisfied and are doing me good honest work. This year, on account of the poor lumber market, we found it necessary to cut down wages. I told them the circumstances, and very few left me.

When we were starting our camp this spring, our woods-foreman was in a small town nearby, and several loggers from a nearby camp asked him for work. He called me up over the 'phone and told me about it, and told me what wages they had been getting. These were higher than we were expecting to pay, and I told him we could not meet these wages, and when he told them they replied that they wanted something to eat, cooked by a white man, and a decent place to sleep in. Five of them came at twenty-five to fifty cents less per day than they were getting before.

Now do not think we have never had a dissatisfied man. We have. We have had quitters, plenty of them, and we will always have them, even if we fed them in the Hall of the Doges at the Davenport in Spokane. Some men are born kickers, and will continue to kick all through life, and I sometimes wonder if the two by two and a half by six foot box will stop their kicking, or if they will still be dissatis-

fied when they have reached that better world, which we all hope to find.

One of our ironclad rules is that when a man comes into our camp drunk we have no further use for that man on our pay roll. If one of them must get on a spree and takes a few days off, and gives us a chance to fill his place temporarily while he goes to town to spend his money and make a hog of himself, that is his business, not ours; but when he comes into our camp and disturbs our men who are trying to be comfortable after a hard day's work, then it is our business and we immediately get busy.

Now we are not trying to run a pink tea camp—far from it; but we are trying to have our camp sanitary, trying to keep our bunkhouse a clean and comfortable place for our men to rest in at night with plenty of light, plenty of ventilation, plenty of clean water, and last but not least, a supply of good wholesome food cooked in a sanitary manner and served up on the table so that it looks clean and appetizing when our men come to the dining room.

I am convinced that the few dollars we spend in this way bring us good returns, and I expect to follow up this policy as long as I stay there to look after the interests of the company that now pays me my salary.

Getting the Most Out of Your Saws

How long should a saw be operated before repeat sharpening, is a very important subject, especially so if a bandsaw is the one in question.

The habit of operating a band saw as long as it will stand up to its work and cut straight is a bad one. It is much better to have regular changing time allowing such periods to be governed by the kind of timber being cut. Of course the condition of the logs enters largely into this. The less grit the better the condition of saw and better results as to output will be obtained in a given period. To illustrate, a large mill in N. C. had all their logs hauled to mill by carry logs, which drag the logs on the ground between two wheels. It was found necessary to change saws so frequently that the mill was forced at times to wait for sharp saws because the filers could not keep up with the demands. Finally the management installed a washing arrangement, a system of sprays under pressure struck the logs as they were hauled into the mill by the log jack and the benefit was all that could be desired. The saws stayed in running condition for a reasonable time and the desired output was obtained at small cost and everybody concerned was happy, especially the filer.

The advantages of changing saws at regular periods are many. In the first place it establishes a system, which is of great benefit in all businesses, and helps to keep the cut at a standard; in other words if the changes are made quarterly, the amount produced each two and a half hours will be pretty nearly alike providing the logs average about the same. The sawyer will exert himself to the utmost to keep up to the standard he has established and will increase it if he can and will hunt up the tallyman at the end of the day and ascertain if he has gone behind or gained.

Another advantage of changing saws at stated periods is to relieve the saw of too constant and undue strain. There is no doubt that the cause of many saws having failed on account of cracks or losing tension is either too long service per trick, or running when dull, or continuing a saw on the wheels after a bad dodge in cut. The latter is a most prolific cause of cracks. The dodge in many instances will pull tension or dish or both. The saw should be removed, and examined and corrected, which will not only increase the life of the saw, decrease expense and make life easier for all concerned, especially the filer and sawyer, but the owners will benefit by increased output, better lumber and better frame of mind at the end of each day. In other words the mill will run smoothly and an average output with few miscuts will be the result.

Don't work a willing horse to death, is an old saying that can be applied to a band saw. Treat the horse right and he will do a good day's work and after a good feed and rest will be ready for the next day. Although the saw is inanimate, it must be treated as though alive. Keep up its condition, do not overwork it, and it will respond to the lever, the same as the horse responds to the reins. If forced too hard either will fail or nullify. The horse will strain himself or balk, and the saw will dodge and the sawyer will cuss. And the filer will in many instances become disgusted and hunt a smoother job. Don't expect too much. Learn the limit of each saw and don't drive beyond it. Many mills force their saws entirely too hard and suffer in quality and quantity of output, and will find if they will investigate that their neighbor whose mill is of the same capacity and who is conservative, manufactures more and better lumber, subjects neither saw nor machinery to excessive strain while doing it. There is nothing in the slap dash method. It may look to the casual observer, and to the owners as though they are making more by such methods but my own experience and observation in numerous mills have proved that the men who keep their saws well sharpened and tensioned invariably get the best results from every point of view.—George McClellan in the Disston Crucible.

Unique Mechanical Draft in a Lumber Mill

The Bloedel-Donovan Company of Bellingham, Washington, have recently installed a unique and successful induced draft apparatus. The magnitude of the installation can only be appreciated by comparing it with the horse and wagon standing beside it as shown in the accompanying illustration. The wagon is only about half the height of the fan, while the collector is larger than an ordinary house. This apparatus is guaranteed by the Sturtevant Company to collect all sparks and cinders, thus eliminating the fire risk. Cinders are caught in the collector and are diverted into a flume of water which empties into Puget Sound. The equipment also enables the owners to keep clean lumber in their yards, and they state that it will save them thousands of dollars a year for that reason. Cinders settling on lumber together with rain, discolor the wood and greatly reduce its market value.

This apparatus is used in connection with boilers burning shavings and sawmill refuse. At the time the photograph was taken the boilers were delivering 2,300 h.p. which is greatly in excess of their normal rating. This increase in boiler capacity is due to the tremendous additional draft obtainable with the induced draft system.

Unique Induced Draft Installation.

In some plants as much as 100 per cent. additional capacity is obtained by using mechanical draft. Another advantage is that steam pressure is kept constant at any desired pressure. When steam pressure tends to decrease the fan speeds up automatically and does not allow pressure to drop. This enables the plant to respond instantly to sudden demands for more steam. If another engine were thrown in there would be plenty of steam. With this system steam can be raised from cold water very quickly.

The intsallation was made by the B. F. Sturtevant Company of Hyde Park, Boston, Mass.

The Canada Lumberman has been favored with a welcome calendar from John Bertram & Sons Company, Dundas, Ont. The calendar consists of a large pad with a sheet for each day of the year, from September, 1914, to December, 1915. It is mounted on a strong metal board bearing the company's name and trade mark.

Moving Pictures of Great Sawmill

The Canadian Western Lumber Company, of New Westminster, British Columbia, which operates one of the largest sawmills on the continent, has had moving picture films made of the various units of the plant, which has a capacity of 400,000 feet of lumber and 1,000,000 shingles daily, and an auxiliary door factory, with a capacity of 1,000 doors a day. The films, which reproduce realistic views of the various units of the great plant, including the logging and cutting of huge trees into lumber and shingles, will be placed on the regular circuits for the movies in Canada, the United States, and Europe, giving to the lumber industry in this Province a wide range of advertising and directing the attention of people all over the world to the great natural resources of British Columbia.

An Open Letter

To the Canadian Lumberman:

Dear Sirs,—

For the past twenty years we have been catering to the wants of the Lumbermen of Canada and we believe that from this long experience that we are in a position to know your requirements. We have studied your methods of doing business, have studied your requirements, and we have made every effort in that length of time to manufacture for you such goods as we could positively guarantee would give you satisfaction. In this connection we might say, that at no time have we ever scimped a garment in order to get a larger margin of profit. We believe we have given you the best make, and for the reason stated above, that we have studied your wants and requirements very closely, and we wish to assure you this year that we are in a position to still cater to your requirements as in the past. The European War has not, nor will not, make any difference in our ability to take care of your requirements.

We are carrying a stock of approximately $500,000 worth of made-up Garments and Raw Material such as you will require for the coming Winter, consisting of, BLACK and FANCY MACKINAWS, HEAVY TWEED PANTS, OVERALLS, HEAVY TOP SHIRTS, PURE WOOL SOCKS, CAPS, HEAVY WINTER UNDERWEAR and a very large and extensive range of MEN'S SWEATERS.

We are in a position to ship your valued Orders the same day as received.

In conclusion, we beg to thank you for the very generous patronage which you have given us in the past and may we ask for a continuance of these favors during the coming year.

We remain,

Faithfully yours,

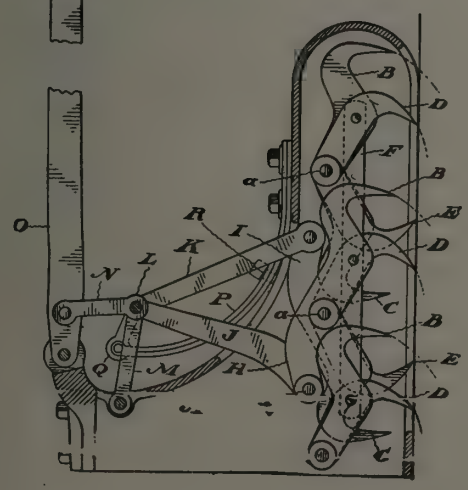
A Boon to Lumbermen
Payette's Famous Patent Mill Dogs
650 Sets already sold

Fig. 1.



BECAUSE

(1) They will dog with perfect ease and safety in any class of timber.
(2) Will dog just as easily, frozen maple or hardwoods of any description.
(3) Will dog the last board, just as easily as they dogged the first one.
(4) They do not tear the board or stock.
(5) Many other reasons, too numerous to mention here.

Write us for full particulars and booklet on same.

We also manufacture the following High-Grade Saw-Mill Machinery;—New Modern Saw-Mill Carriages, with either three or two head blocks; P. Payette's New Patent Saw-Mill Dog, for use in either winter or summer. P. Payette's Grip-Set Works; Steam Feed Valves, Steam Lifter and Loaders, Valves. Five different class and style of Edgers, for either light or heavy duty. Combined Gang-Circulars and Edgers, or Independent Gang Circulars.

Steam-Canters, Steam Lifters and Loaders, and a general line of saw-mill machinery. Detachable Chain-Sprockets, Castings of Gray-Iron, Semi-Cast Steel, and brass castings for general use.

Descriptive Booklet and prices mailed free upon request.

EDGINGS

Ontario

The Geo. McLagan Furniture factory at Stratford, Ont., which has been closed for some time for the installation of new boilers has again commenced operation.

The Shepard & Morse Lumber Company, Ottawa, Ont., are replacing the engine in their plant which broke down a few weeks ago, with a new 700 h.p. Willock compound steam engine.

The Ontario Gazette of September 19th contained a notice that the provincial secretary had accepted the surrender of the charter of the Cavendish Lumber Company, Limited, and had directed that it be cancelled.

The ratepayers of Goderich, Ont., have passed a by-law guaranteeing bonds of $25,000 to J. E. Baechler, North Street, for the erection of a third floor addition to his new plant. The addition is to cost $50,000, and is to be used for a furniture factory.

The shingle mill belonging to J. H. Clark on the Magnetewan River, a little outside of Burks Falls, Ont., was recently destroyed by fire. The stock of shingles was saved. The loss amounted to about $2,000 and there was no insurance. It is stated, however, that Mr. Clark intends to rebuild.

The Cleveland Sarnia Saw Mills Company, Sarnia, Ont., report that the fire from which they suffered recently was confined to the lumber yard and the loss only amounted to $15,000. This was fully covered by insurance. The fire did not in any way interfere with their shipment of dry lumber or the operation of their sawmill.

The Abitibi Pulp and Paper Company are rapidly completing a development which will give good markets and employment to a large number of people. This company will have a probable output of 250 tons of newsprint per day. They are erecting houses for their workmen. They have laid out their town site and are putting in sewers and a water system. They have taken out much pulpwood, and when in full running order will require 90,000 cords for their paper mill.

The New Ontario Colonization Company, Jacksonboro, Ont., are pressing forward their development by the building of roads and the erection of houses, and are, in other ways, making preparations to promote settlement on a considerable scale. With the sale of pulp concessions, other developments may be expected in the near future, and as soon as the Transcontinental is running and reasonable freights obtained, outside buyers of pulpwood are expected to come in and widen out the market for settlers' timber. The Department of Lands, Forests and Mines is preparing the way for settlement by the construction of roads which will enable settlers to get to their lands without delay or hardship.

Eastern Canada

B. F. Smith, East Florenceville, N.B., whose sawmill was recently destroyed by fire reports that the mill will not be rebuilt this season.

The Louison Lumber Company, Limited, Jacquet River, N.B., whose plant was recently destroyed by fire, commenced work upon the construction of a new mill on September 25th.

The engine in the sawmill of Fraser & Company, Aylmer, P.Q., recently broke down and resulted in two hundred men being thrown out of employment. Repairs are being rapidly made.

The new mill built by R. & T. Ritchie at Aylmer, P.Q., is now completed and will shortly give employment to 150 men. This mill was built to replace the one which was destroyed by fire several months ago.

Timber lands in Shelbourne and Queens County, N.S., which were purchased about four years ago by a Yarmouth Syndicate have been sold to the Berkshire Lumber Company, Pittsfield, Mass. The lands amounted to 1,912 acres.

Petit & Petit, Limitee, have been incorporated with head office at Montreal and capital stock of $49,000 with powers to acquire timber, timber limits, etc., in addition to a large number of other general powers relating to the purchase and sale of real estate.

The province of Quebec, in its official Gazette announces that permits to cut timber will be offered at public auction at the Department of Lands and Forests, Quebec, on October 20th in the following districts:—Upper Ottawa, Lower Ottawa, Lake St. John East, Matapedia Valley, St. Laurent of Metapedia, Rimouski West, Gaspe West, Bonaventure West, Lake St. John West, Lake St. John North West, and Saugenay Agency.

Western Canada

The Lumber Insurance Company of New York has been registered in the Province of Saskatchewan under the act for the inspection of foreign companies.

The shingle mill of the Ardley Lumber & Shingle Company at Ardley,

B.C., was recently destroyed by fire causing a loss of $1,600 on the building and $3,100 on the machinery, which is largely covered by insurance.

The A. B. Cushing Lumber Company (Vancouver), Limited, has been incorporated with authorized capital of $200,000.

It is reported that a Vancouver firm is negotiating for the purchase of standing cedar and fir timber at Hope, B.C., and that it intends to erect a shingle mill.

A fire at Port Moody, B.C., recently destroyed about 1,500,000 feet of lumber belonging to the Canadian Pacific Lumber Company. The mill and dry kilns were not damaged.

The partnership between Aaron Serkan and Robert Smith, under the firm name of "The Lake Manitoba Trading and Lumber Company," with head office at Winnipeg, has been dissolved.

Thos. D. Robinson & Sons, Limited, 258 Portage Avenue, Winnipeg, Man., have secured the contract from the Winnipeg Board of Control for the supply of 1,500,000 to 2,000,000 feet B.M. of lumber.

The McLaren Lumber Company, Blairmore, Alta., who were recently making arrangements to erect a large mill at a cost of $200,000, report that they have decided to let the matter stand over until next year.

The Canyon City Saw Mills Company, Limited, have been incorporated in the province of Saskatchewan with head office at Regina and capital stock of $15,000. The headquarters of the company are at Creston, B.C.

The sash and door factory of the Sunset Sash & Door Company, 724 Broadway St. W., Vancouver, B.C., was recently destroyed by fire. The plant was located at the corner of Broadway and Heather Streets. The loss amounted to $8,000.

The Mankin Lumber & Pole Company, Fayetteville, West Virginia, has secured an extra-provincial license to carry on business in British Columbia, with provincial head office at Nelson. The capital stock of the company is $100,000. James O'Shea, Nelson, B.C., is attorney for the company.

Mr. J. S. Deschamps, who is equipping a new mill on the site of the old Yale-Columbia mill at Nelson, B.C., reported recently that the plant was nearing completion and should be in operation about the end of September. He intends to continue sawing operations until Christmas at least. The new mill will have a capacity of 40,000 feet per day, which can be raised to 50,000 feet by slight additions.

The Alberta North West Lumber Company, Limited, has secured an extra-provincial license to carry on business in the province of British Columbia, with provincial head office at 901 Vancouver Block, Vancouver. The headquarters of the company are at Ponoka, Alta. The company's capital stock amounts to $20,000. R. S. Lennie, Vancouver, is attorney for the company.

The Registrar of the Supreme Court of British Columbia is advertising that creditors of the Canadian Puget Sound Lumber Company, Limited, are required on or before October 10th, to send their names and addresses and the particulars of their claims, etc., to Rowland F. Taylor, Victoria, B.C., official liquiadtor for the company. On October 12th the debts and claims reported are to be adjudicated.

Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing to the Department of Trade and Commerce and stating the number of the enquiry.

814. **Lumber (spruce and white pine).**—A commission merchant in Havana would like to correspond with Canadian exporters of lumber (spruce and white pine). Good references offered.

854. **Red fir poles.**—An inquiry is made for the addresses of Canadian sawmills who can supply red fir poles suitable for telegraph and telephone posts.

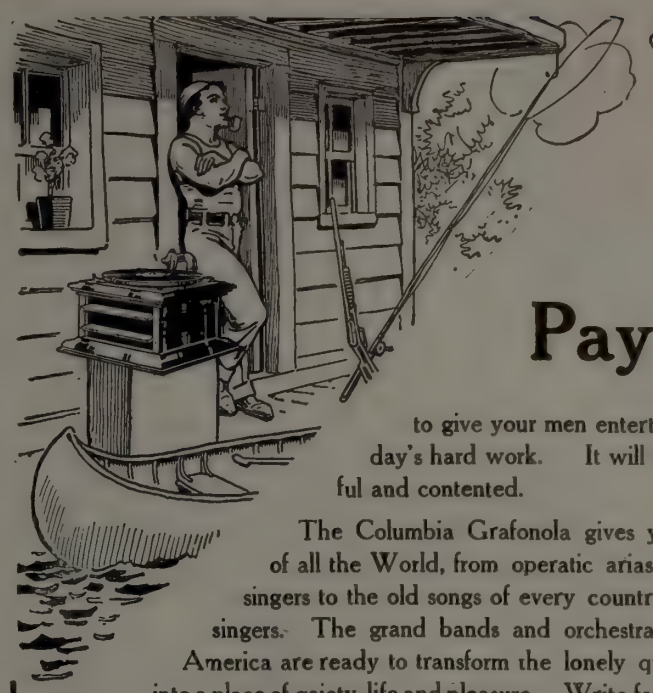
906. **Wood-pulp.**—In view of the possible shortage of paper in Scotland, inquiry is being made for large supplies of Canadian wood pulp, and requests are received for names of manufacturers able to make immediate shipments.

907. **Pit wood.**—Inquiry is made for names of Canadian manufacturers of pit wood.

908. **Pit timber.**—A colliery company in the north of England wishes to get offers of pit timber (c.i.f.) from Canadian shippers. Specifications at Department of Trade and Commerce, Ottawa.

912. **Aspen, poplar, etc.**—An important Swedish match manufacturing enterprise wishes to ascertain the possibility of obtaining from Canada supplies of aspen, poplar, and similar timber, more particularly for the production of match boxes.

Mr. Donald Campbell McLean, for many years a well-known lumberman of Toronto died recently at his home. Mr. McLean was seventy-nine years of age. He had continued an active life up to three weeks previous to his death. He was born in Alexandria, Ont., and moved at an early age to Manilla, Ont., and later to Cannington, Ont., conducting a carriage business at both of these places. After residing in Cannington for fifteen years, he moved to Toronto thitry years ago, and established a lumber business. He is survived by a wife, four daughters and five sons.



It Will Pay You

to give your men entertainment after the day's hard work. It will keep them cheerful and contented.

The Columbia Grafonola gives you all the music of all the World, from operatic arias by the foremost singers to the old songs of every country sung by native singers. The grand bands and orchestras of Europe and America are ready to transform the lonely quiet of the forest into a place of gaiety, life and pleasure. Write for descriptive catalogue of Columbia Graphophones and Grafonolas, selling at $17.50, $32.50, $65.00 and on up to $650.00. One for every taste and every purse.

Columbia Graphophone Co.

365-367 Sorauren Avenue

Toronto, Ont.

Creators of the talking machine industry. Pioneers and leaders in the talking machine art. Owners of the fundamental patents. Largest manufacturers of talking machines in the world. Manufacturers of the Dictaphone.

Why A Time Record But No Belt Record?

Not for a minute would you tolerate an efficient operator at a modern, high grade machine—why then should an inferior or incapable belt be used.

But it is not enough to simply start with a skillful mechanic or a high grade belt and let it go at that. You must know what your skilled mechanic accomplishes, you require of him an accurate time and service record. It is just as essential to know the exact service you get from your belting, the conditions under which it operates and the cost of maintenance.

Our engineering department has prepared several belt record systems to meet different requirements. These systems are simple yet comprehensive and vary according to the size and kind of mill, number of belts used, etc. By the use of such records every mill, large or small, can effect a material saving in their annual belt expense.

Our engineers will gladly assist you in the installation of a belt record system and recommend the grades of belting particularly adopted to your requirements. A comparison will convince you of the large saving possible in your plant by the use of our modern efficient product.

May we send you further particulars—there is no obligation and no expense—the service is absolutely gratis. Consult us freely.

DIXON'S SILICA GRAPHITE PAINT

A single application of this protective paint will outlast several coats of any ordinary protective paint, and give greater protection because of the peculiar faculty the natural silica-graphite combination has for practically indentifying itself with the metal. The firm coating will not crack, peel or flake, nor is it affected by agents which quickly destroy all ordinary protective paints.

Loans on Timber Lands

For Long Periods of Time in Amounts from $25,000 and up

We have been in the lumber business for over half a century.

We now control and operate a number of mills. We also loan money to lumbermen.

It will be to your advantage to deal with practical men who know the requirements of the lumber trade all over Canada.

Our business is to know the wants of the lumbermen and to meet them.

Ontario Bond Corporation of Canada, Limited

HAMILTON, ONTARIO

If you could SEE the heat that escapes from your pipes you would realize how much coal you waste

That's the whole trouble. You can't actually **see** the dollars that are constantly escaping from your poorly insulated pipes—because the heat units are invisible.

As a result, in a few years you have burnt up thousands of dollars' worth of coal—over and above the amount needed to run your plant.

Put an end to this waste by covering your pipes with

JM Asbesto-Sponge Felted Pipe Covering

Actual tests prove that it possesses from 15 to 30 per cent. greater heat-insulating efficiency than ordinary coverings.

Recent figures compiled by Prof. C. L. Norton, Massachusetts Institute of Technology show that, on a basis of 10,000 sq. ft. of pipe, J-M Asbesto-Sponge Felted Pipe Covering saves per year, $19,960.00 over bare pipe, $1540.00 over air cell covering and $1050.00 over moulded covering.

This covering is the most efficient of all high-pressure steam pipe coverings because it confines more "dead air." Made of many layers of thin felt composed of Asbestos fibres and finely ground sponge—with thousands of "dead air" cells in every layer.

Practically indestructible. Can be taken off the pipes and replaced any number of times.

Write our nearest branch for Catalog No. 100.

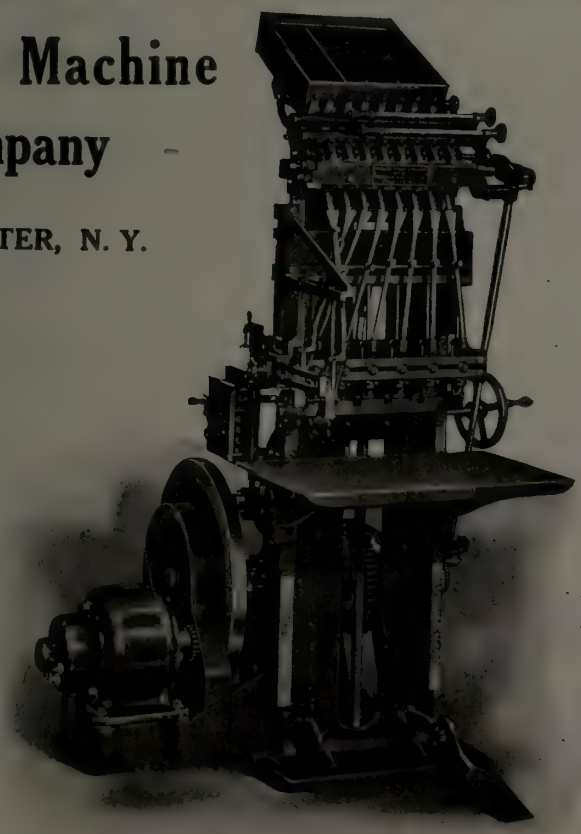
Morgan Machine Company

ROCHESTER, N. Y.



Manufacturers of—

Nailing Machines,

Lock Corner Box Machinery,

Box Board Matchers,

Box Board Printing Machines.

Every manufacturer of boxes; every manufacturer who has nails to drive in any article, or packages of any kind to manufacture, should write the Morgan Machine Company for latest developments in machinery for the Box Industry.

Morgan Machine Company

ROCHESTER, N. Y.

It requires some investment to insure a constant supply of logs for your mill through the purchase of Clyde Self-Propelling Logging Machinery

But remember.

You pay more and you keep on paying for the skidders and loaders you don't buy.

Now this fact is susceptible of PROOF and we are going to ask you to make us prove it to you.

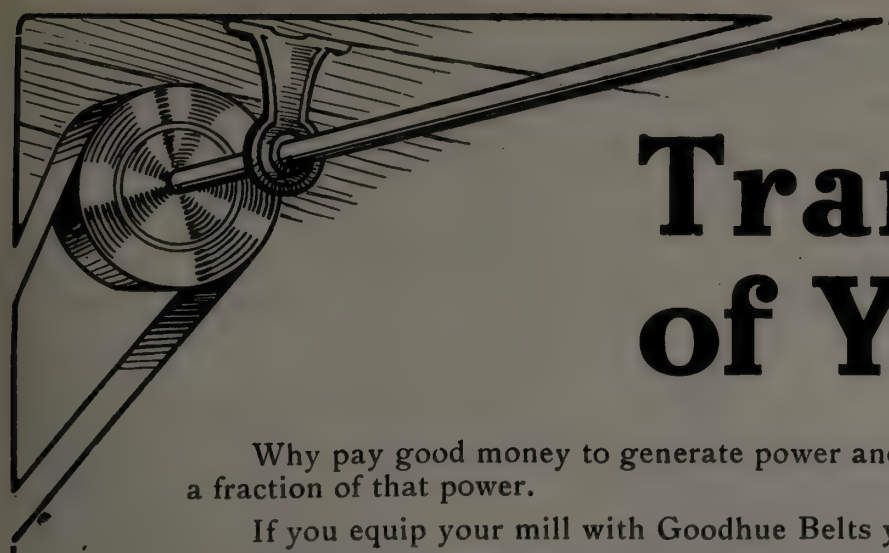
"Wilson Bros." Flooring and Trim

"Wilson Bros." stamped on every piece of this flooring stands for Quality. Look for the name.
Hardwood and Pine. **Interior Finish of All Kinds.** Also Hardwood Veneer Doors to detail.
We are equipped to fill large or small orders on short notice. Write us for prices.

Wilson Bros., Limited - Collingwood, Ont.



Transmit 100% of Your Power

Why pay good money to generate power and then employ a poor belt that will only transmit a fraction of that power.

If you equip your mill with Goodhue Belts you can transmit 100% of the power generated.

Goodhue Belts stretch 15 to 25% less than other belts and have just the right amount of "cling" on the pulley.

Write us for particulars and prices.

YOU CAN DO IT WITH— **A GOODHUE BELT**

J. L. GOODHUE & COMPANY, LIMITED.
DANVILLE, QUEBEC CANADA.

The best one-man for cutting cedar and similar wood

Run Easiest
Cut Fastest
Last Longest

There is a strong array of solid facts to back our assertion that Disston Cross-cut Saws should be used in **every** lumber camp.

They are ground to a true taper all the way from cutting edge to an **extra thin** back. Being ground on lines that conform exactly to the breast of the saw, the blade is absolutely uniform in thickness throughout the entire length of the cutting edge.

This special method of grinding gives the maximum amount of clearance with the minimum amount of set, without sacrificing elasticity and stiffness. You know that all these points are good points, and substantiate our claim that Disston Cross-cut Saws are unexcelled.

While these details are known to lumbermen in all sections of the world, we repeat them for the benefit of the few who may not yet know all the good points of Disston Saws.

It is well to bear this fact in mind; that wherever man has penetrated the forests for the purpose of cutting timber, you will find the Disston the leading Cross-cut Saw. For years and years they have been steadily gaining in popular favor, which is the strongest evidence of their superiority that can be produced.

Section

DISSTON
No. 122
HANDLE

is gaining wider favor every day through its durability and the ease and speed with which it can be attached or detached.

"DUXBAK" Waterproof Clothing

For outdoor wear this "Duxbak" cravenetted coat is just what many lumbermen are looking for. It is light in weight and absolutely guaranteed to be waterproof. The fabric permits of perfect ventilation.

Other "Duxbak" garments are norfolk jackets, long trousers, knee pants, riding breeches, cartridge vests and a variety of caps and leggings, for both men and women.

Write us for booklet.

F. M. DIXON

59 St. Peter St. - Montreal

I would rather stroke a bird's wings than woman's hair.
And the fragrance of the rose pressed against my lips
Is sweeter and more sincere than woman's kisses.
—El-Rami.

Those Who Have Read:
"The Soul of Lillith," written by Marie Corelli, no doubt have been struck by the cynical expressions of El-Rami as to women's constancy. Throughout the whole novel there is a tone of doubt of women in general, though in discussion with Feraz, his brother, he admits there are clever women and faithful women; but further states: "we men seldom choose them, we are fools and we pay for our folly."

There is No Doubt of the high quality of the goods we manufacture, **The High Quality is Constant.**

Take for instance

Harris Heavy Pressure

"the babbitt metal without a fault."

We have spent years in experimenting in our chemical laboratory to produce a babbitt metal which would fill the bill in 95 cases out of 100 where genuine babbitt is used and our sales, which are increasing most rapidly, give evidence that the quality is constant and the metal reliable.

Engineers know that H.H.P. is built for service.
H.H.P. is the best babbitt metal for all general machinery bearings.
H.H.P. will not crack or squeeze out.
H.H.P. runs cool at any speed.
H.H.P. is copper-coated and copper-hardened.

Our reputation and guarantee is back of every pound

A New All Ball Bearing Small Band Mill

FAY-EGAN "LIGHTNING" **No. 361**

For sawing small logs into box shooks, spoke and bobbin blanks, chair, wagon and other dimensions. We fit this mill with an Automatic Carriage, so one man can run the entire outfit.

Made with regular carriage for long logs—wheels 54" in diameter, both run in double race ball bearings—upper wheel raises on ball bearing screws—automatic yielding upper guide—new quick action drop trip lower guide—frame and base cast in one piece—cuts faster and straighter with less power and at lower blade cost than any small band mill ever made.

Ask us for Bulletin O-11.

Cincinnati, Ohio, U.S.A.

Dominion Timber Regulations

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth :—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long, 1½ cents each.

Railway ties, nine feet long, 1¾ cents each.

Shingle bolts, 25 cents per cord.

And 5 per cent. on the sale of all other products of the berth.

Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

W. W. Cory,

Department of the Interior, Ottawa,
December 20th, 1912.

Deputy Minister.

D. C. CAMERON, President and General Manager.

Not altogether what we say but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

West & Peachey - Simcoe, Ont.

THIS GUARANTEE PROTECTS YOU

We have such complete confidence in our sawmill machinery that it is all sold with the following guarantee.

These machines are guaranteed against defective materials and workmanship for the period of one year, and their proper and successful operation is also absolutely guaranteed. Should any part fail through defects, we will replace them free of charge, or should any machine not work properly, we will remove it at our expense, and refund any part of the purchase money which may have been paid to us.

You take no chances when buying our machines, and it is the only kind of machinery you want in your mill.

We build everything needed for a sawmill.

Let us get together

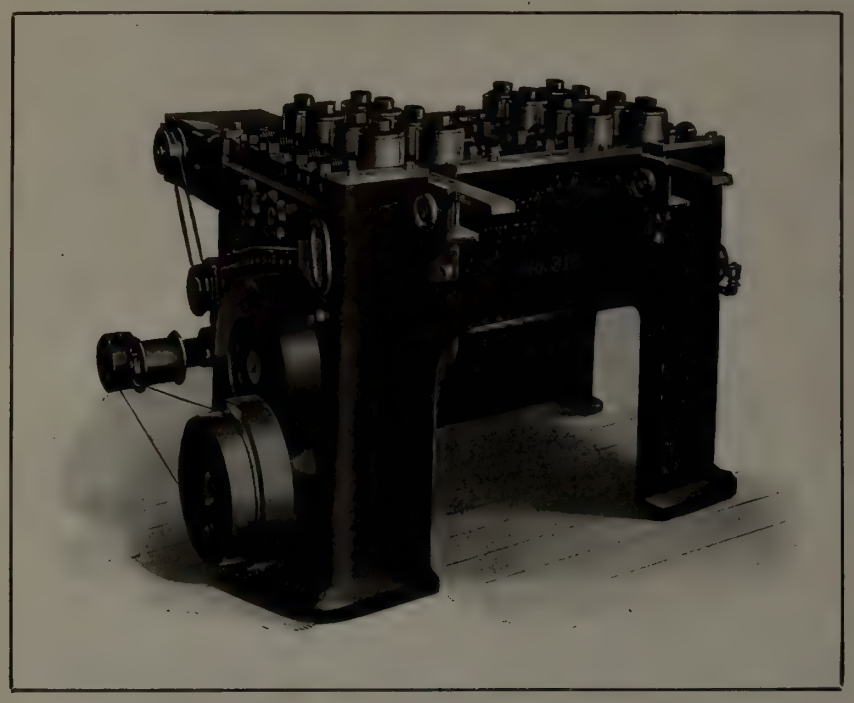
Improved Box Board Matcher



16 driven feed rolls, 4⅛ in. in diameter, each one of which can be adjusted independent of all others.

4½ in. between centres of first and second pair; 5½ in. between centres of second and third pair (the cutters work between this pair) and 4¼ in. between centres of third and fourth pair.

This Matcher is compactly and rigidly constructed with every part readily accessible and the operators are close together when working.

Catalogue gladly furnished which illustrates and describes many other machines built expressly for Box Factories.

Mereen-Johnson Machine Company, MINNEAPOLIS, MINN U. S. A.

Your Lumber Horse Needs

A talk with the Lumberman of Canada on the modern and sanitary system we have installed to serve your requirements.

FINANCIAL RESPONSIBILITY.—We are in a position this season to supply the lumber trade with the finest heavy horses suitable for camp work. We have shippers in the very best heavy horse district in Western Ontario, who make personal selections and take only the best. Every horse we ship out is guaranteed to be just as represented by us as to age, soundness, weight and quality—there is more than two million dollars behind this guarantee. These horses can be delivered off the incoming cars and transhipped in an hour from our yards.

SERVICE.—Our barn accommodation is up-to-date in every particular and has stabling accommodation for 500 horses. A track is also maintained for exercising horses while on the company's premises.

SANITATION.—Believing that prevention is better than cure, and to give the very best service possible we have this year employed a veterinary surgeon under salary. A daily and most thorough inspection is made by him of the entire barns and in this way the slightest indisposition is noted and the animal suffering immediately removed to the hospital on the grounds. "Safety first" is our motto in this respect.

TRANSPORTATION.—Our premises being directly on the lines of the C. P. R., G. T. R. and C. N. R., our rail facilities are such that we are in a position to ship on an hour's notice, and loading and unloading chutes are located right at the barn doors.

We gladly invite inspection of our entire system. Come and let us show you the most modern and sanitary system in Canada.

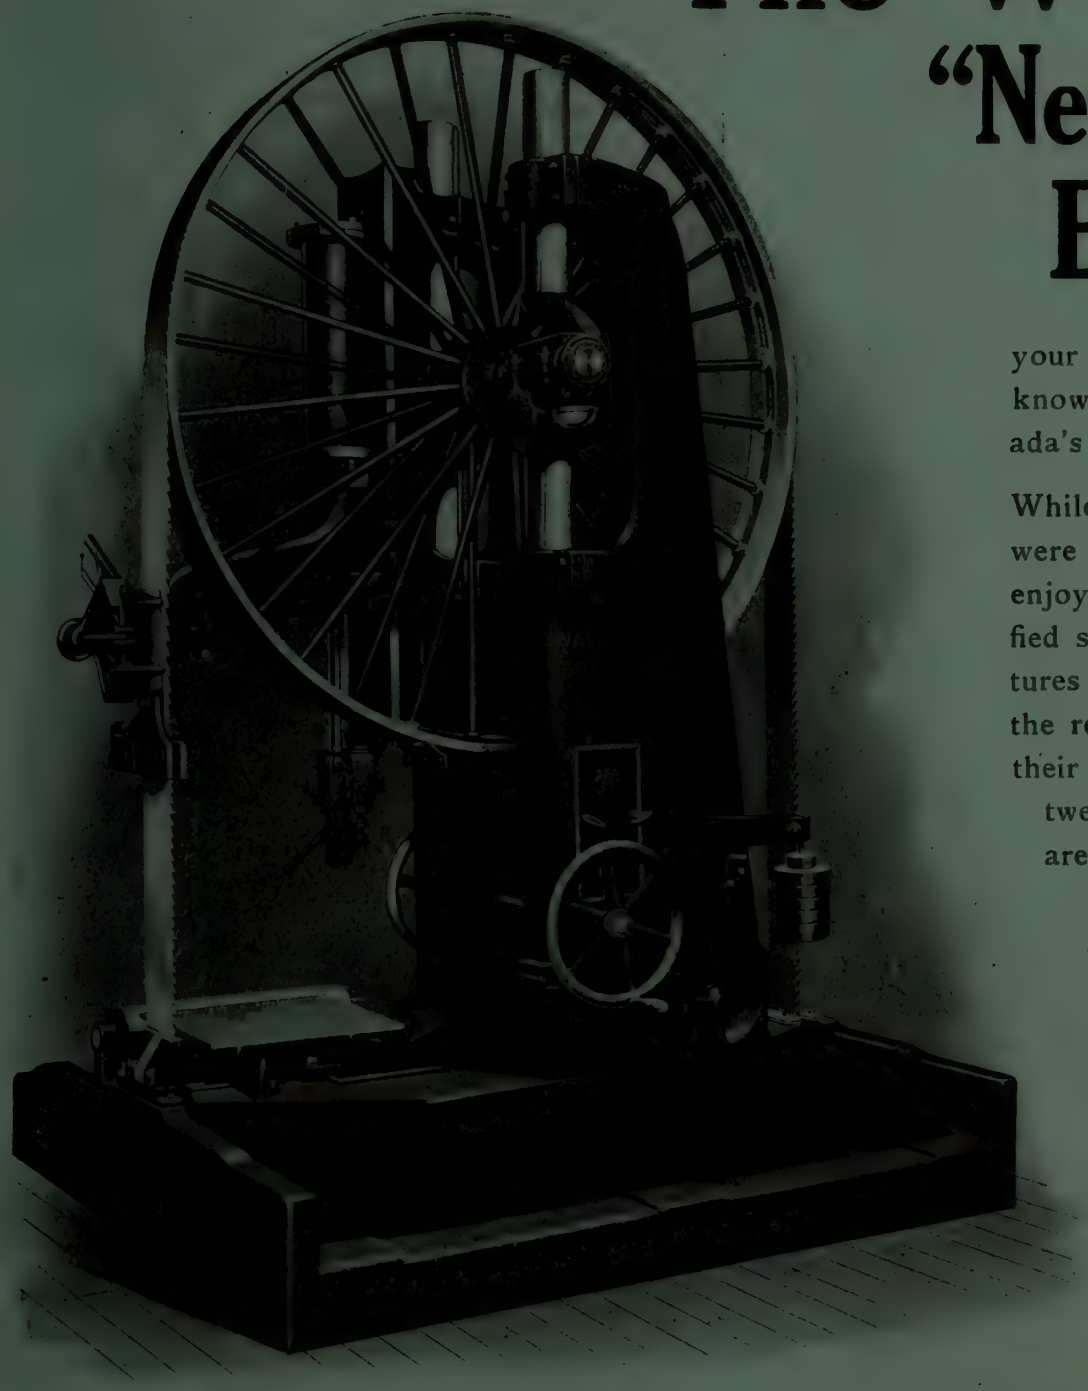
Remember—

that while you should be sure of all your equipment you should be surest of your Bandmill. Upon the efficiency of this one machine more perhaps than upon any other in the mill, the quality and value of your lumber output depend.

In choosing

The Waterous "New Model" Bandmill



your selection is endorsed by the acknowledged preference of many of Canada's largest and fastest cutting mills.

While the first machines sold in 1909 were bought solely on the reputation enjoyed by their producers the unqualified success of the numerous new features introduced by these machines and the records of performance obtained by their use has enabled us to place the twenty-five "New Model" mills which are now in operation.

What is more important, there is not one user of this mill—and we will send you the list—but will unhesitatingly recommend the machine to you.

We have just issued a new 28-page Bulletin of the "New Model" mill, handsomely illustrated and full of information. May we send it to you?

STOCKS 2" TO 24" WIDE

THE BELT YOU WILL EVENTUALLY USE

We guarantee our "Camel Hair" Belting will outlast, transmit more power, prove easier on bearings, stretch less than any other class of belting running under same conditions, and if our claims are not borne out by results, we are ready at all times to make any rebate on the cost of our belt that will make it cost no more than any other style of belting. Service considered.

B. J. COGHLIN CO., Limited ∴ ∴ **MONTREAL**

A Hubbard Oven In Your Camp

A number 3 Hubbard Oven, 31 square feet of tile baking surface, occupies floor space of 5 ft. x 5 ft. 6 in. Height, over all, from 5 ft. 7 in. to 6 ft. 4 in. Shipping weight *only* 2,100 pounds. Also made in 4 other sizes.

The "Hubbard" portable baking oven equipped with "Perfect Rocer Grates" is a sanitary, economical and efficient baking device for lumber camp use. It is substantially built, compact in design and consumes a surprisingly small amount of fuel.

Accompanying is a list of representative lumber camps using the Hubbard oven with perfect satisfaction.

Every oven is carefully assembled in every detail before being shipped. This assures the purchaser that there wil not be the slightest trouble in erecting the oven at its destination. No special tools are required and every oven is shipped complete.

Write for prices f.o.b. your station.

To the Owner of Timber Lands

Far sighted owners of timber lands should take advantage of the times incident to the European wars, and prepare themselves for the day when the demand for timber is suddenly thrust upon them. This is certain to come at no distant day. Therefore cultivate a closer acquaintance with your holdings, and the best method of marketing them. Let us prepare the way for you. Remember, we not only report on the property, but assist in marketing the bond issue when necessary. Send for our booklet.

Machinery and Timber For Sale

The undersigned offer for sale, in large or small blocks all their remaining timber lands, mills and town property situated in the Town of Parry Sound, Ont.; and other Lumber Equipment, including boom chains, plows, sleighs, etc.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

We have the following Sawmill Machinery for sale:

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 3-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.

1 Double cylinder steam nigger, right hand.

1 Log Loader for right hand mill.

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.

1 left-hand steam nigger.

1 Log-loader.

1 Endless chain jack ladder with two kickers complete for right and left hand mills.

2 Roger Gang Edgers for 8-in. cants and lumber.

1 Waterous double edger, 6 saws.

2 2-saw trimmers.

1 20-ft. Slash table.

1 16-ft. Revolving Slash Table.

1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.

1 70-ft. Transfer Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.

1 Lath Mill with bolter.

2 Lath Trimming Saws.

FILING ROOM

1 Automatic Filing Machine for 12-in. D.C. band saws.

1 Automatic Grinding Machine for 8-in. S.C. band saws.

1 Automatic Machine for circular saws.

1 Hand Machine for cut-off saws.

1 Lap Grinder.

1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

POWER PLANT

2 Double Duplex, high pressure Water Pumps.

5 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.

2 125 h.p. Water Wheels.

1 Upright Engine for sawdust conveyor.

1 10 h.p. Engine.

1 Mitts & Merrell Hog.

1 Wood Machine for 22-in. wood.

1 Wood Machine for 16-in. wood.

1 Edger for ripping dry lumber, installed.

1 Edger for ripping dry lumber, not installed.

1 30 h.p. Generator, 250 volt.

1 30 light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and turn-tables, particulars of which may be had on application.

Also, contents of machine shop, containing Planer, Drill, Lathe and Machinery, with tools necessary for repair work.

All of the above open for inspection at Parry Sound.

Do You Want More Business?

Will you send for and USE Selling Assistance—it will not cost you one penny—that will increase the demand for lumber in your locality?

During one week we shipped 15,000 "Building Use Books" to dealers who previously had used our advertising and literature and who wanted additional selling aid because it was worth money to them.

A 500 per cent Increase

With a request for a large number of books one dealer submitted the following report:

> **"You will remember we distributed one of your books earlier in the year and we believe it has resulted in benefit to us and probably to other dealers in this city who use your stock. We already have had more Arkansas Soft Pine in our yard this year than any two years previous since we have been in the retail business." (Letter bears date of September 16.)**

You can sell more lumber if you go about it in the right way and we are convinced—from the testimony of those with whom and for whom we are working—that we have found the right way.

If you want more business or want business on a better basis get in touch with the ARKANSAS SOFT PINE BUREAU, 1738 Transportation Building, Chicago. Write today.

Belting that Pays

In the saw mill where varying stresses are placed on belts momentarily such service calls for belting of unusual quality, service and durability.

That is why Goodyear belts are designed and made to meet actual working conditions. Long before any piece of Goodyear equipment is made, actual working conditions are studied and proved out by Goodyear experts. In this way, every Goodyear product is a service product because not made to meet a price.

"Extra Power"

This is a high speed belt for heavy drives. It shows the highest friction pull of any belt we have ever tested. "Extra Power" stands up under most gruelling service. The duck is the heaviest and strongest we use. All materials are laboratory tested for super-power. The stretch is taken out in the making. Ply separation rarely occurs with this belt.

GOODYEAR MADE IN CANADA Belting

"Imperial"

This is a belt for high speed small pulleys, wonderfully flexible. This insures a maximum arc of contact, utmost power delivery, no slippage—a fine belt for trimmer work.

Other Features

All Goodyear belts have the famous sealed seam which makes them virtually "one piece" and are cured under heavy, carefully regulated hydraulic pressure. "Extra Power" is made in various widths, endless when desired.

Ask These Men

Before buying belting, hose or packing, consult Goodyear experts. Learn just what particular Goodyear product will best meet the particular service, based on a study and test of actual working conditions. Remember that the same quality standards which have won Goodyear leadership in tiredom govern in this field also.

Buying the Goodyear way is buying the right way—the safe way—the economical way.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster General for Canada, for transmission as second class matter.

Entered as second class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 34 Toronto, October 15, 1914 No. 20

The MacLean Building

The above illustration shows the new offices of the Canada Lumberman and Woodworker in the MacLean Building, 347 Adelaide Street West (east of Spadina Avenue), Toronto. Readers are requested to note the change of address. The Telephone numbers have also been changed and a switchboard installed to provide a more adequate service. Hereafter all Departments will be reached by calling Adelaide 2700.

The Trade Journal as a Business Factor

A few years ago there came a temporary lull in business activity early in the autumn, and, as generally happens at such a time, there were a number of firms which decided to reduce their advertising. In the book publishing business, this policy became probably more general than in any other. Firms which were accustomed to using frequent advertising space stopped doing so almost altogether. Very few books were advertised at all. The immediate result was a still greater decrease in the volume of trade in that particular line of business. Whether the firms which reduced their advertising saved money by this policy is not the point of interest at present. There was one large firm, at the head of which was a man who looked deeper into business problems than most of the others. His office was in Toronto and he represented throughout Canada a number of large publishing houses. He saw that the other firms were not advertising and he realized that, with Christmas in the near future, there would be a large number of books sold, whether they were advertised or not, so he selected the best book he then had in stock as a prospective Christmas item and he advertised it liberally. When the other publishers woke up it was too late. This particular firm swept up practically the whole Christmas trade that year and by New Year's day the book-reading public was talking about this book. It was a book which would have sold on its own merits with a fair amount of advertising, but when extensively advertised under such circumstances it became the book of the season and all through the following three or four months its sales continued on a heavy scale.

Books are not quite the same thing as lumber from an advertising point of view, but there is a simple fact in the above story which any lumberman can keep in mind to his own certain advantage, namely; when the other fellow commences to fear business depression and to reduce his efforts to get trade—when he gets cold feet to put the matter tersely—that is the time to speed up and go after new business, whether by advertising or by individual effort. There are some firms in the lumber business, at the head of which is a man or a board of directors who believe that their goods cannot be advertised profitably. We have discussed this point in print and in conversation with many lumbermen, but are not yet convinced that we have come across a single definite case where careful study of advertising methods would not bring profitable results.

Leaving aside entirely the idea that a lumberman ought to support his trade journal because of the advantage he secures by reading it and by having his employees read it, there is always the indisputable fact that manufacturing or wholesaling lumbermen handle goods which are bought by somebody, and that, in very close to 100 per cent. of the cases the buyer is a man who reads his lumber journal. If a lumberman thinks under such circumstances, that he cannot increase his sales by advertising he is really admitting, either that he has not given the matter sufficient study, or that he is not sufficiently in touch with advertising methods to devise a campaign adapted to his particular requirements. Manufacturers, whether individually or in association groups, wholesalers, commission houses, etc., have all disproved the idea that a lumber business cannot make a profit out of advertising.

If advertising is a good proposition under ordinary conditions what about conditions such as those which exist to-day? Who is the wiser man, the one who cuts out his advertising expenditure, or the one who pays special attention to its details and considers advertising as a means of keeping up business activity, particularly in dull times? Individual considerations, based to some extent upon a firm's bank account, will have something to do with the situation, but as a practically general rule, it has been proven, too conclusively to permit of argument, that the firm which is doing a good business in times of ordinary activity cannot afford to neglect the assistance of advertising when trade conditions become disorganized as they have been by the present war. The value of a trade journal both to its readers and its advertisers is not a matter of any uncertainty. One who is engaged in retail trade in such a line as furniture, or boots and shoes, or any other commodity which permits of the use of a store window,

might just as well pull down his shutters in dull times as might a lumber manufacturer or wholesaler reduce or eliminate his advertising. The cases are on all fours with one another. If a man desires to increase his trade difficulties he needs only to stop letting his customers know about what he has to sell and he will soon find trade as bad as it can possibly be. On the other hand, truthful and well planned advertising will go a long way to-day, not only towards improving the trade of the individual firm, but also towards improving trade conditions in general.

As to the value of a trade journal from the reader's point of view, there is no room for doubt, especially in times like the present. Surely, when a journal is devoting its efforts entirely to spreading information regarding trade opportunities and business methods in connection with a particular line of trade, its value is as great, if not greater during times like the present than during ordinary business periods. In every sort of business weather, the trade journal is one of the most valuable factors in business, but especially at present, is it of importance to its readers. There are numerous firms which not only take the Canada Lumberman and read it carefully, but which make a point of searching it for information which can be used to advantage and making an index of such articles. We know of others, we regret to say, who pile up the copies of the journal in a stack and some day dispose of them to old paper purchasers without having read them to any extent. Among such firms as the latter we find those who are inclined to doubt the value of advertising. They are not so numerous as they were a few years ago. There will always be successful business men and men who are failures and we suppose those who take their trade journal for a time and do not read it, will always be with us. They have a hazy notion that a trade journal should be taken as a matter of business, but they have not that business initiative which enables them to dig out valuable information and turn it to advantage. On the other hand those who do appreciate the value of the trade journal are daily increasing in numbers and we feel reasonably certain that one definite result of the present unprecedented business conditions will be a far greater understanding of the value of trade journals, both to the reader and to the advertiser, than ever existed in the past. Signs are already pointing clearly to this result.

The Factors in a Salesman's Success

Personal acquaintance with many of the lumber salesmen in Canada and a few of those who visit Canada from the United States is one of the pleasant features connected with the editing of the Canada Lumberman and it has led us to a firm belief in the value of a high moral standard in the business of selling lumber. Those men who are recognized as the leading lumber salesmen to-day are invariably successful, not only because of their natural ability as salesmen, but also because of the fact that they recognize the right of the customer to fair treatment. The modern idea in connection with selling which is so precisely described by the word "service" is to a great extent nothing more nor less than the old time truth that honesty is the best policy; for "service," comes from strict adherence to honest methods throughout all business dealings. We recently dealt at some length with this subject in an editorial about the "square dealer" and the fact that he is now reaping the benefit of his ideals to a greater extent than ever before. In the present issue we have printed an article running along somewhat similar lines, though viewing the matter from a somewhat different angle, wherein the writer Mr. G. D. Crain, Jr., a well known contributor to some of the woodworking journals, tells how he would go after business and handle it, if he were a salesman. Mr. Crain's article has two outstanding ideas; first the value of personal knowledge about one's business and second the value of a reputation for square dealing. "No salesman," he says, "can know too much about his goods, and yet it seems to be true that the average salesman of lumber, equipped merely with a stock list and a few stereotyped descriptive phrases, knows the minimum about the merchandise he is trying to sell. Maybe this is one of the reasons why his chief argument is that his price is lower than that of anybody else. If he knew more about the lumber, he could forget price for a little while and talk quality."

Probably every lumber salesman has admited the truth of this to himself a good many times and has made attempts to put it into practice and yet some of them have met with obstacles either in the way of competition so fierce that they have not had the backbone to put their ideas into practice, or obstacles in the way of a policy on the part of the heads of their firms not to take them into their confidence sufficiently to enable them to follow out the line of conduct they think best. The human element is so strong in all business transactions and there are so many human elements to consider in the completion of a single contract, that the individuality of the salesman is liable to be eliminated between the others, and yet it should not be so. The successful salesman, the one who is confident of the wisdom of a line of business conduct such as we have outlined, and who has that force of character required to bring this fact to bear upon his business, will make his own individuality the principle factor.

The ideal relation between a salesman and his firm is one which recognizes the fact that the salesman, at the time he is dealing with a customer, is the firm—nothing more nor less—and that he ought not only to know all that is necessary for the securing of a contract, but as much more as the firm can give him in the way of information about its stocks and methods of doing business. If the firm cannot trust all this information to its salesmen there is something wrong, either with the salesmen or with the firm, and if one of them does not suffer as a result, the customer is sure to suffer before very long.

When it comes down to an analysis of details, the salesman should be, if anyone, the best posted man in regard to the stocks which his firm has for sale. It is more important that he should be armed with everything necessary for disposing of these stocks at a profit, than that any other member of the firm should be so equipped. The organization of a selling firm, whether manufacturers or wholesalers, should keep this idea to the front all the time. The salesman should know all there is to know about the stocks and as much as he can legitimately discover about the requirements of customers. Then if he is backed up with efficient service in the carrying out of contracts the results of his work will depend solely upon his own ability as a salesman. If he is naturally a good salesman the firm will reap the greatest possible benefit. There is no other road to permanent success in the selling of lumber than those outlined above, and the truth of this statement is recognied by successful firms all over the country. We would suggest, as a means of stimulating those who are looking for assistance in this connection, that they should read carefully the article by Mr. Crain which appears elsewhere in this issue.

To Improve Business Avoid Price Cutting

One of the things which it is hard for the average man to understand, especially the man who conducts his business on a basis which takes into consideration the necessity for a profit upon all sales, is the manner in which so many people continue to offer "bargains," and so many other people continue to buy them. No amount of experience apparently will permanently reduce the percentage of people who have a natural leaning towards bargains, and no amount of business failure will apparently reduce the percentage of people who imagine that they can lift themselves by their boot straps—or, in other words, that they can sell goods at a loss and, through some peculiar intervention of providence, come out ahead of the game. Unquestionably the idea of making a profit out of the sale of a bargain is based upon

a false assumption. Its danger lies in the fact that, like many another form of stimulant, whether for business or for personal use, it contains within itself, elements which frequently produce a disastrous habit. The selling of something for less than it actually costs, or for a price which does not actually include a reasonable profit is a good enough practice by way of advertising one's business, if it can be confined within sane limits. The danger is that when a man has purchased stock at a bargain he wants more of the same. The buyer and the seller are likely to form a bargain habit before they are aware of it.

Now there is no line of business in the world in which the principles of sound merchandising can be neglected continuously without producing failure. In the selling of lumber, no less than in the selling of farm products, or any other merchandise, there must be a profit for the seller. And not only must there be a profit over a long period, but there should be a profit on every transaction. If a man who is selling lumber goes out among the trade and offers his stock at prices below what they have cost him, he is, as a rule, either pressed for money, or is carrying too much stock. He may however, be seeking to make a name for himself, with the idea of working up a good trade connection. Under any of these circumstances he is probably following out a mistaken policy. The urgency of the case may, of course, regulate whether he shall sell at a loss in case he is pressed for money. There may be cases where this is necessary and wise. What we wish to bring out however, is the mistake made by the man who sells "bargains" in lumber with a view to getting a larger trade connection. On the face of it, one might expect this to be a good scheme. But it is a scheme which has been worked out long years ago. It results in a man making for himself a reputation which is far from valuable. When a merchant, or a consumer, is offered lumber at a price lower than what he knows to be the actual market value, his first question is likely to be "what is the matter with it?" He suspects that it is poor stock, or that there will be delay in delivery. He does not form a high opinion of the man who is offering it, no matter how good a reputation the man may have made for himself before hand. The buying public are so well acquainted with the "bargain" argument that, as a general rule, they buy a bargain only under such conditions as render its advertising, or business-making value, to the seller, less than nothing.

The other side of the situation is worth looking into closely. The man who asks a little more for his stock than other men are asking, is likely to give his prospective customer an idea that the stock is worth what he is asking. Good stock sold at a good price always creates a good impression, upon the buyer. It does not take a shrewd business man long to learn that he is getting better value in a high priced article than in a low priced one of poorer quality.

In the lumber trade during the past few years, there has been a greater amount of price cutting than there should have been. Competition has been exceptionally keen, as compared with former years. Over-production and a rapidly falling demand have produced these results and now, with the disorganizing influences of the war upon us, there is danger that the practice of price cutting may go even further than it has ever gone in the past. The actual conditions call for a much different course of action. Reduced production, minute study of market conditions, and a determination to conduct business only upon the soundest possible principles, are of great importance to-day. There is a remarkable amount of business still to be had in spite of the prevailing uncertainty, and if there is one thing that will help the lumber trade more than anything else it is a determination on the part of these who are manufacturing and selling lumber to discourage price cutting and to insist on getting cost and a profit out of their stocks. The views of many well informed lumbermen to-day encourage a belief that it will take only a short time, if such business methods become general, to bring about a really satisfactory state of affairs in the lumber world.

Foreign Trade in Lumber During July

Statistics of imports and exports of forest products by Canada for July and for four months ending with July have been issued by the Department of Trade and Commerce.

Imports of planks and boards free of duty into Canada during July, 1914, from the United States amounted in value to $376,641. For the four months ending July, 1914, the value was $1,381,818. Imports of timber from the United States during the corresponding periods were valued as follows: July, $81,969; four months ending July, $287,588. The imports of pitch pine free of duty from the United States were valued as follows: July, $186,352; four months ending July, $904,661.

Exports of pine deals to Great Britain from Canada during July, 1914, and during the four months ending July were valued as follows: July, $171,635; four months ending July, $409,362. Exports of spruce deals were valued as follows: July, to Great Britain, $818,088, to United States, $112,011; four months ending July, to Great Britain, $1,618,103, to United States, $324,346. Exports of deal ends were valued as follows: July, to Great Britain, $82,666, to United States, $5,065; four months ending July, to Great Britain, $119,900, to United States, $6,791. Exports of laths to the United States were valued as follows: July, $205,798; four months ending July, $576,015.

Exports of planks and boards were valued as follows: July, to Great Britain, $201,582, to United States, $1,733,274, to Argentina, $2,686, to Cuba, $16,059, to other countries, $73,980, total, $2,027,581; for the four months ending July, to Great Britain, $548,299, to United States, $5,571,203, to Australia, $30,118, to Argentina, $113,686, to Cuba, $99,046, to other countries, $194,723, total $6,557,075.

Exports of scantling were valued as follows: July, to the United States, $130,749, to Great Britain, $77,863; four months ending July, to the United States, $362,961, to Great Britain, $133,522.

Canada's exports of wood blocks for pulp to the United States during July, were valued at $845,614, and during the four months ending July, the value was $2,432,495. Exports of chemical pulp to the United States were valued as follows: July, $350,168; four months ending July, $1,320,417. Exports of mechanical wood pulp to the United States were valued as follows: July, $312,918; four months ending July, $798,034. To Great Britain, the exports of mechanical wood pulp were valued as follows: July, $291,950; four months ending July, $397,810.

Statistics which have just been published by the Government at Ottawa state that during the month of August, which was the first month of the European war, Canada's total trade reached an aggregate of $100,874,000, compared with $98,832,000 for the corresponding month of 1913. There has been a falling off in the value of imports, but a healthy expansion is shown in the value of exports. During August, Canada exported manufactured articles to the value of $5,049,000, as against $4,911,000 during August, 1913. For the five months ending August, exports of manufactured articles were valued at $26,728,000, compared with $20,963,000.

During the twelve months ending July, imports of merchandise showed a decline as compared with the twelve months ending July, 1913, to the extent of over $100,000,000, which wiped out the increase made during the previous year, and brought the total down to about $10,500,000, lower than the total for 1912. Exports however, continued to grow during the twelve months ending July, 1914, showing an increase of almost $66,000,000, as compared with an increase of $47,000,000 in 1913 and $46,000,000 in 1912 over the preceding year in each case. An interesting portion of the statement shows that Canada's imports from Germany during the twelve months ending July 31st amount in value to $13,557,621, while our exports to Germany were valued at $4,541,153. The total summary ending with July 31st is as follows:—

Imports—Dutiable goods, $366,858,417; free goods, $196,320,267; total merchandise, $563,178,684; coin and bullion, $14,757,635; total imports, $575,936,319; duty collected, $97,094,410.

Exports—Canadian produce, $431,974,001; foreign produce, $29,841,099; total merchandise, $461,815,100; coin and bullion, $21,614,085; total exports, $483,429,185.

The Reader's Viewpoint on Trade Topics

How Payment of Men is Worked Out in Different Camps—Probable Effect of the War—Preventing Slab Waste

A Practical System of Paying Loggers' Wages

Editor Canada Lumberman: Snow Road, Ont., Sept. 28.

In a recent issue of the Canada Lumberman we noticed an enquiry from one of your readers in regard to the advisability of paying men in the woods only for such days as they are actually at work, giving them only their board upon wet days. For a number of years we have made it a practice to pay our men, either in the bush or at the mills a given wage per day of ten hours, based on their furnishing their own board. If they wish, they can board at our boarding camps, at a given price per meal, actual meals only counted. In this way the men get no free meals when they are not working, either on Sundays or at any other time. If they want to lay off when it rains, or for any other reason, there are no free meals in our system to make it more comfortable for them to be idle, without good reason. We do not hire men by the month on any of our work, not even our foremen. Every man gets day wages for the days or parts of days during which he works only, and pays for the meals he takes at our boarding houses. From an experience since 1885 with this system, we find that it works satisfactorily, and none of our men look for anything different. We pay good day wages for this locality and our men are satisfied.

No doubt if we had paid our men by the month in the past and given them free board and good wages for rainy days, it would be a more difficult thing to change afterwards. The right way in anything is to begin right. For instance, if we proposed to hire men at $35 per month we would pay them say $1.35 per day; if $52 per month, $2 per day; if $39 per month, $1.50 per day and so on. We thus save the cost of their board on Sundays and rainy days, and on any days when they do not feel able or do not wish to work. If they want to lay off for the sake of not working, they are penalized to the extent of their paying for their own board, instead of our putting a premium of the price of their board on their thriftlessness. We have no trouble whatever with this system.

It is our present intention to take out about our usual amount of timber during the coming winter, namely, the amount required to keep our mills running for the full season only. We now have sufficient logs to keep running until our next cut of logs commences to arrive at the mills next spring.

We are inclined to think that the effect of the war, and the consequent feeling of uncertainty, as well as the tightness of money, will tend to decrease the output of logs to a considerable extent during the coming winter. As we expressed ourselves in the Canada Lumberman immediately after the war broke out, we believe in doing all we can to help steady conditions, and to the best of our ability, we propose to give men employment when they need it most. If all employers in Canada would now give employment to labor, as far as possible, it would minimize the present bad effect of the war, and would be rewarded later by the better prices and greater demand that are likely to follow immediately upon the close of the war.

If time permitted, we could refer to the results of the American Civil war, which were first panic, then boom prices and inflation for some years, then a general slowing down, a drop in prices, hard times, then panic once more when at last the final day of settlement came, which in the United States was from 1872 to 1880. We predict that this war will be followed by similar conditions.—The Chandler-Jones Lumber Company.

Pay Men for Working Days Only

Editor Canada Lumberman: October 4.

It has been our custom to pay teamsters and certain men in the woods full time regardless of wet days, but the ordinary bushman is not paid on wet days unless he his hired by the month and with the understanding that he is to receive pay regardless of weather conditions. We do not consider that a lumberman can afford to pay wages when men are laid up through weather conditions. He is doing well if he feeds them during that period.

As to the extent to which we shall log this winter, we have not fully decided as yet. The outlook will govern. The probabilities are that we shall log to a limited extent throughout the winter.—Ontario Manufacturer.

No Pay for Wet Days at this Camp

Editor Canada Lumberman: September 25.

We note an enquiry in a recent issue of your journal regarding the method of paying men in lumber camps. In our camps it has never been customary to pay men working in the woods for wet days, except such men as are taking care of horses or working around the camp, such as blacksmiths, cooks, cookees, etc. Any other men who are laid up in wet weather get their board only. We think this is nothing but fair to all concerned. We, of course, have a rule that if a man wants to work in the rain, he may do so.—Manufacturer.

Payment of Wages for Time Worked Only

Editor Canada Lumberman: October 7.

A letter appeared in the Canada Lumberman recently from a lumber manufacturer who wanted to know what the usual custom was in regard to the payment of men in the woods for rainy days. We do not allow pay for time not worked, but if the time is lost on account of bad weather, we do not make any charge for board.

Our experience was that the men took advantage of payment for wet weather, staying in camp on days when they could have worked without much inconvenience. We have instances of camps not over three or four miles apart, under similar weather conditions, where one camp would be working and the other not, according to the foreman's opinion regarding the weather.

In all lines of work such as railroad contracting, building trades, or similar work, the workman is only paid for the time he works and this is adjusted in wages, which is more satisfactory than having disputes over whether the weather is fit to work in or not.—Mill Manager.

No Work, No Pay at this Company's Camps

Editor Canada Lumberman: October 6.

One of your readers recently asked other lumbermen to report regarding their methods of paying men employed in the bush, referring particularly to the question of payment for wet days or other days when they do not work. It is many years since I have known of a lumber firm paying men for wet days, except perhaps a teamster who has his horses to look after all the time. I know we have not done so, and I do not know of any firm who have done so for many years.

We expect to do about the same amount of logging this winter as we have been doing for the past few years. We would not be doing this if it were not for the blown-down timber in our territory.—North Shore Manufacturer.

Converting Slabs Into Money

Editor Canada Lumberman: North Bangor, N.Y., Oct. 7.

We hear so much about the elimination of waste in connection with lumbering operations that I would like to give your readers a practical illutsration of waste elimination at a sawmill. A short time ago I visited a mill owned by the Santa Clara Lumber Company at Tupper Lake, N.Y. This mill cuts out about 125,000 feet of lumber per day. I only intend to refer to the way they have of utilizing slabs. The slabs are cut into four-foot lengths and are carried along on a conveyor to the rossers. They are then placed on a horizontal table and the bark is removed by a rotary barking machine. After this operation they are placed in a hog or chipper, and reduced to chips. These are then run out on a conveyor and loaded into a car. The chips are sold to a sulphite mill and command $20 per ton. The price of sulphite pulp at the present time is comparatively high.

This mill also rosses circular wood in connection with the sawing of lumber. The burner uses the bark and refuse from the rossers —nothing else. There is a good market for sulphite chips taken from slabs in the way I have mentioned. This company's output is chiefly spruce.—Geo. B. Oberton.

An important lumber manufacturing company in northwestern Ontario reports that its logging operations during the coming winter will be very small, partly because of the war and partly because of general trade conditions. The same company also report that the output of logs in their vicinity, according to their judgment, will not be more than twenty per cent. of normal.

The Ontario's Workmen's Compensation Act, will come into operation on January 1st next. Several meetings of the board have been held and over eighteen thousand manufacturing firms in Ontario will come under the jurisdiction of the Act. Circulars have been sent to all these firms requiring information as to the number of men employed, amount of pay roll, etc., and as soon as this data is at hand the rate for each particular hazard will be struck and the assessments ordered.

The Telephone a Great Aid in the Bush

Logging Operations and Fire Ranging Facilitated—The Riordon Pulp and Paper Company's Installation—Its Construction and Use

By Charles E. Read, Jr.

The Riordon Pulp & Paper Company first considered the idea of building telephones throughout their limits to assist in the work of fire protection, in the spring of the year 1912. We had heard that the River Ouelle Pulp & Paper Company, of St. Pacome, P.Q., had built and were operating bush telephones with great success and we wrote them for information. They very kindly volunteered their assistance and offered to show a representative of the Riordon company around their lines. Advantage was at once taken of this offer and the company sent their forester to visit St. Pacome, where he secured a great deal of valuable data which governed the initial construction that summer.

When we built our first line we thought only of fire protection and not at all of assisting in our bush operations. In consequence, the first line extended up the slope of Trembling Mountain from the last "Bell" telephone at the foot to our lookout on the peak. This line through a connection with the "Bell" gave us a direct line between our St. Jovite office (head office for the wood supply department) and our lookout man stationed on this commanding point, over 3,000 feet above sea level and 2,000 feet above the surrounding country.

This line was the most difficult of all to build, for much of the distance was over bare rock from which all vegetation had been swept by successive fires. As there were no trees on this fire-swept rock, and as it was impossible in many places to sink post holes, it was necessary to put in rock bolts, which extended well above the surface of the stone, to hold the insulators through which the wire was run. The method employed was the single wire or ground return and it was connected with the "Bell" line through a repeating coil.

Bush Operations Facilitated

This line worked successfully and before the next line was started, the possibilities of the telephone as an assistance in bush operations were recognized. In consequence the intended course of this second line was slightly changed so as to make it of more use in the conduct of our shanties and drives.

Our new line was built on the two-wire or metallic system and was hung from trees, poles being used only where trees were not available. We were also able to connect this line with the local "Bell" service. When these lines were completed and in constant operation, they were found to be so useful to both the work of fire protection and of wood supply than an extensive programme of building was prepared and immediately gone ahead with.

These new plans were designed to be useful, so far as possible, for our woods operations, but in no case was the primary object of fire protection overlooked. The first of these new lines followed up the main Rouge River, from the end of the "Bell" service, keeping mostly to the portage road, as this made it much easier to patrol the line in case of breakdowns. Spurs were run into all the company camps, and where a big jobber was on or near the line, a box was put into his shanty free of charge. The line was run on above our last camp to the main storage dams at the head of the river. This last spring, when water was so scarce and driving so difficult, we were saved many hours of water-flow from these storages by the use of the telephone. Formerly it had taken from eight to sixteen hours for a man to walk from the head of the drive to the dams with orders for the opening and closing. With the telephone this was done by the foreman himself in fewer minutes.

As the gangs come down the river they bring their phones with them, connecting up with the line wherever they camp. In this way, orders can always be given to a gang on the shortest possible time and reports received of their progress at all times.

We also built lines up our two chief branch rivers and last winter each company camp was a long distance station. There was one exception to this as one of our lines only went to the St. Jovite office and did not connect with the "Bell."

The Cost of Construction

We have found the cost of building a two-wire or metallic line to average about $90 per mile where we have been able to support the line from trees. If, however, it is along a road in open country and it is necessary to erect poles, the cost is materially increased. For this style of line we use a No. 12 b.w.g. galvanized iron wire which comes in half mile coils and weighs 165 pounds to the mile. Oak side brackets and glass insulators to the number of thirty or forty per mile are used for support.

A much less expensive line, both in first cost and maintenance, is the one-wire or ground return system. This can be built for about $55 per mile and for it a No. 9 b.w.g. wire, in half mile rolls, which weighs 305 pounds per mile, is used. To support this line we use a No. 18 7-strand soft seizing wire which holds a split ring insulator (Thomas No. 22) through which the wire passes. As this insulator only supports the wire and does not prevent a longitudinal slip it is necessary to use an oak bracket and glass insulator several times in each line. The wire is actually held by the seizing strand to this glass insulator.

After experiment with a number of telephone sets we decided upon the Northern Electric No. 1317P set and with this we used the No. 60-B protector manufactured by the same company. In one case where several hundred feet of wire was destroyed by heavy electric currents from lightning striking the line, this protector arrested the current before it could damage our telephone set. I do not think that anything more need be said as to the advantages of this protector. The cost of a telephone set with the material for its installation is about fifteen or sixteen dollars.

Our costs of construction have divided themselves up about as follows:—

	Per cent.
Materials	22
Labor	45
Provisions	23
Teaming	10

Fire Prevention Saves Construction Cost

The whole amount expended on our lines might easily be saved, and I feel sure it has been, by getting men to one fire in time to place it under control. As a matter of fact this last summer, when fires and fire danger were at their height, the telephones proved their value over and over again by enabling us to send assistance to a ranger in the shortest possible time. The rangers all carry small portable sets and they are able to connect this to the line at any point. Except in the back parts of the limit, it is seldom that a ranger is over five miles in a direct line from the wire.

The assistance rendered by the telephone in the operation of a large number of camps and drives by one central head is really remarkable. All parts of the work are constantly in touch with the manager and with each other. In place of a man walking or driving miles with the manager's instructions for a foreman, the manager or agent can call the foreman to the wire and then, after hearing the facts of the case from this man, can issue his orders direct.

The writer feels sure that, if any firms are desirous of more detailed information in regard to costs, methods, etc., the Riordon Company will be only too glad to put at their disposal any information which their woods department has collected.

Match Wood Wanted in South Africa

The Canadian Trade Commissioner at Cape Town, South Africa, in a recent report says:—"In Weekly Report No. 517, attention was brought to the demand here for the Aspen Log, and although some correspondence has resulted, so far nothing practical has come about. The present conditions in Europe are such that the regular supply will probably not come forward to South Africa. This therefore would be an opportune time to secure a contract with the match manufacturers here at even better prices than were quoted last year, namely, 18 cents a cubic foot, f.o.b. Montreal or St. John. The amount required is not less than 6,000 tons of 40 cubic feet. The logs must not be less than 9 inches diameter up to 20 inches and must be as clear of knots as possible. The wood should arrive here in a moist condition so the bark must remain on the logs and the ends of the logs painted. If any of our lumber dealers are prepared to supply, it is requested that they cable quotations at once. If conditions will permit of code cables, the address 'Nautimus,' Cope Town, should be used, otherwise the cables should be addressed to this office."

The Cut of Lumber in the Southern States

Notwithstanding the general tendency to a diminution in the cut of lumber in the United States, the high mark having been reached in 1909, when the output was 44,585,000,000 feet, the South continues to increase its proportion of the total. Last year it cut 21,532,683,000 feet, or 56.1 per cent. of the total cut of 38,387,009,000 feet in the United States. There was a decrease in the 1913 cut from that of 1912 of 74,836,000 feet in the South and of 696,669,000 feet in the rest of the country.

Ontario's New Prime Minister

Hon. W. H. Hearst.

The appointment of Hon. Wm. Howard Hearst, Minister of Lands, Forests and Mines for the province of Ontario as the new premier to succeed the late Sir James Whitney, is an event of much importance to the lumbering industry in Ontario. Mr. Hearst is pre-eminently a representative of Northern Ontario, and as such, has given great attention to the numerous problems developing out of the management of the forest resources of the province. He will continue at the head of the Department of Lands, Forests and Mines for a time at least, in addition to performing his new duties as premier.

Hon. Mr. Hearst is a man of pioneer stock who was brought up on a farm in the County of Bruce, and has inherited an appreciation of the difficulties of pioneer life. He was born in the township of Arran, Bruce County, on February 15th, 1864, and was educated at the Collegiate Institute, Collingwood, and the University of Toronto. He is also an honor graduate in law of Osgoode Hall. He was admitted to the bar in 1888 and is now the senior member of the law firm of Hearst, Rowland and Brown. He has practised his profession successfully at Sault Ste. Marie, Ont., for 25 years.

Upon the formation of the Whitney Government, Mr. Hearst's ability was recognized by his appointment as government agent in connection with the guarantee loan to the Lake Superior Corporation. Being a lawyer, and having had the advantage of a large practice in a lumbering and mining constituency, he is equipped with an intimate knowledge of the affairs upon which a minister of Lands, Forests and Mines is frequently called to decide.

Securing industries for the north country, so as to provide employment and a market for whatever the settler may raise, as well as the timber he has to sell, has been one of the new premier's important duties, which he has carried out with encouraging success. The Hon. Mr. Hearst is in the prime of life, being under 50 years of age and is able to devote to his new position and his former one all the enthusiasm and vigor of a young man whose heart is in his work.

In his first message to the people of Ontario, recently published, the new premier declared that it will be the aim, object and determination of the new government to carry out the traditions of the government which it has succeeded. A province blessed with limitless resources of field and forest, of mine and river, of lake and waterfall, and people of such a splendid type of manhood and womanhood as ours, constantly requires new measures and new laws for the development of its resources, and the comfort and happiness of its people. The new government would strive to meet these requirements to the full and would not hesitate to break new ground when the needs of the province required it. The work of developing the great heritage of the province of Northern Ontario would proceed with added zeal and energy.

Unable To Change Her Registry

The steamship Robert Dollar has sailed from Rio Janeiro for New York under her old British registry. The vessel, in command of Capt. Morton, sailed from Vancouver, B.C., June 25, with 4,485,666 feet of lumber, to be delivered either at New London, Conn. or at Montreal, for reshipment to Toronto. At Rio Janeiro her owners sought to avail themselves of the new shipping registration of the United States. There was difficulty regarding the transfer and the British government objected to the proceeding. Word was subsequently received by the state department at Washington that the vessel had sailed from Rio Janeiro under the British flag, her owners abandoning their efforts to transfer the vessel to American registry.

B.C. Log Production Increasing

Considerable increase is reported from the British Columbia log-scaling department for the month of September, the figures being 66,500,906 ft., as compared with 66,300,421 ft. for the month of August of this year, and 61,926,946 ft. for September of last year. Mr. G. D. McKay, government timber inspector, says that observations made during his recent trip along the north coast led him to predict a long period of activity for the industry.

Personal News of Interest to the Trade

Thomas E. Fee and Company, wholesale lumber, have opened an office at 411 Drummond Building, Montreal.

J. G. Robson, manager of the Timberland Lumber Company, New Westminster, intends to make an extended trip through eastern cities in the near future. Mr. Robson is Vicegerent Snark of Hoo-Hoo in British Columbia.

Hon. L. J. Allard, Minister of Lands and Forests, and Hon. J. E. Caron, Minister of Agriculture, in the Quebec Government, have just returned from a tour of the Abittibi region, Mr. G. C. Piche, of the Forestry Service, accompanied the Ministers.

Mr. J. B. White, manager of the woods department and sawmills of the Riordon Pulp and Paper Company, has been appointed a member of the Forestry Committee of the American National Wholesale Lumber Dealers' Association for the ensuing year. The other Canadian member appointed to this committee is Mr. John S. Gillies, of the Gillies Lumber Company, of Braeside, Ont.

Among the largest contributors to the fund being raised for the relief of distress in Belgium are Mr. H. Biermans, of the Belgo-Canadian Pulp and Paper Company, Shawinigan Falls, P.Q., the forestry service and also the employees and workmen of the same company. The Laurentide Pulp and Paper Company gave $1,000, and Wm. Rutherford & Sons Company and their employees $1,000, to the Canadian National Patriotic Fund.

C. M. Carrier, a well known United States hardwood manufacturer, who has important interests in the lumber manufacturing business in Eastern Canada, recently made a visit to the eastern provinces. He predicts that lumber business during the coming winter will be quiet in general, but says that a number of lumber companies in Quebec and the east are increasing their holdings extensively and preparing to get out a full cut of logs.

News From Toronto Forest School

Some 20 new students have been registered in the first year of the Faculty of Forestry, at the University of Toronto, making a total of around 50 students. The two upper year classes are, for the first four weeks, in camp No. 23 of Graves, Bigwood & Company, north of Nairn, Ont., for practice work, under the direction of Professors Millar and Howe. During this time timber estimating, tree measurements, studies of rate of growth, forest description and forest survey, marking out for thinnings and for natural reproduction, planting, the making of working plans, and other practical woods work will occupy the students.

Mr. W. N. Millar replaces Mr. A. H. D. Ross upon the Faculty of Forestry. He has been for two years in the Dominion Forestry Branch as a District Inspector of the forest reserves in Alberta, after considerable experience in the U. S. Forest Service. His subjects are the practical ones of most interest to lumbermen, namely, measuring and estimating timber, logging methods, mill practice, and all forest engineering matters, such as road, dam, and trail building and organizing forest fire service.

Changes in the Arkansas Soft Pine Family

Two important changes of position among the members of the Arkansas soft pine family have been announced. One of the members concerned is Mr. C. E. Tredick, who began his lumber life with the Edgar Lumber Company, of Wesson, Ark. His connection with that company covered a period of nine years, to the satisfaction of all concerned. During the latter portion of this time he served as sales agent for the company. The other member concerned is Mr. S. A. Williams, formerly one of the members of the sales force of the Fordyce Lumber Company, Fordyce, Ark., a position which he held for several years. Leaving that company about a year ago he became sales manager of the Arkansas Lumber Company of Warren, Ark.

All three of the companies mentioned are manufacturers and distributors of Arkansas soft pine, and Mr. Tredick and Mr. Williams have been active forces in the sale of the product and the spreading of knowledge of its value. The capacity of the Edgar Lumber Company is 100,000 feet per day and that of the Arkansas Lumber Company, 165,000 per day.

The Arkansas Lumber Company recently required an assistant or resident manager and Mr. Tredick was naturally selected as a man who possessed the desired requirements. He assumed the duties of his new office, including the supervision of sales, early in September.

Mr. S. A. Williams took over the sales work for the Edgar Lumber Company. Both Messrs. Tredick and Williams have established records of faithful service for the companies with which they have been identified. In future, buyers of "Wesson" Arkansas soft pine will correspond with Mr. Williams, and buyers of "Warren" Arkansas soft pine will correspond with Mr. Tredick.

Japan Offers Market for Canadian Pulp

The Canadian Trade Commissioner at Yokohama, Japan, in a recent report says:—"Canadian pulp manufacturers have now an opportunity to do a profitable business with Japan. In Weekly Report No. 537 it will be seen that Germany and Sweden have nearly the whole of the export trade in pulp to Japan amounting to $1,850,000 out of a total trade of $2,100,000. As a result of the war, exports from Germany have entirely ceased, and those from Sweden are bound to suffffer. In consequence, the price in Japan has gone up by 20 per cent. for pulp of a medium quality and will probably go higher. No doubt a large part of this increase will be eaten up in increased freight charges and war risks, but it is a good opportunity for Canadian pulp manufacturers to get a foothold in this market. Pulp of a medium quality was quoted before the war at 8 sen (4 cents) per pound. The duty is $1.67 a ton. The largest importers are the Mitsui Bussan Kaisha, 1 Suruga-cho, Nihonbashi-ku Tokyo.

"The manager of one of the largest American importing houses in Japan states that there is such a shortage of sulphite pulp in this country owing to shipments from Scandinavia via Hamburg having entirely ceased, owing to the war, that price is hardly a factor, and the only question is one of supply. This firm sold last week a large quantity of very poor American pulp ('almost black,' he said) at 50 per cent. above normal prices, and can dispose of any quantity of Canadian pulp offering, at high prices, throughout the war. Nearly the whole of the imports of pulp into Japan have been Scandinavian in origin, shipped in German bottoms via Hamburg, so that the normal source of supply is entirely cut off.

Opportunity for Canadian Mills

"Possibly there is also a shortage of Scandinavian pulp in the United States, with high prices, so that Canadian producers may not care to consider such a distant market as Japan, but it should be noted that any quantity the Canadian mills can produce, can be disposed of here at high prices.

"To save time manufacturers should communicate with the Vancouver office of Mitsui & Company, a powerful firm which handles 22 per cent. of the whole foreign trade of Japan, or with the San Francisco office of the American Trading Company, a firm of good standing with branches throughout the world. Both of these branch offices are being advised by their Japanese offices of probable offerings of Canadian pulp. The demand is for 'Easy-bleaching Sulphite,' and the American Trading Company are offering about $40 per long ton f.o.b. port of shipment. As almost any price asked for is being obtained by the importers, higher prices than this can doubtless be obtained if demanded.

"Shipments can be made via Vancouver, as two ships out of the five trans-Pacific C. P. R. line are still running, the other three having been chartered by the British Government. Or shipments can be made via Seattle or Tacoma, on American and Japanese lines."

Lumber and Pulp Opportunities in Great Britain

The weekly report of the Department of Trade and Commerce, dealing with the timber trade situation in Great Britain developing out of the war says:—"Although the lumber trade should be affected in due course, it would appear that such inquiries as are being made are largely in the direction of precaution. The outbreak of hostilities found the United Kingdom carrying large stocks of timber of most kinds, and also of turnery and woodenware, and as long as the North Sea is kept open, considerable supplies will be available. It is pointed out that there should be an exceptional opportunity for birch, oak, and other ply woods, and several inquiries have been received for broom and tool handles.

"In view of the public statements made as to threatened shortage of newspaper, opportunity was taken to consult probably the largest importer of wood pulp in this country. This authority considers that Canada may be encouraged to look for a good demand for wood pulp generally, although the chief requirement of this country is for sulphite in preference to mechanical.

"In spite of the certainty that Canadian manufacturers are thoroughly posted on all aspects of the trade, it may not be out of place to repeat that leading authorities have long urged the advantage which must result from Canada devoting greater attention to the production of sulphite pulp, and the present turn of events emphasizes this desirability. Sulphite pulp is almost always in demand at profitable prices, whereas there are constant fluctuations in the mechanical variety. It will be noticed from the official trade figures that in 1913 the total importation of chemical pulp of all kinds into the United Kingdom amounted to 411,803 tons, the bulk of which was supplied by Sweden (254,097 tons), other considerable contributors being Russia, 41,000 tons, Norway about 60,000 tons, and Germany 40,000; Canada's share being practically nil. There is already a shortage of sulphite in the United States, and if Sweden should become involved in the area of war, there would be danger of a general famine of sulphite.

"As regards mechanical, Norway is the chief source of supply, contributing a quantity of 311,951 tons out of a total import in 1913 of 565,954 tons. While Sweden is also an important supplier (about 128,000 tons), Canada shipped as much as 69,000 tons and Newfoundland 50,659 tons. The higher freights and unavoidable difficulties of transportation through the North Sea during the period of hostilities should make conditions for Canadian pulp easier."

Quebec's Lumber Trade with the United States

The United States Daily Consular and Trade Reports in a recent issue contain the following reference to the lumber trade of the province of Quebec with the United States during the year 1913:—Lumber exports from Quebec Province to the United States last year were but slightly in excess of those in 1912, which was unquestionably due to the greater home demand for lumber for the extensive building operations and construction work and to the shrinkage of lumber production. The year 1913 has been called the lumber manufacturers' year in Quebec, so far as profits are concerned. Strong advances in prices occurred during the fall and winter of 1912-13, and as a result manufacturers took advantage of this when selling their 1913 cut in the early part of that period. On account of the light stocks on hand and the good demand, business was profitable during the first five or six months, especially in spruce, hemlock, and the lower grades of white pine, although good pine and square timber declined in value. About midsummer there was a falling off in sales, tight money being an important factor in that connection. Dullness characterized the remainder of the year. Hemlock and spruce dealers also began to feel the keen competition of yellow pine, which was dumped in large quantities and at very low prices in Ontario, Quebec, and New Brunswick. In spite of this decline, however, quotations for spruce, hemlock, and the lower grades of white pine held up well, which was accounted for by the heavy shrinkage in the output of the lumber referred to in Quebec, Ontario, and the lower provinces. It is estimated that there was a decrease of 200,000,000 feet of spruce compared with the output of 1912. There was also less hemlock manufactured than in the preceding year.

During 1913 the Province of Quebec imported from the United States lumber and timber to the value of $777,757, as compared with $371,260 in the year 1912.

The U.S. Banking Situation

The criticism directed against Canadian banks for their attitude towards business since the outbreak of the war, is not unlike that which has been directed against the banks of the United States. Vigorous measures have been taken in that country by Mr. McAdoo, Secretary of the Treasury, to bring the banks to a realization of their duty. Being convinced that the banks were withholding legitimate credits and charging excessive rates of interest he telegraphed recently to the ten national banks in the four reserve cities in the South that their request for additional crop moving funds from the government would not be granted at this time, and made it clear that his action was taken in consequence of reports of excessive interest rates and restriction of credits. Mr. McAdoo emphatically criticized the withholding of money which was revealed in the reports of the comptroller of the currency, and stated definitely and emphatically that the policy was contrary to public interests, was indefensible from any point of view, and was not inspired by any necessity or any occasion whatever. As a remedy he stated he would begin issuing a daily list of banks which were hoarding money by maintaining excessive reserves, in order that the country might know how they were performing their public duties. What this means is too plain to require explanation. The secretary urged that such action on the part of the bankers not only hurt legitimate business, but tended to impair confidence and to injure business generally. He urged that if all the banks of the country would do their duty under present conditions in extending legitimate credits, at reasonable rates of interest, the most serious difficulties would most promptly disappear. This last statement is of much significance as it clearly shows the condition as expressed in the opinion of a man who is in an exceptional position to know what he is talking about.

An Unparalled Opportunity to Make Canada Prosperous

"Wake up, Canada!" is the title of a practical little book issued by the Board of Trade of the city of Toronto, which is being distributed very widely. The book is issued in the hope that every Canadian who reads it will agree that there exists today an unparalleled opportunity to make and keep Canada prosperous. A brief introduction precedes a list of articles imported into Canada during the fiscal year ending March 31st, 1914, and the list shows that they amounted in value to the following totals: From Germany $14,686.069, from Austria $1,787,473, from other countries $601,855,332. The introduction to the book is a forcible appeal to Canadians to purchase Canadian goods whenever possible.

The Value of Saw Mill Refuse as Fuel

Pulp and Paper Mills Within Reasonable Distance of Saw Mills Can Use Wood Waste Profitably—A Question of Oven Design

By G. B. Steffanson*

Many a saw mill owner regrets that he has to stand the cost of conveying wood refuse, which cannot by any means be disposed of for the raising of necessary power for the saw mill, to a place where it can conveniently be burnt or otherwise destroyed.

He, however seldom realizes that the refuse has a commercial value as fuel for steam raising, if his saw mill is located in a reasonable distance, from a place or places where power is used and cheap water power or a local natural resource of fuel is not available.

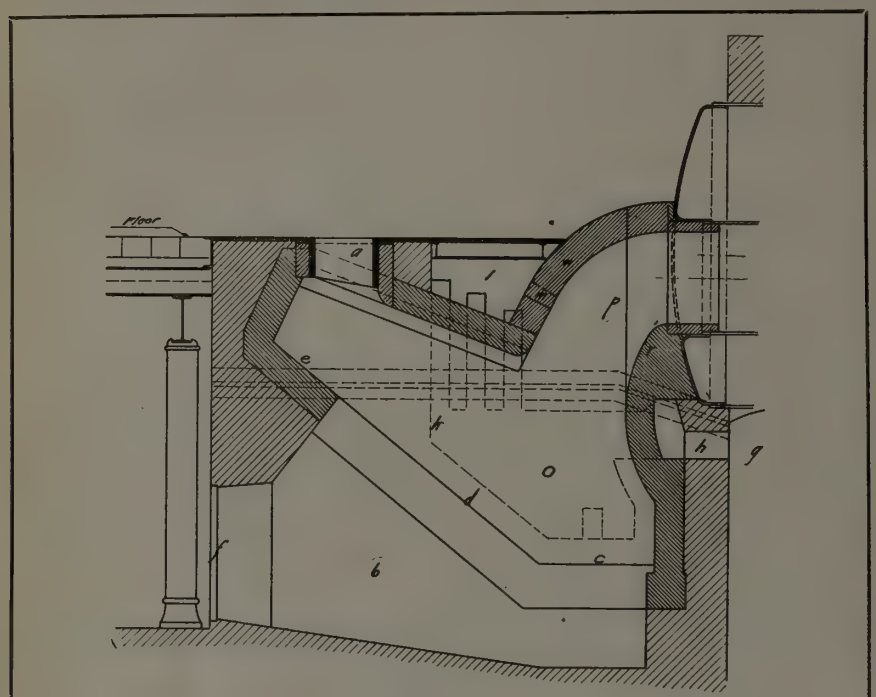

Fig. 1.

Hundreds of power plants throughout the Dominion use imported coal for fuel, though in the vicinity an abundance of wood waste is destroyed.

The average saw mill refuse has not a large value as fuel, if weight and bulk are taken into consideration, if rightly handled it can, however, be shipped both by water and by rail for a considerable distance to the advantage of the seller as well as of the consumer.

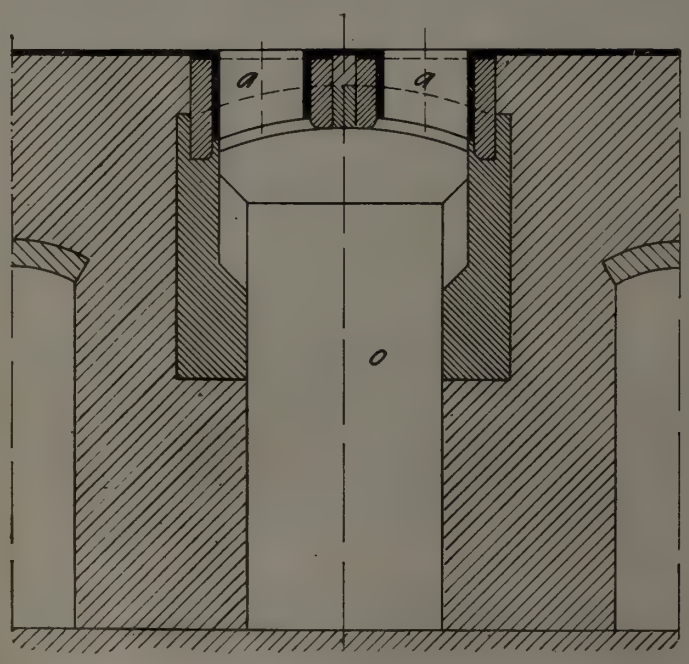

Fig. 2.

Here the Railway Commissioners as well as the railway companies could help the industry in general by granting low local rates, this would soon add to the tonnage, and even if not giving a direct income, would bring down the railroad's local tonnage cost, and thus give an indirect income to the railway companies. Suitable cars would, however, have to be provided.

The sawdust is usually more than sufficient for the raising of the power, necessary in the sawmill using ordinary Dutch ovens. By using more efficient ovens much more than the necessary power could be raised for sale or some of the sawdust could be sold to other steam raisers.

Pulp and paper mills are, as a rule, located near saw mills, as they both have the same source for the supply of their main raw material; still, if the two mills do not belong to the same concern, it usually so happens that the saw mill goes on destroying its wood refuse, and the pulp and paper mill buys imported and expensive coal for fuel.

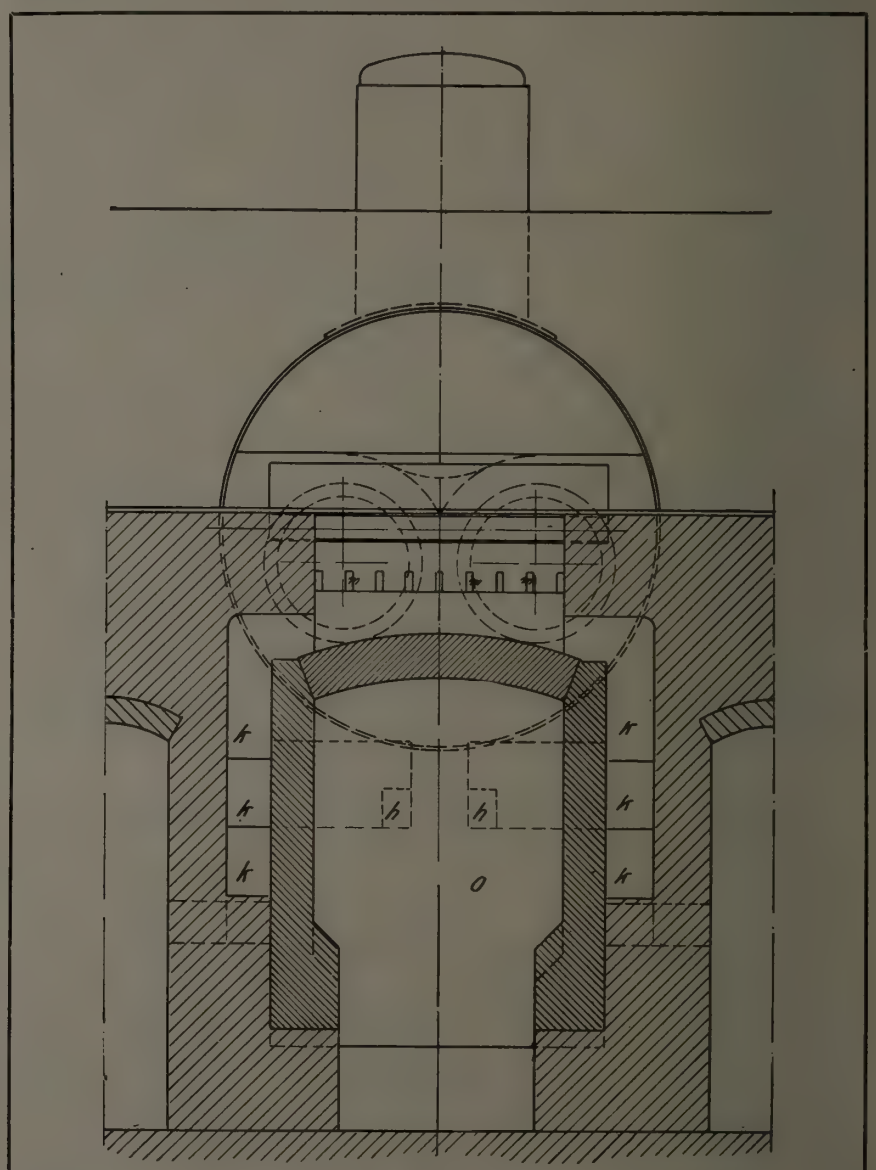

Fig. 3.

THE VALUE OF SAW MILL REFUSE AS A FUEL FOR STEAM RAISING IS NOT FULLY REALIZED AMONGST PULP AND PAPER MANUFACTURERS.

One of the main reasons for this is, that only in recent years, ovens have been designed, which in an economical way utilize even low grade saw mill refuse, without being too expensive in first cost and in upkeep.

Ovens have been designed along many different lines, gas generating, stoker arrangements for direct firing under the boiler, and so on, and more or less fancy designs of Dutch ovens have been tried.

The best oven as yet designed for the utilization of this kind of fuel is undoubtedly the Half-Gas Furnace.

This furnace or oven is not very cheap in first cost, and it takes

* Reproduced by courtesy of The Puly & Paper Magazine.

some experience even for a bricklayer, competent on fire brick work, to build it.

This is undoubtedly one of the main reasons why this kind of oven has not quickly found its way throughout the parts of the world where saw mill refuse is available.

Ovens of this kind will be burned out in two or three months if built by an incompetent brick layer, and of inferior material, whereas an oven built right and of the right kind of material and properly looked after, should stand for eighteen months to two years, going night and day.

Only high grade fine-grained fire brick, true in angle and with sharp corners should be used, and for the arches bricks of the right shape are most essential.

The bricks should before setting be ground well together, in order to get a tight fit. A thin mortar of equal parts of unburnt fire clay, and burnt crushed fire brick or quartz sand all well sifted, should be used. An even, thin layer of the mortar should be evenly spread over the joint surface of the brick, and this worked down in its place as close as possible to get the smallest possible joints. This is a very essential thing, as the temperature is very high, especially in the upper part of a half-gas oven and the heat eats out a wide joint much quicker than it burns good fire brick, thus exposing two sides of the brick to the fire.

Fig. 1 shows a longitudinal cut elevation of a half gas oven, attached to a Lancashire boiler of 1,000 sq. ft., heating surface (100 h.p.). Fig. 2 shows a cross-cut elevation at the feed holes, and Fig. 3 shows a cross-cut elevation in the middle of the oven. Mark the difference between the width of the fuel room and the width of the grates. (Figs. 2 and 3.)

The fuel is admitted through the two feed holes (a). These holes should be well covered over by fuel or by lids, in order not to admit an excess of air this way. The grates are built as ordinary coal grates or as step or extension grates, this latter especially where sawdust is burnt as well, and in order not to allow any of the fuel to escape to the ash pit unburnt.

The grates should be kept well covered with fuel in the lower part of the oven and to accomplish this the upper part should at all times be kept full of fuel. The horizontal ash grate (c) is especially liable to lay bare, if the fuel is not poked down from time to time. The inclination of the grates could be made larger, in order to have the fuel to fall down and cover this harizontal grate without any extra work, this, however, makes it more difficult to remove the ashes from this grate, where they mostly collect. This ash grate should preferably be of the swivel type and so arranged that it can be operated from outside the oven.

The prolongation (e) of the grates serves to receive the fuel and by this arrangement a considerable quantity of fuel not on fire, will prevent an excess of air from entering the furnace, even if the lid is off.

The ash pit door (f) is provided with small dampers regulated from the main floor, and large enough to admit sufficient air for a partial combustion, or rather for the forming of combustionable gases.

A canal (g) is provided for behind the furnace and under the front part of the boiler to accommodate blowout pipes. From this large canal two secondary air canals (h) one on each side of the furnace, lead to both the canals (k), from these to the room (l) above the furnace chamber and through the holes (m) in the arch (n). The air is heated when passing the canals (k) and in the room (l).

The combustible gases from the furnace (o) pass up through the canal (p) where they are thoroughly mixed with the hot secondary air coming through the holes (m). Complete combustion therefore takes place just before the gases enter the fire tubes, thus giving most of its initial heat to the front part of the fire tubes, not to the brick work outside, nor to the inner end of the fire tube, which latter means a considerable lowering of the capacity of the boiler.

When lining the furnace with fire brick, binders extending from this into the brick work behind, should be provided for at canals (k). This in order to prevent the fire brick lining from falling out when it is burnt thin. It may take only a few weeks to burn out half of the thickness of the lining, but the nearer the fire gets to the cooled outer side of the lining, the longer time it will take to burn the lining away, and a thin film of lining may resist the action of fire for many months if it is properly stayed so that it canot be pressed out by the light pressure of the fuel.

The fire bridge at (r) is very much exposed to the fire and in order to prolong its life it is wise to provide same with a canal through which air circulates.

Experiments have shown that the grate area should be about one one-hundredth of the heating surface in a plant where the draught is about one and one-quarter inches of water at the bottom of the chimney and an economiser is installed and consequently the draught at the gas inlet to the boiler is about one-half inch of water.

A larger grate area proved to combust too much of the fuel instead of transforming it into combustible gases, if the boiler was not pressed very hard, when a large loss of heat in the fuel gas occurred. A smaller grate area lowered the capacity of the boiler considerably under normal working capacity.

The grate area should, for plants of above description, but without economisers, be from 15 to 20 per cent. smaller, not to let the gases escape from the boiler at too high a temperature.

In boiler plants where the draught is low, considerably larger grate area has to be provided for, and the furnace so built that the fuel does not resist the direct air too much. The secondary air canals should not be too long, and all corners should be well rounded so as not to prevent a sufficient quantity of air from passing through.

Minute air regulation arrangements should be provided for in order to get the right composition of the combustible gases and not too high percentage of surplus hot air admited into the combustion chamber.

The arch (s) should be provided with peep holes through which the combustible gases and the combustion can be watched. The fireman will soon be able to judge from the color of the flame, how to regulate the different air inlets, especially if he has a combustion recorder to aid him.

Also ordinary Dutch ovens can conveniently be rebuilt to half-gas ovens, care should, however, be taken that the design is such that the secondary air is thoroughly mixed with the combustible gases.

The following tests were made on the furnace described above, and they do to some extent indicate the value of different kinds of refuse as fuel.

Test No.	1	2	3	4
Duration of test hours	4	4	4	4
Quality of fuel (see below)	1a	2a	3a	4a
Quantity of fuel lbs.	6,406	5,496	11,717	18,315
Evaporated during test: lbs. of water	28,263	14,929	28,354	22,037
Pressure aver. during test: lbs. per sq. in.	93,1	90,6	94,2	90,4
Feed water from economiser	231	228	244	274
Evaporation per sq. ft. heating surface	6,9	3,6	6,9	5,4
Lbs. of steam per lbs. of fuel, from 32 degrees F. water to steam of boiler pressure	3,67	2,27	1,99	0,95

Quality of Fuel

1a.—Refuse from wood room and planing mill 74.6 per cent. bone dry.

2a.—Sawdust 45.5 per cent. dry.

3a.—Cut up edgings and slabs stored for 6 months, 69.2 per cent. bone dry.

4a.—Cut up edgings and slabs sawed in winter time and with ice on, 41.9 per cent. bone dry.

Close Utilization of Stumpage

In a recent statement, Prof. R. C. Bryant, of the Lumbering Department of the Yale Forest School, shows that the extent to which close utilization of stumpage can be effected is dependent directly on the markets and the prices which can be secured for the low-grade material, which comprises more than fifty per cent. of the lumber cut. The lumberman removes from the forest only as much of the stand as he believes can be marketed at a profit, although every defective log may contain some cull material which must be handled in order to secure the higher grade lumber on which a profit can be made. The past few years have seen a marked change in the character and amount of timber which is taken from a given acre of land. Where formerly only the choicest trees and the best logs from these same trees were taken, lumbermen have now rached a point, due to higher stumpage values and increased market prices for lumber, where, in some sections the entire stand is removed, down to a diameter of from 12 to 14 inches, in some cases still lower; also where low stumps are cut and where defective and knotty top logs are taken to the mill. The yield per acre for stands of the same character has increased from 400 to 500 per cent. for the above reasons.

From the above, it will be seen that a comparison of the cut from a tract of land 20 years ago with the cut from the same tract to-day does not necessarily furnish any index to the amount of growth which has taken place during that time. This is due to the lower diameter limit in use, and the much closer degree of utilization. Unless full allowance is made for these factors a land owner is likely to conclude, from a comparison of cuts, that the rate of timber production on his land is much greater than is really the case. As a matter of fact, tree growth must be measured; it cannot be estimated. This is one of the tasks for which a forester is trained. It is beyond the scope of the timber cruiser.—Conservation.

"Going After" Business the Only Solution

By A. A. Briggs*

[Editorial Note—In view of the fact that the Dunlop Tire & Rubber Goods Co., Limited, have decided to increase their advertising appropriation at the present time, this summary of conditions which influence national advertisers in making such a decision, will undoubtedly be read with great interest].

Retrench—"To lessen, to abridge, to curtail"—that's what the dictionary especially calls it.

But hasn't the war so far shown that to retrench means particularly to **dig out a fresh trench,** to secure the means and the assistance to make a new assault on the enemy? In the latter interpretation we undoubtedly find what ought to be the keynote for the present advertising situation in Canada.

The truth is that on one side of the Dominion are ranged people who are following the dictionary's main stipulation of "retrench" for their publicity guidance. They may have reasons for so doing which no one in a different line of production can justly pass an opinion on; but it is also true that on the other side are ranged people who are leading—not following anything or anybody in their advertising policy which does not at once spell **Action.** It cannot be denied that the people who have decided "to lessen, to abridge, to curtail" their publicity are in the ascendency at the present time. And everywhere the reason advanced is: "The War."

So far, from the standpoint of salesmanship, **no one has adduced a solitary economic reason why Canadian manufacturers who inaugurate advertising campaigns as a regular portion of their selling effort should discontinue that programme at the present time.** And, is it not strange that in all our mental hurrying to and fro, no one has yet proclaimed the fact that the war did not alter the Canadian consumer-purchasing market one iota? It must be understood that in making the above statement we are not dealing with any isolated cases where this particular business or that particular business may have been affected in countless ways other than the selling end. It is true, a manufacturer may have to pay more for his raw materials as one result of the war, but if he can get the materials at all, he always has the instrument of retail price-increase to wield in offsetting his losses, if necessary.

What really did alter the possibilities of the consumer purchasing field in Canada? Not the war, but the lull that antedated the war. A number of reasons precipitated the lull—most of which the public are conversant with. In other words, dull times, if one chooses to call them such, were here anyway—here in the sense that while the consumer was willing to a considerable extent to make purchases, the middleman had in many cases gone rather askew in his financing. The war simply accentuated the fast-spreading inclination to sit tight.

Naturally, during a portion of 1913 and most of 1914, manufacturers, in the main, were conservative in the matter of building extensions and such like, and sales efforts were always linked to due caution. This year, probably more than usual, attention was centred on the outcome of the Western wheat crop. That crop virutally has arrived, and, if reports are true, it is a good deal larger than advance estimates intimated. Then, notice the price per bushel paid for some wheat at the elevators. The farmers should now assist basic money circulation, which, of course, always commences the upward trend in the retail line.

In seeking our forces for advertising stimulus, it is one thing to deal with the possibilities of new fields of endeavor for Canadian manufacturers and another thing to explain away the measure of uncertainties attached to them. It cannot be gainsayed that consideration of new fields may mean consideration of bonuses and tariffs. What ought to be emphasized is that the Canadian manufacturer has, at least, as much area market as he had previous to the war and the general lull in consumer-buying conditions. Therefore, instead of risking new fields, which at best may be a costly experiment, the natural course seems to be that of again seeking the old field—**but seeking it ten times more forcibly.** This fact is brought home to us with double force when we have evidence aplenty that our friends to the South, in the widespread revival of the export propaganda, are considering the commercial blanketing of this country. It, therefore, behooves the Canadian manufacturer who has advertised in the past, not only to advertise again to create consumer demand for his wares, but to advertise as a means of actually holding what he already has. While suggestions are being made to flank some of the European countries' export business to Canada, we should not allow ourselves to be flanked in a commercial sense by our neighbors across the line.

Those advertising men who passed through the trade siege of 1907 and others before it—which sieges or lulls, or whatever you wish to call them, some bankers say cast their sly glances our way approximately every seven years—know well that **the manufacturers who assumed the defensive in publicity matters on those occasions had a difficult time regaining their stride when normal times returned.** That is natural law in the commercial world. There is no profit in manufacturing, no excuse for a factory's existence, unless the selling end is vigorous. The energy which keeps the selling end vigorous in abnormal times is identically the same energy which keeps it vigorous in normal times—only it is in abnormal times that keeping up the stride is fraught with more discouragements. One hundred courageous manufacturers and five hundred patriotic purchasing agents are worth more to Canada at the present moment than a million sermons or editorials on humaneness in war.

Realizing that one of the big sticks in the commencement of Canada's Comeback is to be wielded by the purchasing agent, every man occupying such a position in Canada, should have a creed something to this effect hung over his desk where he who runs in for an order may read:—

"I have hitched the firm's wagon to the Made-in-Canada star.

"I will specify on all purchases that Canadian materials must be used or the order will be subject to cancellation.

"I know in so doing that I will thereby be encouraging the other fellow—whose traveller calls on me—to buy my firm's goods and possibly at a higher price, too, than he would have to pay for the foreign article."

Let us be assured that Canadian purchasing agents as a body have lined up behind the Made-in-Canada slogan, and we can expect to see Canadian advertising manufacturers assume the offensive. They will know that if they can secure a portion of the trade which formerly went out of the country, they can afford to write off cetrain business, the loss of which was consequent on a measure of consumer retrenchment. And let consumers see with their own eyes manufacturers' copy running in the papers and those selfsame consumers—assured that the factory in which they are employed is going to keep running or the copy wouldn't be running—will commence again to make purchases with some measure of freedom.

Canadian manufacturers as a body must of necessity exist on Canadian orders; to the great majority "export" is an unused word. Orders will not be secured in dull times by methods that would fail in good times. One of the established beliefs of merchandizing is that properly-placed and properly-managed advertising is a force for facilitating sales. If this were not true, why would certain manufacturers —sixty per cent. of whose output might be styled luxuries—increase rather than decrease their advertising at this very moment?

They realize they have a big job on hand—that of securing orders when orders are unusually hard to secure. And they know full well that following the simple instinct of **going after business is the only solution** to the problem.

* Advertising Manager Dunlop Tire & Rubber Goods Co., Limited.

Hemlock and Hardwood Statistics

The Northern Hemlock and Hardwood Manufacturers' Association, with headquarters at Wausau, Wis., presents the following comparison of cut and shipments from January 1 to August 31, 1914 and 1913, which is based upon reports from the same firms in corresponding months:

Increase in hemlock cut, 1 per cent.
Decrease in hemlock shipments, 9 per cent.
Increase in hardwood cut, 13 per cent.
Decrease in hardwood shipments, 17 per cent.
Increase in total cut, 6 per cent.
Decrease in total shipments, 12 per cent.

Woodenware Openings in Leeds District

The Canadian Trade Commissioner at Leeds, England, in a recent report says:—"A steady trade is done in this district in various articles of wood for domestic and other uses. The supplies which reach here come mainly from the United States, Germany and Austria and there would appear to be keen competition for the trade which is done. To enumerate some of the articles in demand would be to mention clothes pins, pastry boards, washboards, chair seats, rolling pins, towel rollers, skewers and handles for picks and other tools. As stated, however, the competition is on a keen basis and this being the case the question of price figures largely when placing orders. Clothes pins, maple blocks and pick handles, it is pleasing to state, already reach this district from Canada."

Nova Scotia's Opportunities

Those who travel extensively in Nova Scotia for the first time are struck by the large proportion of the soil which is still under woods, and which, to all appearances, is fit only to produce wood crops. In addition to this, the visitor is struck by the suitability of the climate for tree growth. Such a large proportion of the province is absolute forest land (authorities estimate it at from 65 to 70 per cent.) that to allow this to be neglected is not economy, but waste. Highways and railways must be kept up through it to get from place to place, and on the very lowest plane of economy it should be producing freight. Of course, nearly all of it is producing some freight, but, like the cut-over timber land of the rest of North America, it is not producing to the acre anything like it should.

Another thing that strikes the visitor is that the fertile spots are very fertile, and very beautiful as pictures of farming scenery. So much of the land is not fit for farming that Nature seems to have balanced things by making the good parts very rich. Again, the visitor from inland Canada is struck by the presence of two important industries, coal mining and sea fishing.

This produces a state of affairs which is, in many respects, unique. Here there is a naturally good timber country, and right along side of it, and mixed in with it, is territory which requires timber. The mines require pit props, hundreds of miles of them, the fisheries require barrels and kegs and fishing craft, while the farms and orchards need boxes and crates and baskets and barrels. This is in addition to the houses, barns, sheds, fences, and other structures which all need. This very fortunate circumstance has been, in a way, a bad thing for forest industries. The fact that the market is so near at hand, and will use up so much inferior material, has led the people to underestimate the value of the forest. Frequently the man who makes barrels, or kegs, or crates, gets the material off his own property, or from that of his neighbors, and the amount used never gets into the statistics of the province. The Bulletin of the Forestry Branch of the Department of the Interior on the Wood Using Industries of the Maritime Provinces has gathered statistics from six hundred factories and shops in the three provinces of New Brunswick, Nova Scotia and Prince Edward Island, but even this large number, more complete than ever before, one feels sure does not take in all the men, who, for a part of the year, make staves, or hoops, or some other product used locally. This fact has kept, and still keeps, the people of the province generally from realizing the full value of the forest industries, and what it will mean when these industries disappear for want of material. Then the fact that much inferior and small timber can be utilized has led to much closer cutting of the forests than where only lumber of the standard size was made.

The apple growers are just beginning to realize that, whereas, ten years ago they paid only for the labor in a barrel or box, they now have to pay as much more for the material; so that the price has about doubled. The same state of affairs exists in regard to fish barrels and mine timbers.

The fact that the fertile lands occur in pockets, frequently in long, narrow valleys, has brought about a condition of things which exists scarcely elsewhere in Canada. Many of the farms have a narrow frontage on the river in the valley, and extend back over the edge of the valley into the hills beyond. Often these farms are four or five miles long. The fertile part is in the valley; the land in the hills is absolute forest land. Very few farmers are content with the income they derive from their fertile acres in the valley. They have been accustomed to supplement this by the sales of timber from the hills. This was a particularly satisfactory arrangement to them because the work in the woods came in the winter, when there was little work to do on their farms. In some respects it is a good way of handling timber. The difficulty is that the cutting has been carried on without regard to the principles of reproduction, and now that the farmers are getting toward the end of their timber they realize that they must either change their methods or suffer a serious decrease in income. This is all the more exasperating as they realize that they could secure prices for their timber in the future such as they never dreamed of in the past. Nor is this merely an incident in the general situation. When it is realized that more than half the timber land of Nova Scotia is held in these small blocks, running from two hundred to one thousand acres, it will be seen that when this problem is settled more than half the difficulties are met. In other provinces the provincial government can improve matters by new regulations and by better administration, but in Nova Scotia, where so much of the timber land is owned in fee simple, a great deal of the work must be done by educating the owners. There can be no doubt, too, that a great many of these men are anxious to know what to do, so that a forester who could go among them and give the information would have his hands full for several years to come. This will probably be the first work of the provincial forester when he is appointed.

Nothing has yet been said of the opportunity for the highest utilization of some kinds of timber in wooden ship building, which business has revived since the crash that followed the introduction of iron ships, and which seems destined to continue indefinitely in the construction of certain classes of vessels. Nor has anything been said of the particularly favorable position in which Nova Scotia stands in regard to export trade, both to Europe and to South America. Nova Scotia is a small province. Her timber has been heavily cut into, and still more heavily burned over, but much of the land is suited to the growing of timber, much of it is covered with woods of some kind, and timber reproduces readily and grows rapidly in the province. She has a number of native industries dependent upon wood, and she has great opportunities for export. All of which shows that action now will result in great advantage to the province in the near future and for all time to come.

Valuable Timber in Little Smoky River Valley

A report upon the timber conditions in the Little Smoky River Valley, Alberta, and adjacent territory has been issued by the Forestry Branch of the Department of the Interior. The report is written by J. A. Doucet, who was in charge of a survey in the district. According to a tabular statement it is shown that the area covered is 7,333 square miles, on which there is an actual production of 4,590,100,000 feet, board measure, of merchantable spruce and pine, and 20,009,600 cords of poplar and birch. The mature spruce and pine timber covers an area of approximately 364 square miles, with a production estimated at 2,839,460,000 feet, board measure. The young forest carrying merchantable timber covers an area of a little over 1,500 square miles with 2,672,680,000 feet, board measure, of merchantable timber of pine and spruce, and 2,675,600 cords of poplar and birch.

The nearly mature poplar covers an area of approximately 1,362 square miles and gives 17,336,000 cords of wood.

The pole-wood of 35 to 75 years old covers an area of approximately 2,060 square miles. This pole-wood, together with the 1,500 square miles of mixed young forest already carrying merchantable timber, are rich prospects for the future.

The area belonging to young reproduction is given as 1,408 square miles, while the area lately burned represents 740 square miles, approximately 20 and 10 per cent. respectively of the whole area.

The report recommends that of the area examined, an approximate area of 5,500 square miles should be placed under forest reserve. This area includes approximately 1,517,000,000 feet, board measure, of mature spruce, from the 1,595,000,000 feet that has been found existing on the whole territory, or a little over 99 per cent.

The poplar land, on the north, was left out, with the exception of a considerable portion of Block 1, where the soil is essentially sandy, and the stand of birch and poplar the most beautiful.

The area outlined contains also 722,000,000 feet, board measure, of nearly mature pine, and 1,120 square miles of young mixed forest already carrying merchantable timber estimated at 1,739,000,000 feet, board measure, and about 2,000,000 cords of poplar and birch. This area will, in 25 years, more than treble its actual given production. Moreover, this area contains nearly 2,000 square miles of pine and spruce pole-wood of a diameter at breast-height of three to seven inches mostly healthy and rapidly growing. At present it is a forest of great economic value, and it will soon become real wealth over a land that repeated forest fires can only turn into an encumbrance, or, at least, a desolation and a shame, if it is not properly looked after.

Export of B.C. Logs to United States

Since the tax on timber cut from Crown lands in British Columbia was reduced by the provincial government recently there has been considerable movement of logs to the United States. It is estimated that the exports during the first week after the embargo was partially raised amounted to 1,000,000 feet per day. Most of the logs exported are cedar, but the shipments include some fir. Royalties and export duties imposed upon timber cut on Crown lands are at the rate of $2 per 1,000 for No. 1 cedar, $1.50 per 1,000 for No. 2 cedar, $1 per 1,000 for No. 3 cedar, $1 per 1,000 for Nos. 1 and 2 fir, and 50 cents per 1,000 for No. 3 fir.

Mr. H. R. MacMillan, Chief Forester for British Columbia, expects that one result of the war will be the opening up of new markets for British Columbia timber. In this opinion, he says, he is supported by the timber agents of foreign governments who are resident in America. With so much destruction of property in Belgium, Austria-Hungary and France, not to say what may happen on the soil of Germany, there will necessarily be a great amount of rebuilding, in which timber will enter to a large extent.

Reports from Three Rivers, P.Q., state that the St. Maurice River is very low and that some of the sawmill companies have been obliged to close down their operations for a few days on account of shortage of logs.

New Pulp and Paper Mill being erected at Bathurst, N. B. to utilize the waste from logging and manufacturing.

The Bathurst Lumber Company, Limited

The growth of the Bathurst Lumber Company, Bathurst, N.B., has been among the most remarkable developments in the lumber industry of the last few years. A number of small concerns with outclassed mills and scattered limits have developed into a large corporation with efficiency as the watchword from the stump to the customer. The net result is that the operations have thus been put on a sound financial basis, which enables the company to do business in a modern business way, and thus to give customers most efficient service. Further, new mills have been built and the old ones rebuilt to latest standards, enabling the company to market a product manufactured to please and satisfy its customers.

Within the present season larger expansion has been in progress. A new electric power and lighting plant to operate the year around has been put into operation to serve the various properties of the company.

A new fast planing mill is now busy night and day dressing lumber in any way desired by customers.

The most extensive development has been the starting of building operations for a large pulp and paper mill, which, when completed, with the proposed extensions, will be the largest plant in Canada. Two units of this plant will operate next summer to manufacture twenty-five tons daily of bleached Mitscherlich sulphite pulp, and sixty tons daily of extra strong container board.

The pulp mill is located at the mouth of the Nepisiguit River, Bathurst, and enjoys the same unexcelled shipping facilities as the two sawmills on the harbour.

A branch line of the I. C. R. will run directly into the mill, which, with the harbour, will ensure immediate shipment of supplies and products in all directions.

An Arkansas Soft Pine Book

A new publication entitled "Arkansas Soft Pine for Building," has recently been issued in connection with the publicity work of the Arkansas Soft Pine Manufacturers. The publicity campaign carried on by this Association under the direction of Mr. Wesley T. Christine, Chicago, Ill., has produced excellent results. A large company in Iowa, referring to this says:—"It has resulted in benefit to us and probably to other dealers in the city who use your stock. We have already had more Arkansas soft pine in our yard this year than in any two years previous since we have been in the retail business." All dealers who handle Arkansas soft pine are furnished with booklets and other advertising aid of this nature without cost and the demmand for Arkansas soft pine is thus being built up with great success.

As Others See Us

The optimism which is being preached by the press of Canada by Canada's big captains of industry is having a steadying effect. There is less pessimism today than there was two or three weeks ago. Business men are disposed to take a hopeful view of the situation, which is being shared by the lumbermen. This is being increased day by day as the success of the allied armies is becoming more of an assured thing. A decisive defeat of the Germans, either on land or sea, would improve matters in Canada 100 per cent. As it is, Canada stands to gain enormously by the war. It is one of the chief food producing countries in the world and as its farmers are receiving enhanced prices for grain, flour, cattle and other products it means that the buying power of the great body of the Canadian people has been greatly increased. It is also believed that following the close of the war there will be a big influx of emigrants from war-stricken Europe, which will give an added impetus to the building trade and through that to the lumbering industry. At present, the bad effects of the war more than outbalance the good, but the time is not far distant when there will be a noticeable improvement in the situation. —From the American Lumberman.

Birch Coming Into Its Own

Birch should never have been substituted for mahogany or cherry. It should have stood on its own merit from the first. It is not a second-place wood, not an apology for or a substitute for anything. While it may be a compliment to birch that it has passed as mahogany for a hundred years, the time for compliments of that kind is now over, and the day is not distant when no one will wish to conceal real birch behind the false claim that it is a tropical wood. Without detracting one iota from the genuine worth of mahogany, it can be stated that birch possesses certain qualities which are superior to mahogany.

At the recent furniture show in Chicago the display of birch was instructive. When employed as an imitation of mahogany it was given the load to carry. If it was a bedstead, the rails were birch, because the strains fell there; if a chair, the arms and other parts were of American wood, where strength as well as beauty were demanded; if a hat rack or coat tree of slender central spindle, more than likely the strain fell on a birch piece.

It is not necessary to claim for birch that it is superior as a furniture and finish wood to all others in America. There are other extremely high grade cabinet woods in this country, and all that need be claimed for birch is that it ranks with the best of them. It is strong, hard, stiff, takes fine polish, responds remarkably well to the application of stains and fillers, and if a figured wood is wanted, selected birch supplies it. All of the qualities of a superb cabinet materiai are here. It is no experiment. It has held its place and gained ground from the first, and it has reached a point where it is able to stand on its own merits and against all comers, either domestic or foreign. This claim extends to lower as well as to the best grades of highly colored and finely figured stock. Birch fills plebeian as well as aristocratic places; it is the camp stool as well as the rocker; the bed slat as well as the carved legs of the grand piano. It is fit for nearly every part and class of woodwork. It detracts nothing from its long and honorable reputation to know that excavations have shown that the terrible war chariots of the Assyrians, with scythe blades on the hubs and spears on the ends of the poles, were made of birch—rims, hubs, spokes, axles, poles, and body. Then why hide the identity of this splendid wood under aliases and disguises.—Hardwood Record.

If I Were a Lumber Salesman

By G. D. Crain, Jr.

If I were a salesman of hardwood lumber, here are some of the things I would do as part of my job of selling the stock:

I would know the lumber I had to sell as well as it was possible to know it. Instead of going into the office of a consumer and talking about the lumber being "bone dry, good widths and lengths," I would say, "This stock is four months old, contains 30 per cent. of long and averages 8 inches wide." This would be substituting specific information of the sort that the user appreciates for the vague generalities which are generally used. The salesman on the road may insist that he cannot get this information; but if he shows his boss that it would make him a more valuable man and that he could sell more lumber at a better price by being able to describe the lumber, instead of merely talk about it, the information would be forthcoming. It would merely be necessary for the people in charge of the mill or yard to systematize the business a little, so as to have a record of the stock on hand. This might be difficult in the case of a wholesaler, constantly getting lumber in and loading it out, but it would be simplicity itself for the millman. At any rate, I would make an effort to secure this information, because it would be one of my strongest cards in selling the lumber.

In this connection I would get to the office of the company as often as I could and go through the yard, watching the lumber being handled and getting an idea of the way the stock is running. Every section has its peculiarities, and the salesman who doesn't know the strong points of his own lumber, in regard to appearance as well as dimension, is overlooking an opportunity.

Know More About Your Lumber

I would occasionally take a stack of lumber and look through it, measuring the widths and getting an idea of how the stock was running, independently of other sources of information. I have seen salesmen who, with specific information of this kind about some particular bunch of stock, go into the office of a buyer and describe the lumber in one or two stacks so thoroughly and convincingly that the sale was made immediately. No salesman can know too much about his goods, and yet it seems to be true that the average salesman of lumber, equipped merely with a stock-list and a few steretotyped descriptive phrases, knows a minimum about the merchandise he is trying to sell. May be that is one of the reasons why his chief argument is that his price is lower than that of anybody else. If he knew more about the lumber, he could forget price for a little while and talk quality. At least, he would know what not to say. Some salesmen tell a furniture man that their stock runs extra wide, merely to get the signature on the dotted line, and when the shipment comes in, and is found to contain a particularly large percentage of narrow—which the salesman should have known about—there is no reason to be astonished if the customer kicks. This is another reason why I would try to learn my stock of goods thoroughly before going out to sell it.

I would arrange to get a tally-sheet of every car of lumber loaded out to my customers. Perhaps the boss would tell me that this was none of my business; but if I could prove that it would not only help me to sell more lumber, by following up the good cars and getting the repeat orders while the customer was still thinking about what a nice lot of stock he had received, but would also enable me to settle complaints, since I could speak with authority about what the car actually contained, instead of having to harmonize the statements from the customer, he would probably be willing to let me see these records.

It is just as important for the salesman to know what the customer got as what he contracted to deliver. If the salesman in a shoe store agreed to send you a pair of $6 shoes, and when you got home you found that he had slipped you a pair of $2.50 brogans, you would be inclined to make a kick. A lot of customers, sold in perfect good faith by the salesmen, don't get what they ordered. This puts the salesman in a most embarrassing position, especially if he has to settle the kick, as he usually does. If he knew what every customer was getting on every order, he would be able to negotiate more effectively. And even if the owner of the business considers this information a part of the private records of the office, a report of some kind about each car shipped out would be a lot of help to the man who has to do the selling.

Investigate Every Factory

I would not overlook any opportunities to find out about the consumption of lumber. I would go through every factory where the owner would let me, and sneak in the side way if the superintendent didn't mind. I would find out why this customer was finicky about getting certain widths, and why the other was hard on one grade and let another lot get by. In other words, I would try to learn enough about the running of a woodworking plant so that when I went in to talk to the buyer about his lumber requirements, he would not have anything on me in the matter of information. I would try to make helpful suggestions whenever possible. If I saw the men at the machines wasting lumber because they failed to turn the board over and take advantage of the good side, I would tell the factory man about it, even though it started him to buying one-face lumber. He would be much more likely to stay with me if he thought I was trying to help him save money as well as to make money out of his business.

I would try to pick up labor-saving and money-saving ideas in every factory I visited, so that at the next I could give the head of the concern suggestions that would help him in his business. In that way I would find it unnecessary to buy cigars and dinners in order to make myself persona grata, but I would find a "Welcome" doormat at the entrance of every customer's office.

I would talk to salesmen in non-competing lines about consumers and their methods, so as to get the personal angle wherever possible. Instead of neglecting them, I would cultivate the acquaintance of the machinery salesmen, varnish men and others calling on the same line of trade, and in exchange for the information they gave me I would give them equally good tips on prospective new business. In this way I would hear about the new buyers coming into the market, and perchance also about some of the lame ducks who develop from time to time; and by avoiding the latter I would save my company thousands of dollars which undiscriminating salesmen might have allowed to go by the board because they were not careful about whom they sold.

Don't Be a Knocker

I would refrain from knocking other lumbermen and other woods. If my house happened not to be selling gum, I would not therefore proceed to lambast gum, because I would realize that perhaps next season there would be many cars of gum on the stock-list for me to sell. I would find it better to have a soft spot to fall on than to cultivate a bunch of thorn-trees to light in. I would have a good word for my competitors, but would confine most of my attention to talking about my firm, its lumber and its service. By adhering to this plan I would make the hammer of the knocker who went after my business turn into a boomerang, which would hit him in the back of the neck so hard that it would knock him over the edge of the horizon.

I would not miss opportunities to establish personal relationships with my customers, for while most business nowadays is placed in a purely business way, with no favors for anybody, it still remains true that, other things being equal, the buyer is going to follow his likes rather than his dislikes. In building personal however, I would rely on legitimate methods only, rather than those which might be classed by others as smacking of graft. I would let subordinates in the factories of my customers alone, and go to headquarters for business. I would keep an expense account that would not have to include gratuities to those whom I thought might some day be "useful."

These things sound good to me, because, perhaps, I am not a lumber salesman. But if I ever am one, I will try them out, just to see if practical business can't be run along the lines that seem just and honest and straightforward and helpful. I might be badly mistaken about the result; but at least I would learn the reason why.—Lumber World Review.

Sawmilling in Japan

The sawmilling industry in the Japanese Empire has been making important advances of late. A sawmill which was recently completed at Mt. Air is the largest and best equipped mill in the Empire. It is fitted with American machinery throughout, and is operated by electricity. It is intended to handle the lumber brought down from the forests on Mount Ari by a railway built up that mountain for the purpose. The grades on this line are very steep and the cars that will carry the timber are all fitted with air brakes. The number of tunnels and bridges on the line is large, and the torrential rains cause frequent washouts. The difficulties to be overcome are enormous, but when this line and mill do get into regular working order Taiwan will become a large exporter of lumber. It is not yet determined how the business will be carried on. At one time it was planned to form a company of all the firms engaged in the lumber business on the island and let this company have the rights. At another time it was thought that the business would be handed over by the Government to some one firm to become a monopoly controlling railway, mill, and forests.

Officers of the Okanogan national forest in the state of Washington are installing powerful signal lanterns for night use in reporting forest fires from lookout peaks.

A report upon the timber and soil conditions in southeastern Manitoba, has been issued as bulletin No. 45, by the Forestry Branch of the Department of the Interior.

Lumber Consumed in a Battleship

No Less Than 1,200,000 feet Required in the Vessel and Its Temporary Supports—Where It All Goes

The use of lumber in the construction of battleships is far more extensive than a great many people, even in the lumber trade, imagine. At the present time, when the navy of Great Britain is occupying so much of our attention, the subject is one of unusual interest and we are pleased therefore to be able to reproduce from the Woodworker, Indiannapolis, the following article dealing with the use of lumber and timber in the construction of a United States battleship:—

I often wonder how many men, employed outside the shipyard in the wood-working industries, actually know the amount of lumber used and the class of work done in the preliminary and permanent work on such vessels. No doubt some will be surprised to learn that over 1,200,000 ft. of yellow pine, spruce, oak and teak have been used in the construction of one of these monsters. Vessels of the Pennsylvania class will probably take more than this amount. Should we see one of these ships at anchor in the stream we would see no wood at all. Going on board, we would notice the wooden deck, but that would only account for about 10 per cent., or 120,000 ft. Where is the rest of it?

To answer that question we will have to start from the bottom, or rather start before she has any bottom. A vessel of the class of the Pennsylvania, or battleship 39, which is now building at the navy yard, Brooklyn, while building, will cover an area of about 60,000 ft., viz., 96 x 625 ft., and will weigh, when about to be launched, about 12,000 tons, which is about 40 per cent. of her total weight. Therefore, it is necessary that a foundation must be constructed sufficient to withstand this weight without any settlement. To accomplish this, piles are driven in rows across this space to be occupied, and each row is 4 ft. between centres. There are about 156 rows, with thirty-two piles to a row, in all nearly 5,000 piles. Each row is then capped with 14 x 14-in. yellow pine logs. In this item alone there are nearly 200,000 ft. of lumber.

But the vessel must be constructed in such a manner that she will slide into the water, and to do this must be built on an incline. That is, that the line of the keel will be much higher at the forward end than it is at the after end, so a declivity of about ½-in. to the foot is given her, which will bring her about 26 ft. higher at the bow than at the stern. To accomplish this a heavy structure, called cribbing, is built up at the forward end to the height required, about 26 ft., inclining downward to the water's edge. The cribbing is built of 12 x 12-in. or 14 x 14-in. yellow pine logs, crossed and recrossed and bolted together in a substantial manner.

Upon the cribbing are erected the keel blocks, which are built up in sets of five blocks, pyramid fashion, the lower one being 8 ft. long and the upper one 3 ft. long. The upper blocks are perfectly aligned to the declivity of the vessel and a perfectly straight line, known as the centre line, is struck and scored in on them, and from this line all measurements are taken. There are at least 150 sets of keel blocks, placed 4 ft. between centres, and all blocks are dressd on two sides. The keel blocks being in perfect alignment, we are now ready to lay the keel. But as we are not ship-fitters or iron-workers, and only dealing in lumber, we will leave this to the master ship-fitter and wish him well, for his troubles are commencing.

The ship starts to grow, plate after plate is put in place and bolted up. The shipwright must construct false work to receive them, must shore up to get them in position, must regulate them to hold the shape, and the mill provides him with the wherewithal to do it. Scaffolding and staging must also be provided, until a veritable forest of timber rises under and around her. The time is fast approaching when the work on the vessel will be far enough advanced to put her overboard, for she must go over just as light as possible. This is usually done when the hull, exclusive of the armor, is completed.

The carpenters have been building the ways, on which she is to be launched, in some other part of the shipyard, and these are worthy of description. First come the groundways, 12-in. in thickness, 72-in. in width, the length of the ship and enough beyond to carry her into deep water, approximately 700 ft. The groundways are built of 12 x 12-in. yellow pine, in sections 100 ft. long, and as there are two sets of ways, one port and one starboard, it will require fourteen sections, 12 x 72-in. x 100 ft. This material must be clear, no defects in lumber being allowed. The groundways are slid into place under the vessel and on the same incline, perfectly aligned, bolted together and secured to the cribbing on which it rests. They now form two immense tracks, one on each side of the keel, and about 15 ft. out from the centre line, and on these the ship is to make her first voyage.

Next come the slidingways, which are 12 ins. thick, 66 ins. wide and approximately 500 ft. in length. They are built similar to the groundways and are placed on top of them, with an opening about ¾ in. between, in which to run hot tallow and graphite. The extreme upper ends of the slidingways are bolted to the groundways and these few bolts are the last thing that hold the ship from sliding into the water until the order is given, "Cut away." With the ways in position, there still remains about 3 ft. from top of ways to bottom of ship, and this must be filled in so that the weight can be taken off the keel blocks and shores on which she rests, and transferred to the ways. And here the mill again has a job on its hands.

Oak wedges, 7 ft. long, 6 ins. wide and tapering from 6 ins. at large end to ½ in. at small end, dressed on both tapered sides, are made, and it will take about 700 of them for the job. These are placed across the top of slidingways, about 18 ins. apart, with butt ends projecting about 18 ins. over edge of ways. On top of the wedges comes the packing, which is to fill up the intervening space. This is usually 4 x 12 yellow pine plank, s.2s., as wide and as long as the slidingways and built up from top of ways to bottom of ship. The planking that comes next to bottom is fitted to conform to curvature of the hull, so that the vessel rests in a snug-fitting cradle.

Packing and slidingways are now made fast by wire cable to the ship, and hot tallow and graphite are run into the space between groundways and slidingways. All shores, staging and scaffolding outside the ship are then removed. Double bottoms are shored and stiffened temporarily with wood, and all precautions taken to insure a successful launch. The vessel is now resting on the keel blocks, with a few temporary shores here and there.

The great day arrives and everybody is on edge, especially the naval constructors and master mechanics, upon whom the responsibility for the successful launch devolves. The wedges are rammed home; this is a heart-breaking job, but does not take long. The keel blocks are split out, the remaining shores tumbled down, and now the whole weight of the vessel is resting on the groundways, and nothing prevents her from sliding into the water but the few bolts which hold the slidingways to groundways. The order is given, "Cut away," the slidingways are cut through just below the holding bolts, and the vessel breaks away and commences her graceful journey to the water.

The launch over, let us get back to work, for she is but 40 or 45 per cent. complete, and there is a great deal to do before she can meet the enemy in battle. The carpenters and mill men have as yet done very little permanent work on her and there is still the armor backing and the wood deck to be done. All parts of the ship that are to be covered with armor must first be covered with teakwood, and this wood is known as armor backing.

The backing for the belt armor usually extends all around the vessel and is at least 7 ft. below the water line to about 5 ft. above, and from 3 to 6 ins. in thickness. This is all sawed from the log into planks and dressed on two edges, with edges slightly bevelled to form what is known as a caulking seam. The sides of plank are then sawn to conform to the curvature of the vessel's hull. Above the belt armor backing comes the casemate armor backing, which extends from 350 to 400 ft. over the vital parts of the ship, such as engine room, boilers and magazines. The casemate armor backing is treated in the same manner as the belt armor backing, viz., dressed on two edges. All armor backing is bolted to ship, bolt heads counter-sunk and plugs put in over the bolt heads. We will require 10,000 1¼-in. diameter plugs for this.

The turret armor backing comes next. She will have four turrets, elliptical in shape, with sloping sides. They will be 6 ft. 6 ins. high, about 40 ft. long and 30 ft. in width. It will take 20,000 ft. of 6-in. timber to cover them. As the sides of the turret slope inward, it is obvious that the top must be smaller than the bottom. As the backing on the turret is put on stave fashion—that is, the plank running up and down—it will be readily seen that the plank will be larger at the bottom than at the top, consequently they must all be tapered. Further, the taper is not all the same, because, as the turret runs aft, the sides are almost perpendicular, and this gives a twist to the plank. In getting the twist the degree of twist is given at about every foot and marked on the edge of plank. The plank is then sawed on a bevel band saw (common to shipyards), whose upper and lower wheels turn on a circular guide, whose centre is the point where the saw passes through the table of machine. On a saw of this description you may commence sawing with the saw square with the table and finish with the saw 45 deg. to the right or left. It takes two men to operate this machine properly.

And now comes the deck. Nothing but the best material is used in this; it must be rift-sawed and straight-grained. Teakwood is used here, as it is considered the best wood for ship-building purposes. It is very durable, does not shrink or warp when seasoned, will not injure iron, nor will iron injure the wood. It will take at least 200,000 ft. of logs to make 125,000 ft. of material fit for decking, as teak is a very wasteful wood; there are large heart shakes in it and nothing like this must enter.

The deck planks must be run to an accurate width, as they must be bolted to the iron deck upon which they lie. The holes have been drilled in the iron deck and spaced accurately, therefore we cannot afford either to gain or lose in the width of plank, or we would ver

soon have the bolt holes over into the caulking seam. The plank will be 3½ x 3½ ins., and as the ship will be 96 ft. in its widest part and the plank are laid fore and aft, it will take about 320 plank laid side by side, exclusive of margins, to cover this space. The decking is s.4s. and out-gaged; that is, the sides of plank are bevelled slightly so as to leave an opening between the planks on the top edge, which forms a caulking seam; 5/32-in. is allowed between each plank.

Considerable trouble is experienced in dressing teakwood, especially where it is necessary to hold an exact width. It is apparently easy to work, not very hard, but it is very sandy, and with the ordinary soft steel cutters, running at the rate of 60 ft. per minute, it is impossible to run more than 400 lin. ft. without filing. With hard cutters you may possibly double this amount. I have seen cutters, after running 400 lin. ft., worn away 1/64-in., so it keeps a man constantly grinding and setting cutters.

Besides the teak, yellow pine, oak and spruce, there is about 80,000 ft. of soft Idaho white pine used for templets of plates and frames. This is all ripped into 3, 4 and 6-in. material, resawed to ⅜ and s.2s. to ¼-in. When the battleship is complete and goes into commission, there is a bill for about 1,200,000 ft. of lumber against her, and probably only about 300,000 ft. will actually go into her construction.—H. E. G.

Rounding Up the Fall Trade

By a Lumber Association Secretary

The farmer has his busy plowing and cultivating season in the spring and early summer, but the busy plowing season for the retail dealer serving the country trade should be in the fall when the farmer is not too busy and is in just the right kind of shape to be cultivated himself with ideas and inspirations to buy lumber and other material to improve the farm and get it in shape for winter. This is the time of the year for the retailer to turn mixer, to get out and hustle around among the farmers, not merely to see what they want, but to help make them want a lot of things that they have never thought of themselves.

Forrest Crissy, who has written quite a lot of gingery stuff about merchandising and live-wire methods, in a recent story in the Saturday Evening Post about teaching the retailer how to fight said among other things, that the best country storekeeper he knows of spends about as much time in his automobile getting around the country as he does behind the counter. Incidently he makes his machine pay better dividends than any other one thing he owns. He makes it his business to understand farmers right down to the ground. He takes a real interest in the things that make up the farmer's world, and as a result the farmers not only know him—and he knows them—but they like him and he gets their trade.

There is no reason on earth why this kind of logic will not apply to the retail lumber dealer as well as to the retail merchant in the town, for really that is what a live retailer is—a merchant. And if he is really alive he will sell many other things as well as lumber, notwithstanding the sentimental, spell-binding talks on the sentiment of lumber against all substitutes.

The man who makes it his business to get out and cultivate the farmer—if he is the right kind of a man and takes a real and not a superficial interest in the matter—will develop many other things besides acquaintances. He will develop ideas that will help him build trade; he will see where this improvement and that can be made to farm and farm buildings, and he will give good counsel to the farmers and get good trade in return.

Talk Farm Machinery Protection

In the fall is the time when one sees farm machinery standing out under trees or in fence corners or somewhere that needs to be housed in proper sheds. It is easy enough to demonstrate that the farmer can save money by properly housing everything of this kind. There are many new things involved, too; it is not merely the old mower, reaper and cultivator, but there are now farm tractors of various kinds, which to properly take care of call for extensive house or shed room. Where these things are found the right order of salesmanship should result in getting orders for lumber and roofing material, for cement to make concrete, for drain tile, paint and various other things.

The fall season is above all the season for putting all manner of roofs in order. It should be a busy season of sales of all kinds of roofing material including shingle, slate, tile, metal roofing and composition roofing. Right along with these, too, goes sales of paint, both roofing paint and sidewall, exterior and interior paint. There is no need for extended argument to the retailer on these things—what we need is for the retailer to develop the practice of geting out in the midst of his trade and extending argument about them to his customers.

Some retailers make the mistake of staying right close to their business during the fall season because it is naturally a sort of busy season with the farmer customers, and he expects many of them to come in. Staying close to his business is the right idea, but he should not overlook the fact that his business extends out over a wide territory and is not all located right in his office and yard. A man with a business worth while should have help that is competent to make estimates and handle customers. Then while not neglecting his business at the office for the help to run entirely, he should make it a part of his own business to spend a lot of his time going out among his customers, not only to keep in touch and see what they want, but also that he may know what they need and what they could use in addition to the expressed wants. There is room for the right kind of persistent work of this kind to develop a volume of trade which might not otherwise come that may often equal the volume of trade that just naturally comes. Which, stated another way, means that the right kind of effort and hustling around may double the volume of the fall business done.

Consider the Women Folks

One of the good things about a yardman running around the country visiting with his country customers is in the fact that it helps him get acquainted with the women folks, too, and through this develops an interest in and consideration of the women folks. In the city trade a man may run around in an automobile and visit customers for months without meeting up with the women folks of the family. In the country this is different. When the retailer goes out on the farm to the customer's home he generally meets in the round the women folks as well as the men folks. This is worth something—worth more, perhaps, than the average retailer has realized.

The women folks of the country are taking a much more active interest in building operations and outside work generally than they ever did before. They are not only taking a keen personal interest themselves, but this interest is taking on the form of a factor in the purchasing part of the game. The man who can develop friendly acquaintance with the women folks throughout the country and get them to coming to his place of business along with the men will not only get more trade by this, but he will develop a friendship that is the best safeguard in the world against cut-throat competition and the mail order sharks. So long as the women folks are not induced to come and look over the stock the local yardman has to offer, their main knowledge of building material comes from what they see in other people's houses and what they see illustrated in catalogues, and it is these illustrations and catalogues that help turn lots of the trade in that direction.

We have reached the time when women folks should be seriously considered in the mater of lumber and building material, no matter whether it is city trade or country trade. It may take different methods to reach the feminine interest in the city from in the country, but in each case it is an important factor and needs more attention. They may not know at first just what they want, but women's wants do a lot to shape the buying; and the man who takes the trouble to arrange his office and display room so that it will be inviting and informing to the women folks will likely find it a good business proposition. It will not only help him get and hold trade, but when he can get the interest of the women folks it will be found much easier to handle stock patterns in sash and doors and get more profit out of it with less expense to the customer than is involved in the making of so many special things to order because the customers develop their own notions. As an educational proposition for inspiring and shaping tastes alone it is worth while, and it is a good business proposition entirely aside from this. So make it a point to cultivate the feminine as a factor in the arrangement of display rooms and in the office equipment so that you may be prepared to make the women folks so much at home that more of them will come to you when they want something or have under consideration plans for building anything from a chicken coop to a new home.

The Hubbard Oven for Camp Use

The attention of our readers is called to the advertisement of the Warren Manufacturing Company, Limited, on the inside front cover page of this issue. The illustration shows one of their Hubbard Ovens, which are in use by representative lumber operators throughout Canada, and are specially suitable for lumber camp use. The numerous advantages which the "Hubbard" has over the old time ovens, in its durability, efficiency in baking. and compactness in design, make it practically indispensable for every camp. In several lumber centres the same Hubbard ovens have been in constant use for fifteen years and are still giving satisfaction. Lumber operators would do well to get the illustrated literature of the company, which is sent free for the asking.

The Supreme Court of Pennsylvania has decided that the amount of damage collectible on growing timber set on fire through negligence is not only the value of the wood destroyed, but also the injury to the property as a whole through the destruction of the young growth.

A Lumberman's Life Story—From Tally Boy to Lumber Baron

By C. P. McDonald

(This is the life story of one of Chicago's most successful lumber dealers, whose identity, for obvious reasons, must remain anonymous. How he rose from a humble beginning to a position of influence and power in the lumber world is best told in his own words. It is chiefly for this reason that his name is withheld from publication).

"Forty-eight, sixteen, five short!"

"Forty-eight common, sixteen cull, five short!"

"Did you get it?"

For several years these and similar expressions were my daily diet. They are not euphoneous phrases, perhaps, but to me they never ceased being sweetest music.

I first heard them 'way back in the early '70's. I still hear them today. Often I catch myself humdrumming the shout, "Forty-eight common, sixteen cull, five short!" my fingers tapping in rythmic unison with the words.

I still can hear the guttural voice of the chief inspector as each plank, batten, and deal came up from the hold of the vessel in which it was stored. I can hear the faint scratch of my pencil flying across the smooth surface of my tally sheet, recording grades of lumber and dimensions as the figures and names floated to me from the deck of the boat.

"Did you get it?" The question was bawled to me every once in so often. The inspector, as the timbers sometimes crashed about him, failed to catch my sharply ejaculated "Check!" At other times I answered with a hardly perceptible mutter, mechanically jotting down dimensions, my mind trying to penetrate behind the curtain of futurity. For from the first moment after I had become a tally boy my dreams ever were of the time when I should become a lumber dealer and direct the destinies of my own big plant.

All boys indulge in dreams. Without them the world would be a sorry affair, devoid of the one big thing that makes life worth the living. The trouble is the dreams of many young men never are realized. This failure of realization usually is charged to adverse luck. I don't believe luck ever figures in such things. The young failures, to my way of thinking, never chirk up because they have confused dreams with moods. They do not work and apply themselves to gaining the ultimate goal. They wait for a lucky turn of the wheel and do not strive to make their dreams realities.

My dreams were of the material kind. I meant to cash in on them some day. That perhaps is the reason why I did not take my place in the rank and file of the business failures. I believed myself made of sterner stuff. I did not, of course, set myself up as a paragon of wisdom. There were a lot of boys working around me who, I frankly admit, were wiser than I, whose educations were superior, who possessed greater strength. But their greater strength was only of the physical caliber. My strength was concentrated on purpose, theirs on the accomplishments of acrobatic feats and muscular achievements. While they developed their sinews and their brawn I assimilated a valuable knowledge of the lumber business. There is a vast difference.

For instance, I'm the head of my own concern right now, have a big lumber business and enough money to keep me from worrying. One of the boys who started out with me is a motorman in Omaha. Another is clerking in the freight department of a railroad. A third wrote me a year or so ago that he had become a business nomad—working here today, there tomorrow, making barely enough to keep himself abreast of the tide. So you will see from this illustration that it isn't the smartest boy who picks the plums, but the one who absorbs the principles of his work and puts them into practical circulation.

Father was a carpenter—and a good one, too—when he brought his family to Chicago from County Mayo, Ireland. While father worked I was permitted to attend the old Kinzie school. When he didn't I helped out. During the summer I worked as a tally boy for a big lumber concern. I got $4.00 a week, which was pretty good money in those days.

My duties as tally boy involved going on a boatload of lumber. I sat on a box in a convenient spot and marked down the feet and grades that were called out to me by the inspectors who were put on the cargo for the purpose of determining the amount of feet and the quality of the lumber in the cargo.

In the early days of the lumber industry in Chicago this lumber was shipped in by vessel to the wholesale market in Franklin and South Water streets, and the dealers used to go out to the market in the morning and look over the vessel loads of lumber that came in.

They then would examine the different cargoes and pick out what lumber they thought would suit their trade. The price of lumber was fixed by supply and demand, and if there was a big field of lumber in the dealers got it as cheaply as possible. We had to demonstrate the quality and grades of each cargo before we could make a sale. To do that a man had to have a thorough knowledge of the grades of lumber in the cargo, and he also had to know the requirements of the dealers. To be a successful salesman a man had to familiarize himself with the trade of his dealers and anticipate their wants in many cases. Some dealers bought different grades for their trade than others did. To get his price the salesman had to have knowledge of the trade of the various dealers. But I anticipate.

In my position of tally boy I was required to figure up the tally sheets of each cargo of lumber and make a report to the buyer and seller of the amount and grades of lumber in the cargo. In this way, of course, I became efficient. The inspectors took an interest in me because they approved of my earnestness of purpose. They did all they possibly could to acquaint me with the different grades of lumber.

I had been a tally boy for several years when I learned that another lumber firm required a new bookkeeper. My duties as tally boy had qualified me, and I applied for the job and got it. I got a substantial increase in my pay envelope, I might add incidentally, but I don't believe the exact figures would add any weight to this life romance of mine.

As bookkeeper I learned a lot more about the lumber business. I entered into the spirit of the labor because my youthful dreams then were as strong upon me as every they were. As a tally boy I had determined upon becoming my own boss. As a bookkeeper this determination still grpiped me.

Well, when I had wrestled with the company's ledgers for a few years, I was promoted to the position of general cashier. In this position I got much inside information that was to stand me in good stead when I ultimately embarked for myself.

A larger lumber company offered inducements one day. This company wanted a competent bookkeeper who would understudy the sales manager. They owned large mills in Michigan and shipped their lumber by car through the different states. I qualified, became sales manager, and was put in charge of all the selling.

Several months later the firm sold out and I went with another lumber company—a Michigan concern—as their sales manager on the Chicago lumber market. This firm sold all their lumber by cargo to the yards and dealers in Chicago. In those days we used to freight lumber by vessel for $1.25 a thousand feet. Today the freight is from $7.00 to $8.00 a thousand from the south and $15.00 to $16.00 a thousand from the coast. That will explain, in a general way, why the price of lumber has advanced.

My business took me through the lumber camps each year, where I was supposed to look over the log cutting and familiarize myself with the quality of the lumber that would be produced from those logs the ensuing year. Here I got my real insight into the lumber game. I found tree felling an engrossing study. I learned, for instance, that when a tree is felled too young the proportionate amount of sapwood is softer than in a tree that has been permitted to mature. On the other hand, the wood of an old tree loses considerable of its toughness. Full grown trees contain heartwood in its greatest proportion, the sapwood remaining firm and elastic. Lumber cut from such trees is strong, tough and durable.

When Norway fir and northern pine trees reach seventy years they are matured. This maturity sometimes takes longer. But when such trees reach the venerable age of seventy and from then on up to one hundred years, they are considered worth while. Between fifty and one hundred years is the best time to fell the larch, the elm, and the ash. The oak should not be cut before it is ninety or one hundred years old.

The sap of trees is at rest during the midsummer and midwinter, Therefore those are the best seasons for felling timber.

I learned all this from the gang foreman, rough, rugged, big-hearted men, who treat the hard and seamed side of life as a huge joke, daily grin at the prospect of sudden death, and who never are so happy as when they carry their lives in their hands. They know lumber, however, as the astronomer knows his telescope, the physician his remedies, the jockey his steed.

I recall a long talk I had with Jerry Casey, a big Celt who had known my father as a boy in County Mayo. Jerry had been foreman of one of our Minnesota gangs for many years. He loved his business, the life, his acute lumber wisdom. He joyed to talk about either. He liked the way I mixed and it is to him that I owe much of the knowledge I acquired of the lumber business.

"Jim," said he one day, "if you're going to be a successful sales manager you've got to know lumber. I'm going to tell you some things you may not know. If you do know them, my angle may add to your wisdom. You ought to know what a balk is—a log sawed or hewed to a square section, varying from eleven to eighteen inches square in size. You ought to know what deals are—parallel sided bits of timber from two to four inches thick and about nine inches wide.

"Do you know what battens are? Well, they are somewhat like deals, only they're not more than seven inches wide. You'll get a lot of calls for ends. They are bits of deals, planks, and battens under eight feet long.

"Beware of deals, Jim, bearing coarse rings. These rings are layers of wood which grow upon the tree annually. They bring about

a coarse grained wood which isn't desirable for the best class of work. Reject such deals, Jim, as you would those with waney or naturaliy beveled edges. When these coarse rings are wide they indicate that the mother tree probably has matured in marshy ground, which ground has a tendency to mature a tree too quickly.

"I'll take you around a bit and show you just exactly what I'm trying to drive into your skull. Would you know when a tree is suffering from cup shake? No, I thought you wouldn't. Well, cup shake is where the interior of the tree splits naturally between a couple of annual rings. Severe weather will raise the very devil in trees, Jim especially when the sap is running down. When the sap freezes, cup shake follows."

Jerry ran along in this vein by the hour. You couldn't stop him if you had wanted to, and I'm sure I didn't want to. Why I was learning more from this wise old Irishman in half an hour than I could have learned in a year under ordinary conditions. He explained other diseases of timber—or, perhaps, I should designate them as defects. He told me about heart shake, upsets, doatiness, star shake, and foxy timber. I owe the greater part of my success to Jerry Casey, gang foreman. And I might digress right here long enough to say that Jerry's kindness in instructing me wasn't overlooked when I became my own boss. Right now Jerry is handling a big gang of lumberjacks in my big camp in Minnesota. He's getting what I meant should be the biggest salary a gang foreman ever got.

It was hard work saving my first thousand dollars. Every man who has made a success of himself will tell you that same thing. And there isn't a particle of fiction in the statement, either. Few young men of the present generation, getting fabulous salaries in comparison with those the boys got in the early days of the lumber game, save much. If it's hard for them to save, what must it have been for the tally boys and bookkeepers working for a pittance? It's not a hard proposition to solve.

In 1890 I had a long talk with my brother, also a lumberman on a small scale. He wasn't satisfied. He didn't want to work for other people all his life. Neither did I. He had a good working knowledge of the game; mine was a little more advanced, owing to my frequent visits to Jerry Casey's camp.

"It takes money," I told Patrick, my brother.

"Granted," he conceded. "We've got a thousand apiece. That's enough for a start. We're both known to the dealers and the trade. Our reputations are untarnished. We can raise what little additional money we need."

His argument prevailed. Truth to tell, it didn't take much of an argument to make me take the plunge. The men for whom we both worked were waxing rich in the lumber business. They, in days gone by, had to make a start.

We went out among our friends and raised the necessary capital. We opened headquarters in Chicago, but operated in Minnesota, Wisconsin, and Michigan. It was at the start that I enlisted the services of Jerry Casey. He was tickled to death to join us in the venture.

We enjoyed an exceptionally good business right from the beginning. It didn't take so much money to open with in those days, although competition was keener than it now is. You see, there was so much lumber thrown on the market. As the years went by and lumber became scarcer and scarcer, prices began soaring. It takes a preety good bunch of working capital to open a lumber business today.

When we threw open our doors lumber was, as I have said, sold entirely by cargo, shipped in by vessel to the wholesale lumber market in Franklin and South Water streets. Today that market is out of existence and practically all lumber is sold at the mills.

Dealers in those early days couldn't pay cash for their lumber, owing to a financial depression. Lumber sold at extremely low prices. We found it necessary to extend credit, and so took the notes of the lumbermen and discounted them at the different banks. The credit of the Chicago lumbermen was gilt-edged and banks were anxious to handle that class of security. We therefore had little trouble in discounting good paper.

We had frequent transactions where we sold from 5,000,000 to 7,000,000 feet of lumber a day. As business developed we opened yards in several important towns in Iowa. Sales are different now. The transactions themselves are different. Where we sold only by cargo in the '90s, we today sell entirely by carload lots, and the volume of business done by a firm at the present time isn't as big as it then was.

Sometimes we averaged from three to eight cargoes a day. That's quite a bunch of lumber when you sit down and figure it out. A cargo of lumber, for instance, would average about 175 carloads. There are approximately 350,000 feet of lumber in a cargo. In a carload lot there are something like 20,000 feet, Today, a lumberman does a good business if he disposes of twenty cars a day. There you have actual comparative figures of what the lumber business was and is.

For instance, a good day in our first year meant eight cargoes. Eight cargoes averaged 1,400 carloads. With 350,000 feet to the cargo we sold 2,800,000 feet of lumber. Today it is governed entirely by demand. If a dealer has a good trade, it makes a big demand on the manufacturer for his class of lumber.

In the early days hemlock wasn't saleable. You couldn't give it away. Nobody would think of buying it. But lumber has grown steadily scarcer and scarcer. Today hemlock furnishes at least half of the lumber that is used. Coast lumber wasn't in demand in the Middle West then. White pine from Michigan and Norway was used here almost exclusively. White pine was cheap, selling then for less than hemlock sells for now. And just to think that hemlock once was an absolute drug on the market, and if you wanted it removed from your tract you had to hire the work done. People today are too prone to blame a mythical lumber "trust" for the existing high prices of lumber.

While my brother and I were operating our company, I became interested in a big lumber manufacturing plant with some lumbermen in Wisconsin. This was, of course, a business separate and distinct from the brotherhood concern. Today, I have large lumber interests in Washington, am a director in one of Chicago's biggest banks, have large coal interests in several growing companies, and enjoy automobiling and golf. What more could a man wish for?

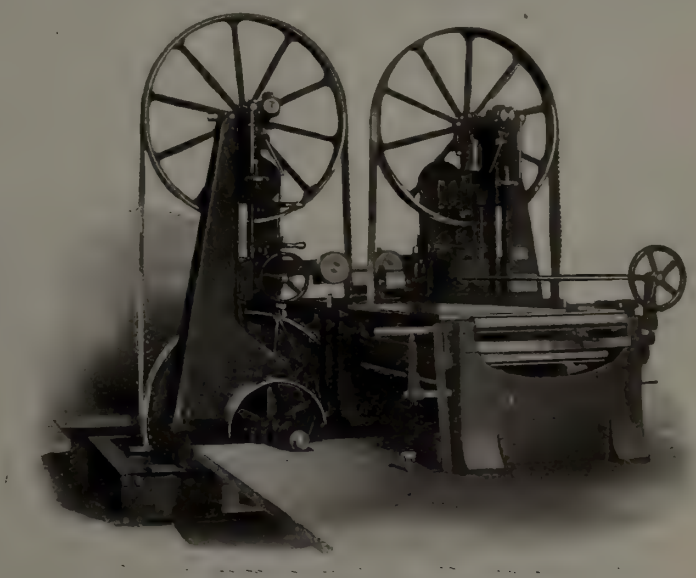
So much for youthful dreams. Dreams, I always have maintained, are negotiable if one but seeks to understand them. Application is but a mild form of dreaming, argue against the theory as you will. When you dream of becoming wealthy, your own boss, acquire the knowledge that is essential, before you can make your dreams become tangible.

Consult with the Jerry Caseys of the business you are engaged in. Every enterprise has its Jerry Casey. No business would be complete without him. When you become your own master, hire Jerry Casey. He has the knowledge which upbuilds, expands, captures the elusive dollar. When you've gone into the game and dug out its secrets, qualified to operate your own concern, let Jerry Casey boss the gang. It's a combination that never was known to fail.—The Disston Crucible.

The Band Saw as a Gang Edger

The accompanying illustration gives an idea of the wide diversity of uses to which band saws are now being put. The picture represents a gang edger, making use of band saws in place of circular saws, the lumber guide and one saw being movable, the remaining saw being stationary.

The machine is the product of the shops of Wm. B. Mershon & Company. The wheels are 54-in. in diameter; the saws carried, 6-in. in width. The lumber guide recedes 16-in. from the stationary saw, and the movable saw is adjustable throughout a range of 10-in. It is



Mershon Gang Edger Using Band Saws

thus possible to edge the narrowest strip or to handle the widest board or flitch that presents itself. The upper press rolls rise to a height of 12 inches or more, as the machine is designed for the handling of timbers, cants, and flitches, as well as plank. The movable saw is mounted on roller bearings and a simple power control permits the quick and accurate setting of the saw.

The machine is primarily designed for Pacific Coast service. The upper press roll being 11 inches in diameter, slabs of varying thickness can be sawn without adjustment of the press rolls. The adjustment of the press rolls and revolving saw guide is controlled from the front of the machine, as are also all of the other adjustments.

Many of the purposes to which this tool can be put in connection with sawmills and factories will suggest themselves to the practical mill man.

Additional information will be furnished from the Saginaw office.

WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (14 agate lines make one inch.) ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

Wanted–Lumber

Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 7-tf

Export Birch

Hardwood lumber wanted for export.
The Fletcher Pulp & Lumber Co., Ltd.,
20-21 Sherbrooke, Que.

Cedar Railway Ties

Will negotiate at once with producer only for purchase of Cedar Ties—2,000 at once and 7,000 Spring delivery. Also for 25-ft. and up Cedar Poles. Quote prices and particulars to Box 82, Canada Lumberman, Toronto. 20

Wanted To Buy—1000 Birch Logs

fresh, clean, straight and sound, 14-in. and up diameter at small end, 8 ft. to 16 ft. long. Delivery to commence as soon as possible. Terms: 75 per cent. cash when alongside track at railway station, balance when loaded on cars. Write P. O. Box No. 1595, Montreal, stating best price. t.f.

For Sale–Lumber

For Sale

St. Frances Valley, Arkansas, Band Sawed Red Gum, dry, choice stock, all grades. Inspection guaranteed under National Rules.
The Crittenden Lumber Company,
19-22 Crittenden, Arkansas, U.S.A.

2 Cars—8/4 Hard Maple No. 1 Com. and Bet.

2 cars 8/4 Soft Elm, No. 1 Com. and Better.
2 cars 4/4 Basswood, No. 1 Com. and Better.
Good lengths and widths. Dry stock.
20 BERT S. SIMPSON, Farmington, Mich.

Lumber For Sale

200 Pieces 1 x 15 and up 22 ft. Cypress.
375 Pieces 1 x 15 and up 24 ft. Cypress.
Clear for boat building, in stock at Montreal.
GEO. C. GOODFELLOW,
c Montreal, Que.

Do You Want to Buy or Sell?

If you wish to purchase or dispose of a particular stock of lumber or logs, a mill property or timber limit, or some second-hand machinery, the CANADA LUMBERMAN AND WOODWORKER will bring quick returns. Use our "Wanted and For Sale Department."

For Sale

1 car 2 in. Rock Elm, No. 2 and 3 Common.
1 car 2¾ in., 3 in. and 3½ in. Sound Rock Elm Hearts.
1 car 2½ in., 3 in. and 3½ in. Maple, No. 2 Common.
2 cars 2 in. Maple, No. 2 Common.
1 car 2 in. Maple, No. 3 Common.
1 car 1¼ in., 1½ in. Beech, No. 2 Common and Better.
2 cars 1½ in. Beech, No. 1 Com. and Bet.
3 cars 1½ in. Beech, No. 2 Com. and Bet.
30,000 Cedar Posts, 8 ft. long.
1,000 cord 4 ft. Hardwood Slabs.

This stock is dry and in good shipping condition.

WM. PEDWELL, Lumber Merchant,
15-t.f. Owen Sound, Ont.

For Sale–Machinery

Second Hand Machinery

150 to 175 h.p. Corliss Engine, 16-in. x 36-in., new two years ago.
75 to 100 h.p. Brown Automatic, 13-in. x 30-in., in excellent condition.
500 to 750 h.p. Buckeye; a good sawmill engine.
Boilers, 72-in. x 18-ft. and 54-in. x 14-ft.
THOMAS HOBBS,
Mail Building,
7-t.f. Toronto, Ont.

WOODWORKING MACHINERY FOR SALE: 1 40-in. MacGregor-Gourlay pedestal bandsaw; 1 32-in. disk sander with boring attachment; 1 No. 1 Ballantine dowel machine; 1 Goldie & McCulloch 2 spindle wood shaper; 2 26-in. revolving bed, double surface planers; 2 20-in. Ideal pony planers; 1 25 gallon advance glue heater with warming chambers for eight 2-quart pots; 2 10-in. four side moulders; 2 lightning cut-off saw tables. H. W. Petrie, Limited, Toronto, Ont.

For Sale

Saw mill, 8 ft. Allis Band, 6 ft. Allis Resaw, Clark Carriage, Prescott Set. 12 in. Steam Feed, Edger, Boilers, Engines, Dynamo. Complete mill ready to run.
14 Russell Log Cars, 60,000 capacity, 26-in. wheels, air brakes, 12-ft. bolsters.
Eight miles of 45-lb. Steel Relaying Rails, excellent condition. Wheel Press, Lathe, Planer, Crucible for Brass, Power Drill.
All of the above equipment is at Marlinton, W.Va.
Campbell Lumber Company,
20-23 Marlinton, W. Va., U.S.A.

Wanted–Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cent

Position wanted as inspector of lumber. Twenty-five years' experience. Best of references. Any kind of lumber. Have some capital. Will not work for small firm. Address J. Golden, Rutter, Ont. 20-22

Position wanted as Superintendent of woods or mill, or both. Understand the lumber business from stump to the building. Twenty years' experience. A1 references. Box 79, Canada Lumberman, Toronto. 20-21

Wanted–Employees

Advertisements under this heading two cents a word per insertion. Minimum charge 50 cents

WANTED a competent man to look after bush operations. Apply, F. W. Brennen & Company, Hamilton, Ont. 18 21

Wanted—Superintendent to supervise extensive pulpwood logging operation. Must have good general business and executive ability and practical experience, particularly in pulpwood. State confidentially full experience, present position, age, etc. Box 81, Canada Lumberman, Toronto. 20

Business Chances

Retail lumber business for sale, a going concern, prospects good, splendid chance for live man. Apply Geo. W. Mortimer, Niagara Falls, Ont. 18-20

Timber Limits For Sale

Can be quickly and profitably disposed of by advertising them on this page. This is where buyers of timber property look for opportunities to invest. If your "ad" is here the investor will see it. Canada Lumberman, Toronto, Ont. tf

Sale of Pulp Timber

Sealed tenders will be received by the Minister of Lands at Victoria, B.C., not later than noon on the 30th day of November, 1914, for the purchase of nine (9) pulp licenses, situated on the Coast of British Columbia, and estimated to contain the following:—

Hemlock	87,301,000 ft. B.M.
Balsam Fir	44,444,000 ft. B.M.
Spruce	43,244,000 ft. B.M.
Cedar	27,779,000 ft. B.M.
Douglas Fir	2,779,000 ft. B.M.
Total	205,547,000 ft. B.M.

his timber is within ten miles of salt water and is tributary to Vancouver.
Thirty (30) years will be allowed for the removal of the timber.
For full particulars and maps, address H. R. MacMillan, Chief Forester, Victoria, B.C. 17-20

Tenders for Ties, Posts, &c.

Sealed tenders addressed to the undersigned, and marked on the face of the envelope "Tenders for Ties and Posts, etc.," will be received until noon on **Thursday, the Twenty-second day of October next,** for 25,000 Cedar Railway Ties, No. 1 and No. 2 quality; 25,000 Cedar Posts of 8 feet long and 8 inches and under in diameter, and 500 Cords of Shingle Blocks, which the Indians of the unceded part of Manitoulin Island are to make from dead and fallen trees, during the ensuing winter and deliver at convenient points for shipment from the shores of Lake Huron.

Tenderers should state the prices they are prepared to pay for No. 1 and No. 2 Ties, and also for any that may be rejected from these descriptions; and for the Cedar Posts and Shingle Blocks, over and above the Crown Dues of 4 cents each for Ties, 2 cents for Posts and 75 cents per Cord of 128 cubic feet for Shingle Blocks, which shall be payable by the successful tenderer to the Department, under Sworn Returns, at the close of the Season, before shipment.

In the event of any dispute in regard to the classification of Ties, the decision of the local Indian Agent shall be final.

An accepted cheque on any Canadian Chartered Bank, for $500.00, made payable to the order of the Receiver General, should accompany each tender, which in the even of failure to carry out the undertaking shall be forfeited to the Department.

The highest or any tender will not necessarily be accepted, and cheques sent by unsuccessful tenderers will be returned.

The Department will not pay for the unauthorized publication of this advertisement, in any newspaper.

DUNCAN C. SCOTT,
Deputy Superintendent General of Indian Affairs.
Department of Indian Affairs,
—68562. Ottawa, 5th October, 1914.
20

Miscellaneous

Sales Agents Wanted

Large United States chain manufacturers now represented in Quebec Province want to secure sales agents in Ontario, Western Canada and Maritime Provinces for all kinds of logging chain, dredging chain, etc. Apply Box 80, Canada Lumberman, Toronto. 20-22

For Sale

Fifty good lumber horses from 1400 to 1700 pounds. Also harness, sleighs, water tanks, snow plows, blankets, chains, camp stoves and all camp supplies. Can all be seen at Berriedale, near Burks Falls, Ont.
Highland Lumber Company, Ltd.,
20-23 Berriedale, Ont.

Portable Mill and Complete Camp Outfit For Sale

50 H. P. engine and locomotive boiler mounted on skids, only used three months. 54-in. circular saw mill, three saw edger, cut-off saw, shingle mill, belts, shafting, pulleys, etc. Also camp outfit, blankets, sleighs, waggons, chains, etc. Will sell right. Terms arranged or will take lumber in part payment.
C. H. ROGERS,
Care Peterborough Canoe Company,
18-21 Peterborough, Ont.

For Sale

Rare bargain. Band mill located in best lumber and log center on Puget Sound. Rail and cargo shipping facilities. Excellent log pond. Ten and a half acres of land. Price one-fourth of appraised valuation. Must sell quick. Box 765, Canada Lumberman, Toronto, Ont. 8-t.f.

Saw Mill Machinery For Sale

Sawmill near Sellwood, Ontario, daily capacity 60,000 feet. All machinery including:—Log Ladder, Bullwheel, Steam Kicker, Log Loader, Stationary Steam Nigger, 42-in. Steel Carriage, 10-in. Steam Feed, 8 ft. Double Cutting Bandmill, Cast Iron Lumber Table, 5-Saw Slab Slasher, 48-in. Big Champion Edger, Trimmer, Transfers to Edger and Trimmer Tables, Sorting Tables, etc. Also, Independent Lathmill, Filing Room Outfit and Power Plant complete. This machinery is of the latest design, practically new and in excellent condition. Offers will be accepted for all or any part of this machinery, where it stands or F.O.B. cars Sellwood.
The Waterous Engine Works Company,
22-t.f. Brantford, Canada.

Progress in Wood Bending

Wood bending is almost exclusively a hardwood proposition because it involves the use of hardwood all along the route from wheel rims and shafts to chair braces, and includes all of the used articles in bent wood. In the progress of this industry many machines and appliances have been invented to facilitate the work and to reduce the percentage of breaking. Until recently most of the attention has been centred on appliances for clamping and holding and bending the wood, but now there is a new line of progress through the development of encloesd retorts for steaming or preparing wood to be bent. While this is the most recent phase of progress in wood bending, it is really in many respects the most important because it is not only a source of economy in the use of steam for bending, but perhaps contributes more than any other one thing to reducing breakage and to insuring a smooth even bend. For many generations the practice has been to boil wood in open vats or steam it in home-made wooden boxes. This has wasted much heat and has never accomplished the results it should. The new-

est idea in this line is an enclosed retort in which wood for bending can be steamed under pressure. It is a good idea, too, offering advantages enough in steam economy to pay for itself and it certainly improves the condition of wood to be bent. It is a good idea that should have been taken up with long ago and now that we have it it should receive the attention it merits from all those who have bending to do.—Hardwood Record.

Salting Saves Timber

It was found in replacing a recently burned railroad trestle along the north shore of Great Salt Lake, Utah, that the piles were sound after forty-three years of service. These were of local pine and fir, but were found to have been impregnated with lake salt. The result of this investigation started the United States forest service on its recent examinations of the use of salts as a preservative of timber. At another point on the lake some eighteen-inch piles, twenty-nine years old, have been similarly preserved with salt, which has penetrated to the centre. Timbers in the Southern Pacific railroad trestles across the lake, placed in 1902, appear as good as when driven, and have been preserved above the water line by salt spray dashed upon them. The first transcontinental telegraph line, which was built before the first railroad, extended west from Salt Lake City through the then prosperous mining camps of Eureka, Austin and others. When the railroad was built the telegraph line was transferred to this right-of-way, and the old poles were sawed off at the ground. A recent examination of the butts left in the ground in the salt desert near Fish Springs, Utah, showed that after the fifty years since the poles were cut off the butts were perfectly sound. It has been common practice in the Salt Lake valley to preserve poles by putting about seventy-five pounds of salt in the ground around the butts.

Sawdust Floor Compounds

In response to numerous inquiries regarding sawdust as a material for floor compounds, O. T. Swan, in charge of the United States forest service industrial investigations, recently wrote the following account of the material:

"The manufacture of floor-sweeping compounds requires no great outlay of capital nor extensive equipment. The primary requisites are a sufficiently large supply of raw material and a local market for the product. Though heretofore the sawdust of the so-called white woods, that is, white pine, basswood, cottonwood, etc., has been used for this purpose, I see no reason why hardwood sawdust could not be used in this country to advantage. To the sawdust are added sand, oil, and generally some cheap coloring matter. Sometimes the sand is omitted entirely, since it is likely to scratch or wear high-class floors too severely. On the other hand some floors are most satisfactorily cleaned and polished if treated with the compound containing the sand. The sand used is generally the white beach sand. The sawdust and sand are mixed with cheap lubricating oil and the coloring matter, such as vermillion, blueing or fuller's earth, is added. These ingredients are either mixed by hand or in a rotating cylinder for about half an hour until it is of a uniform color. The following is a representative formula used in the manufacture of floor-sweeping compound: Twelve parts sawdust, seven parts sand, one part oil.

"These preparations are usually sold in packages or cartons varying in weight from ten to one hundred pounds. The retail price of this commodity varies from $2.50 to $3.50 per 100 lbs., depending upon the grade and size of the package. This utilization of waste material, however, offers but limited opportunities for utilizing waste sawdust I am of the opinion that the prices now paid for floor-sweeping compounds are at a maximum, since more firms are entering the field and these prices are likely to decrease. In many localities, though, opportunities exist for building up the local trade in this commodity and the profitable utilization of a limited amount of sawdust."

Ash in Face Work

Ash is a wood that was prominent in cabinet work back in the middle ages, and it has been identified with it ever since, but at the present time it is not as prominent a feature as some of our native woods. One finds ash used in hardwood veneered doors, occasionally in furniture, and quite often in the making of pews and church furniture. There are many different kinds of ash, and there is quite a variety of figure obtainable. Generally when there is figure it is quite conspicuous, and is best suited where striking effects are desired.

Some of the ash doors compare in figure to some of the quartered oak, with heavy but not broad splash lines. In some of it the figure is subdued, and it may be used right along with oak and chestnut, and some of it is curly and presents a beautiful figure, somewhat suggestive of curly maple or birch, but more striking in the figure outline. When one can get a close-grained curly ash it makes a beautiful face veneer product for either cabinet work or mill work, and perhaps there would be more of it used if more attention was given to sorting out ash timber for the good veneer stock. A careful study of different species of ash and a little experimenting should make it practical for the veneer industry to get more out of this wood as a material for fine face veneer.—Veneers, Indianapolis.

To Make Brown Mahogany

How to make brown mahogany is a live question in a good many finishing rooms at the present time. This new shade has been rushed in so quickly and taken such a hold on popular favour that the demand for it has created quite a stir among some finishers who have found some difficulty in producing it.

Two stains are usually required to produce good results. The first is a solution of bichromate of potash. Dissolve thoroughly 6 oz. of bichromate of potash in 1½ gal. of water. Coat the wood with this and let it stand until quite dry, after which sand with fine paper to remove any fuzz. Then coat with a solution made up of ½ lb. English oak powder, 5 oz. brown mahogany powder, 2½ oz. jet black nigrosine, and 1½ gal. water.

This stain may not produce uniform colour, and some touching up may be necessary. For this touch-up work, prepare a stain as follows:—3 oz. bichromate of potash, ¼ oz. nigrosine, ¼ oz. brown mahogany powder, ⅛ oz. red mahogany powder, and 4 oz. chromic acid.

Allow the chemicals to dissolve thoroughly and then reduce small quantities of it with water to the shade required. Usually about equal parts water and stain will be required. This stain will, without any reducing, make a beautiful brown mahogany, but as a touch-up it has no superior. It will penetrate where other stains will not take hold.

The finisher who understands preparing stains may vary the shade by changing the proportion of the ingredients and may use it for matching samples that come to him from time to time.—R. K., in Veneers.

Cleans a building of Rats and Mice in short time, keeps it cleaned, for it is always ready for use. Made of galvanized iron, can't get out of order, lasts for years. Large number can be caught daily. Go to Catcher mornings, remove device inside, which only takes few seconds, take out dead rats and mice, replace device, it is ready for another catch. Small piece cheese is used, doing away with poisons. Catcher is 18 inches high, 10 inches diameter. When rats pass device they die, no marks left on them. Catcher is always clean. One of these Catchers set in a livery stable in Scranton, Pa., caught over 100 rats in a month. One sent prepaid to any place in Canada or United States upon receipt of $3. Catcher, 8 in. high, for mice only, prepaid $1. On account of shipping charges being prepaid, remittance is requested with order.

Review of Current Trade Conditions

Ontario

It is a matter of much difficulty to report anything in the way of a feature to the lumber trade in Ontario. "Featureless" in fact is the best word with which to describe the situation. Nevertheless, there is a fair volume of trade in progress, as is evidenced chiefly by the mact that many firms which a few weeks ago thought it would be wise to keep their travellers off the road are sending them out regularly and they are reporting a sufficient amount of business to make their trips worth while. The best trade in fact, to-day, is in the country districts the good prices realized by the farmers for their products are commencing to have a beneficial effect upon the lumber trade. A couple of very encouraging rumors were heard during the past week, namely, that the International Harvester Company at Hamilton is starting its plant again, and that the Massey-Harris plant at Brantford will be starting up in the near future. The report about the International Harvester Company was published definitely in the daily press and the Massey-Harris report, we understand upon good authority, is vouched for by a responsible member of the company. Imports of southern pine have fallen off greatly since the commencement of the war. At first it was feared that the closing of the export trade from the Southern States would result in large quantities of southern pine being thrown upon the Canadian markets. The manufacturers of southern pine, however, probably realized that the prices to be obtained in Canada for their stock during the past month or two would be so low that they could not ship to Canada without a much greater loss than they were prepared to accept.

Reports regarding the probable output of logs in Ontario during the coming winter continue to indicate a reduction variously estimated, and amounting according to some estimates, to 40 per cent. The reduction however, will not be so great as was predicted a month ago.

Eastern Canada

The lumber business at Montreal continues very quiet. Locally, the volume of trade is small, as the building season is nearing its end, and very little new work is appearing. A somewhat better feeling is reported, however, in connection with the outlook for next spring, as many lumbermen feel that, if the war is over by that time there will be a heavy demand for lumber and for other Canadian products. Reports from Quebec province mills indicate that there will probably be a considerable decrease in the output of logs during the present winter. Exports to Great Britain continue on a steady and fairly extensive scale. There is plenty of space available on vessels for this purpose. Total shipments for the season, however, will be smaller than last year.

The demand for spruce at Boston continues quiet and latest reports indicate slightly weaker prices, varying from 25c to 50c lower than a fortnight ago. Operators have found difficulty in securing financial assistance from the banks, but some improvement is reported in this direction and it is expected that this will help the situation in the near future. Dimension, 8 ins. and under is still being quoted at $23 as the bottom price, by a number of large concerns, but others are reported to be considering bids at $22.50. Other dimension prices at present are about as follows: 9 in., $23.50 to $25; 10 in., $24.50 to $25; 11 in. and 12 in., $25.50 to $26 . Random is reported to have eased off on account of over production and small demand. For 2/4 $21 has been taken, but some mills are insisting on $21.50. Some of the other sizes are quoted as follows: 2/3, $20 to $21; 2/5, $19 to $19.50; 2/6 and 2/7, $20 to $20.50; 2/12, $23.50 to $24. Car load lots of spruce covering boards 5 in. and up wide, 8 ft. and up long are being sold at $21. Some choice boards are bringing 50c. more. At New York the demand for spruce has dropped considerably and prices are irregular. A fair demand continues at Boston for 1⅝-in. lath and prices, when promptly delivered, are $4.10. The demand for 1½-in. is not quite so strong, but the price remains at $3.75 to $3.80. The demand for shingles is dull. White cedar extras are bringing from $3.40 to $3.50, clears $3.85 to $3.90 and second clears $2.60 to $2.75. Red cedars are not so active as the whites. Some of the above makes however are being held at $3.65.

United States

The disposition to go slow in connection with business in the United States is still noticeable in all parts of the country, as much in the lumber business as in any other line. Everyone feels convinced that a period of exceptional prosperity is certain somewhere in the future, but the present chaotic situation in Europe makes it impossible for anyone to estimate definitely when this change will come about. In the lumber business throughout the country, trade continues on a basis of present requirements, and speculative buying is absent. Retailers, and the large consuming factories are keeping their stocks as low as possible, so as to avoid carrying charges and to prevent loss on account of price fluctuation. Although there has been a great deal of curtailment on the part of manufacturers, the market is one which favors the buyer. There is a fair demand for building material to be used in factory contsruction and the upkeep of railroad equipment, and these two sources of demand seem to be the present backbone of the business. There is nothing new to report in connection with yellow pine, which is about steady, although there is a little talk of stronger prices in some markets. There has been an extensive curtailment in production among southwestern mills and this is helping the market to some extent. It is reported that the supply is not excessive and that stocks are showing a tendency to become broken. Some operators have cut the price of dimension by 50c, but other prices, as a rule, are holding steady. On the Pacific Coast, conditions continue unchanged. Many of the manufacturers closed their plants entirely. In western Washington one-half the mills have closed down and the others are running on reduced time. Stocks are still plentiful.

The demand for northern pine indicates that retailers are merely buying what they require for fall trade and are not laying in any stocks for probable future requirements. Shipments from the pine mills are only about half their normal size. Stocks in Minnesota and northwestern Wisconsin are plentiful and there is a large supply of dry lumber. There is considerable talk of reducing the output of logs during the present winter. Trade in the Saginaw Valley is slow, but prices are unchanged. Production of northern hemlock is extensive, much beyond the shipments. The demand is light, as building has dropped off considerably. Stocks of hemlock in eastern retail yards are smaller than usual. The hardwood trade continues in a rather unsettled condition. Some manufacturers think there is considerable improvement, but the volume of trade is still small. Extensive stocks are reported from most northern points. Plain and quartered oak are moving at a fair rate.

Great Britain

The volume of business in the lumber trade in Great Britain is large enough to bring a fair amount of satisfaction to lumbermen, when they consider the pessimistic expectations of only a few weeks ago. The actual trade in progress in London is more for Government requirements than for general purposes, but even so, it is a matter for satisfaction that deliveries at London docks during the week ending September 26th were considerably over 5,000 standards, and, for the first time for many weeks were in excess of the deliveries during the corresponding week of last year. A few weeks ago it was scarcely to be expected that so good a showing would be made. On the other hand it is certain that the replacing of stocks sold will be effected at a considerable increase in cost. Arrivals are reported to be coming pretty freely from Sweden and the White Sea. The Government demand at present is extensive, being largely for the erction of accommodation for recruits and prisoners. Price reports are erratic. Differences of so much as 10s. on identical stocks from Sweden are common. Apparently every man is a law unto himself so far as prices are concerned. On the whole however, it seems certain that future stocks will cost buyers much more than those they have already purchased. An encouraging evidence of the increasing confidence of the Government in the military situation is the fact that they have announced the impending early removal of the moratorium.

A decided improvement in the lumber trade is reported from Liverpool, in all cases except American hardwoods. For once, according to recent reports, spruce is a profitable investment and stocks are almost cleared out. Fresh arrivals meet with a strong demand, and higher prices still are expected. It is now considered probable that the output of logs during the coming winter wil be on a much smaller scale than usual. In Manchester, no important change in trade conditions is reported, although the general feeling is more confident among both buyers and sellers. Spruce continues firm. Railway companies have recently sent out enquiries for timber.

At Glasgow the timber trade is quiet. There is a steady call for packing case material and a number of transactions are reported for forward delivery at remarkably high prices when compared with the price for Canadian third and fourth yellow pine deals. The demand for pine has been poor for some time past, but as soon as trade activity is renewed, improvement in this respect is looked for. Recent shipments of Oregon and Virginia clear spruce have sold readily at advanced prices.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Mining Timber Trade May Become Permanent

Ottawa, October 8 (Special to the Canada Lumberman): If Canadians can supply Great Britain with pit props at the right price during the war they may find that the market will develop from a temporary to a permanent one. This intimation has been given to officials of the Trade and Commerce department by the members of the British Commission, appointed by the British Board of Trade to visit Canada and Newfoundland for the purpose of obtaining information pertaining to pit props.

This Commission recently spent part of one day in Ottawa. They came here for the specific purpose of seeing officials of the Trade and Commerce Department. The members are: Messrs. W. Windham, representing the Board of Trade; David Harrower and Norman Cumming, representing the Federated Timber Trades; Ridley Warham and Mr. Warrington, representing the Federated Collieries, and R. Sommers, Secretary.

They are not visiting Canada for the purpose of making contracts with any lumbermen, but solely to gather information regarding the quality and quantity of pit props available and to report to the Board of Trade, which is really the Department of Trade and Commerce of the British Government.

The members of the Commission say that the war has closed the Baltic Sea. It is from the forest areas in close proximity to the Baltic that Great Britain has hitherto drawn its supply of pit props. A new market must now be found, and British sentiment inclines to Canada. If Canada can guarantee the supply at a reasonable price while the war is on, a permanent business may result. The Commissioners point out that if lumbermen expect to handle these props at any fair margin of profit they must get them aboard ship without much expense, so that lumbermen between Ottawa and the Rocky Mountains could hardly expect to handle this product profitably on account of the long railway haul to the nearest seaboard shipping point.

In Gaspe, in the Saguenay district, in some parts of the Maritime Provinces, in Anticosti and Newfoundland, there is a vast quantity of timber that is just the thing for pit props and the limits have the advantage of being near the deep water trade route. British Columbia can also supply an illimitable quantity, but whether lumbermen there could get them over to England and put them on the market at a price that would meet competition is doubtful, owing to the long rail or water haul. Around Mobile, Alabama, there is plenty of this lumber and lumbermen there are expected to enter into competition if possible. The present price of pit props in Canada is a little under one cent per foot.

Since the Trade and Commerce Department advertised a few weeks ago that Great Britain was making urgent inquiries with regard to pit props, the Department has been literally deluged with letters of inquiry from all parts of Canada. These props must be from four to six feet long and over a million are urgently needed, chiefly fir, 4 feet to 7 feet long, 5 inches to 6 inches diameter tops; also straight poles, fir, spruce or larch, 20 to 30 feet long, 5 inches to 9 inches.

The Commissioners are now in Newfoundland. They may visit British Columbia before they return to England.

A large quantity of timber is used in Canada annually in the form of mining timbers. The only statistics available upon this subject are those which were published for 1910 by the Forestry Branch at Ottawa. It is shown that during that year round and sawn timbers for mining purposes were used in Canada to the extent of 52,848,000 linear feet of round timber, worth $523,339, and 22,305,000 board feet of sawn timber which cost $303,998. The varieties of woods used for round timbers and their quantities in linear feet were as follows:—Douglas fir, 28,268; spruce, 14,417; Jack pine, 4,455; balsam, 2,710; hemlock, 1,172; tamarack or larch, 893; pine, 720; birch, 366; poplar, 54; cedar, 23; maple, 1; beech, 1. The average cost per thousand linear feet was $9.90 and the individual average costs per thousand linear feet were as follows:—Douglas fir, $7.03; spruce, $12.46; Jack pine, $14.98; balsam, $9.78; hemlock, $13.39; tamarack or larch, $16.72; pine, $14.21; birch, $13.22; poplar, $15.70; cedar, $48.12; maple and beech, $11.00.

Referring to the preservation of mining timbers by chemical treatment the bulletin says that this has not yet been adopted by the mining industries of Canada. In many localities however, the distances required to transport mining timbers are becoming greater, poorer qualities of woods have to be used and the annual cost of the upkeep of mine timbering is becoming greater. In the United States much has been done in the treatment of mine timbers and it has been proven that a treatment of creosote or zinc chloride decreases the destruction due to decay, fire and insects. This increases the life of the timbers and decreases the annual cost of replacing mine timbers. Timber used in mines has, on the average, a shorter life than wood used for any other purpose. The surroundings in a mine are very conducive to rot, which, after a period of three to five years, causes the timber to break, crumble and become useless. Experiments have been conducted in United States mines with a row of untreated and treated mine props alternately placed. In one instance, after 18 months, every untreated stick was weakened by decay and broken, while the treated props were sound and useful. From various practical experiments of this kind with different species of wood important results have been obtained.

Douglas fir has an average of five years life when untreated. Treated, it lasts twelve years. Hemlock, lasting as a natural wood five years, doubles its term of life when treated, as does tamarack. Spruce is one of the species which decays quickest when untreated, lasting only three years. If treated it will last twelve years, thereby increasing its life 300 per cent. To sum up, wood preservation not only prolongs the life of durable timbers, thus decreasing their annual consumption, but also permits the substitution of inferior species, whose use considerably reduces the drain upon the more desirable kinds.

English Commissioners Consider Price Very High

The English commissioners who came to Canada to enquire into the possibility of securing mining timbers to replace the supply formerly secured from Europe, visited Montreal and Ottawa recently and announced their intention also of investigating the situation in Newfoundland. It is reported that they find they can secure an ample supply of mining timbers in Canada, but that the prices are considerably higher than those which have formerly been paid for Russian and Norwegian timbers. New Brunswick would be in a specially favorable situation in connection with this trade, on account of having an all-the-year-round port from which to ship stocks. Timber owners in New Brunswick state that they could supply the English demand for mining timbers without difficulty.

Mining Timber May be Exported to England

On account of the enquiries being made in Canada by the Commission sent out from England to look into the possibility of securing supplies of mining timber for Great Britain, to take the place of the supplies which formerly came from Europe, the Government of Quebec has passed an Order-in-Council, dated September 24th, exempting from the operation of article 13 of the Crown Lands regulations during the present season of navigation, all coal mine props shipped to England, on condition that, before shipment is made, a sworn statement must be furnished to the Department of Lands and Forests, giving the quantity of such timber shipped, the designation of the ship, the address of the consignee and an assurance that the timber is exclusively intended for the use of coal mines in England. A corresponding sworn statement must also be furnished by the consignee to Hon. Dr. P. Pelletier, the agent of the province of Quebec, at London, England. Article 13 of the regulations, which is thus partially suspended, is the article requiring that timber cut from Crown Lands in the province of Quebec must be turned into some manufactured product before being exported.

The English Import Trade Situation

In view of the importance of the timber situation in Great Britain, resulting out of the European war, a few remarks recently received from a correspondent in England, regarding the trade from Baltic and White Sea ports is of much importance to Canadians who export to the Old Country. The writer says:—"A shortage of the cheaper kinds of timber would have been a serious matter in this country, in view of the large quantities that are in requisition for the erection of temporary buildings and the carrying out of temporary works of varied character. Germany has declared Swedish deals, battens, boards, staves, and packing case boards to be non-contraband of war, provided that they are carried in neutral bottoms. Finland, which exports a vast amount of timber to England, is of course Russian, and although

Getting Acquainted

Is somewhat of a problem, at times, occasionally decidedly unpleasant You have probably found it so in both your buying and selling experience.

Why take a chance of having your pride, feelings or temper ruffled—stick close to your old friends, not quite the excitement maybe, but there's that peace of mind, that satisfaction in knowing that they can be depended upon.

There is no more dependable place on earth to get your Dressed Spruce, than Fenderson's—the value is in it—beautifully dressed—excellent grade—bone dry—you can bank on its being good when you place the order.

If you would help your business grow, handle better stock than the other fellow, your customers talk it over, if pleased, they build your business—if not pleased, they tear it down. Be jealously careful of your strongest advertising medium.

Remember

The most value for every dollar.

Each car chuck full of satisfaction.

Make that next car a Fenderson car.

You'll like it.

WE CARRY THE LARGEST AND BEST ASSORTMENT OF DRY SPRUCE IN CANADA

Russia quickly removed her prohibition against the exportation of timber, sufficient awkward facts remain to reduce the customary shipments. A great quantity of timber of the cheaper kinds comes also from Archangel or other White Sea ports, and the trouble there now (according to one who is an authority on the matter) is the difficulty of loading, on account of the shortage of labor arising from the calling up of conscripts. 'A friend of mine,' (he writes) 'sent a boat out at the commencement of the war, but it was returned empty because of the prohibition. He had £12,000 worth of Archangel deals and boards on order, which would have been very profitable to him during the coming winter, but he told me that he had since cancelled the order because of the difficulties of loading. If it could not be loaded before the White Sea had frozen (and the White Sea ports close earlier than any other timber exporting ports), he was afraid they might take fire before they could be loaded per 'first open water' in the spring. They have very frequent fires in Archangel on account of the tremendous quantities of timber stocked there, and the difficulty would be for him to prove that it was not his timber that got on fire. It is a very difficult thing to prove after a fire that it is or is not your timber that has been burnt, because there are thousands of other stocks of exactly the same size all piled together.' The same authority is of the opinion that if the price of Baltic and Archangel timber goes much higher during the war, American spruce and cheap pitch pine will have to take the place of deal."

Montreal Trade Expects Improvement

Montrea, October 8 (Special to the Canada Lumberman):—The approaching termination of the building season, with little new work coming forward, is responsible for further contraction in the lumber business. At this time of the year there is generally a falling off, but the European situation has accentuated the position. Several lumbermen are inclined to blame the banks for withholding assistance, thus preventing a certain amount of business which could have been carried on if the necessary cash had been forthcoming. In the case of several important buildings, operations were suspended at the first sight of trouble, and in other instances, plans for erecting structures were postponed.

There is however, an optimistic feeling as to next spring. Many believe that, providing the war is over, there will be an enormous demand for lumber and other Canadian commodities. The country is passing through a period of re-action which set in after a long upward trade movement, and next year should witness a swing of the pendulum in the right direction.

Reports reaching this city are to the effect that there will be a considerable reduction in the cut of logs made in the province of Quebec during the coming winter. There is abundance of labour, with rates on a reduced scale.

Shipments to Great Britain are proceeding as usual. There is now plenty of space for all requirements, and if this continues, a considerable amount of leeway in exports will be made up. The total shipments of the season will, however, show a substantial decrease as compared with last year. Next season, it is anticipated, will see a welcome revival in our oversea business. It is almost cetrain that, owing to war conditions, the supply from the Baltic will be on a small scale and that Canada will have to make up the deficiency, especially in spruce.

The ground wood market is quiet, but the mills which have stocks on hand, or whose production is not sold, are not inclined to do business at present quotations, believing that higher prices will prevail later on. Water conditions in Canada and the United States are very poor.

Bleached sulphite has reacted slightly from the recent high values. For unbleached, Scandinavian mills are asking very high prices or are refusing to quote for future delivery. Advices from Christiania, Norway, are to the effect that the Scandanivian pulp mills have been unable to secure supplies of wood from the Baltic.

For the month of September the ordinary building permits show a heavy decline, being only $501,514, as compared with $1,999,524 in the corresponding month last year. The city building department have however, included the work carried out by the Harbour Commissioners for the current year, bringing up the total for the month to $4,041,514. Without this there would be a decrease of $3,156,455 for the nine months, but taking the harbour building into the total, there is a gain for the year to date of $393,545, the totals for 1913 and 1914 respectively being $15,816,146 and $16,209,691.

New Brunswick Mills to Operate in Full

The United States Consul at St. John, N.B., in a recent report to his government says:—"Besides the natural trade depression caused by events in Europe and the resulting violent fluctuation in wholesale prices there followed another serious discouragement to commercial activities throughout this district by the report that the lumber concerns had decided to make no log cuts during the approaching logging season. Want and suffering would have been the result. It would have meant idleness during the succeeding 12 months for 12,000 to 15,000 men usually employed in the forests and at the mill yards and mills. Plans, however, have been made for the usual logging activities during the next winter and spring, and all the mills will run to full capacity during 1915. This also means a resumption of normal business at the stores.

St. John Transatlantic Shipments

Transatlantic shipments of wood goods from St. John, N.B., during September and during the nine months ending with September, for 1914 and 1913, are reported by W. Malcolm MacKay, St. John, as folows:—

Ash	520	1,000	680
Birch and Maple	38,640	47,680	50,800

Bradstreet's Report More Encouraging

The Canadian edition of Bradstreet's, in its issue for October 3rd, referring to Toronto reports, says that the demand at wholesale houses is slow, particularly from those retailers whose trade depends largely on the building and manufacturing branches of the industry, and money with them is scarce. On the other hand, from the agricultural centres, almost uniformly, come exceedingly satisfactory reports, and collections are generally pretty good. Builders' supplies are in dull demand. Money is scarce. Wholesale men however, maintain their feeling of confidence in the future. In the west, conditions are reported to be decidedly on the mend. Referring to reports from St. John, N.B., Bradstreet's says that business has now pretty well recovered from the general dislocation immediately after the declaration of war. The lumber trade is fairly active, Canadian spruce being in demand by Great Britain as the supplies from the Baltic are now unobtainable. The advance in freights, however, has offset this advantage to a certain extent. Industrial conditions in general are very near normal.

The Grand Rapids Veneer Works, Grand Rapids, Mich., have secured a contract with J. R. Eaton & Sons to install a battery of eight fireproof box kilns of their latest type. The contract was given after an exhaustive time test made by Mr. Eaton, during which he covered the general field in Canada, and also after extensive personal enquiries in the United States.

CAMP SUPPLIES

We have a splendid stock of Prunes, Dried Peaches, Apricots, Apples, Raisins, Currants. In fact everything in the eating line suitable for the Camp, and we would appreciate a line from you asking for our prices which we can assure you are as low as the present condition of supplies will warrant, and very much lower than we could offer if we were compelled to go into the market and buy today.

Fancy Woods and Veneers

THEIR ORIGIN, VALUE AND USE—COMMENT AND VIEWS ON AN IMPORTANT BRANCH OF THE TRADE.

The Glue Side of Veneering

When we consider that without glue there would never have been any veneering industry we can realize something of the importance of glue in the business of veneering. The term glue is meant to cover all of the cementing substances used for fastening wood together. Though glues were discovered and used in the early days of civilization and have always been a factor in joinery, yet not much importance was given this phase of the business until the built-up ply wood came into use. It was this which led to consideration and closer study of the glue side of the business.

In the earlier days of the work glue was looked upon as a mysterious foreign substance that the woodworker was not supposed to know much about except that when heated and melted and applied to wood it would hold it together. When the veneer industry had developed to the point of using enormous quantities, however, the cost of this item was such a factor that it led to a search for means of reducing it. The matter of quality came in about that time. It was found that sometimes glue failed to perform its duty and work went bad. Sometimes this was because of unwise efforts to save cost either through the use of too small a quantity or from buying an inferior glue or making up an improper mixture. Anyway, investigation of the subject soon showed two factors to consider—the factor of cost, and the factor of safety or quality.

Up to this stage of the development no one but the glue people seem to have made a careful analytical study of glue. It is doubtful if even the glue people had concentrated enough attention on the matter of careful and thorough analysis. However that may be, the veneer industry eventually created quite a stir in the matter of gluing. Important users made careful studies of the glue used. This developed appliances as well as formulas for testing and grading and heating glues.

One of the great discoveries of this period was that many people had been injuring the quality of their glue by overheating it. Experiments showed that glue could be cooked and damaged even when enclosed in a water-jacketed vessel. The experimenters soon sounded a warning against excessive temperature in preparing glue. The first ones brought it down somewhat from the original cooking temperature, and by and by these were scaled down still lower until finally there was a pretty general agreement among authorities on the subject that the temperature in the preparation of glue should be kept somewhere between 140 and 150 degrees F.

It was discovered, also, that freshness was a quality; that glue kept heated and mixed with water deteriorates rapidly in value, consequently to get the right results everything should be cleaned up at the end of the day and only fresh stock used in glue work.

During all this time there was a more or less persistent casting about for other substances than the standard glue product to use in cementing wood together. The first outcome was the use of casein, which was taken up extenisvely but retired after a season or two—just why is not clear. Some say it was worth more for other purposes, others that it was uncertain. Sometimes it would give excellent results but at other times it would fail, and this uncertainty caused it to lose favor.

The casein product closely resembled in appearance and was used in practically the same manner as the regular glue, but with the passing of casein there came other products with their own peculiar methods of preparation and application, differing in some instances from that of standard glue. The most important of these, the one receiving pretty wide attention at the present time, is a product known as a vegetable glue. One of the noticeable differences between this and standard glue and its use is in that the vegetable glue can be and is commonly used cold.

This vegetable glue product has become important in veneering and is today probably the most formidable competitor of the old standard glue. Among the other glues are silicate of soda and some special formulas of secret compositions that seem to bear relation to what is known as the Russian idea in veneer work.

Silicate of soda or water glass is dissolved by heat, and when reduced to liquid may be kept for some time and applied cold. It is used as a principal base into which other ingredients enter in varying proportions to make up the glue mixture. There are some branches of the built-up lumber industry into which this product enters quite extensively—that of making two and three ply stock for packing boxes and some plain panel work. It does not seem to have found favor in the furniture trade or in fine cabinet work. Just why, it is a little difficult to understand. Those who have made a study of it simply pass the subject by with saying that it serves very well for certain purposes in making cheap built-up lumber and is a comparatively inexpesive glue, but does not find favor in the finer grades of work.

What is known as the Russian method was explained at a recent meeting of veneer and panel manufacturers, but the explanation had to do more with the handling and the time of using the veneer and the qualities of the built-up product than with the nature of the composition constituting the glue. It seems that the practice in Russia is to take veneer when it is fresh and green and glue it up under pressure and heat, where it sets in a very short time, and dry it out afterward or accomplish part of the drying in the process of gluing. It seems that the glue mixture enters into the wood, replacing the sap substances or the moisture at least, and becomes in effect a waterproofing substance as well as a cement to hold the wood together. There is lacking in connection with our knowledge or this, two important things. One of these is the composition of the glue itself. We have a number of secret formulas in use in this country which suggest the Russian method, and claim waterproofing qualities, but we are lacking in definite knowledge as to the composition and nature of the material.

The other thing on which we lack information is, what is done about shrinkage when green veneer is crossed and glued up? Samples of panels claimed to have been put up by the Russian process have been examined by the writer. These seem to hold together all right and they closely resemble samples of waterproof secret process glue work that has been done in this country. In each case, however, while the glue held and the product seemed to resist moisture, there was checking of the face, likely due to shrinkage, and from all this the tentative deduction is made that it, like the silicate of soda proposition, may be adaptable to certain work and for the purpose of making up box panels and common panels of various kinds, but not exactly the thing for fine veneering.

Here is a point where the vegetable glue differs materially from some of the others. The vegetable glue is entering into actual competition with standard glue for fine veneering and cabinet work generally. In other words, it seems adaptable to all manner of uses, whereas some of the others are adaptable to certain uses only.

From the foregoing it will be seen that the glue side of the veneering business has been receiving a fair share of attention. The relative merits and the prospective uses of the various offerings will adjust and take care of themselves in the course of events. They deserve continued attention, too, for glue is not only a big item in the use of veneering, but is an essential factor to the life of the industry itself.

Glue plays an important part in joinery of all kinds, and in the cabinet work of today there is much more of the joinery held together by glue than is held by nails, screws, pins or other mechanical devices. We might devise other ways of holding frame work together in cabinet making, but when it comes to veneering the real life of the industry depends on glue. Therefore, the glue side of veneering is a vital one and it is deserving of close and continued study.—C. R. O. in Hardwood Record.

Birch Interiors

An attractive publication entitled "Birch Interiors," has just been published by the Rotary Birch Club, Wausau, Wis., and the Northern Hemlock & Hardwood Manufacturers' Association, Wausau. This book, which, from the standpoint of typography and illustration is exceedingly handsome, contains much valuable information that will be helpful to architects and builders. It is especially replete with unique and attractive suggestions to the home builder. The numerous illustrations include pictures of interiors of pretty homes in which birch trim has been used. These pictures show homes ranging from those costing many thousands of dollars to the more modest but cozy bungalows. Illustrations are also given showing the kind of houses in which birch can be used to advantage in exterior work. The several subjects into which the book is divided are The Wood, Halls and Stairways, Living Rooms, Dining Rooms, Varied Uses of Birch, Birch Doors, Stains, Birch Furniture, Birch Finished Residences, and Where to Get Birch. The work of compiling this handsome booklet was chiefly done by R. S. Kellogg, secretary of the Northern Hemlock & Hardwood Manufacturers' Association. A copy will be mailed to any one desiring who applies to either of the organizations mentioned

British Columbia's Timber Resources

A report has been issued by the Dominion Government, of the proceedings of the select standing committee on forests, waterways and water powers, during the third session of the present parliament. The committee, which was appointed early in the present year, held two sittings. At the first sitting, an interesting address was delivered by Sir Richard McBride, premier of British Columbia, who spoke of the natural resources of the western provinces, and of the work of the government in conserving them. At the second sitting, evidence was given by Mr. H. R. MacMillan, chief forester for the province of British Columbia, who gave a description of the forest resources of the province and the work of the forestry branch in connection therewith. Mr. MacMillan's remarks were of a practical and definite nature, giving the committee an excellent idea of the work done. Most of the information which he gave has already been published in the Canada Lumberman.

Speaking of the timber area of the province, Mr. MacMillan said. "There are south of the 65th parallel, roughly, about 250,000,000 acres of land, at least 80 per cent. of this land is timbered; probably only 15 or 20 per cent. of it is covered with timber which is now accessible and available to the present-day lumbermen. But there is no doubt but that there are at least some 350,000,000,000 feet of merchantable timber in the southern portion of the province, not including any territory more than 150 miles north of the Grand Trunk Pacific Railway. This merchantable timber will, at the present rate of cutting, last probably 100 to 150 years, even allowing for quite a loss by forest fires. In addition to the timber land which grows merchantable timber, there are immense areas, included, of course, in the 250,000,000 acres I mentioned, which have been burned over during the last fifty or sixty years, and on which there is at present absolutely no merchantable timber, but it is all growing up with young timber, which, if protected from fire will, of course, be mature before there is any call upon it for industrial purposes."

After outlining the various classes of timber found in the province Mr. MacMillan said:—"I have no doubt but that the timber possibilities of British Columbia; by the time the population exists in Western Canada to use the timber, the capital has been brought into the country to manufacture it, and the transportation facilities provided to handle it; will be able to sustain indefinitely an annual cut of five billion feet. At present the annual cut for all purposes is about two billion feet; about two-thirds is manufactured into lumber, and the remainder into other products. An estimate was made last year of the value to the province of the timber industry. On a very conservative basis, even at the low prices which have been realized during the last year or two, there has been brought into the province at least $30,000,000 from the manufacture and sale of timber products."

Newfoundland's Lumber and Pulpwood Output in 1913

There were 21,000 more logs cut in Newfoundland during 1913 than in the previous year, the total number being 1,504,000, from which it is estimated 46,000,000 feet of lumber (principally spruce) were produced, an increase of about 5,000,000 feet over 1912. The lumber turned out was valued at $600,000 and consisted of 24,500,000 feet of boards, 7,225,000 feet of scantling, 1,241,000 feet of heading, 673,000 feet of box material, 106,000 palings, 6,700,000 spruce laths, and 9,100,000 spruce shingles. In addition to the lumber, 135,000 cords of pulp wood were cut, an increase of 11,000 cords over 1912. The men employed in the forests and sawmills numbered 3,500. There were 15 lumber mills working in conjunction with the fisheries. For the fiscal year 1912-13 there were shipped 413,000 feet of lumber valued at $6,306, as against 504,000 feet, valued at $8,215, in 1912. Canada took 272,000 feet and St. Pierre 141,000 feet. The total number of laths exported was 1,365,000. The steady decrease in lumber exports from year to year is due to an increased consumption of pulp wood, and to local requirements warranted by a steady industrial development other than that of the fisheries. The paper produced from this pulp wood was of both news and wrapping grades of good quality, and it found a ready market. The output for the fiscal year 1912-13 amounted to 44,424 tons, valued at $1,990,229, as compared with 26,821 tons, valued at $1,201,656, for 1911-12. All of the paper excepting a small quantity used locally was exported to England. The pressed ground-wood pulp output for the same period amounted to 51,487 tons, valued at $436,352, as against 42,102 tons, valued at $361,149, for 1912. England took 35,619 tons and the United States 6,483 tons.

Mr. James A. Conners, of James W. Sewall's office, Old Town, Maine, has taken a crew of men into northern Aroostook County, Maine, on a detailed township survey and timber estimate. Mr. O. W. Madden of the same office is cutting about a million feet of lumber for Mr. Sewall on the Passadumkeag River watershed.

Wool

While there has been a steady advance in the price of Raw Wool for the past few months and a majority of the lines used by the Lumbermen have advanced from 10 per cent. to 15 per cent.

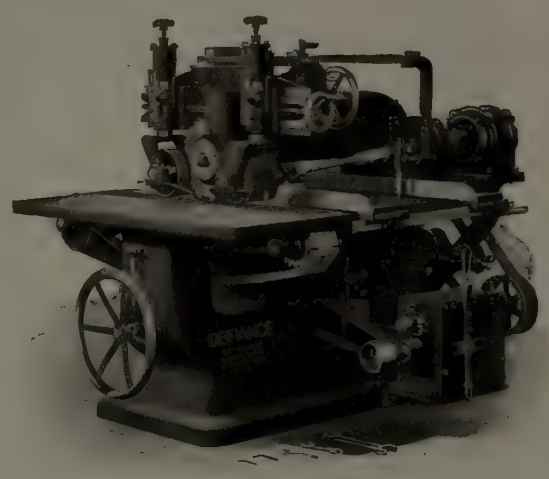
An Over-Cut Glue Jointing Saw

This machine is a new departure in a straight edger and rip saw and is attracting wide-spread attention both in America and Europe. It will accurately edge or rip hard or soft wood up to 4″ thick by 32″ wide at six changes of feed, from 35 to 155 feet per minute. It is the only saw on the market on which accurate glue jointing surfaces can be procured.

The feed chain is of the rack and pinion type with a groove for the saw. The feed changesare controlled byhammered steel gears and can be shifted instantly.



No. 121 Patent Chain Feed Straight Edger and Rip Saw.

EDGINGS

Ontario

The lumber business carried on at Mount Brydges, Ont., by Mr. Monger has been sold to Wm. Longfield, of Windsor, Ont.

The Hawkesbury Board and Paper Mills, Hawkesbury, Ont., will shortly commence work upon the erection of a paper and board mill. Mr .T. E. Helmick, 40 Herald Building, Montreal, is one of those interested in the company.

The timber limits at Ha Ha Bay on the Saguenay River, formerly owned by the Battle Island Pulp Company, of Fulton, N.Y., have been purchased by the Ontario Paper Company, of Thorold, Ont., the figure being around three hundred thousand dollars. It is understood that twenty-seven thousand acres are freehold and one hundred thousand acres are leasehold land.

The Parry Sound Barrel and Manufacturing Company, Limited, of Parry Sound, Ont., which was recently incorporated with capital stock of $500,000, will manufacture boxes, cases and crates of all kinds and wooden ware fibre products such as toothpicks, clothes pins, etc. The incorporators are Charles L. Sanford, Wm. A. Leyda, and John P. McKelvie, of Toronto, John A. Johnson and T. C. Algar, all of Parry Sound.

The R. Laidlaw Lumber Company, Sarnia, Ont., have purchased the business long conducted at Sarnia, by Mr. E. A. LeBel, taking over his entire stock of lumber and plant. They have also installed a complete baling equipment for taking care of surplus shavings. These will be baled under heavy steam pressure, and as they separate their sawdust from the shavings, their baled shavings will be of choice quality. They intend to sell them locally and in carload lots. The company have also under construction an addition to their shed capacity, 130 feet by 20 feet, and an addition to the manufacturing portion of their plant.

Eastern Canada

The sash and door factory of Mr. I. Allard, Des Erables Street, Montreal, has been very badly damaged by fire.

A report from Conception, P.Q., states that the Besselle lumber mill has been destroyed by fire, and that a large quantity of lumber in the yards has been burned.

The Cascapedia Booming Company has been incorporated in the province of Quebec with head office at New Richmond, and authorized capital of $50,000. Those mentioned in the letters patent are Angus McLean, Montreal; S. B. Bond, Chaleurs, P.Q.; R. L. Montgomery and M. H. Montgomery, New Richmond, P.Q.; and Hugh McLean, Buffalo, N.Y. The company is given power to construct works for improving the Grand Cascapedia River for log driving, holding and sorting purposes.

The shareholders of the Laurentide Company, Limited, have authorized an issue of four million dollars in thirty-year bonds. The last issue of capital stock by this company was made for the purpose of providing a portion of the funds necessary for the construction of the new power plant and increased paper plant. The present issue is for the purpose of providing the remainder of the money necessary to complete this work. This issue will provide also for the redemption, at maturity, of the existing issue and will leave a considerable sum in the treasury for possible further requirements. The new issue will be disposed of only as and when required for the above purposes.

On October 6 the Montreal Trust Company, Limited, sold by public auction, at the Court House of La Malbaie, P.Q., the property of the East Canada Power and Pulp Company, in liquidation. There was a large attendance, American interests being strongly represented. The timber limits, of approximately 392 square miles, on the Riviere de la Malbaie, and lands on the east side of the harbour at Murray Bay formerly belonging to the Laferriere Lumber Company, were sold for $108,000 to Mr. A. E. Bradbury, of Ottawa, who was acting for other interests. Mr. Bradbury also purchased the pulp mill, plant, and certain land rights, for $34,000. A quantity of pulp wood for sale was withdrawn. The sale of the pulp mill and machinery was made under reserve of rights of ownership claimed by two companies who supplied certain machinery.

The Upper Fraser River Lumber Company, which has head offices in Montreal, has been reorganized. The capital is $2,500,000 6 per cent. non-cumulative participating shares, $750,000 common shares and $750,000 first mortgage 6 per cent. 25-year bonds. The bondholders have agreed to exchange their bonds at par for an equal amount of preferred shares, plus an amount representing all arrears of interest. Holders of existing common stock are entitled to an allotment of fully-paid ordinary shares equal to 10 per cent. of their holdings, the balance being held in trust. The company has completed the erection of the frame of its permanent mill at Dome Creek, B.C., and has built stables, bunkhouses, etc. Everything is ready for the installation of the machinery, and 100,000 feet of logs are on the skids ready for the saw. A spur will give connection with the Grand Trunk Pacific Railway.

Western Canada

Lang & Roddis, who have been operating a small sawmill at South Sumas, on the line of the B. C. Electric Railway, contemplate a larger mill on the same site.

The Orford Bay Timber & Logging Company, Limited, has been incorporated in British Columbia with authorized capital of $175,000, and head office at Vancouver.

The Victoria Furniture Company, Limited, Victoria, B.C., has been incorporated with authorized capital of $10,000 with power to manufacture and deal in furniture of all kinds.

The J. D. McArthur Lumber Company's sawmill at Lac du Bonnet, Man., was recently destroyed by fire, the loss amounting to $125,000. The company carried insurance to the amount of $50,000.

The North Alberta Lumber Company, Edmonton, Alta., is considering the erection of a sawmill at Edmonton. It is reported that the plant will be operated by a 1,000 h.p. generator which will also furnish the electric light.

Limits owned by the Kootenay Cedar Company on the Lardo and Duncan Rivers, at the head of Kootenay Lake, are to be taken over by the Riverside Lumber Company of Calgary, which has been operating in the Crow's Nest Pass district, and which has retail yards at prairie points.

Sealed tenders are being received by the Minister of Lands of British Columbia, up to noon on October 26th for the purchase of license X243, to cut 2,500,000 feet of Douglas fir and cedar, on lot 2980 Upper Stave River, New Westminster, B.C. Two years will be allowed for the removal of the timber.

The Mankin Lumber and Coal Company, whose headquarters are at Fayetteville, West Virginia, have secured extra-provincial registration in the province of British Columbia with provincial headquarters at Nelson, B.C., where James O'Shea is the company's solicitor. The powers of the company include manufacturing, buying and selling lumber and all kinds of forest products.

The Washington-British Columbia Timber Company, which has head offices in Walla Walla, Wash., own large limits on Vancouver Island, and if conditions are not too untoward will erect a mill next year. The company, which has registered in British Columbia, has the following officers: President, E. Blackburn; vice-president, H. A. Gardner, both of Walla Walla; secretary, George H. Foster, Baker, Oregon.

Sealed tenders are being received by the Minister of Lands of British Columbia, up to noon of November 23rd, for the purchase of license X52 to cut 6,000,000 feet of merchantable timber on an area situated north of lot 904, Loughborough Inlet, range one, Coast district. Two years will be allowed for the removal of the timber. Further particulars may be secured from the Chief Forester, Victoria, B.C.

The Wasser-Mowat Shingle Company, Edmonds, Wash., who recently acquired cedar limits in British Columbia from the C. W. Scarff Lumber Company of Seattle, Wash., report that until business picks up they do not intend to complete the shingle mill at Powell Lake, B.C. They have 14,000 acres of timber at Powell Lake and will put in six machines to start with. Within a year they intend to move two of their small mills from Washington over to Powell Lake and make the plant a twelve-machine mill, which will give them a capacity of 300,000 per day of ten hours. They are installing electric motors for power. They do not expect to put in a dry kiln as all of their product will go through the Panama Canal to the eastern States and provinces. Their buildings have been erected and they have bought their machinery and stored it at Vancouver and intend to complete the mill within sixty days from the time they find that market conditions warrant it. They state that they do not expect much improvement in the shingle business until after the war is settled.

Trade Enquiries

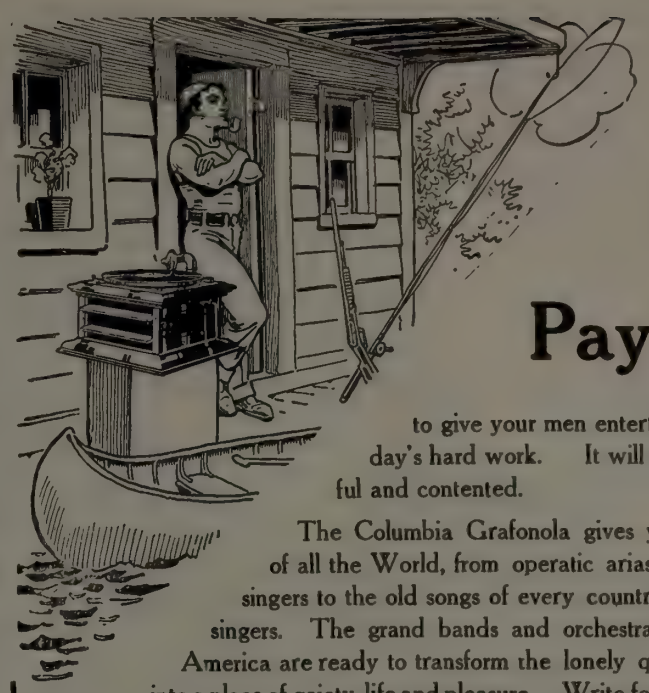
The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing to the Department of Trade and Commerce and stating the number of the enquiry.

981. **Canadian lumber manufacturers.**—A London firm desires to be placed in touch with Canadian lumber manufacturers from whom they could purchase supplies of oak and other wood for brush manufacturing purposes.

983. **Wood pulp.**—A correspondent at Genoa, stated to be in immediate touch with paper manufacturers in Italy, reports a market there for Canadian wood pulp in view of the suspension of German supplies and would like to hear from exporters in the Dominion.

985. **Pit props.**—A coal mining company desires to arrange for shipments to Hull of pit props of fir, or other suitable wood. Quotations desired f.o.b. Montreal or Halifax for large quantities of props ranging in size from 3 to 7 feet long and from 4 to 6 inches diameter (at the top); also for 100,000 bank bars or splits 5 feet by 6 inches by 3 inches; also for 50,000 sleepers 3 feet by 6 inches by 3 inches and 2,000 sleepers 6 feet by 6 inches by 3 inches.

1004. **Wood turnery, pulp-board, etc.**—A London correspondent is open to communicate with Canadian manufacturers of domestic wood turnery, pulp-board or "leather-board," and other lines made in the Dominion, willing to consider proposals for extending their export trade through London merchant houses.



It Will Pay You

to give your men entertainment after the day's hard work. It will keep them cheerful and contented.

The Columbia Grafonola gives you all the music of all the World, from operatic arias by the foremost singers to the old songs of every country sung by native singers. The grand bands and orchestras of Europe and America are ready to transform the lonely quiet of the forest into a place of gaiety, life and pleasure. Write for descriptive catalogue of Columbia Graphophones and Grafonolas, selling at $17.50, $32.50, $65.00 and on up to $650.00. One for every taste and every purse.

"The Missing Link"

DROP FORGED
FROM HIGH GRADE STEEL

Made in sizes 1/4" to 1 5/8"

These links are the only ones which compare with the same size chain and are fully equal to it in strength. The great advantage of this is self-evident. Their use means a saving in expense and time. No other link approaches them. We also manufacture a large line of CONTRACTORS' SUPPLIES and MOTOR BOAT FITTINGS.

If a dealer, ask for our 450 page catalogue.

Weatherbeaten Over Ten Years

The story the other fellow tells about Neptune Waterproof Leather Belting is even stronger than ours. Just read the following voluntary letter:—

Madera, California, June 7, 1911.

"For the past seven years we have had in continuous use one of your 12-in. double "Neptune" Belts on our hog. This belt has been, and is still running in the open, and is exposed to all rain, fog, hot sun, and any and all kinds of weather, and is still a good belt, and in good condition."

Madera Sugar Pine Company,
A. P. Froom, Foreman.

WESTERN UNION TELEGRAM
May Sixteenth, 1914.

"Madera Sugar Pine twelve inch Neptune still running and giving good service."

There you have it—unmistakable proof of the absolute waterproof quality of Neptune Leather Belting. Make your next order a Neptune Order—send it in to any of our Branches—large stock of belting at each one; prompt shipment guaranteed.

Machine Knives

Planer, Veneer, Moulding, Cooperage, Paper Mill, etc.

Your Machine Knife Account is Where Money is Being Wasted.

Your knives operate fairly well, you have no decided kicks from your foreman so you don't realize that you are losing money every day, BUT YOU ARE. Our knives, costing no more, will wear 10 to 50 per cent. longer so if you are not using WHITE knives, you are losing 10 to 50 per cent.

WE ARE PREPARED TO PROVE IT

It isn't necessary to place a big order to find out for yourselves—send us an order for one or two set or a knife or two. You surely are interested in saving money.

Our edge tool catalogue is also at your disposal if you wish it — Axes, Adze, Chisels, Knives, etc.

UNION STOCK YARDS HORSE DEP'T

Your Lumber Horse Needs

A talk with the Lumberman of Canada on the modern and sanitary system we have installed to serve your requirements.

UNION STOCK YARDS HORSE DEP'T

FINANCIAL RESPONSIBILITY.—We are in a position this season to supply the lumber trade with the finest heavy horses suitable for camp work. We have shippers in the very best heavy horse district in Western Ontario, who make personal selections and take only the best. Every horse we ship out is guaranteed to be just as represented by us as to age, soundness, weight and quality—there is more than two million dollars behind this guarantee. These horses can be delivered off the incoming cars and transhipped in an hour from our yards.

SERVICE.—Our barn accommodation is up-to-date in every particular and has stabling accommodation for 500 horses. A track is also maintained for exercising horses while on the company's premises.

SANITATION.—Believing that prevention is better than cure, and to give the very best service possible we have this year employed a veterinary surgeon under salary. A daily and most thorough inspection is made by him of the entire barns and in this way the slightest indisposition is noted and the animal suffering immediately removed to the hospital on the grounds. "Safety first" is our motto in this respect.

TRANSPORTATION.—Our premises being directly on the lines of the C. P. R., G. T. R. and C. N. R., our rail facilities are such that we are in a position to ship on an hour's notice, and loading and unloading chutes are located right at the barn doors.

UNION STOCK YARDS HORSE DEP'T

We gladly invite inspection of our entire system. Come and let us show you the most modern and sanitary system in Canada.

Union Stock Yards of Toronto, Ltd.

SAMUEL C. ROGERS & CO. 18 LOCK ST. BUFFALO, N.Y.

Dixon's Graphite Wire Rope Grease

Two agencies destroy wire rope:—wear between the strands themselves and between the rope and the sheave or drum; and corrosion due to weather, moisture, gases, etc. The fine flake graphite in Dixon's Wire Rope Grease forms a protective coating over the metal which minimizes wear by giving complete and lasting lubrication, and prevents corrosion by covering the surface with pure graphite. Further explanation in "Wire Rope Lubrication," No. 238.

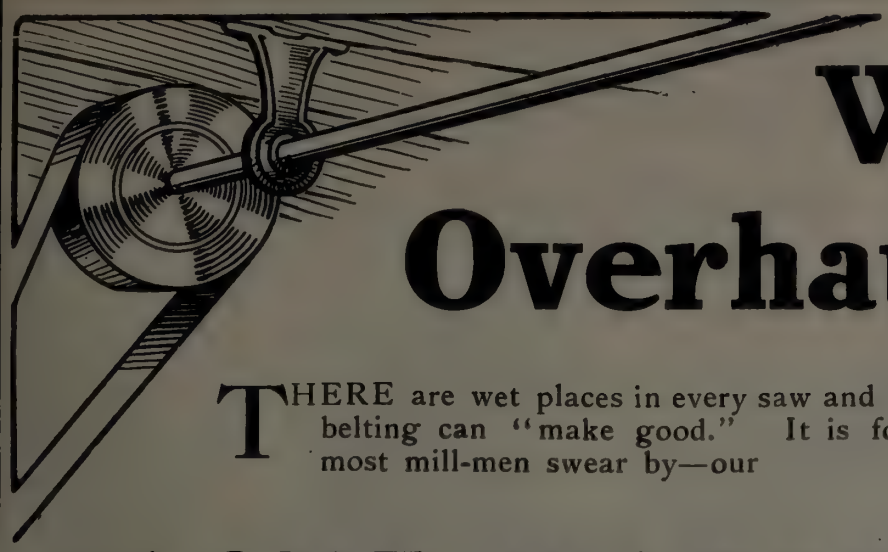
"Wilson Bros." Hardwood Flooring

is the Flooring that is manufactured expressly to supply the demand for the best. It is made by modern machinery from carefully selected stock, and every precaution is taken throughout our entire system to make it fulfill the requirements in every particular. Write us for prices.

Wilson Bros., Limited - Collingwood, Ont.



When You Overhaul Your Mill

THERE are wet places in every saw and pulp mill where nothing but the highest class belting can "make good." It is for these wet places that we recommend what most mill-men swear by—our

"ACME WATERPROOF" BELT

This belt is especially made for a rough and trying service. It has less stretch than any other belt by 15 to 25 per cent.

When you are overhauling try a Goodhue "Acme Waterproof" belt. Other Goodhue belts are "Extra" and "Standard."

Prices and Particulars on Request

J. L. Goodhue & Company, Limited

Danville - Quebec

Run Easiest
Cut Fastest
Last Longest

Labor Saved is Time Saved

When to this is added increased durability we have the economy that naturally results from larger output and long service.

These are some of the strong points in favor of

Disston Cross-Cut Saws

They are ground to a true taper all the way from cutting edge to an extra thin back. Being ground on lines that conform exactly to the breast of the saw, the blade is absolutely uniform in thickness throughout the entire length of the cutting edge.

This special method of grinding gives the maximum amount of clearance with the minimum amount of set, without sacrificing elasticity and stiffness. You know that all these points are good points, and substantiate our claim that Disston Cross-cut saws are unexcelled.

You will find a lot of valuable information in our Cross-Cut Saw Booklet. Sent free on request.

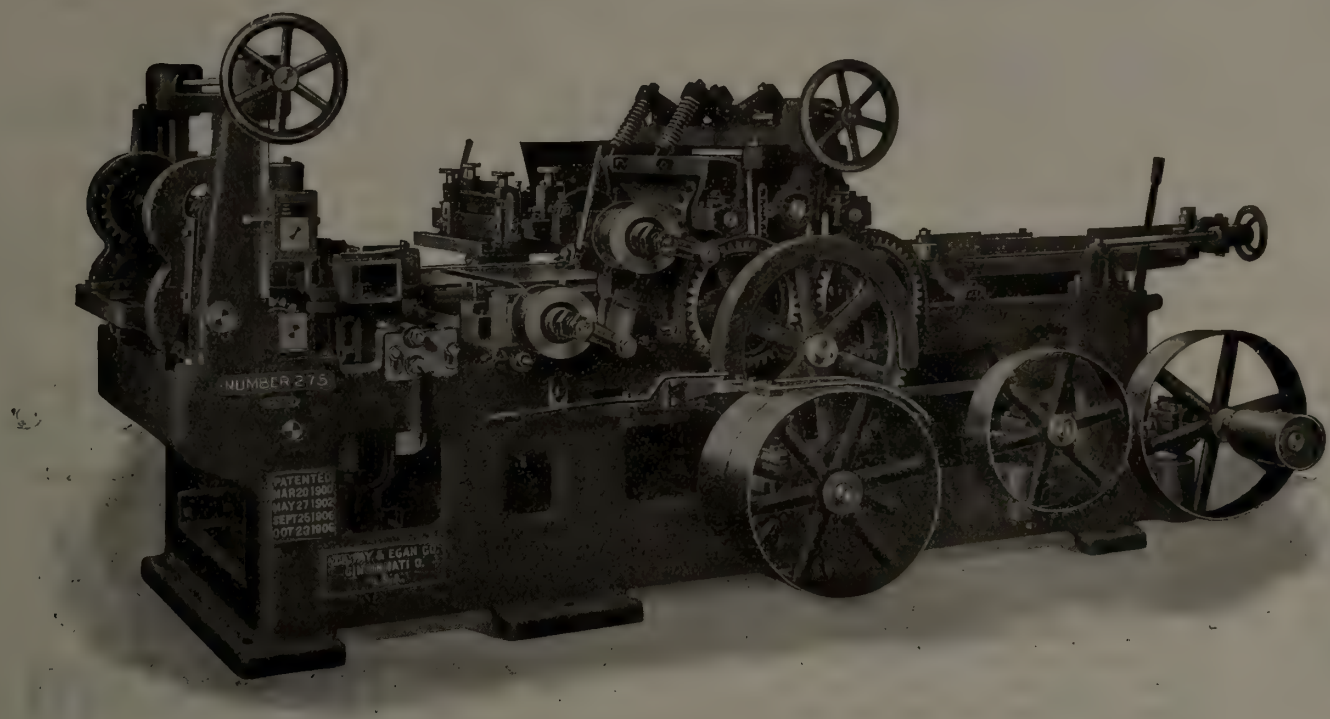
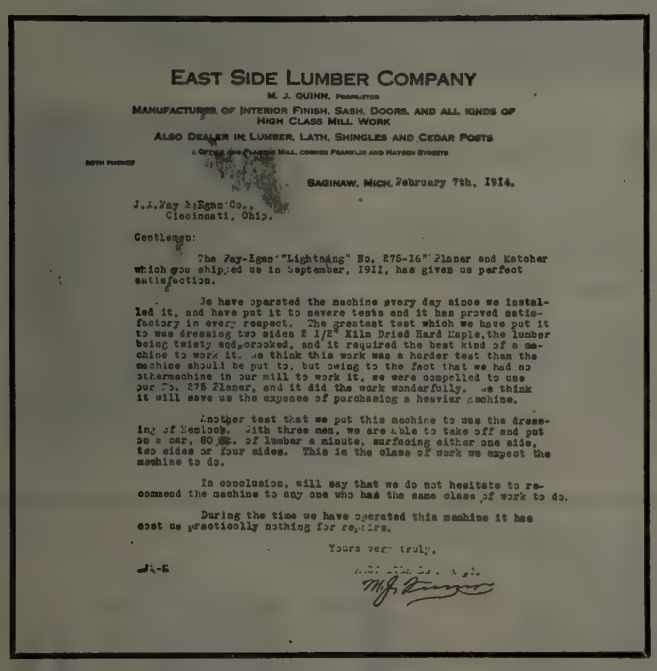
More Proof of the value of this Medium Weight and Medium Priced Matcher FAY-EGAN "LIGHTNING" No. 275



Satisfied Owners everywhere are telling us how the 275 is doing all that we claimed for it, even more—it will do the same for you.



EAST SIDE LUMBER COMPANY

M. J. QUINN, Proprietor

MANUFACTURER OF INTERIOR FINISH, SASH, DOORS, AND ALL KINDS OF HIGH CLASS MILL WORK

ALSO DEALER IN LUMBER, LATH, SHINGLES AND CEDAR POSTS

Office and Planing Mill, corner Franklin and Hayden Streets

SAGINAW, MICH. February 7th, 1914.

J.A.Fay & Egan Co.,
Cincinnati, Ohio.

Gentlemen:

The Fay-Egan "Lightning" No. 275-16" Planer and Matcher which you shipped us in September, 1911, has given us perfect satisfaction.

We have operated the machine every day since we installed it, and have put it to severe tests and it has proved satisfactory in every respect. The greatest test which we have put it to was dressing two sides 2 1/2" Kiln Dried Hard Maple, the lumber being twisty and crooked, and it required the best kind of a machine to work it. We think this work was a harder test than the machine should be put to, but owing to the fact that we had no other machine in our mill to work it, we were compelled to use our No. 275 Planer, and it did the work wonderfully. We think it will save us the expense of purchasing a heavier machine.

Another test that we put this machine to was the dressing of Hemlock. With three men, we are able to take off and put on a car, 80 M. ft. of lumber a minute, surfacing either one side, two sides or four sides. This is the class of work we expect the machine to do.

In conclusion, will say that we do not hesitate to recommend the machine to any one who has the same class of work to do.

During the time we have operated this machine it has cost us practically nothing for repairs.

Yours very truly,

JA-E

M. J. Quinn

In fact, every one of the 275 we have put out has more than satisfied the purchaser in both quantity and quality of production.

The letter, herewith, shows how the East Side Lumber Company use their 275 and what they think of it. We have others from all parts of the country proving it to be the Greatest General Purpose Planer and Matcher on the market.

The 275 is just the machine for your mill or factory It is medium in price and weight, low operating cost, a fine Matcher and Floorer, a great surfacer, as well as an Inside Moulder.

Accessibility to all parts is a feature of the 275, a necessity in the general purpose machine.

If you need a General Purpose Machine why not get the Greatest—a 275. Write today.

BERLIN RESAWS Assure More Profits—Every Hour of the Day, Every Day of the Week, Every Week of the Year.

Berlin Resaws Produce Economically

These resaws are especially adapted to Canadian Planing Mill and factory conditions. No. 341 has 54-inch wheels and tilting feed works. No. 342 is a 64-inch, short saw machine with large capacity and powerful feed works.

There's a Berlin resaw especially designed for your work. There are single verticals for light, medium or heavy duty and a twin vertical for long shook stock; the single horizontal and the twin horizontal for resawing short shook stock, besides the slab resaws. All Berlin band rip and resaws and band mills are simple in design and operation and easily kept in order. Whatever ripping or resawing you want to do can be done at lowest possible cost on a Berlin.

Easy to Operate

On Berlin resaws the conveniently placed operating devices make maximum results easy to obtain. That's why any average workman can successfully operate them and also why reduced cost is assured.

The wheel tilt and quick cross-line adjustments are especially conveniently placed. The top saw guide adjusts from the front of the machine; a throw of a lever changes the speed of feed. The rolls are positioned by a quick, accurate set works.

Easy to File For

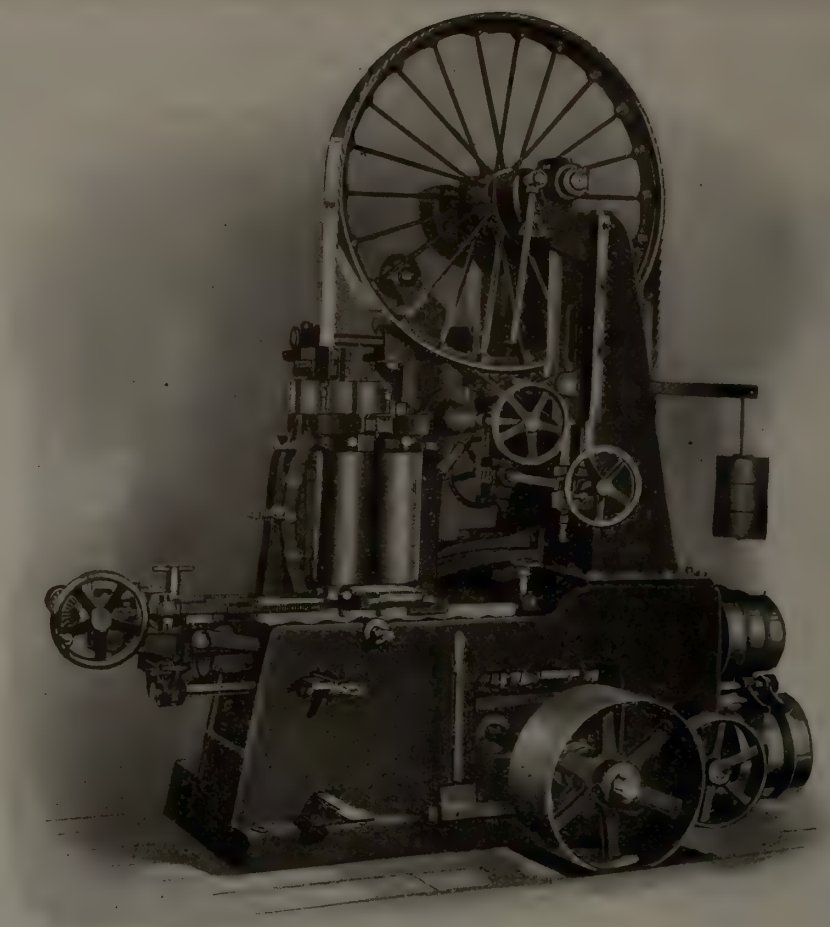
Filers say that blades on Berlin resaws endure longer runs at fast feeds—that our very sensitive Knife-edge straining device is assurance against cracked blades. The saving made because of low upkeep cost of blades and machine is one reason for installing Berlin resaws. Before you decide on any particular resaw, investigate thoroughly the merit of Berlin "Quality" built band sawing machinery. Berlin resaws are working in many Canadian mills. See one in operation.

We'll send you complete data and the address of your neighbor user if you'll drop us a card request.

BERLIN MACHINE WORKS, LIMITED, Hamilton, Ont.

Largest Manufacturers of Woodworking Machinery in the World

UNITED STATES PLANTS, - - - - BELOIT, WISCONSIN



54" Vertical Re-Saw

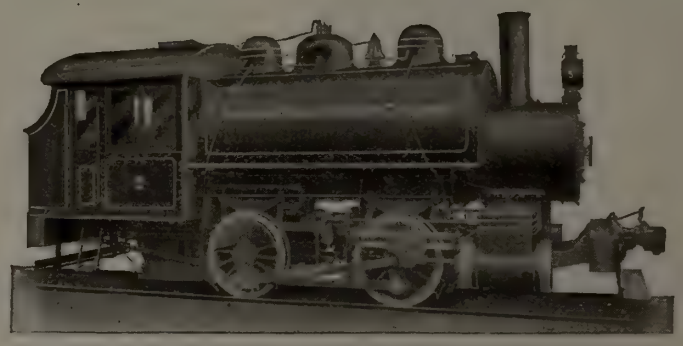
This is an exceptionally rigid machine and will give high grade results at a fast feed under the hardest conditions of continuous service.

The upper band wheel rests directly on the straining device making a very sensitive tension; therefore a very thin saw can be used.

We also manufacture Horizontal Re-saws and will gladly mail catalogue upon request.

Mereen-Johnson Machine Company, MINNEAPOLIS, MINN.

WHAT YOU WANT IN A LOCOMOTIVE



Reliability is what you want in a locomotive.

Efficiency and durability in our locomotives make them reliable.

For the service small locomotives are called upon to perform, reliability means readiness to perform a day's work every day. You know how the work stops when the locomotive is out of service. We guard against breakdowns by the material and the design.

Every part is made with reference to long life. Every part is made interchangeable for each size of locomotive, so worn parts may be quickly replaced without a machine shop. This is most important in keeping the engine on the job.

Dominion Timber Regulations

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth :—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long, 1½ cents each.

Railway ties, nine feet long, 1¾ cents each.

Shingle bolts, 25 cents per cord.

And 5 per cent. on the sale of all other products of the berth.

Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

W. W. Cory,

Department of the Interior, Ottawa,
December 20th, 1912.

Deputy Minister.

MORGAN DOORS

"The Door Beautiful"

We were the original designers of the above illustration, which will give the readers of the Canada Lumberman a conception of the attractive variety of designs in Morgan doors.

Each model illustrated is truly "A Door Beautiful".

Morgan Company

The Mark THE E. LONG MANUFACTURING Co. SAW MILL MACHINERY ORILLIA, CANADA *of Quality*

A Boss Dog Carriage

For Quick Work in Small Logs

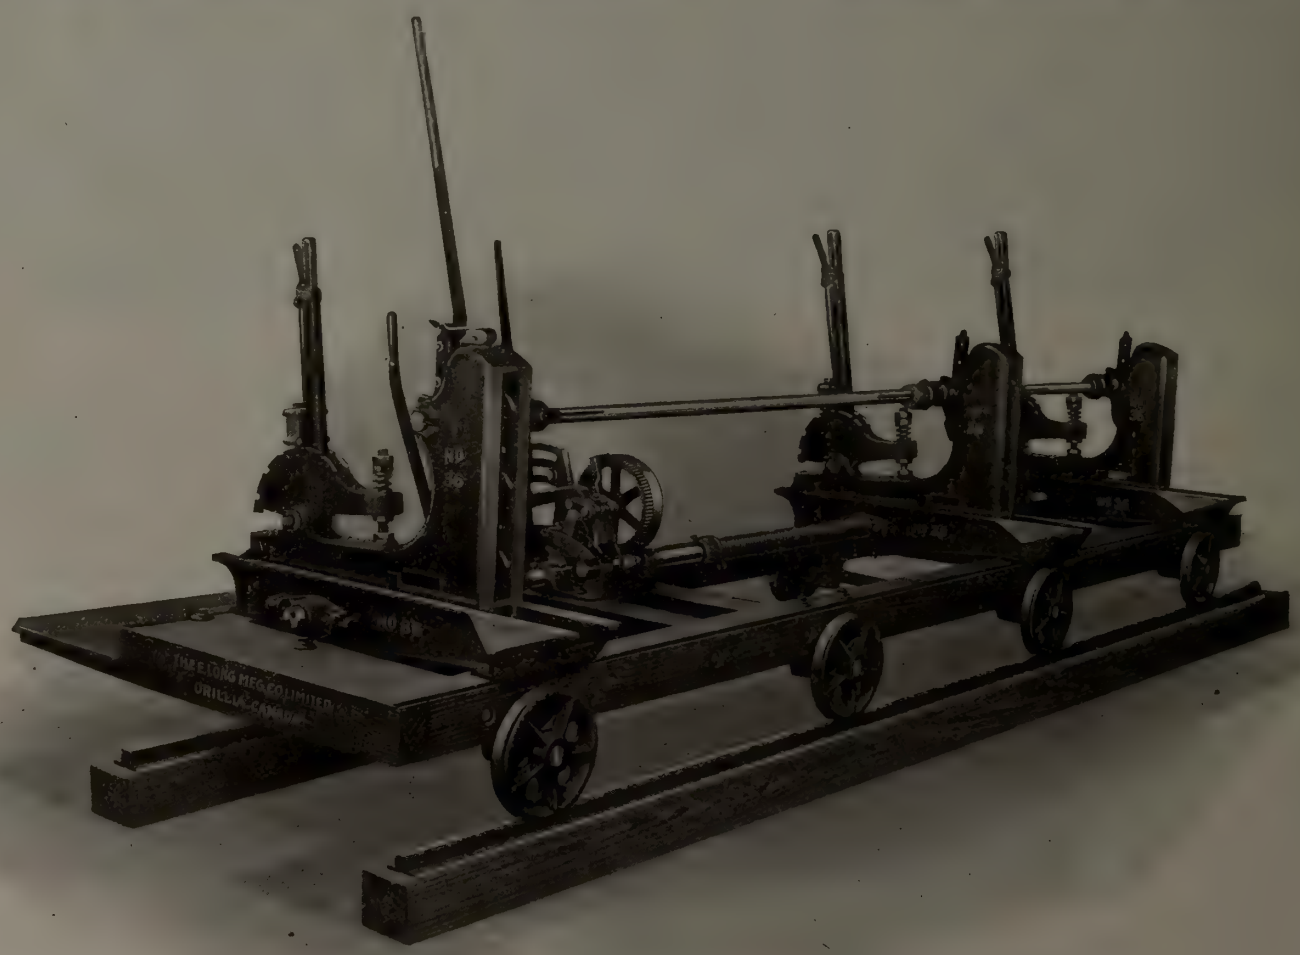
A carriage designed to stand abuse, yet light enough to be speedy.

Catalogue No. 100, shows a carriage for every purpose. Have you got it?

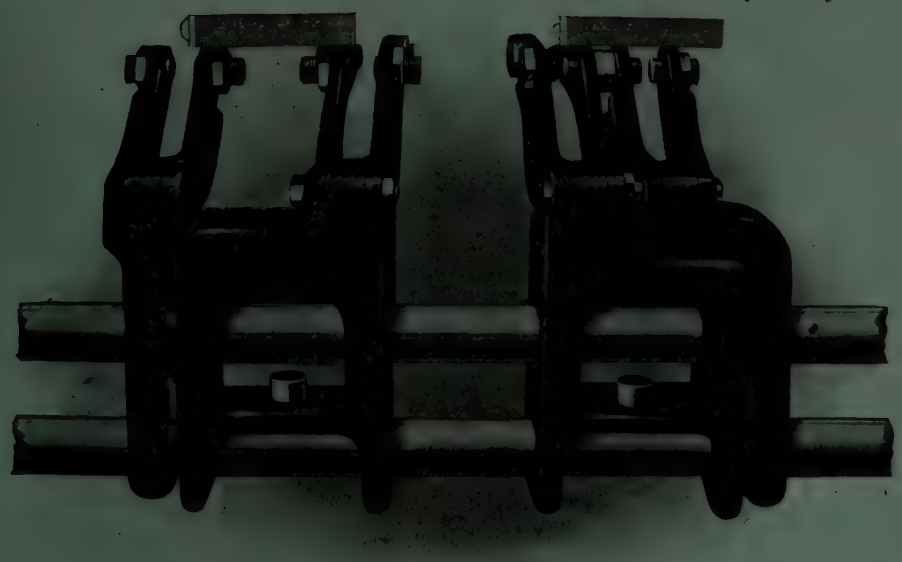
The E. Long Mfg. Co., Limited, Orillia, Canada

AGENCIES:

Vancouver—Robt. Hamilton & Co.
Calgary and Edmonton—Gorman, Clancey & Grindley, Ltd.
Winnipeg—The Stuart Machinery Co., Ltd.
Montreal—Williams & Wilson, Ltd.



No. 36 Standard Carriage



Right Here in the Guides

the superiority which distinguishes every part of the Waterous Edger is evident.

By carrying the guides on two steel shafts let into the edger frame the greatest ease of movement and the utmost rigidity has been obtained. Notice that the stationary and shifting guides can be approached within 3 in. of each other. Three distinct types of guides are supplied, so designed that by proper selection they can be combined to meet practically every edger requirement of the modern sawmill.

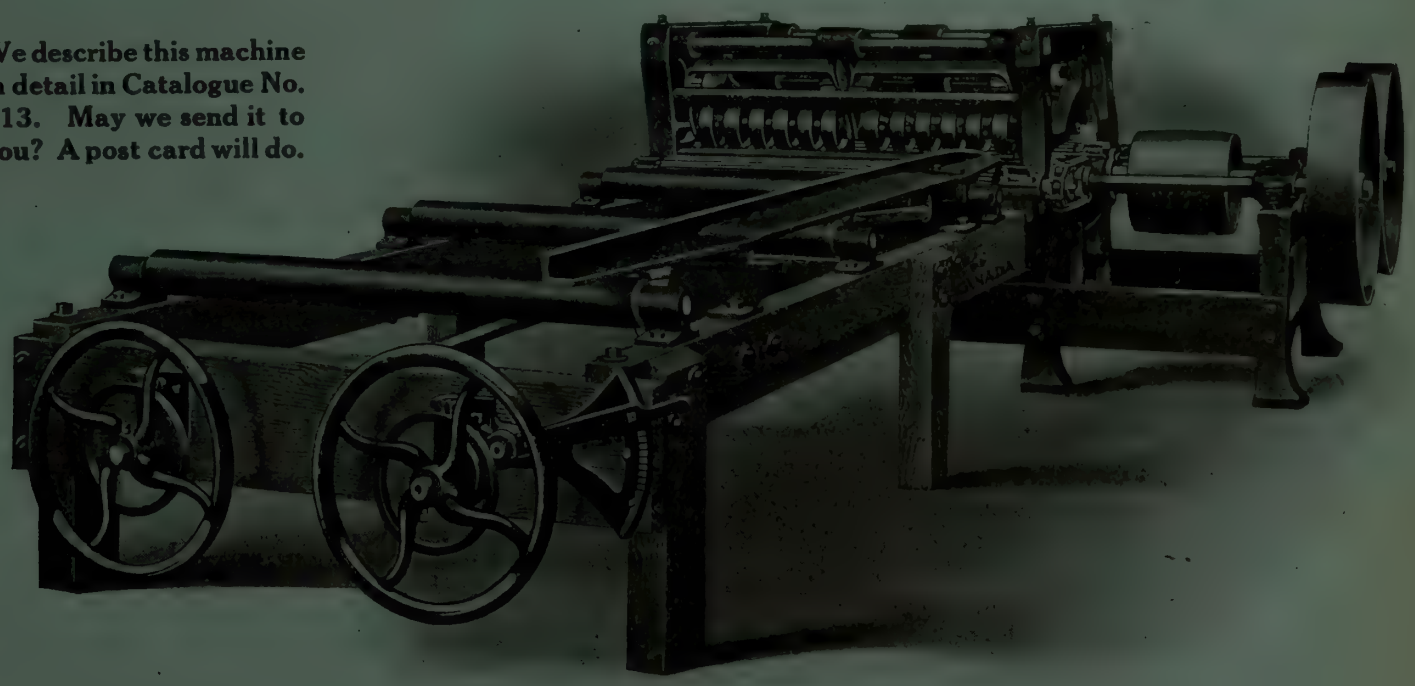
Their all-steel construction, the safety swing back arms and non-heating, slow wearing saw plugs with which they are fitted spell exceptional wear and service. We have spent plenty of money perfecting these guides but the results obtained have more than justified the expense.

The Waterous New Champion Edger

is built to suit both the man who buys and the man who operates it. While you can be satisfied that the Edger is mechanically correct, that it will give results with the proper handling, you can be dead certain that your edgerman will handle it to get those results. Every constructional feature that will simplify operation, that will make adjustment and cleaning more convenient, and that will increase the safety of the operator, have been introduced in the New Champion Edger.

Your edgerman will appreciate these things and the work he turns out will show it.

We describe this machine in detail in Catalogue No. 113. May we send it to you? A post card will do.



The Waterous Engine Works Co.

BRANTFORD, CANADA Limited

Vancouver, B. C. Winnipeg, Man,

"FROST KING" METAL

$5,000,000.00
worth of mixed metal sold annually.

Our thirty-five years experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. **Price 30c per lb.**, Fort William and East; West of Fort William **35c per lb.**, delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our FAULTLESS BABBITT will stand where all other metals will fail. Price, Fort William and East, **40c per lb.**; West of Fort William, **45c**, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

HUMBOLDT REDWOOD

A Wood With A Thousand Uses

Humboldt Redwood because of its many good qualities has been put to a great many uses.

It will not check, is fire repelling, beautifully figured, free from pitch, easily worked, will not shrink, takes finish equal to mahogany. For these reasons Humboldt Redwood is an ideal material for sash, doors, and trim, boats, furniture, toys, pattern lumber, outside building trim, car siding, cooperage, hot bed stock, refrigerators, tanks and silos, buildings, exposed beams, clap boards, lattice, screen doors and windows, theatrical scenery, incubator and beehive stock, turned work and a variety of other uses.

Write us for prices and literature.

To the Owner of Timber Lands

Far sighted owners of timber lands should take advantage of the times incident to the European wars, and prepare themselves for the day when the demand for timber is suddenly thrust upon them. This is certain to come at no distant day. Therefore cultivate a closer acquaintance with your holdings, and the best method of marketing them. Let us prepare the way for you. Remember, we not only report on the property, but assist in marketing the bond issue when necessary. Send for our booklet.

"Brazel Patent" SNOW PLOWS

Known in every Camp from the Atlantic to the Pacific as the most satisfactory Snow Plow made.

Combination Model, Lumberman's Snow Plow, can be used either with or without Rut Cutter.

One man to operate. Adjusting wheels close together make change for light or heavy work in an instant. Wings placed to throw snow 9′ wider than sleigh track or narrower if desired. Height of mouldboards prevent snow falling back on track. **Brazel Plows** cut 6′ wider than logging sleighs, roll snow outside track and away from roadway. Cut off knolls, fill up holes and leave a perfectly level roads. Cut off dirt and manure heaps from an ice road leaving a clean roadbed. Roll up and push entirely away from the road, 12″ of loose snow each time the plow passes over.

Making Friends

That is what Arkansas Soft Pine is doing wherever it goes. Its uniform texture, its beautiful figure, the "consistently good" character of this stock makes friends for the producer, for the retail lumbermen who sell it, for the planing mills that use it and for the carpenter who makes buildings of it.

From a Newly Acquired Friend

"We have just unloaded the car of casing, base and finish which you shipped us and we are pleased to say it is the best car of this class of material we have ever received.

"We have in the past purchased lumber from the —— Lumber Company but have always had to run it through the sander before sending it to a job. This stock from you we are able to send direct to the job without sanding.

"You may rest assured of receiving future orders."

There is an ever increasing demand for good lumber. More and more "good lumber" is becoming the national synonym for **Arkansas Soft Pine.**

It is a factor in securing and retaining business that should work for and be a source of profit to every progressive dealer.

Arkansas Soft Pine costs more because it is worth more. One of the reasons is given in the letter quoted. Perfection in manufacture increases the sale value and the use value of a wood that intrinsically **is** worth more.

Is that the kind of lumber you are selling?

A Sample of the kind of Lumber that mal-es friends.

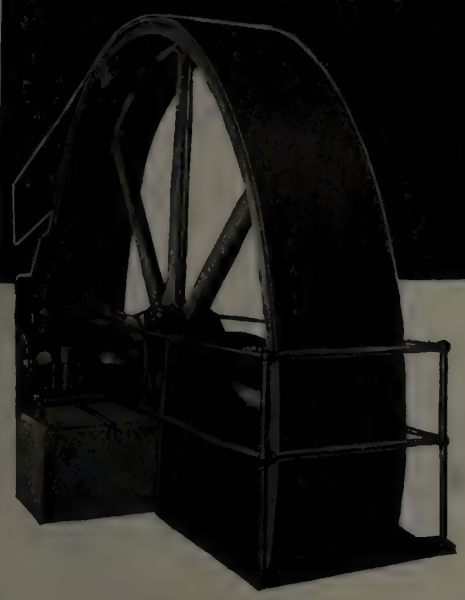
Service Belting Made in Canada



Buy belting made in Canada, and at the same time get Service belting—the most economical belting—Goodyear Belting.

Saw mill work demands belting made for hard day-in-and-day-out service and for varying stresses all day long.

Goodyear belts are designed to meet these unusual conditions. Every Goodyear product is the result of careful study of actual working conditions by Goodyear experts. That is why Goodyear products are referred to as Service products.

"Extra Power"

This is a high speed belt for heavy drives. It shows the highest friction pull of any belt we know of. "Extra Power" stands up under most gruelling service. The duck is the heaviest and strongest we use. All materials are laboratory tested for super-power. The stretch is taken out in the making. The possibility of ply separation is reduced to a minimum.

GOODYEAR MADE IN CANADA

"Imperial"

This is a belt for high speed small pulleys, wonderfully flexible. This insures a maximum arc of contact, utmost power delivery, no slippage—a fine belt for trimmer work.

Other Features

All Goodyear belts have the famous sealed seam which makes them virtually "one piece" and are cured under heavy, carefully regulated hydraulic pressure. "Extra Power" is made in various widths, endless when desired.

Buy This Way

Let Goodyear experts help you. It costs nothing to confer with them. Involves no obligation on your part. They will be glad to confer with you and advise you. Remember that these Goodyear products are made at the Goodyear factory at Bowmanville, Ont. Here are employed the same methods and quality standards that have won Goodyear leadership in tires. Write to Goodyear experts today. State for what particular purpose you require belting, hose or packing.

Machinery and Timber For Sale

The undersigned offer for sale, in large or small blocks all their remaining timber lands, mills and town property situated in the Town of Parry Sound, Ont.; and other Lumber Equipment, including boom chains, plows, sleighs, etc.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

We have the following Sawmill Machinery for sale:

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 8-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.

1 Double cylinder steam nigger, right hand.

1 Log Loader for right hand mill.

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.

1 left-hand steam nigger.

1 Log-loader.

1 Endless chain jack ladder with two kickers complete for right and left hand mills.

2 Roger Gang Edgers for 8-in. cants and lumber.

1 Waterous double edger, 6 saws.

2 2-saw trimmers.

1 20-ft. Slash table.

1 16-ft. Revolving Slash Table.

1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.

1 70-ft. Transfer Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.

1 Lath Mill with bolter.

2 Lath Trimming Saws.

FILING ROOM

1 Automatic Filing Machine for 12-in. D.C. band saws.

1 Automatic Grinding Machine for 8-in. S.C. band saws.

1 Automatic Machine for circular saws.

1 Hand Machine for cut-off saws.

1 Lap Grinder.

1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

POWER PLANT

2 Double Duplex, high pressure Water Pumps.

5 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.

2 125 h.p. Water Wheels.

1 Upright Engine for sawdust conveyor.

1 10 h.p. Engine.

1 Mitts & Merrell Hog.

1 Wood Machine for 22-in. wood.

1 Wood Machine for 16-in. wood.

1 Edger for ripping dry lumber, installed.

1 Edger for ripping dry lumber, not installed.

1 30 h.p. Generator, 250 volt.

1 30 light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and turn-tables, particulars of which may be had on application.

Also, contents of machine shop, containing Planer, Drill, Lathe and Machinery, with tools necessary for repair work.

All of the above open for inspection at Parry Sound.

The
Parry Sound Lumber Co.
Limited

26 Ernest Avenue, TORONTO, CANADA

SPUD

If a dealer, ask for our 450 page catalogue.

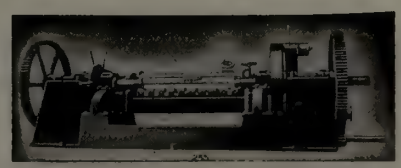
WATERPROOF 3 PLY VENEER

have been made for quite some time in Russia and the product has become a household article with furniture and wooden-ware manufacturers all over the world.

This everybody knows, who is connected with or interested in the veneer business.

Lumber manufacturers not directly in touch with the line, however, may not know it, but if they want to, they can secure all the information they need by writing to

Merritt Manufacturing Company, Lockport, N. Y.



Another rather important side of this subject is that Great Britain is clamoring for waterproof panels or plywood right now and is looking to The North American Continent to take care of the demand.

Will Canadian Manufacturers be able to supply this waiting market, which they later on very we l can hold, if they like to. ? We should say NO. They never offered the matter much thought leave alone the manufacturing of veneer for this purpose. But, lumber is plentiful in Canada and of the right kind and the plywood manufacturing is a paying proposition, we are told.

Are you going to help rebuild Europe, and are you going to make the waterproof ply-wood industry one of the chief features af your lumber business. ?

It is easy, if you know how, and the above mentioned firm will tell you. There are no complicated methods or machinery to worry over, everything is very simple, in fact simpler than any other method of lumber reducing, and much more economical by leaving less waste than ordinary saw and planing mill practice does.

.The usefulness of waterproof plywood is so varied and extensive besides constantly increasing that it would seem important for lumbermen to investigate this market, when there would be little doubt about the result, viz:

"Made in Canada"

The World-Famous

SIMONDS

Crescent-Ground

CROSS-CUT SAWS

MADE IN MONTREAL

Yes they are famous because they have been giving such universal satisfaction to Lumbermen and Loggers for so many years and in so many different parts of the world.

Crescent grinding and Simond's Steel is a combination that makes the best edge-holding, even tempered, well wearing cross-cut saw that the skill of man has yet been able to produce.

Price is not the factor; it is only results that count in making this the most economical saw on the market.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster General for Canada, for transmission as second class matter.

Entered as second class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 34 Toronto, November 1, 1914 No. 21

The Doctrine of Business Enterprise

The greatest requirement of the business world in Canada to-day is enterprise. When the war is over, its effects upon us will be measured chiefly by the way in which it has altered our commercial and industrial life. Canadian business men have made a good reputation for themselves throughout the business world, and to-day they are being put to the test in a manner which will prove whether this reputation is well-founded or not. If we are to maintain the reputation we have secured, business enterprise is the great thing needed. Thrift is well enough in its way. Its importance is great, but it is of no use to be thrifty unless one has something to put his thrift to work upon. What we need to-day is to realize that it is far more important to make money than to save it. We have been talking with much self-satisfaction lately, of efficiency, of thrift, of safety first, and of many other similar things which have come to play a great part in the business world, and the danger is that we are likely to raise them upon too high a pedestal and to fail in business enterprise. We are in danger of thinking so much of safety first and of thrift that we will hold business ventures in check, keep men unemployed and make collections slow. Under the critical conditions existing to-day we need to lay the emphasis much more decidedly upon enterprise. The enterprise that is required is not the kind that takes enormous chances in the hope of making corresponding gains, but a variety that gives intelligent study to prevailing circumstances and works out a plan for turning to profitable account those conditions, new and strange as they may be, under which we find ourselves. Above everything else to-day, we need to discourage the habit of hoarding which has become so much more general than it was a few months ago. We need to develop a habit of encouraging the movement of goods and money, the habit of paying and being paid, so that financial and commercial conditions may improve. In all lines of business we need aggressive and intelligent activity.

We cannot afford to cry down thrift as a virtue, neither can we afford to raise it upon a pedestal to-day. Thrift is of many varieties and we all know of some varieties that are a public menace. We have seen this danger lately very clearly. We saw, in the early days of the war, the tendency to store away supplies to last over a possible period of scarcity and high prices, and we saw a disposition on the part of nearly everybody, for a few days at least, to practically crawl into a hole and pull the lid after them, with the intention of remaining under cover until the storm passed over. We have seen evidences of this in every direction. It was based upon an ill-considered fear of events which we had never before experienced and which we did not stop long enough to understand.

We have heard people talk about rocking the boat and we have told the rockers to sit down. That is well enough as a precaution, but it does not go quite far enough. The man who simply sits down in a boat never arrives anywhere. He must use the oars if he wishes to go forward, but many business men have simply been sitting tight in the middle of the boat holding stiffly to both sides. What we want and what fortunately we are now finding is men who will not only sit in the middle of the boat, but who have a clear vision of the shore towards which they are heading and are doing their best to send their boat forward in the right direction.

Thrift, the object of which is to acquire the means necessary for further enterprise, is right enough at all times. To-day however, we need, even more than this commendable variety of thrift, an appreciation of the danger of halting our activities and blocking the progress of industry. There must be a period of wonderful expansion ahead of us, somewhere in the not far distant future, and we should not wait for it to arrive. The best way to meet it is to adopt a very definite policy of persistent building up of business. Business will-never build itself up. Trade conditions now are changing. The scenes of business activity are shifting, and there is little or nothing to be gained to-day by waiting. If we wait we will find that someone else has done the building and that his structures surround and smother us. We must watch and study every indication of change and do all we can to increase the general sum of business activity. We must not only talk business but practice it. We have talked business for so long when business was good, that now it is up to us to put into practice many of the things we talked about so much. For the individual, the best business maxim is to study conditions and to get out into the open where he can see and be seen. Advertising is the keystone to business development at all times. It worked wonders in the good years of the past, and its power is even greater to-day than it was in the days before the war. We need to-day to spend, to study and to put into practice the things we have preached when times were good.

Relation of "System" to Advertising

Although practically every branch of business nowadays has been subjected more or less to the control of "system" it is curious that probably the most important department in connection with many classes of business has been largely neglected from this point of view. When one considers the extremes to which many business institutions have carried the worship of "system" it is strange to find that, in the department of advertising, the application of "system" has made comparatively little headway. At first, this statement is likely to be contradicted, but it only needs a comparatively small amount of consideration to discover that, although some firms and agencies have developed advertising methods upon very successful systematic lines, there are many others who have not done so, and a still greater number who, not appreciating the value of advertising, have failed entirely to take any advantage of it, either in a loose or a systematic manner.

Trade journals have recently published a far greater amount of discussion about business management than they used to publish a few years ago. There are some people who believe that the subject has been given too great an amount of space in the press and too much personal discussion, and that the result is that "system" has become something of a "fetish" which prevents them from giving the necessary amount of attention to other important business factors. There is no doubt about the fact that "system" has been overdone in more ways than one, but it is also beyond question that the movement to-

wards systematizing all branches of business management which has been the most outstanding feature of all business life for some years has had a great influence for good.

We are accustomed to considering the growth of advertising of late years as one of the most remarkable developments of the age, and to a great extent we have associated it with the application of "system" to business management, as we understand it to-day. The connection is there beyond any question, but it is not nearly as definite as it should be, and as it probably will be in the future. "System" has been applied to advertising by all great and successful advertising firms and institutions and has been one of the important causes of their success, but there is a great necessity for increasing its application to publicity work, and making it serve the requirements of many lines of business which have not yet appreciated its value. Advertising specialists are preaching the gospel of systematic publicity all over the world, but they have a great task before them. They must persuade those who are prejudiced against advertising, as well as those who have suffered from misdirected advertising efforts, and it is hard to say which of these is the tougher proposition, because each considers that advertising does not create a demand for its particular class of products.

The object of advertising is simply to create a demand. Then the advertiser must be able to furnish to the consumer, with the least possible delay and difficulty, the goods which he has been taught to desire. This fact is understood by all successful advertisers and is kept in mind definitely in working up an advertising campaign, but there are other factors to be considered besides the consumer. Every step in the journey from the producer to the consumer must be studied, and in the case of lumber these steps are sometimes very numerous. The man who is about to build a house may have been reading the advertising matter relating to a particular class of lumber and have persuaded himself that it is the best material for his home. The manufacturers of this class of lumber may be prepared to furnish it satisfactorily and it would look as though conditions were alright for the completion of a deal. But there are a few other factors which the manufacturer often overlooks and it is the object of this article to impress upon them the importance of systematizing their advertising efforts so thoroughly as to eliminate the possibility of these factors nullifying their work.

After the lumber manufacturer is ready to sell his stock and the consumer is wanting it, other parties may influence the situation. There is the contractor, the architect, and the lumber dealer. Money which has been spent upon creating a demand on the part of the man who is building a house is wasted unless the lumber dealer, the architect and the contractor are ready to back up the efforts of the advertiser. One or other of them, possibly all of them will find it an easy matter to persuade the prospective customer that he is wrong and that other varieties of lumber will fill the bill to greater advantage. It is in the direction of preventing this kind of unfairness that advertising in conjunction with "system" can be confidently applied to the work, and it is also in this connection that very little in the way of systematic effort has been carried on. To be convinced of this, one needs only to consider the attention which has been given to the same problem by the manufacturers of many other building materials which are advertised as substitutes for lumber. Very recently a tendency has been noticeable towards remedying this evil and the results already indicate that the movement will grow.

An important point in connection with advertising is the necessity for keeping in mind the exact results desired. A man who is advertising a particular line of lumber only wants to sell it. It is not necessay for him to discourage the use of other varieties of lumber. Every class of wood has its own particular excellence for certain lines of work. These are the points upon which to lay stress in advertising. It will bring better results if it is free from references to the fact that some other lines of wood are not so good for these purposes. There is nothing gained in the advertising of lumber by running down the other fellow's goods. The way in which the demand for several important varieties of lumber has been stimulated during the past few years by advertising, is a definite proof of this fact. This has been done by publishing clean cut assertions of the utility of the stocks advertised. It has created not only a local or temporary demand, but a widespread desire to use these particular kinds of wood, and a fairly general knowledge of their qualities and attractions. Those who are advertising lumber extensively and are studying the advertising proposition systematically are aware of the results which have been achieved of late in the direction of promoting the use of particular varieties of stock, not the output of one mill alone, but of a whole district. These people know now that the outlook for improving the whole lumber selling business by means of systematic publicity has become far more encouraging. They are expecting to see a day, not so far in the future, when business "system" as applied to advertising will have opened the way to the correction of a great many of the errors and difficulties which have been a great burden to the trade in the past.

A Campaign Against the Use of Lumber

The lumber trade has had so much to contend with lately in the way of business troubles that it would seem as though any new trouble could scarcely make any impression upon it. General trade depression, followed by the war, have brought about a great reduction in the actual amount of lumber which is passing from the manufacturer to the consumer; but as if this condition were not enough to depress the business spirit of the lumberman, the enemies of lumber in the business world have lately organized a great national campaign in the United States, the effects of which are likely to be felt in Canada. The chief competitors of the lumber trade are the manufacturers of other building materials such as brick, cement, tile, etc., all of whom have made much of the claim that their products are far less subject to destruction by fire than those of the sawmill. When these arguments were confined to individual claims by sales agents, the lumber trade was able to meet them by the same methods without suffering greatly. To-day however, there is a great national movement in the United States to stimulate the sale of these other building materials by means of an organized campaign directing its efforts definitely against the use of lumber. Associations have been formed in many important centres for the ostensible purpose of "eliminating the fire risk," and they have given themselves names indicating that this is their only object. Their members however, are those who are interested in the sale of such other building material as brick and cement, also the insurance companies whose interest is to enlarge their net profits. None of them are likely to have any mistaken ideas as to the real results of the campaign.

These associations are making extraordinary efforts to obtain their end. The campaign upon which they have entered has already been successful to such an extent that 37 cities have adopted building codes, restricting the use of wood, and many others are considering similar legislation. The National Board of Fire Underwriters is distributing broadcast a printed "code of suggested ordinances for small municipalities." The quiet and efficient methods of working which are being adopted are such as to command admiration, though they may not always command respect. Many affiliated organizations are sending out similar material and the natural result of success in connection with these efforts will be an increase in the net earnings of insurance companies and of manufacturers of so-called "fire proof" materials.

The lumber trade and industry in the United States has commenced to see in this movement a threat of great injury to its business and is taking steps to oppose it. Although the movement has not extended to Canada in anything like the definite form which it has assumed in the United States, there is no question that the day will come soon after the movement has met with any success in the United States, when it will be carried into Canada as well. We do not wish to urge lumbermen to take steps which will enable anyone to point them out as seeking to discourage the efforts directed towards the re-

duction of the annual waste by fire. We believe however, as every lumberman knows, that a campaign adopted by such interests as those which have taken up this movement in the United States, cannot fail to be based upon an unsafe foundation. Insurance people and the fire proof building material people cannot be safe guides towards the prevention of fire. Their interests are too closely connected with the movement and their efforts must surely bring unfair injury to the lumber trade. No matter how fairly they may desire to look upon the situation, their views cannot be unbiased.

The interest of the lumberman in this matter is to let the public know what a valuable material lumber is for building purposes, and to what a great extent even, it can be used in connection with a fire prevention campaign. Above all other things fire prevention methods must prevent. They may do other things, but prevention is the essence of the matter, and when prevention comes to us in company with the promotion of private interests, we must suspect its genuineness. By the same reasoning it would be natural to feel that the views of the lumber industry should not be taken without question as to the use of lumber when fire prevention is under consideration. Lumbermen realize this fully and will not want to force their views upon the public, but will only wish to see that their views are considered and that the use of lumber is not restricted simply upon the recommendation of those who are interested financially in the use of other material.

In the United States this situation has developed almost to a crisis and the lumber industry is working hard to see that its interests are not unfairly injured. The campaign has come very close to Canada, indeed already affects Canada greatly, on account of the fact that Canadian lumber finds extensive sale in the markets of the Northern States, which are being invaded by the "fire proof" materials campaign. At Cleveland, Ohio, for instance, there is now a society advocating fire elimination, which is made up of builders' supply firms, brick manufacturers, etc. The organization is very active, with a paid secertary, and is receiving substantial support from manufacturers of brick, cement, tile, etc., throughout the State. If the organization were one for fire elimination solely, the lumber trade would probably back it up, as lumbermen believe in fire prevention as much as anyone else. The lumber trade would be glad to agree upon a plan for using only fire proof materials and heavy mill construction in downtown and badly congested districts. The Cleveland organization however, is not content with a restricted area of operation. It is doing everything possible to enlarge the fire district, or fire limits, of the city and the lumber trade considers this is unfair and entirely uncalled for. Accordingly the lumber trade is also organizing for the purpose of putting before the public the argument in favor of lumber and its long record of immunity from fire in residential districts. The movement to enlarge fire districts and eliminate wood and lumber however, is not local. It is a nation-wide movement and one which the lumber trade will have to combat by some national organization also, unless it is content to suffer very serious consequences.

Editorial Short Lengths for Busy Readers

The ordinary regulations governing the loading of timber have been suspended by the Canadian Government, following the example of the United Kingdom, so as to permit the export of pit props and other timber from the Dominion to Great Britain, where they are urgently needed. The Marine Department on October 14th wired to Mr. Thomas Robb, manager and secretary of the Shipping Federation at Montreal, stating that the department had been advised that masters or owners of vessels arriving in the United Kingdom from Canadian ports between October 31 and November 15 with summer deck loads of wood goods would not be proceeded against by the Board of Trade. The department had, therefore, decided to allow steamships to load accordingly in Canada up to November 7. Similar steps have been taken in Great Britain in the case of Russia, although as a matter of fact Russia can provide very little lumber because of the closing of the Baltic.

The war's effect upon the lumber industry of New England has thus far been negligible, so far as the real needs of the territory are concerned, and actual consumption of lumber throughout the territory has not been largely reduced, says the Lumberman's Review. If the war continues six months or more the effect upon next year's output will furnish the chief cause for concern. Already the purse strings in Canada have been tightly drawn against commercial enterprises that cannot produce the soundest kind of collateral, for that country has its hands full financing its military establishment and aiding the mother country. The New England banks and other loaning institutions are moving cautiously, and reports are coming to the surface daily which make it clear that many lumbering enterprises will be forced to curtail through failing to secure the usual accommodations from the banks. However, production in Canada will undoubtedly be more extensively curtailed than on this side of the line, and already the demand for spruce deal for delivery in Great Britain has been so active that the price has been forced up three to four dollars per thousand, and it is reported that several substantial contracts have already been made with both American and Canadian shippers operating mills in Canada calling for the shipment of deals right through the winter months. This business has been based upon the assumption that the British fleet will be able to keep the ocean lanes open between the St. Lawrence and the English Channel. Lumber in almost any form has in war times always been classed as contraband.

Reports upon hardwood operations in the southern States, which have been published by the Southern Lumberman, as received from 287 representative mills show that 138 of them have shut down and 51 are running on part time only. Stocks on hand show an average increase of 39.6 per cent. at 96 mills and a decrease of 29.4 per cent. at 49 mills. Commenting upon the reports the Southern Lumberman says: "The monthly cut of mills reported as wholly shut down totals approximately 100,000,000 feet. The monthly curtailment indicated in reports from operations not wholly shut down, but running on reduced hours, or with reduced output, totals in round numbers 40,000,000 feet. Adding these two totals we have an aggregate monthly curtailment of 140,000,000 feet. The monthly production of hardwoods for 1913 (the latest year for which government statistics are available) was 673,705,000 feet. If no other curtailment is in effect than that shown in the reports below, the monthly curtailment based on the government figures for 1913 is 20.7 per cent.

"The 287 mills from whom reports were received have total monthly capacity of 200,000,000 feet. Their reports, as we have seen, indicate monthly curtailment of 140,000,000 feet, or 70 per cent. of their capacity. If these mills can be taken as a fair average of the thousands of mills, big and little, cutting hardwood, then the monthly curtailment now in effect, figured on the government's report of hardwood cut for 1913, reaches the enormous figure of 475,593,500 feet.

"Even with a liberal allowance made for inaccuracy in the government reports we assert with confidence that the figures amply bear out our statement that the present curtailment of hardwood production is not less than 30 to 40 per cent. of normal production."

Another trade publication has made a close canvass of the sawmills of Texas and of Louisiana, and finds that production, when compared with the output at this same time last year, has been curtailed in those two States by approximately 106,000,000 feet per month. The yellow pine mills in Alabama, and many of the cypress mills in Louisiana and Texas, seem to be following the other course and are cutting quite freely. Many of the yellow pine operators express confidence in an early cesation of hostilities in Europe to be followed by an important and hurried call for supplies. The cypress men feel assured that by the time their stock is in shipping condition there will be demand enough to take care of it. The Pacific Coast mills, on the other hand, find demand at a standstill, though they had looked with confidence toward that day when the opening of the Panama Canal would bring the world to their mills for supplies.

Quebec Timber Lands Auction Sale

The Department of Lands and Forests, Quebec, on October 20 offered for sale by public auction a number of permits to cut timber in certain districts. The average price obtained was $238 per square mile, permits for 1,036 square miles being sold.

In the Lake St. John East district, the sales were as follows:—Anse, St. Jean A, 6¾ square miles, $130 per square mile, to Joseph Girard; Anse St. John B, 5½ square miles, $105, to Auger & Son; township of Simard No. 2, 10 square miles, $255, to Tremblay & Gagnon; township of Cimon No. 2, 1 square mile, $205 to Auger & Son; township of Falardeau No. 61, 9 square miles, $255 to Tremblay & Gagnon; township of Sagard, 20 square miles, $205 to V. M. Thereault (in trust).

In the Matapedia Valley district, Causapscal, 3½ square miles and Causapscal No. 2 9 square miles, were sold at $255 per square mile to Albert Lemieux.

Limits in the district of St. Laurent of Metapedia were sold as follows:—River Assemetquagan, 222 square miles at $265 per square mile to Donald Fraser & Sons; Little River, east branch, 13 square miles at $265 to Champoux and Bros.; Flat Land Brook, No. 2, 3¾ square miles at $265 to Alexander Pratt.

In the district of Rimouski west, Upper River Mistigougeche, 45 square miles were sold at $390 per square mile to the Shives Lumber Company.

In the district of Gaspe West the sales were as follows:—township of Taschereau, 1½ square miles, $225 per square mile to Marsouins Lumber Company; township of Cap Chat, River Ste. Anne, 2 2-3 square miles, at $185 to Germain Leclerc; township of Tourelle, Beaver Brook, 1 1-3 square miles at $155, to Marsouins Lumber Company; township of Duchesnay Arbour Brook, 2¼ square miles at $155, to Joseph Rioux; township of Christie River Marsouins, 4½ square miles at $155, to Marsouins Lumber Company; township of Christie River a la Martre, 3 square miles at $155, to Germain Leclerc; township of Christie Valley Brook, 6 square miles at $105, to Frank Bigouell.

In the district of Bonaventure West, the River Escuminac Limit, No. 7, 6 square miles, was sold at $255 per square mile to W. H. Miller & Company.

In the district of Lake St. John Northwest, the Limit, River Ashuapmouchouan and du Chef, 634 square miles, was sold at $230 per square mile, to the British Canadian Industrial Company.

In the Saugenay Agency, the Little Rivers Limit, township of Manicouagan, 5½ square miles was sold at $105 per square mile to Auger & Son.

An Interesting International Freight Rate Case

An important and interesting case recently came before the Interstate Commerce Commission of the United States, relating to through freight rates from Canadian to United States points which are alleged to be excessive. The case is that of the International Paper Company against the Canadian Pacific Railway et al. The International Paper Company asks that the rates be declared unjust and unreasonable. The International Paper Company, in their case stated that if the Canadian railways chose to participate in such joint through rates, they made themselves amenable thereby to the jurisdiction of the Interstate Commerce Commission. The representative of the Canadian Railroads argued that the Commission has no jurisdiction over the Canadian rates and that if it took any action it would be virtually an attempt to reverse a decision of a Canadian Court of Record. The Dominion Board of Railway Commissioners, said Mr. Harding, representing the railroad companies had already decided that on the reverse proposition they had no jurisdiction over rates originating in the United States. They had displayed an attitude of international friendship and it would be only an act of courtesy on the part of the Interstate Commerce Commission to abide by the Canadian decision.

The rates under consideration were instituted in 1900 and the complainants held that they had been greatly increased since that time, also that the carload minimum had been increased. The increases involved were on an average of 1c. per hundred pounds, almost all of which was going to the Canadian roads. The traffic most directly involved is that of pulpwood used mainly by New York paper mills.

U. S. Collecting Duty on Ceiling and Drop Siding

Quite an important matter to Canadian firms exporting certain lines of lumber to the United States has been brought up by a recent ruling of the United States Customs Department officials. In the Minneapolis market, salesmen representing manufacturers in the Canadian northwest assumed that the present tariff law, which was enacted last year, placed practically everything in manufactured lumber of soft woods on the free list and shipments have been coming forward with that understanding.

Since the war broke out trade in Canada has dropped off materially and a number of manufacturers of that country have been energetically soliciting business on this side of the line. Undoubtedly they will continue to do so, but their ability to ship to the United States will be somewhat restricted by the new ruling on the tariff. The tariff law as enacted by congress last year provides that timbers, sawed boards, planks, deals and other lumber of white wood, sycamore and basswood, sawed lumber, not specially provided for, lumber of any sort when planed or finished one, two, three or four sides and tongued and grooved are admitted free of duty. However, Section 647 of the Underwood-Simmons bill which provides for the free admission of lumber reads as follows: "Wood. Logs, timber, round unmanufacturer, hewn, or sawed, sided or squared; * * * sawed boards, planks, deals and other lumber not further manufactured than sawed, planed and tongued and grooved; clap-boards, lath, pickets, palings, staves, shingles, ship timber, ship planking, broom handles, sawdust and wood flour; all the foregoing not specially provided for in this section."

It appears that the custom officials have decided that bevelled ceiling and drop siding are "further manufactured" and under the tariff law are dutiable at the rate of fifteen per cent. ad valorem. It is possible that the decision of the tariff officials is based on Section 176 of schedule "D," which reads as follows:

"House or cabinet furniture wholly or in chief value of wood, wholly or partly finished, and manufacturers of wood or bark or of which wood or bark is the component material of chief value, not specially provided for in this section, fifteen per centum ad valorem."

The Ontario Workmen's Compensation Act

The Canadian Manufacturers' Association has, through its legal department, sent out the following notice to its members in reference to the working of the Workmen's Compensation Act: "It has been announced that the new Workmen's Compensation Act of Ontario will go into effect on January 1. The act, as you know, is in general outline based on proposals made by the association and we take this opportunity of urging our members, notwithstanding the many and serious defects of the measure, to extend to the administering commission their earnest co-operation in making it as successful as possible. As we have already advised you, considerable portions of the Act will have to be abandoned to make it workable, but we believe we may confidently expect that the administering board will make every effort to work out a fair and reasonable system, and we should like to urge upon our members that notwithstanding the unsatisfactory circumstances attendant upon the passing of the measure nothing in the way of co-operation and sympathy on the part of employers should be wanting to assist the board in its difficult task. The legal department of the association will be at the disposal of members either for the purpose of advising or assisting in straightening out any difficulties that may arise, and we would respectfully suggest that you utilize the department freely."

War Prices in Canada

The effects of two months of the world's war on Canadian prices are summed up in a rise of the Labour Department's index number from 135.5 as calculated at the end of July to 140.7 as worked out at the end of September. These numbers are percentages of the general level of prices in the decade 1890-1899 and are based on quotations from 272 articles scattered over the whole field of production and consumption.

Most of the rise took place during the three weeks following the declaration of war. In fact the last half of September saw general steadiness and even a tendency to decline in important articles like grains and cattle.

Though a rise of 5 points in the Department index number is very marked it is not without precedent. Canadian prices during the trade boom of 1912 went up at intervals with almost equal rapidity, and the readjustment of prices at the close of 1911 sent the index number up 4 points in a single month.

It has also to be remembered that several articles which have contributed very materially to sending the index number up during the last month are not of first importance in consumption.

Retail prices, of which the Department is receiving quotations for over 30 articles in every town of 10,000 and upwards in Canada, were, on the whole, steady in September after the first upward movement following the war. In flour and sugar further advances occurred in most of the cities, but in other commodities prices were quiet. Rents were downward in some fifteen localities throughout the Dominion.

It is interesting to note that in England the Economist's index number went up 6 per cent. during August, the rise being greatest in foodstuffs and least in minerals, while the Statist's index number went up from 82 at the end of July to 87 at the end of August. Bradstreet's index number for the United States went up 12 per cent. in August, but has eased off slightly since. The crest of the high prices wave seems to have come about two or three weeks after the declaration of war.

Canada's Foreign Trade in Lumber

Exports of Forest Products Show Only Slight Drop—General Imports Decreased—Pitch Pine Imports Increased

A report upon the imports and exports of Canada for the fiscal year ending March 31st, 1914, has been issued by the Department of Customs. The following tables are taken from this report and from the corresponding report for 1913. The imports of lumber as shown by this report fell off in value by nearly $3,000,000. The imports of pitch pine showed an increase of about 17,000,000 feet, and an increased value of nearly $500,000. The imports of oak fell off by about 18,000,000 feet and their value showed a decrease of about $560,000.

Exports of forest products from Canada were almost the same as in the previous year, showing only a falling off of about $290,000 in value.

Forest Products Exported

Following is a summary statement of exports of forest products from Canada to all countries during 1914 and 1913.

		1914		1913

English Pit Prop Requirements

W. Windham, chairman of the British Commission, which recently visited St. John, N.B., and other points in Eastern Canada, to inquire into the pit prop prospect, has written to the secretary of the board of trade from Ottawa expressing regret that the limited time at their disposal rendered it impossible for the commission to prolong its stay at St. John. He remarks further: "I should be very glad to receive from the members of the St. John Board of Trade, and any others interested, further information as to possible sources of supply. The number of pit props required is approximately 1,000,000 per week, and the measurements from 2½ in. to 7 in. diameter at small end, and about 3 ft. to 12 ft. in length. The wood should be spruce, fir or pine, and separate prices (either by lineal or by coard measure) should be quoted for each size, delivered alongside ship, if possible. Any such particulars should be communicated without delay to H. M. Trade Commissioner for Canada and Newfoundland, No. 3 Beaver Hall Square, Montreal, P.Q."

The Timber Trades Journal, London, England, in its issue of October 10th states that it received from Ottawa, under date of October 1st, the following telegram:—

"Representatives of the British Board of Trade were conferring here with the Dominion Minister of Trade and Commerce in regard to the supply from Canada of pit props, which have hitherto been imported from Russia and Norway. It has been ascertained that there is abundance of suitable timber, but prices here are higher than those previously paid."

Commenting upon this the journal says:—"The difficulty, so long as the seas are open, is clearly a matter of price, the question of the goods being contraband in German eyes takes a secondary place. The object the coal interest is considering is to obtain supplies at or near those ruling before the present state of war. That a substantial advance must be paid, unless the Government grants a subsidy on this branch of raw material, goes without saying: goods of this class from the American Continent have to be conveyed greater distances to the loading ports than is the case in the Baltic; they have to meet a higher rate or cost of labour, a longer sea journey than from France and the North of Europe, and higher rates of freight and insurance. That a new basis of price will be fixed or arrived at in a few days is fairly certain, and when that is done there will be a chance of the English woods and plantations taking an active part, whereas in the face of prices ruling until two months ago, they were, so to speak, out of court. Many of the collieries had two months ago supplies on hand and in prospect that would last them about three months at old rates, at the end of which agreements at advanced prices must be arrived at; indeed, the outlook at present seems a long one for the return of prices to those that obtained on this class of wood before the outbreak of the war. Supplies are looked forward to from the White Sea, but it is unfortunate that those shipping ports are annually so long and powerfully held in the grip of King Frost. The Welsh collieries with their Welsh and Spanish connections and supplies are in a better position than those of England or the North."

A Busy Pulp and Paper Making Centre

Windsor Mills, P.Q.—Scene of Manufacturing Operations of the Canada Paper Company, Limited—An Outline of its Growth and Equipment

THE pulp and paper manufacturing industry in Eastern Canada is experiencing an unprecedented period of activity as a result of the heavy demand for newsprint paper requirements for publishing extra editions, and also as a result of the interference with productive capacity in countries now at war. Every mill in Eastern Canada is working practically to its utmost capacity to meet the new demand. Fortunately, the capacity of these mills has recently been added to extensively as a result of the policy of the various governments of encouraging the manufacture of the raw material into a finished product at home. The old-established plants as well as the newer ones are feeling the urgency of this demand.

Among the best known plants in Canada are those of the Canada Paper Company, Limited, whose mills are located at Windsor, P.Q., on the main line of the Grand Trunk Railway, from Montreal to Portland, and on the Windsor Mills branch of the Canadian Pacific Railway. This plant consists of two paper mills each containing two paper machines, a ground wood pulp mill and a chemical pulp mill. The Windsor mill is situated on the Ouatapekah River, a tributary of the St. Francis River, about one-eighth mile from the Grand Trunk Station. The St. Francis mill is situated about one-third mile further south and is on the main stream of the St. Francis River.

Large Limits of Splendid Spruce

The limits from which the Canada Paper Company secure their timber are mostly on the Ouatepekah River, within a few miles of the mills, and they contain some of the finest spruce to be found on this side of the continent, the trees running up to 36 ins. in diameter. The butt logs of these big trees contain much excellent timber which can be very advantageously turned into lumber or dimension. These are held aside for this purpose and the rest of the tree is converted into pulpwood.

From the woods, the timber which is to be manufactured into paper is floated down the river in the spring, and is taken from the river during the summer by means of a chain conveyor. Some of it is used in the mills at once, and the rest is stored beneath trestle conveyors, for use during the winter months. In the groundwood pulp mill the wood is carried to a saw which cuts it into 2 ft. lengths. Then it goes to the barkers where knives projecting from the face of a rapidly revolving disc, quickly remove the bark which goes to the boiler room for fuel.

The "rossed," or prepared wood, thus obtained goes to a conveyor which takes it to the grinder room where it is loaded on trucks and taken to the grinder. The grinding department consists of 12 standard 3-pocket grinders, which connect to a 350 h.p. wheel. The grinders are 54 ins. in diameter by 27 ins. face and the wood is held against the face of the stones with a pressure of from four to five tons. Leaving grinders the pulp is diluted with water and pumped to the screens which remove the coarser particles that are unfit for the grades of paper being made. Some of the screens are of the flat type and some are of the centrifugal type. From the screens the stock goes either to the deckers where the surplus water is removed and it is thickened to a consistency suitable for use in the beaters, or it goes to the wet machines where it is brought to the form of "laps" suitable for storing or shipment. All of the ground wood manufactured is used in the company's paper mills. The wet machine equipment consists of five deckers or feltless wet machines, and six 72-in. wet machines.

In the beaters, the ground wood pulp together with a certain amount of chemical pulp and the necessary coloring matter, size, clay, etc., are thoroughly mixed and by the action of the beater-roll the fibres are beaten or "brushed out" for the proper length of time to produce the desired grades of paper. The beater room equipment consists of four 2,000 lb., three 1,000 lb., beaters and two refining engines. After having passed through the refining engines or Jordans, the stock is ready for the paper machines of which there are two, one 92-in. and one 156-in. Fourdriniers.

How the Chemical Pulp is Made

At the chemical pulp mill the wood is used in the four-foot lengths. It first passes to a "chipper" by which it is cut into thin chips which are then conveyed by a belt-conveyor to the chip storage over the digesters. These digesters are large upright boilers some 30 to 40 ft., in length of which there are four. In them the wood is acted upon by steam under heavy pressure and chemicals until the intercellular matter has been dissolved, leaving only the cellulose or pure fibre. The mass is then blown from the digester into pits where the pulp is thoroughly washed, after which it is pumped to the screens where the coarser particles are removed. Flat screens are used at this mill. From the screens the stock goes to two 72-in. wet machines. The greater part of the pulp made at this mill is bleached for use in the high grades of paper made at the Windsor mill. The beater room equipment consists of two bleaching engines, four 600 lb., and four 800 lb., beaters and two refining engines. The two paper machines at this mill make "writings," "book" and various high grade specialties in various shades and weights.

From the two mills the paper (of which the company make some 70 tons per day) is shipped either to their branch houses at Montreal and Toronto, or direct to their various customers all over Canada, United States, Great Britain, South America and New Zealand. One can almost tell where the various foreign shipments are going, by the manner in which they are packed. For instance the company sends considerable paper to Peru which has to be put up in small, strongly packed bales which are carried over the mountains on the backs of mules.

A large and well equipped carpenter shop and machine shop form a part of the company's plant where all necessary repair work is done. A cehmical and testing laboratory is maintained where the manufactured products and the various supplies and materials entering into the manufacture are inspected and tested, and where considerable experimental work is carried on.

The history of the Canada Paper Company's growth is one of

continued and steady expansion, indicative of capable management and far-seeing business ability. The town of Windsor Mills which has grown up around the company's plant is fifteen miles from Sherbrooke, P.Q., and the industry was in the first place a Sherbrooke one. The firm has been in business for over fifty years, having been founded by Messrs. Angus, Logan & Company in Montreal in 1859. Shortly after this the company had in operation a small paper mill on the Magog River in Sherbrooke, but not being satisfied with a leased power they established a mill at the village of Windsor Mills about 1862. In 1864 they established what they claim to have been the first pulp mill in Canada, and the second pulp mill in North America. Subsequently, the firm of Wm. Angus & Company, under which the business was then known sold out to the Canada Paper Company who have operated the plant ever since. At the mill at Windsor, Mr. Wm. Angus states, the first chemical pulp and paper produced in Canada was manufactured.

Rapid Growth From the Outset

The business of the firm grew rapidly and in 1873 the old firm was formed into a limited company, with Mr. Wm. Angus as president and Mr. Thomas Logan as works manager. Shortly after this the company built a second mill, the Springvale mill, a short distance up the Ouatapekeh River. This mill turned out 12 tons per day which was considered an excellent performance in those days.

The product of the mills at that time was sold through the wholesale stationery house of Messrs. Angus, Logan & Company, in Montreal, and in 1879 a branch was established in Toronto under the charge of Mr. John MacFarlane, who afterwards became president of the company. In 1898 the ground wood pulp mill was established on the St. Francis River, and paper machinery was added subsequently. In 1901 this pulp and paper mill was entirely destroyed by fire. The loss was met by an issue of preferred stock, and some changes in the directorate were made. Sir H. Montagu Allan was elected president and Mr. F. J. Campbell, then manager of the Toronto branch was appointed general manager. The head office was moved to Windsor Mills and work was commenced on what is now the company's St. Francis mill which began operation in 1902.

In 1908 Mr. Joseph Kilgour, of Toronto, became associated with the company and shortly afterwards was elected president. Then the company undertook the re-construction of its old mills. The Springvale mill was dismantled, and the Windsor mill was entirely rebuilt, with a capacity equal to the product of the two old ones. The Windsor mill is now one of the most efficient in the country, and is designed for the economic production of colors, and fine wood pulp papers. The company own their land in fee simple and have large and unbroken limits on the Ouatapekeh and Stoke Rivers.

At the present time Mr. Joseph Kilgour is president of the company and Sir H. Montagu Allan, vice-president. The executive management is in charge of Mr. F. J. Campbell, general manager; Mr. H. B. Donovan, manager of sales, and Mr. H. M. Thorne, secretary-treasurer, all of whom have been with the company for several years.

Foreign Opportunities for Canadian Paper

The Dominion Trade and Commerce Department has issued a bulletin to Canadian pulp and paper manufacturers relative to the opportunities offered them in foreign markets. Commissioner McKibbin reports from Johannesburg that South Africa wants Canadian paper. He points out that newspapers there which formerly issued but one edition now get out three per day, states that local stocks of paper are getting low and that "this increased daily issue of news should warrant increased demand for Canadian paper."

Commissioner Ray reports from Birmingham that "paper of all kinds is scarce in the United Kingdom at the present time, and the scarcity is likely to continue until communication with European sources of supply becomes normal again. Even after the cessation of hostilities it is obvious that British importers will rely upon Canada to furnish considerably larger consignments than in the past. Several firms have already sent buyers to Canada and many inquiries are being received at this office for printing paper."

The total amount of paper for printing or writing, on reels, imported by Great Britain from foreign countries last year amounted to $5,035,000 in value. The bulk of this supply with the exception of $103,000 from the United States, will now be cut off. The total amount of paper for printing and writing, not on reels, imported from foreign countries, was $4,384,730, $400,000 worth of this being from the United States. Imports of packing and wrapping paper were valued at $14,186,190. In this regard Commissioner Ray observes that there is the possibility of permanently capturing Germany's contribution, valued at$3,727,550. "One of the largest importers in Great Britain visited this office to-day and asked to receive samples and quotations immediately on packing and wrapping paper."

Decline in B. C. Exports Discussed

A discussion of the lumber trade of British Columbia was the chief item at the quarterly meeting of the Victoria Board of Trade recently. In order to get the views of men fully informed on the subject, the board had invited E. J. Palmer, the well-known Chemainus lumberman; J. O. Cameron, and H. R. MacMillan, chief forester of the province, to be present. After the matter had been fully threshed out, the following resolution was unanimously passed:

"Whereas the timber resources of British Columbia constitute its largest and most readily available visible asset; and whereas, notwithstanding the new markets that have been opened for lumber from the Pacific Northwest, the exports of this commodity from British Columbia have not only decreased in volume, but also, in a remarkable degree, in proportion to the total exports from the coast; and whereas it is desirable in the public interest that, if any obstacles exist to the due development of the export trade in lumber from this province, they should be ascertained, and, if possible, removed.

"Therefore be it resolved that the council of this board be requested to have a memorial prepared setting forth in convenient form such facts as may be available, bearing upon the export trade in lumber from this province, and to take such other steps in connection therewith as may seem to it advisable.

In dealing with the huge decline of lumber exports from the province in the past few years, E. J. Palmer offered some very interesting figures. While in 1902 British Columbia had enjoyed 33 per cent. of the coast trade in lumber, in 1913 she had only 4 per cent. The combined foreign shipments from British Columbia, Washington and Oregon to all parts of the world for 1913 had reached a total of 600,000,000 feet. Of this the natural markets of Australia, New Zealand and the West Coast of South America had taken 371,000,000 feet, or about 62 per cent., Australia being the largest importer with 238,000,000 feet, or about 40 per cent., of which British Columbia had secured a share of barely 4 per cent.

To South Africa, a country in which Canada had a 10 per cent. preference on lumber, British Columbia had supplied 14,000,000 feet, or 64 per cent. of the total imports. This was a striking example of what a small preference had done for this province. He urged that representations should be made to Australia to give Canada a similar privilege in her markets. The lumbermen on the other side of the border were bending every effort to persuade Australia to take lumber from them, but he hoped British Columbia would make every effort immediately to get preferential treatment in the southern country.

J. O. Cameron furnished the board with additional information as to the causes of the slump in British Columbia exports of lumber. The demand for lumber in the prairie provinces had been so great that at one time the coast mills were hard put to it to satisfy all their orders from that source. In time, however, the American competitors had got into action, being able to keep up their export trade while entrenching themselves pretty firmly in the interior trade in Canada. This was possible because they paid no duty to Canada, while the American market was closed to British Columbia exporters.

Chief Forester MacMillan showed the board that the importance of encouraging the lumber industry of this province to the fullest extent lay in the fact that it is the most important feature of the foreign credit of British Columbia, and as such ought to be preserved and encouraged to the utmost. He gave some interesting statistics to indicate how the trade put a large volume of money into circulation and compared present conditions with those of some years ago.

Why Australian Trade Goes to the United States

Mr. O. C. Beale, of Sydney, Australia, who recently visited Vancouver, B.C., made some interesting remarks regarding the lumber trade with Australia. Mr. Beale has been twice president of the Associated Chamber of Manufacturers of Australia, and is one of the leading industrial authorities of the Commonwealth. The lumber demand in Australia is increasing, and there is opportunity in that country for Pacific Coast manufacturers. He says:—

"Americans are making steady progress in the lumber market of Australia, and it might be well for the lumber interests of British Columbia to make additional efforts for a fair share of this trade before it becomes so closely held by our cousins to the south as to cause it to be especially difficult to obtain. The bulk of our fir and pine importations are from the Pacific Coast, but not from British Columbia. The chief reason is, I think, that your lumbermen do not seem to have conformed to the requirements of our trade in as great a degree as have the Americans. Lumber has often been sent from British Columbia in cumbersome cargoes and in unsuitable sizes, whereas it should be prepared for the Australian market here and not there. If individual lumbermen, or groups of lumbermen, in British Columbia would send to Australia more representatives with sufficient information to talk, not generalities but specific orders from the start, there would be a corresponding increase in the volume of sales of British Columbia fir and pine to Australian buyers, providing of course, the shipments fulfilled our special requirements.

"Because of our tariff regulations, dressed lumber cannot, as a rule, be sent, but lumber can be sent in sufficiently advanced stages to make the business well worth while. We have plenty of imperial sentiment, and while we like to trade with Americans, there might be a tendency to favor the British Columbian product, other things being equal. There is no reason why a reciprocal trade arrangement should not be made between Canada and Australia, which would give your loyal people special advantage in our market. Not only the Americans, but the Russians are also making steady progress in supplying Australia. Siberian woods are becoming an important factor. Several mills have been established at Vladivostock, and they are looking keenly for Australian trade.

"I would say, therefore, that it would be well for British Columbian lumber interests to make a strong move before the obstacles become greater. We get along very well with the sons of Uncle Sam. We have entire confidence in the representative firms. We like their methods. An agent of a large lumber dealer or of a group will call upon us, ready to quote prices and conditions or any kind of an order and full of the information we desire. He knows his business and gets ours."

B.C.'s Shingle and Lumber Industry

In a recent report to his government, the U. S. Consul General at Vancouver, B.C., says:—There are in British Columbia 61 shingle mills, with a total of 313 machines, each machine having an average daily capacity of 25,000, making a total capacity of the mills in the province of 7,825,000 shingles per day. The maximum number of machines in one mill is 23 and the minimum 1. American capital is interested in 15 of the plants, operating 84 machines, with a total daily capacity of 2,100,000 shingles. The following table gives the number of mills and machines in the province:

Shingle Mills in British Columbia

Mills	Machines	Total machines	Mills	Machines	Total machines
5	1	5	2	11	22
11	2	22	2	12	24
13	3	39	1	14	14
10	4	40	1	16	16
5	5	25	1	17	17
3	6	18	1	23	23
2	7	14	—	—	—
2	8	16	61	..	313
2	9	18			

Exports Practically All to United States

Invoices covering shipments of shingles from British Columbia to the United States certified through the United States Consulate General shows a large increase in the exports during the past year. The exports from Vancouver to the United States for the first three-quarters of 1913 were 53,569,505, as compared with 64,994,647 for the corresponding period of the previous year. The exports during the last three months of 1913 were 90,899,865 shingles, as compared with 24,590,320 for the corresponding period of 1912.

The exports for the first six months of 1914 were 313,584,035, as compared with 144,469,370 for the entire twelve months of 1913. The shipments of shingles from Vancouver to the States for the last quarter of 1913 and the first half of 1914, covering the three quarters, show a total of 404,483,900, as compared with 78,159,825 for the corresponding periods of 1912 and 1913.

Practically the entire output of the British Columbia shingle mills is now exported to the United States, the industrial depression prevailing in Canada during the past year having seriously affected building operations in the western provinces.

The financial conditions incident to the war recently caused the shingle manufacturers in the province to reduce the wages of employees, which has enabled them to compete more successfully with the shingle mills in the United States, and in order to keep the plants in operation the manufacturers in British Columbia are devoting their energies to the extension and maintenance of their export trade, the bulk of which is to the United States.

Exports of Lumber to the United States

The lumber exports to the United States invoiced through this consulate general during the December quarter, 1912, were 205,724 feet, and for the last quarter of 1913 the exports amounted to 1,703,534 feet, an increase of 1,497,810. Exports for the last quarter of 1912 and the first half of 1913 were 1,861,100, as compared with 12,030,799 for the last quarter of 1913 and the first half of the year 1914, an increase of 10,169,799. The total exports to the United States for the year 1912 amounted to 1,009,123 feet; the total for 1913 was 4,186,600 feet and for the first six months of 1914 the shipments invoiced through this consulate general show a total of 10,327,265

feet—nearly ten times more than for the entire year of 1912, and approximately two and one-half times more than during the twelve months of last year.

There is little demand for lumber in Western Canada at this time, owing to the depression in the building trade, and the millmen are depending largely upon the market in the United States for an outlet for their products.

An Important Australian Contract

The Government of British Columbia, has cabled to Premier Fisher, of Melbourne, and to D. H. Ross, Canadian Trade Commissioner at Melbourne, to endeavor to secure for Canadian lumber firms the privilege of quoting direct upon orders for some 25,000,000 feet of lumber needed for the new Capitol Buildings at Canbarra. A commission has been appointed in San Francisco to receive tenders for the supply of this lumber and British Columbia mills must send their tenders to them. This will mean a handicap of at least 6 per cent. against the product of British Columbia in competition with the United States mills and therefore the province will do all it can to secure permission for tendering direct.

B.C.'s Forest Revenue for September

The total amount of forest revenue of the Forest Branch of the British Columbia Lands Department for the month of September, 1914, was $151,569.13, made up as follows:—

Timber Licence Fees	$105,728.55	
Timber Licence Transfer Fees	660.00	
Timber Licence Penalty Fees	355.00	
Timber Lease Rentals	4,346.40	
Timber Lease Transfer Fees	5.00	
Timber Mark Fees	24.00	
Handlogger Licence Fees	250.00	
Scaling Fees	2,222.07	
Scaling Expenses	129.75	
Timber Royalty	22,921.08	
Timber Tax	7,587.88	
Trespass and Penalties	727.10	
Timber Bonus	6,528.85	
Exchange	3.73	
Miscellaneous Revenue	9.50	
Timber Sales Rentals	42.22	
Timber Sales Cruising	21.90	
Timber Sales Advertising	4.80	
Interest on Leases	1.30	
Total	$151,569.13	
Collections for the Forest Protection Fund from Timber Licencees, Lessees, etc.	$10,087.43	
Contributed by Provincial Government	10,087.43	$20,174.86
Forest Protection Expenditure during month of September was		$85,211.56

The total amount of timber scaled in all districts was:—62,069,444 ft. B.M. of saw logs; 378,596 lineal feet of piles and poles; and 13,512.86 cords of railway ties, shingle bolts and cordwood.

The quantity exported from all districts was as follows:—10,074,891 ft. B.M. of saw logs, and 122,930 lineal feet of piles and poles.

Timber sales completed during the month of September amounted to 974,000 ft. B.M., the total estimated value being $1,560.73.

An Interesting Type of Lumber Vessel

F. A. Ballin, a naval architect, and E. H. Dodge, both of Portland, Ore., have obtained a patent from Washington, D.C., on plans for a new type of vessel for service in the coastwise lumber trade. The vessel can be loaded with 5,000,000 feet of lumber in an hour, it is said, and complete the round trip between Portland and San Francisco in seven days, including the time required in taking on and discharging her cargo. The plans prepared show it to be in the nature of a "dry-dock" steamship. It is to be built in such manner that it can be submerged to a sufficient depth to permit two sets of barges loaded with lumber to be floated into the hull through bow gates. Five of these barges can be placed in compartments on each side, each of the 10 loaded with 500,000 feet of lumber. After the gates have been closed and all the water used for submerging pumped out, the cargo deck will be above them. The operation for discharging the cargo consists of flooding the central lower portion of the hull with water until the vessel sinks and the bow gates have been thrown open allowing the barges to float out. There will be extra barges, making it possible for 10 to be loaded at leisure in port while the vessel is en route down the coast, carrying her capacity. It is expected that the system will prevent congestion of lumber on the docks. The barges are open and can be filled direct from the saws and planers. The vessel indicated in the plan is 650 feet long, with 80-foot beam, while each of the barges is 100 feet long, with 30-foot beam. For the return trip from San Francisco it is said the barges will be loaded with fuel oil, asphalt, cement and different kinds of general freight.

New Box Factory for British Columbia

A company composed of Boston capitalists, with $250,000 capital, plans a box factory on the Fraser River, adjacent to Vancouver, which will employ 200 persons. The location of the factory in British Columbia is due to the fact that a plentiful supply of the kinds of wood to be used in the construction of the boxes, including cottonwood, spruce, hemlock, fir, and alder, is to be obtained in the province at prices below those prevailing for the same class of material in the United States. That the plant will begin operations under favorable auspices is shown by the fact that orders have already been secured from Ceylon and India for a large number of tea boxes. The boxes will be manufactured by a process by which thin pieces of wood in cross sections are fastened together with a composition used under high pressure, which, it is claimed, renders the wood impervious to water, makes it non-shrinkable, and in the crossing of the grain gives the material great strength and resistance in proportion to its weight. A special feature of the boxes is a triangular section covering the edges and corners, protecting and greatly strengthening and rendering them especially desirable as containers for eggs, fruit, etc. The boxes are much lighter in proportion to the size than those made of ordinary lumber. The process of preparing the material and the composition with which the sections of wood are bound are patented.

Douglas Fir Distillation

The results of four experiments carried out on a commercial scale to determine the value of distillates from Douglas fir stumps, along with other supplementary investigations, show that distillation as an aid for clearing land is entirely out of the question, according to G. M. Hunt, of the U. S. Forest Service. The processes employed were steam distillation with and without subsequent extraction, destructive distillation, and combined steam and destructive distillation. The experiments are described in detail in a 3,000 word article, and the summary brings out a comparison of the yields of Douglas fir to those of Norway pine and Longleaf pine, although not an exact comparison.

	Turpentine gal.	Other Oils gal.	Tar gal.	Rosin lbs.
Douglas fir	1- 4	3- 8	15	75-150
Norway pine	8-18		10-20	300
Longleaf pine	10-20	7-16	25-45	

The yield of charcoal is about the same for each. While the yields of acid and alcohol cannot be compared, those from Douglas fir are so low that it is doubtful if they could be profitably saved.

Besides the small amount of product, other things stand in the way of profit. The products are different from those of Norway and Longleaf, and are not favored on the market. The large stumps make expensive handling, and, besides, the mill-waste is more easily handled and is much more than sufficient to supply the Pacific Coast.

Robert Dollar Nearing End of Long Trip

Mr. C. C. Yount, vice-president of the Empire Lumber Company, Cowichan Lake, B.C., visited New York recently to enquire into the progress of the steamer Robert Dollar, which is on its way from Victoria, B.C., with a large cargo of timber for the harbor improvement works at Toronto. He found that the Robert Dollar which was delayed at Rio de Janiero, on account of the desire of the vessel owners to transfer from British to American registry, was expected in New York, on Friday, October 23rd. Mr. Yount reported that business was very quiet in British Columbia, chiefly because it was impossible to get transportation. Almost every vessel in the Pacific Coast trade was under the British flag and very few of them were now upon the Coast. Stocks of lumber in the west, he stated, were short. All the lumbermen had stopped cutting when they found a shortage of vessels.

In spite of the dullness of the lumber market the export of lumber from St. John, N.B., to the United States for September was considerably more than double that of the corresponding month last year. The figures are as follows:—

Lumber	$101,965.86
Wood pulp	22,653.47
Pulpwood	4,567.50
Laths	45,037.67
Shingles	2,672.19
Pine boards	3,173.17
Total	$180,069.86
Total for corresponding month, 1913	79,835.47

Cableway Logging—Operating Methods

How Logs are Brought from the Woods by the Overhead System—Description of the Principal Working Features

By Asa F. Williams, F.E., Vancouver, B.C.

The logging industry of the Northwest has seen several changes in the principal methods of operation—hand logging, the "bull team," the horse team, the spool donkey and the compound. The past year or so has shown to the industry another change—the cableway or overhead system. Steam was first used in the woods of the Pacific Coast nearly thirty years ago by Saldern in California, he inventing the well-known spool donkey. Soldern's invention followed the first use of steam for logging at the great source of North American loggers, Michigan, where Hiram Butters devised a practical steam logger to take pine out of the pot-holes near Ludington. All forms of

Lidgerwood steel spar skidder as used by the Canadian Western Lumber Co.

logging machinery (the log loader, the portable pine logger, the Pacific Coast donkey) are all developments from this device of Butters. The strange point in this development of logging machinery—especially strange to the Pacific Coast operator who has but recently heard of or used the overhead skidder—is that Butters machine was an overhead machine. Thus it will be seen that the development of the simpler ground machines has come from the higher, more complex, overhead machine. From Michigan the cableway skidder wended its way south. In the south it found a tremendous field of usefulness and was perfected to its present wonderful completeness, until today ninety per cent. of the cypress, twenty-five per cent. of the gum, juniper and oak, and a considerable per cent. of long leaf pine, is logged with the cableway skidder.

On the Pacific Coast the cableway skidder made its first appearance successfully some ten years ago, but until recently made little progress, and few loggers had seen or even considered seriously the use of overhead methods for the heavy Pacific Coast logs. In British Columbia the writer some three years ago installed the first successful cableway skidder. This installation was at the camp of the Fraser River Lumber Company. It produced remarkable results from the start, decreasing railroad construction, giving clean, unsniped logs, allowing the profitable handling of small logs and decreasing yarding costs. The first installation was followed successively by five others by the same company. Other companies and individuals rapidly followed the Fraser River Company, and adopted overhead systems of skidding or of roading, and for once the Canadian has shown himself more enterprising than his American cousin, for today nearly twenty per cent. of the British Columbia coast logs are handled by overhead systems, in comparison with less than one per cent. so handled in coast timber in the United States.

Overhead System Described

For the Coast logger who still is unfamiliar with the principles of overhead logging the following may be of interest:

In all systems of overhead logging, either for yarding or roading, the logs are suspended in transit from a trackway consisting of single suspended wire cable. This cable may be simply suspended from each end, as is usually the case in yarding, or may have intermediate supports, as is necessary in roading. The supports for the main cable may be trees, poles, "A" frames, or as is the case in the most improved form of yarder, by a steel tower. From the main cable or trackway the load of a log or logs is hung from a carriage or several carriages. In skidding usually a single carriage is used, but in roading two or more, depending on the log lengths.

In overhead logging the load is held suspended from the carriage in several ways. First, by direct fastening to the carriage; this is the way for all successful roading systems, it has been attempted for yarding, but with little success. The second was used in the original machine as built by Butters, and in all present successful yarding machines excepting the Lidgerwood, is to hold the load suspended by a backpull, on the haulback or return line by means of a brake. Thirdly, the interlocking or Lidgerwood, in which suspension is accomplished by interlocking the gears of the inhaul and outhaul drums of the machine, so that the haulback pays out automatically as rapidly as the load travels. This eliminates the brake friction, amounting to fifty per cent. of the power required to handle the load.

The principal reasons for the use of overhead logging systems come from the decreased power required for transportation. The light friction of shieves and well-oiled bearings replace the tremendous load experienced in dragging logs over rocks, roots and stumps in ground yarding, of even the smoother skid road for roading. A practical example of the different power required in ground and overhead yarding is shown by a fuel test between a compound geared yarder and an interlocking skidder, both operating on Vancouver Island under the same conditions of smooth ground, handling fir averaging seven hundred feet to the log; in this test the skidder used about thirty per cent. of the fuel that the donkey did per thousand feet of logs per distance yarded.

Why Overhead Logging Is Best

There are many other reasons which render the overhead method of roading or of yarding more desirable than ground methods; many of them are advantageous only in specific cases. Some of them are cited here that the logger may judge whether they apply to his own conditions. When logs are yarded upon the ground there must be some preparation, such as sniping, bucking into short lengths, swamp-

North Bend system of overhead trolley installed by Canadian Willamette Co., Vancouver.

ing, putting in shear logs, or in roading, fore and aft or cross skids, road or tree rollers, or other preparation, all of which is unnecessary in overhead operations. A high speed of operations both for the haul-back and for the load is possible in overhead methods—a speed two or three times as great as with ground systems.

Logs handled through the air are free from sand, gravel and rocks; they are without broken ends; and piles and similar products retain their bark undamaged. Forest products of all descriptions may be handled with little difficulty or much additional cost, be they logs twelve or one hundred and twenty feet long, pulpwood, shingle bolts or tanbark.

Overhead systems are but little influenced by ground conditions. The varied conditions of the long leaf pine belt, the cypress swamp, the West Virginia mountains, the sharp coral rocks of the Bahamas, the mountains of British Columbia, or the hardwoods of lake states, with the entirely different methods of operation formerly used, are all now most economically logged by overhead methods, which permit of operating advantageously either up or down hill, much more so than do ground methods.

To consider the advantages of overhead methods for the Pacific Coast, and especially the Coast of British Columbia, the four principal ones which are causing them to replace ground methods are: First, the decreased cost of logging; secondly, their adaptability to rough ground; thirdly, the greater distance they will work advantageously; and, finally, their ability to handle all size and length of logs cheaply.

The present average cost of logging on the Coast of British Columbia is over six dollars per thousand feet, and it is tending to increase. Anyone who has seen the millions of feet of British Columbia timber that stands on rough, rocky slopes, or up impassable gorges, or miles up valleys impassable for railroads, realizes the inefficiency of the present methods to log the timber from these areas. Of the new methods that must be introduced for their exploitation, undoubtedly the overhead yarding and roading method will be prominent.

Working Features Explained

To the logger first investigating overhead systems a number of questions usually occur. Some of the possible ones are answered as follows:

Regarding the main cable: In practice the main cable in overhead yarding is stretched so as to have a deflection of from two and one-half per cent. to three per cent. It will readily be seen that the deflection of the main cable is one of the main factors determining the length of the span it is possible to use. Thus, on a 1,000 foot span the deflection would be from twenty-five to thirty feet. A further clearance is required for the carriage, tongs, or other grabs, of perhaps ten feet more, so that to handle logs up to forty feet in length on a span of one thousand feet the terminal supports of the main cable on level ground logging would have to have an elevation of at least seventy-five feet.

The resultant strain in yarding on the main cable with the usual deflection is about five times the load; thus a log scaling five thousand feet, and weighing eighty-five hundred pounds to the thousand feet,

Where the McFarlane does great work.

will give a load of 42,500 pounds, or a terminal pull on the main cable of 210,000 pounds. Furthermore, it must be understood that the load usually greatly exceeds the weight, for in actual skidding stumps, brush, rocks and small trees offer resistance, if encountered, that must be overcome.

In breaking out logs in yarding it will be found that the engine operator usually pulls until the load comes, something breaks, or the engine is stalled. The real factor governing the required strength of all rigging, then, is the pulling power of the engine.

In roading by overhead methods the excessive strains of yarding are not encountered, and the weight or the maximum load of logs is the governing factor in the strength of equipment. Long spans are not so desirable as in yarding and a main cable deflection of about five per cent. is generally used. It is of course understood that the strain increases as the deflection decreases. It is now practicable under suitable conditions to yard up to 3,000 feet, and to road up to five miles, by overhead methods; efficiency, however, decreases as the distance increases. As to the future of overhead methods on the coast of British Columbia, it is my humble opinion that less than ten years will see at least 80 per cent. of the logs yarded by overhead methods.

There are accompanying this article four illustrations. The reader's attention is called to that of the Portable Spar Skidder especially, in that it is the most highly developed and specialized of any logging machine in existence. This machine is an overhead skidder and loader; the main cable is suspended from the steel spar. The machine remains on the track during all operations, the empty logs cars passing beneath it. Loading is done with a long swinging loading boom. This machine is the first of its kind in the Northwest and embodies most of the principles that will be found in the machines used in the future.

[*Note.—Mr. Asa S. Williams, now a contracting engineer of Vancouver (familiarly known as "Skidder") was formerly manager of the logging machinery department of the Canadian Allis-Chalmers Company, and had long previous experience in the South and East installing overhead logging systems.—Editor].

Forest giant in grip of McFarlane skyline.

Donald McLean, for several years in charge of the London branch of the E. B. Eddy Company, of Hull, Que., has been appointed manager of the Toronto branch, succeeding James Logie, who has been manager for the past five years, but who resigned to enter into the paper jobbing business in Toronto on his own account. Mr. Logie is well known to the trade, having been for nearly a quarter of a century identified with it. Allan M. McLean has been made manager of the London branch of the Eddy Company, succeeding his father.

British Trade Statistics Show Reductions

The London Board of Trade, in its report for September shows that extensive reductions occured in British trade during that month.

Imports for last month were but £45,051,937, as against £61,355,725 for the corresponding month of 1913. Exports were £26,674,101, as against £42,424,864 in September of the preceding year.

These figures show a decrease of £16,303,788 in imports and of £15,750,763 in exports.

An analysis of the figures shows a decrease of £1,610,711 in the amount of raw cotton imported and a decrease of £3,664,502 in manufactured cotton exported.

The only items of import showing a marked increase for the month were flour and grain, the amounts of which exceeded those for the previous year by £682,041.

After manufactured cotton, coal showed the greatest falling off in the export list. The amount of coal, coke and manufactured fuel exported last month was worth £1,851,658 less than that sent out in September of 1913.

Britain feels it must find new coal markets, as Germany was one of its best customers. Last year Germany bought £5,328,000 worth of coal from British mines. It is doubtful whether this market will ever be regained, and British manufacturers are urged to take over German trade that they may require more fuel in their factories.

Spruce Deal Demand Growing

Eastern manufacturers of spruce have been considerably exercised of late by the activity of English and Continental buyers, not only in their natural field—the maritime provinces of Canada—but also in Northern Maine, where there are many large mills well equipped to produce and ship the special sizes of 3-inch stock known abroad as "deal." English "wood goods" statisticians tell us that about 65 per cent. of the spruce deal consumed annually in Great Britain come across the Baltic, and the buyers apparently fear that this waterway will be closed to them indefinitely by reason of the war. A report from Nova Scotia tells of the chartering of vessels to carry fully 65,000,000 feet of Nova Scotia spruce across the water, while one exporting house is credited with having closed for the delivery of more than 50,000,000, some of which will come from this season's cut and some early next spring. This stock will be shipped from St. John and from mills along the St. Lawrence. That the foreign buyers, contrary to custom, have invaded the Maine field is shown by reports that one mill on the northern border has booked an order for 3,000,000, while another has sold 2,000,000 feet, while still another large order was being negotiated with a Bangor shipper. Shipments from Maine mills will be made either from Bangor or from Stockton Springs, the open harbor at the end of the Bangor & Aroostook Railroad. That this call upon the spruce shippers of Maine and the Provinces will have a steadying effect upon the winter and spring spruce market of the East is the natura lsequence. To what extent this demand from abroad is to increase is a problem which the future alone can decide.—The Lumberman's Review.

Car Supply Likely to be Ample

In the middle of the summer this year predictions were generai that there would be a serious car shortage in the fall. In the latest report at hand, furnished by the American Railway Association, covering the year to September 15, while it is shown that there has been a steady decrease since July 15 in the net surplus of cars in the United States and Canada, there was on that date a surplus of 136,049 cars, which when compared with the surplus (40,159) at the corresponding date in 1913, shows practically 100,000 more cars idle on September 15 this year than was the case a year ago. The present situation is doubtless traceable to the fact that thousands of cars engaged in hauling export commodities to the water front have been turned completely away from that line of activity. Apparently the supply of cars will be ample throughout the fall and winter periods.

Southern Hardwood Cut Greatly Curtailed

A recent despatch from Memphis, Tenn., says that the most significant development in the hardwood situation in the South since the war began in Europe has been the vast curtailment of output effected. Practically all the mills in the Mississippi Valley, comprising the principal hardwood producing territory, were operating on full time at the end of July. Since that time manufacturing operations have been confined practically entirely to the conversion into lumber of the stocks of logs already on hand. Such progress has been made in curtailment that conservative hardwood lumbermen estimate that the output in the Memphis district is not more than 25 to 30 per cent. of normal. By means of curtailing the output and by virtue of ability on the part of the lumbermen to secure funds for the financing of their lumber, very little stock has been forced for sale. Demand has not been active at any time since the war began, but the ability of lumber interests to carry their stocks without sacrificing them has made it possible to maintain prices at almost as high a level as that prevailing before the war.

Exports of lumber are almost at a standstill, particularly so far as new business is concerned. Within the past three or four weeks cargoes destined for the United Kingdom have been allowed to go forward, but shipments have not been made to any of the other warring countries because of the extreme risk involved therein. The British Government has been a moderate buyer of southern hardwoods more recently, but demand from other countries is particularly small.

Large Timber Resources in G. T. P. Districts

Mr. J. E. Dalyrmple, vice-president of the Grand Trunk and head of the traffic department, who went with Mr. Chamberlin to the end of steel upon the recent western trip of the former, is enthusiastic in respect of all he saw and heard touching the new system. "The general character of the country, its capacity for development along the most permanent lines, and the variety of its undoubted rich resources, have impressed me most favourably, he said. Take the case of timber resources. I had the impression that these were of secondary importance. On the contrary, from what I have seen, from the enquiries I have made, the timber asset may easily prove to be the chief among the natural resources of the country. So much am I impressed with this that I intend to take the matter up with the Government to the end that its co-operation may be enlisted in the work of developing this large asset. These timber limits lie so near our line that there will be little difficulty in getting the timber to market. With our easy gradients we should be able to supply the prairie provinces, and, of course, there are the markets overseas to be supplied via Prince Rupert."

Canadian Box Shooks May Find Sale in London

Mr. Harrison Watson, the Canadian Trade Commissioner at London, Eng., has forwarded to the Department of Trade and Commerce specifications of box shooks, furnished by a leading lumber broker in London. This broker stated that, although considerable advances have taken place in the prices of Scandinavian box shooks, recent Canadian quotations had not up to the time of writing been exceeded. He was anxious, however, to receive quotations from the Canadian mills, as it was uncertain as to whether Scandinavian box shooks would for long be available at the present rates. It would be deisrable for Canadian shippers to quote their lowest c.i.f. prices to the ports of delivery, inclusive of marine insurance, but exclusive of war risk insurance. For commission and delcredere, 5 per cent. of the f.o.b. value of the goods should be included in the prices quoted.

Railway Service in Northern Ontario

In his first address to the public, Hon. W. H. Hearst, the new premier of Ontario, who retains the portfolio of Lands, Forests and Mines, declared that with the inauguration of the Transcontinental Railway service across Northern Ontario, the development of that district in relation to settlement and forest production, would progress rapidly. Premier Hearst remarked that until transportation channels were supplied for Northern Ontario it would be unfair to expect rapid settlement or growth.

Clothes Pin Information Wanted

Editor Canada Lumberman:— Bear River, N.S., October 9.

We have been investigating the manufacture of hardwoods for some months and it occurs to us that there is an opportunity to start a small enterprise along this line, in our neighborhood. We would be glad to have you send us some information as to the number of clothes pin factories, with some allied manufactures, which are operating in Canada, where they are located, what success they have had and what the prospect for this line of business is. Please also give us whatever information you can in regard to the manufacturers in Canada who supply clothes pin machinery—Clarke Bros.

The Forestry Branch of the Department of the Interior at Ottawa state that five firms in Canada report the manufacture of clothes pins. These firms have reported the product as separate from ordinary woodenware. Some of the larger woodenware factories may make clothes pins as a by-product from hardwood waste, but if so, they have not mentioned them on their lists of products. The Department gives a list of the five firms referred to, which have been forwarded to Messrs. Clarke Bros. They state that they can give no information as to the prospects of success in connection with such a line of business. This would entirely depend upon particular local conditions. Several addresses of manufacturers of woodworking machinery have also been sent to Messrs. Clarke Bros., in connection with this enquiry. If any readers of the Canada Lumberman can give more definite information upon this subject, we will be very pleased to hear from them, and to forward the information.

Causes of Fire in Yards and Kilns

A report issued by the National Fire Protection Association, Boston, Mass., states that 43 per cent. of fires in lumber yards occur from unknown causes. The cases in which the causes are known are divided as follows:—

Exposure.	Per Cent.	
Locomotive sparks	27.0	
Other exposure	16.2	
		43.2
Incendiarism		38.0
Smoking		8.0
Lightning		5.4
Stoves in offices		2.7
Oily rags and waste		2.7
		100.0

The report also states that 28.6 per cent. in number caused losses of $10,000 or below and that 71.4 per cent. of the fires caused losses above that amount. It recommends that piles should be limited to 15 feet in height; should individually be kept of narrow width and should be separated every 10 or 20 feet by an alley 3 or 4 feet wide to permit the laying of hose lines. Main driveways should be 15 or 20 feet wide and transverse driveways of similar width should be maintained not over 100 feet apart. Large yards should be divided into fire sections by the maintenance of clear spaces 100 to 200 feet wide.

As to dry kilns the report states that much improvement has been made by the general adoption of the moist air principle in drying, greatly reducing losses. Of the statistics gathered by the committee 56 per cent. of fires resulted from unknown causes. The known causes were as follows:

	Per Cent.
Steam pipes in contact with combustibles	30.3
Sparks entering kiln	28.8
Overheating	12.2
Oily material igniting	10.6
Fans or blowers	4.6
Defective flue from kiln	3.0
Miscellaneous (none over 2 per cent.)	10.5
	100.0

The report concedes that the drying of lumber by kilns rather than by air drying has to a very material extent, under modern conditions, reduced the fire hazard of lumber manufacturing plants. It is, of course, obvious that there is a smaller area exposed to causes of fire in a dry kiln than in a corresponding equivalent of lumber yard space; but in addition the committee emphasizes as points tending to reduce fire hazard the superior design and construction of modern kilns as to the support of steam pipes and lumber trucks; the promotion of cleanliness by large clearance and easy access for removing refuse accumulation; the continuous circulation of very moist air with entire absence of charring of the interior woodwork of the kiln, and, as an incidental cause, the reduction of drying defects such as warping, checking and discoloration, thus reducing the amount of waste in the manufacture of lumber and promoting cleanliness in woodworking plants in which kiln dried lumber instead of air dried lumber is used. Sprinkler protection is recommended and it is stated that no large losses have occurred in dry kilns where a standard sprinkler system was provided, with adequate water supply. The report contains suggestions for installation of fire protective equipment.

Weights of Various Kinds of Lumber

The figures below are taken from data given in the United States Forest Service Circular 213 for the first column; from the official estimated weights of air-dry lumber as published by the Hardwood Manufacturers' Association of the United States for column 2; from similar official estimated weights both dry and green as published by the National Hardwood Manufacturers' Association for columns 3 and 4 except the figure for white pine in column 4 which was taken from Forest Service Circular 213.

	Weight per M. feet			
	Absolutely dry	Air dry	Air dry	Green
Beech	3,476 lbs.	4,000	4,000	5,750
Birch	3,435	4,000	4,000	5,500
Hard Maple	3,341	4,000	3,300	5,400
Soft Maple	3,222	3,000	3,300	5,000
White Pine	2,032	2,400	2,500	3,535

Box makers in the United States use 4,547,973,180 feet of lumber annually, of which softwoods constitute 3,138,278,019 ft., or 69 per cent., and hardwoods 1,409,695,161 ft., or 31 per cent. of the total. Practically all of the wood used for boxes is the product of the sawmill and therefore forms a part of the annual lumber cut. Based on the production in 1912, the last year for which figures are available, 11.6 per cent. of all lumber produced in the United States is converted into boxes. In fact, the manufacture of packing boxes and shooks, crates, crating, fruit and vegetable packages and baskets, is the second largest wood-consuming industry of the United States. The manufacture of lumber for construction and building purposes, planing mill products, sash, doors, blinds and general mill work, is, of course, the leading wood-consuming industry, taking over two-thirds of the annual lumber cut.

Expects Trade Improvement in the West

D. N. Winton, of Minneapolis, who returned recently from a trip to northern Saskatchewan where he is interested in the manufacture of lumber, says that trade in the Canadian northwest is rather slow at the present time. Crops have been fair this year in the western prairies and the farmers are getting more for their grain than ever before, but the war has hit Canada rather hard and business is dull. The mills in which Mr. Winton is interested are those of the Prince Albert Lumber Company, Limited, of Prince Albert, and the Ladder Lake Lumber Company, of Big River. The latter concern was formerly the property of the Big River Lumber Company and was recently bought by the Wintons. The mill of the former owners had been destroyed by fire but the new owners are just completing a magnificent new plant which will have a daily capacity of about 300,000 feet in a day and night run. The new equipment for this plant was manufactured and installed by the Diamond Iron Works of Minneapolis. The Prince Albert mill of the company has a daily capacity of 350,000 feet. Practically all of the lumber manufactured by these two concerns is spruce of very good quality. While it contains practically no finishing lumber, neither is there any very low grade stock in it. The company has enjoyed excellent trade for several years and Mr. Winton believes that business will again be fine in that section as the agricultural resources have not yet been developed to near their potential capacity.

Manchester and Liverpool Stocks

H. W. Litghtburne & Company, Liverpool, and John E. Moore & Company, Limited, St. John, N.B., furnish the following report upon Liverpool and Manchester stocks on October 1st:

Spruce and Birch

Month Ending September 30th, 1914

Liverpool

	Import			Consumption			Stock		
	1912.	1913.	1914.	1912.	1913.	1914.	1912.	1913.	1914.

Laurentide Finishes Big Survey

The forestry division of the Laurentide Company, Limited, has finished a survey and map of 2,350 square miles showing all drainage, roads, portages and trails, lookout stations, telephone lines, and timber conditions. This is the first complete map ever made of the section and in order to be of use about 500 miles of contiguous territory was mapped.

There were recently shipped in one consignment from Vancouver to Buenos Aires, Argentina, 500 tons of wood pulp, and further orders from the same sources for similar shipments have been received by a Vancouver pulp Company.

WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (14 agate lines make one inch.) ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

Wanted–Lumber

Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 7-tf

Export Birch

Hardwood lumber wanted for export.

The Fletcher Pulp & Lumber Co., Ltd.,
20-21 Sherbrooke, Que.

Lumber Wanted

Hemlock running chiefly 14 ft. and 16 ft. lengths, 1-in. Spruce, Basswood, Birch; also Cedar Posts. Send detailed list giving lowest wholesale prices. Address Box 85, Canada Lumberman, Toronto. 21-24

CRATING

We invite correspondence from manufacturers of crating stock in Canada and the United States for the New England and New York markets. Let us know prices of ½-in., ⅝-in. and ¾-in. stock in first letter; cash business, and plenty of it. Box 91, Canada Lumberman, Toronto. 21

Wanted To Buy—1000 Birch Logs

fresh, clean, straight and sound, 14-in. and up diameter at small end, 8 ft. to 16 ft. long. Delivery to commence as soon as possible. Terms: 75 per cent. cash when alongside track at railway station, balance when loaded on cars. Write P. O. Box No. 1595, Montreal, stating best price. t.f.

Wanted

2 cars Cedar Posts peeled, 3 to 5 in. tops.
1 car 1-in. Pine, 1 to 10 in.
1 car No. 2 Hemlock, 1 and 2 in.
1 car No. 1 Hemlock, 2 x 8 and 10, 10 to 16 ft.
Best cash prices.

Box 195, Jordan, Ont. 21

For Sale–Lumber

For Sale

400 Spruce Spiles, 60 ft. long, 7 in. tops. Also any quantity Spiles 35 to 50 ft. long. Prompt shipment.

The Northern Lumber Mills, Limited,
21-t.f. North Cobalt, Ont.

Lumber For Sale

200 Pieces 1 x 15 and up 22 ft. Cypress.
375 Pieces 1 x 15 and up 24 ft. Cypress.
Clear for boat building, in stock at Montreal.

GEO. C. GOODFELLOW,
c Montreal, Que.

For Sale

Two cars of Poplar, Balm of Gilead and other softwoods. Three miles west of Galt, C. P. R. or G. T. R. Railroads. Write Uriah Snyder, New Dundee P. O., Ont. 21-22

For Sale

St. Frances Valley, Arkansas, Band Sawed Red Gum, dry, choice stock, all grades. Inspection guaranteed under National Rules.

The Crittenden Lumber Company,
19-22 Crittenden, Arkansas, U.S.A.

For Sale

One car 4/4 in., 2 to 4 in. Clear Quartered White Oak Strips.
One car 4/4 in., 4 to 5½ in. Clear Quartered White Oak Strips.
Will make attractive prices to move this.

Duhlmeier Bros., Cincinnati, O., U.S.A.

Business Chances

Timber Limits For Sale

Can be quickly and profitably disposed of by advertising them on this page. This is where buyers of timber property look for opportunities to invest. If your "ad" is here the investor will see it. Canada Lumberman, Toronto, Ont. tf

Sawmill For Sale

Capacity, 20,000 ft. per day; circular saw outfit. Engine, 46 h.p. Boiler, 80 h.p. Pony Pump. 3 Saw Edger. 3 Block Carriage and Dogs. Trimmers and Slash Table. Friction Nigger. 4 Circular Saws, 52-in. Shaft and Belting. Frictional Jack Ladder.
Sawmill all complete F.O.B. Cars Penetang for $2,850.00. Also chopping outfit, capacity 40 to 120 bags per hour, price $350.00, F.O.B. Cars Penetang.

F. PAYETTE & COMPANY,
21 Penetanguishene, Ont.

Miscellaneous

Electric Lighting Plant

wanted, without power, direct current, capable of supplying 250 to 300 16 c.p. lamps. Must be in first class condition. Name lowest cash price. Correspond with Clarke Bros., Bear River, N.S. 21-24

Sales Agents Wanted

Large United States chain manufacturers now represented in Quebec Province want to secure sales agents in Ontario, Western Canada and Maritime Provinces for all kinds of logging chain, dredging chain, etc. Apply Box 80, Canada Lumberman, Toronto. 20-22

Sales Engineers Wanted

A large firm specializing in the manufacture of motors of all classes desires to secure sales engineers in various parts of Canada. Firms who can carry a stock of motors are preferred. Write stating the territory that you can cover. Box 96, Canada Lumberman, Toronto. 21-24

Wanted

Second-hand patent snow plows, also boom chains. Plows are for use on road where sleighs 6 ft. wide from outside to outside are run. Address The Schroeder Mills and Timber Company, Salines, Ont. 21-22

For Sale

Fifty good lumber horses from 1400 to 1700 pounds. Also harness, sleighs, water tanks, snow plows, blankets, chains, camp stoves and all camp supplies. Can all be seen at Berriedale, near Burks Falls, Ont.

Highland Lumber Company, Ltd.,
20-23 Berriedale, Ont.

Agents Wanted

Large firm making low voltage transformers and electrical measuring instruments wants sales agents for Canada. These transformers are for sign lighting, bell ringing and toy requirements. The electrical measuring instruments include a complete line of switchboard and portable ammeters and voltmeters. All agents to work on a commission basis. Write, stating what territory you can handle, to Box 93, Canada Lumberman, Toronto. 21-23

Portable Mill and Complete Camp Outfit For Sale

50 H. P. engine and locomotive boiler mounted on skids, only used three months.
54-in. circular saw mill, three saw edger, cut-off saw, shingle mill, belts, shafting, pulleys, etc. Also camp outfit, blankets, sleighs, waggons, chains, etc. Will sell right. Terms arranged or will take lumber in part payment.

C. H. ROGERS,
Care Peterborough Canoe Company,
18-21 Peterborough, Ont.

For Sale

Rare bargain. Band mill located in best lumber and log center on Puget Sound. Rail and cargo shipping facilities. Excellent log pond. Ten and a half acres of land. Price one-fourth of appraised valuation. Must sell quick. Box 765, Canada Lumberman, Toronto, Ont. 8-t.f.

Saw Mill Machinery For Sale

Sawmill near Sellwood, Ontario, daily capacity 60,000 feet. All machinery including:—Log Ladder, Bullwheel, Steam Kicker, Log Loader, Stationary Steam Nigger, 42-in. Steel Carriage, 10-in. Steam Feed, 8 ft. Double Cutting Bandmill, Cast Iron Lumber Table, 5-Saw Slab Slasher, 48-in. Big Champion Edger, Trimmer, Transfers to Edger and Trimmer Tables, Sorting Tables, etc. Also, Independent Lathmill, Filing Room Outfit and Power Plant complete. This machinery is of the latest design, practically new and in excellent condition. Offers will be accepted for all or any part of this machinery, where it stands or F.O.B. cars Sellwood.

The Waterous Engine Works Company,
22-t.f. Brantford, Canada.

Sales Agents Wanted

Large firm manufacturing a complete line of electric centrifugal pumps, automatic electric compression water systems, electrically-driven multi-stage turbine pumps, electrically-driven double acting pumps and a number of other lines, wants sales agents for various parts of Canada. Write, stating what territory you can handle, to Box 94, Canada Lumberman, Toronto. 21-23

Do You Want to Buy or Sell?

If you wish to purchase or dispose of a particular stock of lumber or logs, a mill property or timber limit, or some second-hand machinery, the CANADA LUMBERMAN AND WOODWORKER will bring quick returns. Use our "Wanted and For Sale Department."

Work in Saskatchewan

E. H. Roberts, Forest Assistant, Dominion Forestry Branch, Prince Albert, Saskatchewan, writes:—

"The Dominion Forestry Branch have three reconnaissance parties in the field here examining lands and locating suitable areas for inclusion in forest reserves. Another party is examining boundaries on the already established reserves, with a view of making additions where the land is unsuitable for agriculture, so as to straighten the existing lines and facilitate the fire-guarding, as well as making the blocks more compact and easier handled. On the smaller prairie reserves, which are mostly without any tree growth at present, grazing permits have been granted for the running of stock, and many of the settlers surrounding these areas are gladly taking advantage of the privilege. On the older established reserves, the improvement work is going ahead rapidly. The erection of ranger houses, steel look-out towers, and the construction of telephone lines is under way. Fireguarding the boundaries and the plowing of the same is keeping some of the rangers busy. The railroad fire patrol has been doing good work thus far, and most of the roads travelling the bush country have their right-of-way well cleaned up, things being in better condition than at any previous season. The fire ranger service in the north country is doing well. Another new patrol boat was installed this spring on the lower Beaver River and in the vicinity of Isle a la Crosse. The forest nursery on the Pines Reserve is in fine shape, and the beds that were planted last year are making a remarkable growth this season.

"The newly located gold-fields at Beaver Lake, north of Cumberland House, are attracting considerable attention, and the influx of prospectors is keeping the fire rangers in that district very busy."

Notes From Kamloops

P. Z. Caverhill, District Forester of the British Columbia Forest Service at Kamloops, writes:

"This district embraces that portion of British Columbia extending north from the Dominion Railway Belt to the head waters of the Clearwater, North Thompson, Adams and the Columbia Rivers.

"In taking charge, I found that the district was wholly lacking in transportation facilities. In fact, even the rudiments of trails usually made by Indian hunters were missing, no doubt owing to the semi-coast type of the timber and the difficulty of getting through owing to the amount of down timber. Improvements were therefore our first consideration. One hundred and twenty-two miles of the most needed trails were constructed, and sixty miles of telephone, this being only a start.

"A start was also made in the disposal of brush after logging operations. The debris, after a couple of operations, was burned broadcast last spring. On tie permits the brush was piled, but has not yet been burned. An interesting sequence of this operation is the keen interest which the settlers are taking in brush disposal. They are now requiring almost all operators on their land to pile the brush. This is going to be a great help in the future fire situation."

Treatment of Exposition Trees

The thousands of great trees which are being brought from every country in the world to be transplanted at the Panama-Pacific International Exposition are scientifically treated by experts to prevent their dying. The side roots are first cut and sideboards placed down the cuts. Six months later, when the tree has become accustomed to receiving nourishment only from its bottom roots, these are cut and a bottom board attached to the side ones, making a great box. The tree is then hoisted by derrick and shipped by land or sea to San Francisco, where it is replanted in special soil brought from the Sacramento River, seventy miles away.

Death of a Prominent B. C. Lumberman

One of the prominent lumbermen of British Columbia passed away on October 18th in the person of Mr. John O'Brien, president of the Brooks-Scanlon-O'Brien Co., Ltd., Vancouver. Death took place after an illness extending over several months. Besides being president of the Brooks-Scanlon-O'Brien Co., he was also president of the B. C. Loggers' Association, and a member of the Vancouver Board of Trade. Deceased, who was 65 years of age, was born at Bangor, Maine, and went to Minnesota when he was but a boy. His parents located at Stillwater, Minnesota, and until 1900 Mr. O'Brien was engaged in the lumbering business there. In that year he moved to Montana and until 1906 was in the lumbering business, being president of the John O'Brien Lumber Co. In 1906 he became interested in the timber business in British Columbia and moved to Vancouver where he organized the Brooks-Scanlon-O'Brien Co., Ltd., which company is one of the largest in the timber business in the province.

B. C. Seeking Large Australian Order

Elsewhere in this issue a report is published of a cable sent to the Canadian Trade Commissioner at Melbourne, Australia, with the object of inducing the government there to permit Canadian firms to tender direct instead of through San Francisco firms, for the supply of the 25,000,000 feet of lumber needed for the Capitol buildings at Canbarra. A later despatch states that a cable has been received in reply that the matter can be arranged satisfactorily. The government of B. C. is also urging the Dominion Government to press a request upon the Australian Government for a tariff giving preference to Canadian lumber.

Pennsylvania's Wood Consumption

A report upon the wood-using industries of Pennsylvania, which has recently been published by the State Forestry Department, states that seventy-two kinds of wood were used within the State during the year under consideration. White pine heads the list, representing nearly 14½ per cent. of the total, but had longleaf, loblolly, and shortleaf been grouped under the term "southern yellow pine" it would have stood first in the list, and in amount equal to more than one-quarter of the total consumption. It is interesting to know that the consumption of lumber in Pennsylvania exceeds the production. In 1912 the lumber cut by the State was 992,180,000 feet while the quantity consumed by the wood-using factories was 1,114,000,000 feet. Of the quantity used, 313,683,000 feet or 28 per cent., was accredited to the State, leaving 800,536,000 feet as coming from the forests of other States and from foreign countries. Cost is the principal consideration with the manufacturer purchasing raw material and the fact that his own State produces the same kind of lumber that he uses is of little consideration unless that material be the cheapest and readily and conveniently procured. That only a little more than one-fourth of the State's lumber production is consumed in factories within the State suggests a probable duplication in distribution that does not tend to economy.

In the consumption of wood four classes of factories in Pennsylvania lead all other states: brushes, patterns and flasks, toys, and mine equipment; in seven others the State stood second; car construction, printing material, caskets and coffins, laundry appliances, playground equipment, machine construction, and tobacco pipes. The State was third in box making and the manufacture of wooden clock cases. Excelsior factories, manufacturers of insulator pins and brackets, and the makers of butcher blocks and skewers were the only industries procuring all of their wood from the forests of the State. Nineteen others use a larger amount of State-grown than shipped-in material, leaving 29 that find the major portion of their wood supply out of the State. Every industry reported the purchase of some Pennsylvania wood. It is surprising that the box makers, who use only low grades, used more shipped-in material than any other industry, while on the other hand, the handle makers, who usually seek their raw material over a wide extent of territory, procured considerably over two-thirds of their needs within the State.

Nearly $32,500,000 are annually expended by the Pennsylvania wood users for raw material. Not over 20 per cent. of this is paid for home-grown woods, leaving $25,000,000 spent outside the state.

Review of Current Trade Conditions

Ontario

The lumber trade in Ontario has shown no change during the past fortnight. The demand in the large centres is very quiet, building operations being very light and the manufacturing demand greatly reduced. There are a few reports however, of an improvement from the manufacturing trade. A prominent firm of box makers reported that the second week in October was one of the best it had ever had. In the country districts the demand is better than elsewhere, as the farmers have done well with their year's crops and a little of their money is finding its way to the retail lumber yards. The movement however, even in the country districts, is only sufficient to maintain a hand to mouth demand. It is scarcely possible to give any definite review of prices, as the market is so quiet. Stocks at mill points, though not large, are ample for the rest of the year, if market conditions do not become more active. Logging operations are likely to be much reduced during the winter, though several important mills will operate on the same scale as usual. The export trade to the United States continues very quiet.

Low water in the Ottawa River has now compelled several firms to close their mills. This will have a noticeable effect upon the season's cut, as the mills usually continue sawing until the end of November, or the early part of December. Woods operations this winter promise to be much less than last winter. There is very little export trade from Ottawa to Great Britain at present, as most of the ships have been taken off for use as troop transports.

Eastern Canada

The volume of trade at Montreal continues small, although, considering the situation in general there is a fair volume of orders. Building operations are very quiet as the banks have closed down on the contractors. It is expected that, in the course of a short time, better prices will prevail, as there is likely to be a comparative shortage of stocks. The export trade to Great Britain has been light, on account of scarcity of vessels, many having been taken off for conveying Canadian troops to England. Eastern firms which can furnish mining timber are interested greatly in the enquiries for pit props for England. It is expected that a good trade will result in these. The requirements will total about 1,000,000. A few individual firms already report having received orders. The government is seeking to make arrangements for covering the whole trade. Prices alone will be the determining feature.

Boston reports indicate that spruce may be expected to advance in price. A large quantity has been taken off the market by the sale of stocks for England. The local demand is also improving. The base price for frames, 8 in. and up remains at $23 with some business at 50c less. A few of the larger mills are reported to have received bids at higher prices than those which have been prevailing of late. The demand for random is spotty. Spruce boards are moving very slowly and offerings are plentiful. At New York, the demand for eastern spruce continues dull. Yards are well supplied. The demand for hemlock at Boston is quiet, but a fair trade continues. Clipped boards, 10, 12, 14 and 16 ft. are selling at $21, to $21.50 and some mill men are holding their stocks rather than go below $22.

The movement of shingles at Boston is light and prices are a little easier. White cedar extras are quoted at $3.50, clears $2.90 and 2nd clears $2.75, while it has been possible in some cases to buy for 10c less. Red cedar shingles although in less demand than the whites, are a little firmer in price. The best Washington makes are bringing $3.65 and British Columbia makes $3.75. Lath continue in fairly good demand, the best varieties of 1⅝ in. selling at $4.10 for immediate delivery and $4, where early delivery is not urgent. The demand for 1½ in. is moderate, the price being from $3.75 to $3.80.

Great Britain

Quite an extensive trade is reported from London, England, much of which is no doubt connected with Government requirements, especially for housing the great number of new troops which are daily being enrolled, also for increasing the number of temporary hospitals and for the accommodation of the large number of prisoners constantly arriving. In addition to this there is a demand for lumber for the vast number of boxes required for packing ammunition and stores, and a demand for large quantities of whole logs, deals and battens needed by the forces in the field. Deliveries at London docks for the week ending October 3rd amounted to 6,583 standards, as compared with 5,013 standards during the corresponding week of 1913. At Foy, Morgan & Company's recent auction sale, 3 x 9 2nd Quebec spruce 10 to 11 ft. was sold at £14 10s. 3 x 7 u/s 12 to 13 ft. at £11 15s., and 3 x 6, 3rd Quebec at £11 15s. and £11 10s.

At Liverpool, the feeling of depression in the lumber trade which developed shortly after the outbreak of the war is passing away. A good business is going on in the spruce market. The stoppage of imports from the Baltic has affected the value of spruce which is being used as a substitute. Prices for future contracts from St. John, N.B., and Miramichi are very firm, owing to the rise in freights and scarcity of tonnage. Further advances are expected as the season goes on. Combined stocks in Liverpool and Manchester are one-third less than at the corresponding period in 1913. Imports of Canadian pine deals have been a little more extensive lately, on account of the fear of vessels being taken off for the transport of troops from Montreal. Prices remain unchanged.

At Glasgow, the trade shows no improvement, consumption being on very moderate lines. Imports have been arriving very sparingly and a steady though slow reduction of stored stocks is in progress. There is a steady demand for spruce and values are inclined to further advance.

United States

The demand for lumber in the United States continues upon a very restricted scale, being entirely of a hand-to-mouth variety. Had it not been for the outbreak of the war in Europe, it is generally believed that there would now be a decided increase in business activity in almost every line, as agricultural harvests were heavy, and the railroads and other large consumers were expected to make extensive purchases. As it is, the railroads and all lines of trade which were heavy consumers of lumber have decreased their demand. The expected call for large amounts of railroad and car material has not occurred. The present indication is that only a hand-to-mouth demand for lumber will prevail until financial and industrial conditions return to normal. Consumers and dealers are all shaping their stocks with a view to getting over the end of the year with as little lumber as possible, and with their liabilities reduced. Manufacturers, in view of this situation, are trying to keep their production down close to the limit of demand. The curtailment of output has become general in nearly all parts of the country, the opinion being that nothing can be gained by sawing lumber and forcing it upon the present market. There will be a limited, but steady request for lumber to meet current requirements for the balance of the year, as supplies have been kept very low in retailers' hands. Building operations throughout the United States decreased greatly during September, being 32 per cent. less than for the corresponding month of 1913. Reports from the Pacific Coast indicate that manufacturers believe that the bottom of the lumber market has been reached and improvement should be shown from now on. A good volume of trade and advanced prices are expected by the beginning of the new year. Increased curtailment is helping to steady the Pacific Coast markets. Shingle mills are practically idle and trade is very slow. The trade in white and Norway pine at the Tonawandas is a little less than normal, but a fair amount of business is going on. Prices are considered fair, but are showing a slight tendency to sag. In the Saginaw Valley, prices are steady, but the movement is spotty. Receipts at Buffalo have been large of late, so that dealers expect to have a full stock on hand for the winter.

The hardwood trade at Chicago is spasmodic, so far as the demand is concerned. Consumers are buying for present requirements only. At Memphis, a little export business is reported to England and domestic orders are increasing slightly. Shipments are greater than production, and stocks are being reduced slightly, which is assisting holders in keeping prices firm. At Buffalo, the hardwood trade is below normal although a few yards report improvement as compared with a month ago.

New Brunswick Benefits from the War

One of the benefits which New Brunswick will probably reap from the European war situation is an increase in the cut of pulp wood and also an increase in the freight receipts on the Intercolonial Railway from the hauling of this commodity. Speaking of this matter, a leading pulp wood operator of the province recently said: "The imports of pulp from Europe to the United States have been of large proportions, and it is inevitable that the war will have the effect of reducing the shipments from the other side in some degree, and possibly to a very large degree. American manufacturers of paper will have to look elsewhere for their supplies and the pulp mills of Canada should benefit proportionately."

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Ottawa Trade News—Low Water Causing Idle Mills

Ottawa, October 26 (Special to the Canada Lumberman): The water in the Ottawa River has become so low that it has compelled several lumber firms to close up recently, among whom are Shepard and Morse, of Ottawa; Fraser and Company, Deschenes, Que., and McLachlan Bros., Arnprior. J. R. Booth closed down his mill for the same reason several weeks ago and has been hoping to open up again so that he can give employment to the 1,000 men he laid off at the time. He says if the water rises soon he will restart his saw mill and continue operating it until the severe weather sets in. Gilmour and Hughson, of Hull, and The W. C. Edwards Company are about the only large mills on the Ottawa still running. It can readily be understood what effect this early closing of the mills will have on the annual cut, with its consequent loss to lumbermen, when the time for closing down under ordinary conditions is the end of November or the early part of December.

There is little activity in the woods this season. The Estate James Davidson is operating one camp instead of three as they originally intended. This firm, however, is fairly active in its Ottawa factory where it has 225 hands employed only 25 less than at this time a year ago. Their mill at Davidson, Que., closed down for the season a short time ago after cutting about 17,000,000 feet, 2,000,000 more than in any previous year. Most of the cut was pine and spruce.

Since the war the rate of discount on United States currency and cheques has gone up in Ottawa from ¼ of one per cent. to as high as 2 per cent. Just now it ranges round ⅞ of one per cent. Local lumbermen are realizing that this advance in the discount rate may prove expensive to them, as it did to one last week who sold $30,000 worth of lumber and received a cheque from the New York buyer for that amount. He was docked ⅞ of one per cent, for exchange when he presented the cheque for payment at a local bank. This meant a reduction of about $260. Lumbermen here claim that they had better wake up to the necessity of asking for payment at par for sales made across the line. The British exchange, which went up to $6.25 soon after the war, from $4.87 for one pound sterling, is now down to between $4.92 to $4.95. Local exporters say that there is little trade going on between Canada and Great Britain at present owing to the fact that most of the ships usually employed by the Canadian trade have been taken off the trade service for the transportation of troops.

Mr. W. Windham, who is one of the commission delegated by the British Board of Trade, which is equivalent to the Department of Trade and Commerce in this country, to gather information in Canada and Newfoundland on the pit prop situation, was in Ottawa again a few days ago to confer further with the Department of Trade and Commerce. He intends to visit British Columbia to see what the prospects for obtaining a supply of pit props are there before he returns to England.

Montreal Market Letter—Business Continues Quietly

Montreal, October 27 (Special to the Canada Lumberman): Only a small volume of business is passing in the lumber trade. Here and there, wholesalers state that, considering the general situation; they are receiving a fair number of orders, but in the main there is a considerable decrease in business. The banks have shut down very tightly on the contractors, and the reduction in the permits is sufficient evidence of the limited amount of work which is being done. Some builders have been rather badly scared by the statement of a civic controller that 20,000 houses are empty. While there are far more houses to rent than is usual at this time of the year, the statement of the Controller is a strong exaggeration of the position.

As to the future, much depends upon the course of the war. In the event of the hostilities being concluded favourably to the allies, it is believed that construction work which has been postponed will be commenced on a large scale. The indications point to good lumber prices being secured, as there is certain to be a shortage in the cut, and consequently, it may be anticipated, a comparative scarcity of lumber.

One firm has secured from an English house a contract for a large weekly supply of lumber for crating purposes.

Owing to the large number of vessesls on the other side, due to the conveyance of the Canadian contingent, and the heavy shipment of grain from this port, there is a scarcity of room for lumber. In consequence the forwarding of lumber has been held up to a certain extent. Stocks in Great Britain are reported to be large. As far as can be seen, the total shipments from this side will show a decrease of at least 20 million feet, making the season one of the poorest for many years. Freights, too, are high, and it is probable that they will be very stiff at the opening of navigation next year.

Ground wood is a firm market. Heavy rains have been beneficial to the Canadian and United States mills.

There is little change in chemical pulp, which is in good demand at satisfactory prices. It is expected that there will be a scarcity during the winter, as Europe will be unable to supply sufficient for the United States.

There are no stocks of news print on hand. The Canadian mills are shipping all the paper they can manufacture.

Spruce Deals Active in London

Churchill & Sim, London, Eng., in their monthly wood circular, under date of October 5th, say:—Under the influence of a necessarily light importation, and in face of a strong demand for all North of Europe stock, the higher prices established in August through the incidence of the war were to a large extent maintained in September. Deliveries for the month were about 6,000 standards less than in the coresponding month of last year, the short supply having its effect upon the quantities taken overside, and throwing the demand more insistently upon the landed stock, the figures of which, with the exception of Swedish floorings, which arrived very freely, show heavy reductions, especially in deals, battens and scantlings. The curtailment of the Russian and Finnish supplies has enabled the Swedish shippers to take full advantage of the strong demand in this country, and the importation was mainly from this source. A large forward business has been arranged from this side for autumn delivery, and, although prices are high and credits restricted, buyers have not been deterred from operating freely, and a plentiful supply of comparatively cheap money has enabled the business to be financed without much inconvenience.

From the St. Lawrence the imports are:—

Pine Deals ...	173,000 pieces	against	372,000 pieces in 1913
Spruce	318,000 pieces	against	731,000 pieces In 1913
Birch Planks ..	124,000 pieces	against	263,000 pieces in 1913

and from New Brunswick, etc.—

Pine Deals ..	19,000 pieces	against	26 000 pieces in 1913
Spruce	308,000 pieces	against	377,000 pieces in 1913
Birch Pianks .	359,000 pieces	against	292,000 pieces in 1913

The market interest centred in spruce deals during September and prices maintained the sharp advance recorded in August. Several cargoes of Lower Port spruce have been sold, and the London demand for the moment is satisfied, but the available stock is small, and will soon want replenishing. There has been no movement in pine deals, the stock is ample and the demand disappointing. There is no change in the market position of Canadian hardwoods.

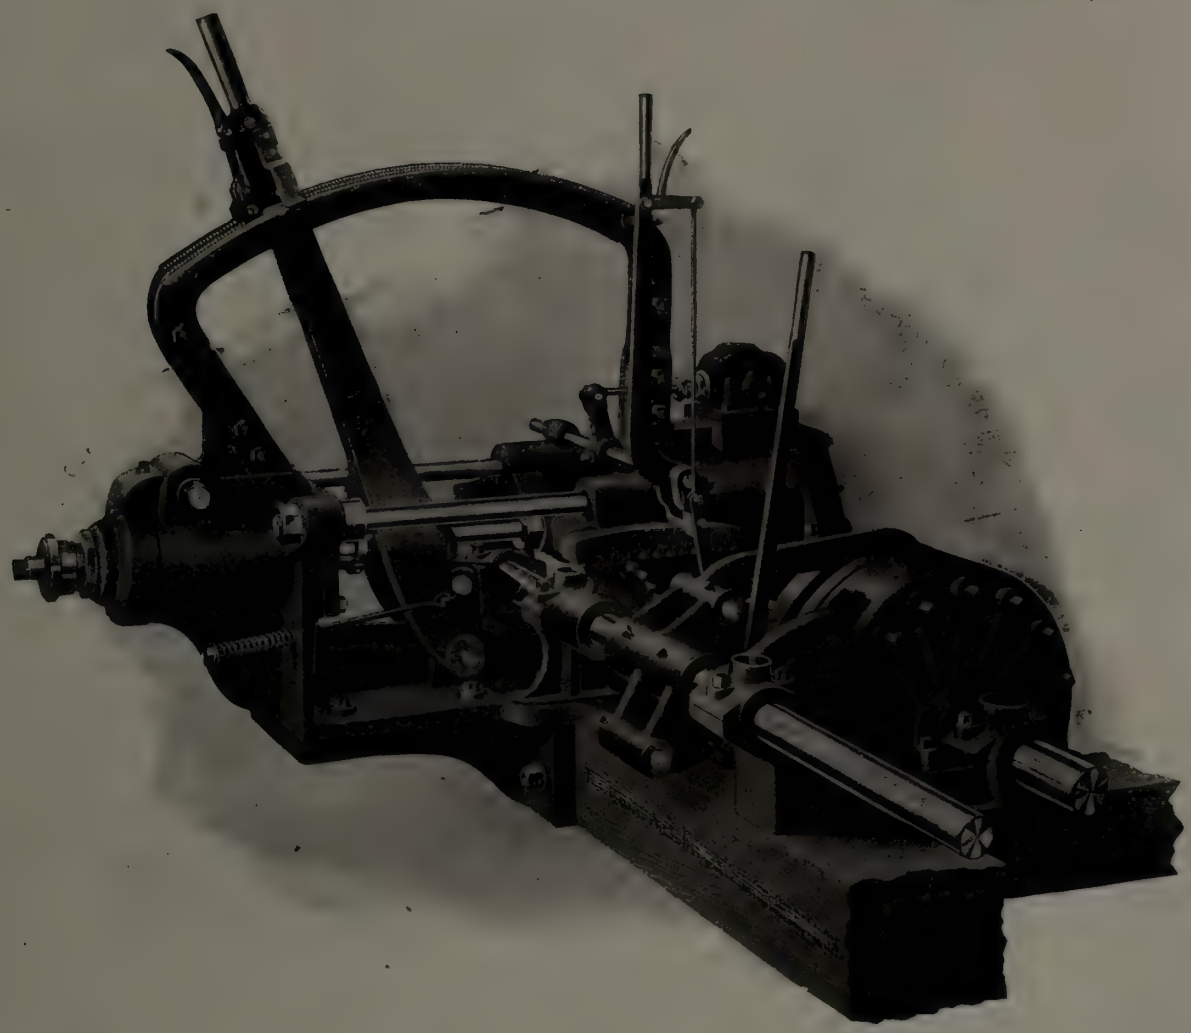
Stocks of Oregon timber are heavy, two cargoes having arrived in September. There is little change in the value of good timber, but for inferior stock prices dropped again during the month.

Steadier Trade Reported at Liverpool

Farnworth & Jardine, Liverpool, Eng., in their monthly wood circular under date of October 1st, report as follows:—The business of the past month was steadier and more regular than after the outbreak of war in August, and in volume a fair amount transacted, especially in woods suitable for Government requirements, but the general trade was quiet. Arrivals, with the exception of Baltic goods, were fairly heavy. Stocks, with few exceptions, are not too large, and values all round are advanced. Ocean freight rates have improved, but chartering is slow, and little tonnage offering.

Canadian woods.—Pine timber.—Imports during the past month were moderate, but there is little change in the demand to report; stocks are ample; values steady. Waney pine.—First class: The moderate arrivals were on contract, and landed at Manchester; deliveries about kept pace, but stocks are sufficient; values firm. Second class: There was only a limited enquiry. Red pine.—The demand very restricted. Oak.—Imports again moderate, and on importers' account for special requirements; the demand, however, continues quiet, but stocks are light; values steady. Elm.—Arrivals fairly moderate, viz., about 4,000 cubic feet to Manchester; there has been a fair consumption, and stocks, although not too large, are adequate; values rule high. Pine deals.—Imports have again been on a very moderate

One Setter Can Work All Day With This Machine



With a steam set works you do not have to change setters twice or three times, a day. One man can do all this work, because the hard work is done by steam.

And you get better lumber, because the travel of the piston is as exact as in a steam engine, so that a steam set works of itself simply cannot cut uneven lumber.

Further, you get more lumber, because it will set up to four inches as quickly as any other machine will set two inches.

Let us send you further particulars.

William Hamilton Co., Limited

Peterborough, Ontario

scale, but with restricted demand; deliveries have been disappointing; stocks, although ample, are firmly held, and values are steady. Red pine deals have not been imported; improved enquiry; prices are stronger, and stocks are light.

New Brunswick and Nova Scotia spruce and pine deals.—The import to the Mersey (including Manchester) exceeded that of the corresponding period last year, viz., 10,280 stds., against 8,710 stds.; the demand was less active than during the previous month, but deliveries were satisfactory; recent advance in values has been maintained, and prices now rule on a high basis; stocks are not too heavy, and firmly held. Ocean deal freights have again advanced, and tonnage is limited. Pine deals in fair request; stocks light; prices steady.

Birch.—Logs.—Moderate imports; the demand is quiet, but the deliveries have been fairly satisfactory, and prices steady; stocks in Manchester are sufficient, but in Liverpool light. Planks have come forward in fair quantities, but deliveries have been rather disappointing; stocks are not too large.

British Columbia and Oregon pine.—Arrivals light, viz., about 2,000 cubic feet; there has been a little more enquiry, but the stock is still heavy.

Liverpool Market Continues Steady

Alfred Dobell & Company, Liverpool, in their monthly timber market report, under date of October 1st, report as follows:—Since our last report there has been very little change to note in the condition of our market. Beyond an active demand for certain items, business again ran on somewhat narrow lines. Arrivals were on a moderate scale and values generally are steady.

Canadian woods—Waney board and square pine—The arrivals were on contract to Manchester. Stock still heavy. Oak—There was a moderate import and fair enquiry. Values steady. Rock elm—Stock is light and price high. Birch—Logs—Arrived sparingly and met a steady enquiry at firm figures. Planks—Arrived somewhat freely. There was only a quiet consumption. Values are easier. Pine deals and boards were in moderate request at firm figures. Stocks are ample. New Brunswick and Nova Scotia spruce deals—As compared with the corresponding month last year the import to the Mersey and Manchester is 1,570 standards more, while the consumption is also larger to the extent of 1,440 standards. The combined stock stands at 22,370 standards, being less by 10,740 standards than that held this time last year, which fact, combined with the great restriction in the import of Baltic white deals, places spruce in a strong position. Values tend to increase.

Spruce Deals Active at Liverpool

Smith & Tyrer, Limited, Liverpool, Eng., under date of October 1st, report as follows:—The special feature during the past month has been the endeavour to fill up the gap due to the difficulty in obtaining supplies from the Baltic and White Sea. To some extent this difficulty has been mitigated by the employment of neutral steamers from the Baltic and the immunity from capture enjoyed by steamers from the Northern Russian ports, but the various uncertainties involved have necessarily restricted those operations. The approach of winter has spurred on the activity, but, nevertheless, the import this season must be far below the normal. The war drags on, and is likely to drag on for months, and it is beyond human ingenuity to forecast what new conditions will arise, to be met by new resources. Pitch pine has fluctuated a good deal, and has a tendency to be overdone. Hewn timber is not an active market. Sawn wood in smaller sizes has been in demand for colliery purposes, but the supply has been ample and prices have weakened. Average wood has gone off sparingly. Prime lumber, owing to the quantities of diverted stock thrown on the market, has dropped considerably in price, but lower qualities have been in active demand. Hardwoods have strengthened, but there is little disposition to contract ahead. Spruce deals have moved actively and prices have been well maintained. A keen demand continues and the supplies during the winter are likely to prove inadequate. Birch, both logs and deals, has an improving tendency. Pine deals have been disappointing, especially for the better qualities. Hemlock is wakening up again in sympathy with the improved position of spruce. Pacific Coast woods have been in slow demand. Oregon pine logs are ample in stock. Some enquiry has been experienced for clear spruce.

Glasgow Quarterly Market Report

Calder, Henderson & Livingston, Glasgow, in their quarterly timber market report, under date of October 1st, report in part as follows:—Yellow pine—Waney.—There have been no arrivals since the opening of the shipping season. So far as the demand locally is concerned little or no change has occurred to alter the position, which remains very unsatisfactory, but it is reported that some substantial orders have recently been provisionally fixed in this market by the Admiralty. Lower prices to shipbuilders have failed to stimulate the enquiry for prime deckwood of which the stock consists, and the consumption for the quarter amounted to about 100 loads. While the stock as compared with this period last year shows a decrease it is still too heavy. Values of prime deckwood are nominally around 4s. per cu. ft. Of second class wood and also square timber there is no stock but they have not been enquired for.

Birch—Logs.—Arrivals were chiefly of round logs on contract, and the stock is almost entirely of this description. Hewn logs of fair size that came forward were disposed of and realized fair prices. There is a fair enquiry at present for logs 14-inch and up average, and an advance in values may be looked for. Small wood is slow of sale and can only be moved at low figures. Planks.—Arrivals were principally on contract. Consignment parcels were only in moderate request, but as stocks were light values increased and sales have been made at from £13 15s. to £15 per St. Petersburg standard. The demand has become quieter on account of the decrease of activity in the cabinet-making trade.

Deals, battens and Boards.—The import was exceptionally light, but this had no effect on the demand which has been very slow. The lower grades were in best request. Values are steady, and the stock while low is ample. Good pine sidings are only occasionally enquired for and prices are barely steady.

Pine—Firsts.—Transactions were few and only of minor importance. Seconds.—Were in a similar position to first quality. Thirds.—Enquiries were principally for regulars and that only to a moderate extent. Fourths.—Sales were confined principally to deals 12-inch and up. Regulars and undersizes were slow, but some enquiry is anticipated and values tend to be firmer in sympathy with the higher level of spruce deals.

Red pine.—The quiet conditions prevailing in housebuilding resulted in a limited import and restricted selling. Values on account of the war have advanced. The demand has improved, but business has been hindered owing to the want of stock.

Spruce.—Arrivals were light and principally on contract on merchants' account. Apart from some enquiries for 9-inch and up the demand in the opening month of the quarter was quiet. During the past two months prices have advanced sharply owing to the situation disclosed since the declaration of war. Stocks are light and the likelihood of any further imports is problematical.

New Brunswick and Nova Scotia

Pine.—A slight improvement is anticipated in the demand arising out of the situation of the spruce market.

Spruce.—The import was fairly heavy, the bulk going to a large local consumer. Since the opening of hostilities stocks of all descriptions were quickly absorbed by merchants to cover themselves against probable disappointments of deliveries of goods from the north of Europe. Values advanced sharply. As far as 3-inch deals are concerned the demand at the moment has now been pretty well filled, but there are still enquiries for 2 x 5 and 6-inch, and 2½ x 6½ and 7-inch of long average. Government orders are responsible for the largest part of the present consumption which is expected to go on increasing so long a sthe war lasts. The increased cost of import will militate against a super-abundance of supplies, and as the stock is moderate spot values are likely to advance, but will be regulated to some extent by the competition of Swedish goods until the closing of these ports in winter.

Scotch Lathwood Requirements

The weekly report of the Department of Trade and Commerce in its issue No. 558, contained a trade enquiry (No. 991) under the heading of "hemlock for laths." This inquiry was forwarded by Mr. Harrison Watson, Trade Commissioner at London, who further writes the Department that what is required is timber from which hand riven laths can be manufactured. In Scotland laths are for the most part hand riven, being manufactured wholly by the lath splitters themselves. Before the outbreak of the war, the lathwood was imported from Riga, Russia. The lengths of the logs imported were 9 feet, 8 feet, 7 feet, 6 feet and 4 feet, the proportions of each being about 15 per cent., 45 per cent., 15 per cent., 20 per cent. and 5 per cnt. respectively. These logs were sold at so much per fathom of 288 cubic feet (8 feet x 7 feet x 6 feet). The logs from which Riga lathwood is prepared are riven and then the centres are taken out and used for firewood. It is hoped, however, that if hemlock be used the whole log will be suitable and that it will only require to be riven into two or three pieces. Interested Canadian firms should communicate with the Department of Trade and Commerce and obtain the name and address of the firm referred to in Trade Inquiry No. 991.

The Newfoundland Legislature recently passed a measure to permit the export of raw pulp wood from Labrador and Newfoundland.

The Connecting Link

Way back in 1880 the **Wanted and For Sale** columns of the Canada Lumberman and Woodworker were used extensively by the lumbermen of Canada for the purchase and sale of timber, lumber and machinery.

Time has but served to enhance the value of this medium, until to-day the **Wanted and For Sale Department** of the Canada Lumberman has become a national market.

Twice a month "the paper with the green cover" brings together buyers and sellers of lumber and machinery from all the principal lumbering centres of Canada and the United States. By covering this wide field, the percentage of waste circulation for advertisers has been reduced to a minimum.

For quick and satisfactory results, get your advertisement in the **Wanted and For Sale Department** of the

Steel Frame Cars With Inside Sheathing

A new method of car building which apparently offers a new field for the use of lumber of the lower grades, is rapidly gaining in favor among a number of the larger transportation companies. This method of inside sheathing of steel frame and corrugated steel cars is described in the following extracts from a paper read recently by W. B. Burnett, general master car builder of the Canadian Pacific Railroad, before the American Society of Mechanical Engineers:

The original wooden car, with the single spring draft rigging having the cheek castings bolted to the sills, gave little if any more trouble than modern equipment, due principally to the shorter trains, less density of traffic and to the use of link and pin couplers which compelled gentler handling of trains than is prevalent to-day. The steel underframe car was built mainly to secure a stronger centre construction for the attachment of draft rigging and to get away from the trouble caused by wooden sills breaking and splitting, broken draft bolts, etc.

While having many advantages over the old wooden car, the steel underframe car developed some troubles peculiar to itself, the most important being due to the fact that the body being carried on a rigid frame and not held together by the strains resulting from its weight, as in the old trussed cars, has a tendency to develop slack in the superstructure. This in turn affects the roof and sheathing. One principal trouble with outside sheathed cars is that, after they have been in service a comparatively short time, the sheathing frequently loosens at the end sill and at the side sills near the bolsters with resultant leakage of grain.

There were some steel frame box cars built previous to 1909, but the writer has been able to secure data on only the outside sheathed types. Of these 2,700 were in service on the Norfolk & Western, of which the first 100 were built in 1902; the owners state that they were satisfactory and the same type has been purchased on subsequent orders. The Rock Island and Frisco lines had in service at that date approximately 5,000 cars similar to the Norfolk & Western, and these also appear to have given satisfaction as the owners have reordered the same type several times. All of these, however, were outside sheathed and as regards leakage at the sills, had comparatively little advantage over the wooden cars. Recently both of these lines have purchased some inside sheathed cars. The Frisco car of this type is fully described in the Railway Age Gazette, October 3, 1913.

In 1908 the Canadian Pacific designed its first steel frame inside sheathed box car. This car avoided the disadvantages of the outside sheathed car, and at once obtained a further reduction in weight and provided for cheapness of maintenance by the use of steel superstructure without the additional lumber required by the outside sheathed car. With practically no preliminary experimenting 500 of these cars were built, and since then over 30,000 have been built similar to the first cars, with the exception of several refinements of details, such as corner and door posts, end doors and side plates, and the joining of flooring and lining. These changes have not affected the general design of the car, but are the improvements that have been introduced from time to time to reduce weight and simplify the construction.

Advantages of the Steel Frame Car

The steel frame inside sheathed car has several advantages over the types previously used, notably in that the tare is low in proportion to the capacity. There is such a variation in the figures used for the cost of hauling per ton mile, that no attempt is made to say what the saving would amount to, but certainly the advantage of having a car equal, if not superior to other cars in all respects, and weighing from 1,000 to 5,000 pounds less, will appeal to all traffic and operating men. Not only is there that much less dead weight to haul when the car is empty or partly loaded, but additional lading can frequently be carried. The actual limit on the paying load that can be carried in a properly designed car is the total weight on the axles. Thus, a car having 5-in. x 9-in. axles with such a tare weight that, when deducted from the capacity of the axles, allows the car to be safely loaded to 88,000 lbs. could, if dead weight be reduced by 3,000 lbs. safely carry a paying load of 91,000 lbs. and retain the same strength. Thus the actual capacity of the car is increased almost four per cent., with a better ratio of paying to dead load.

It had been thought necessary to assist the wooden type of superstructure by heavy roof construction, some going so far as to use different methods of diagonal bracing, but with the steel car it has been found that there is no appreciable local movement of the framing in the heaviest service which makes a simple proposition of the roof as it has only to take care of itself. This presents a simpler problem to roof designers, making it possible to design a roof much lighter, without necessity for the use of purlins or ridgepoles to strengthen the car. It is obvious that unnecessary weight in the roof raises the centre of gravity, increases the tare weight and cost and has other disadvantages.

In explanation of the local movement of this style of framing, it is well to mention tests we have made in jacking up this type of car, which demonstrated that the car would take a gentle twist from end to end, allowing the bolsters to be slightly out of the same plane horizontally. This twisting was accomplished without any perceptible local distortion of the sides or ends. The capacity for twisting is a condition to be desired as it allows a car to adjust itself to uneven track conditions.

In addition to being 5½ inches narrower than the distance over the outside of the sheathing of a wooden car, the superstructure of the Canadian Pacific car is protected by the framing, so that a side swipe that would do serious damage to an outside sheathed car frequently does not touch the lining and is resisted by the framing without damage to the posts or braces. Frequently it is found that a side swipe that would almost demolish the sides of a wooden car only bends the steel framing, and in making repairs, the lining is merely removed, posts and braces straightened and the original lining replaced, the whole cost being the comparatively small labor charge. Jacking frames are being installed at all of our principal repair points for all classes of steel cars, and while not original with the Canadian Pacific, they have been amplified to better take care of steel frame box cars. With these frames, many jobs that would require the car to be cut apart, taking several days, can be done in a few hours without cutting the rivets. With modern steel frame cars, these jacking frames are as much a necessity as the blacksmith shop or any other part of the shop.

It is difficult to clean an outside sheathed car properly when it is unloaded, on account of grain lodging between the framework and also on account of the opening where the posts and braces meet at the bottom becoming obstructed, resulting in grain being retained between the sheathing and lining with resultant complaints from shippers. All of this is overcome by the clean joining of the lining and the floor in the steel frame cars, and it is believed a change of this kind would have come years sooner if designers had kept in close touch with service conditions. One advantage of the steel frame car is that outside of possible repairs due to wreck damage and to wear and tear of couplers, wheels, brake shoes and journal bearings, the car does not deteriorate more rapidly in service than when stored.

The grading of lumber for use in these cars is an item that has received much consideration. Yellow pine or fir has so far been the principal lumber used, although we have experimented to some extent with spruce, but although it has the advantage of being lighter, it seems to be more difficult to dry spruce sufficiently for this purpose. Great pains have been taken to avoid knots that are too large or numerous, and while it is generally desirable to have lumber as free from knots as possible, I have never in the inspection of many hundreds of cars seen where a knot had fallen out. It is, however, desirable to have lumber as free from sap and shakes as possible and thoroughly dry.

When the first of these cars were built outside of the Canadian Pacific shops we had considerable difficulty in getting the lumber properly dried, due to lack of both experience and facilities on the part of the car companies. We have about 3,000 cars on which the lumber has shrunk and given them a bad appearance, but this result was expected, as when the cars were built the lumber was quite green. The sheathing on these cars could be tightened for less than $4 per car, but very few have been tightened, owing to receipt of practically no reports of loss or damage to lading due to the shrinkage; also they do not frequently reach our main repair tracks, being shopped only for such repairs as wheels or wreck damage. We have not considered it advisable to shop the cars for a defect which is almost entirely a matter of appearance. The lining shrinks as much in two months of summer weather as it ever will.

The lining should not be matched before drying, as it warps and curls, rendering it difficult to make a tight joint. The rough size of lumber should be at least one-quarter inch greater than the finished dimensions. In establishing limits for drying lumber no information or data whatever could be secured, and after experimenting we came to the conclusion that a piece of this lining of full cross-section subjected to a temperature averaging 170 degrees F. for 96 hours should not lose more than six per cent. in weight and that lumber represented by samples losing more than 10 per cent. must not be used until further dried.

The receipts of lake lumber at Buffalo, N.Y., to October 1st this year were 51,759,000 feet, a falling off of about one-third from the same period of last year, when they were 76,333,982 feet. September receipts were 11,364,000 feet. Shingle receipts to October 1st were 421,000,000, a decline of about 18 per cent. from last season to date, when they were 523,908,000. Shingles have been in ample supply this year and the prices have been weak.

The death is reported of Mr. C. Spearman, lumber manufacturer, Stittville, Ont.

CAMP SUPPLIES

We have a splendid stock of Prunes, Dried Peaches, Apricots, Apples, Raisins, Currants. In fact everything in the eating line suitable for the Camp, and we would appreciate a line from you asking for our prices which we can assure you are as low as the present condition of supplies will warrant, and very much lower than we could offer if we were compelled to go into the market and buy today.

Overhead Yarding

By James C. Hearne*

During the past year we have been working in comparatively rough ground and found many corners that we could not afford to railroad close enough to get direct yarding. We had been taking out these long corners by means of swing donkeys, one donkey being placed in the timber and doing the yarding while another at the landing dragged the logs in from the swing and loaded them. The roader's haul runs from 800 to 1500 feet. Several of the long corners were in steep ground and when pulling the logs down we had much trouble with the logs on account of their running out of the chokers, behind stumps, etc. We might have improved this by building fore-and-after roads but as a rule the amount of timber in one of these corners would not justify the expense of building such a road. This is our excuse for trying an overhead line for bringing the logs in.

The system is not new, having been worked with a few slight differences by many loggers. It is so simple as to need very little description, so that about all left for us to do is to tell you how it worked, our troubles with it, our failures and any success we had.

The standing line is stretched from a stump or gin pole near the landing to a tree near the yarder, the height of these depending on the nature of the ground. On this line a two sheave carriage runs, the sheaves travelling on the standing line. The skidding line passes through a block hanging from the front lower corner of the carriage, thence through a swinging block and then fastened to the lower side of the carriage. The haulback tail block is fastened near the base of the tail tree, thus bringing the skidding line and block to the ground so the chokers can be put on the swinging block. The haulback is attached to the swinging block and not direct to the carriage. By this system the logs are not lifted bodily and transported to the landing, but are carried as conditions warrant. Sometimes they are dragging, sometimes one end is lifted and sometimes they are lifted free.

In coming down the steepest line we had, a slope of about forty degrees, we had considerable trouble with the chokers coming unhooked and began to think we had fallen down on the very point we were trying to remedy. For about two days we were up in the air but then we tried out chokers with rings instead of hooks and made of lighter wire, using ¾-inch and ⅞-inch instead of the 1⅛-inch and 1¼-inch that we yard with. These small chokers stood up to the work alright, there not being the great strain on them that there is when dragging logs on the ground, and practically ended the trouble of the logs getting away. This made it necessary to change the chokers at the yarder, the large ones being used only in yarding and the small ones in the loading, but took an inappreciable amount of time. On the large logs when it was deemed necessary to keep the large chokers on the roader the unhooking was overcome by using light dog chains—a chain about 30 inches long with a dog hook on each end. One dog was driven in the log, a wrap taken in the choker just above the hook and then the other dog driven. All these provisions are, of course, unnecessary when roading the logs on the level or up hill, which we found much easier than roading them down.

The largest logs we have handled ran about 14,000 board feet and the greatest distance 1,200 feet, both of which might be increased by using heavier lines. Our standing line is 1¼-inch by 6/19-inch, skidding line ⅞-inch by 6/19-inch and haulback ⅝-inch. The skidding line was strong enough for all the down-hill roading but when we started bringing the logs uphill we put on 1⅛-inch line.

We tried one standing line 2,000 feet long but failed. The line carried several small logs but failed on logs of 2,000 feet. We were warned by the manufacturers that 1¼-inch was too light for the work, but wanting to use the line for yarding lines after we had finished that particular corner we preferred to take the chance rather than buy lines that would be too heavy for yarding. We are not satisfied yet that it would not have held under ordinary conditions. The logs dropped over a bluff just after leaving the tail tree. We could find no means of easing the jerk and we think it was this jerk that caused the failure.

The standing line is stretched by means of two small double blocks and ⅝-inch line. We have no extra drum for this on our donkeys so that we have to take a pull on the tightening line with the main line and then clamp it around a stump. We rigged up one of the donkeys that had a straw line drum for this work by putting a ratchet and dog on the straw line drum, but from the natural perversity of things, or something, we are seldom able to use this donkey in the places we rigged her up for. The standing line is tightened to a pretty good tension but no special effort made to take out all the slack, our only object being to keep it well clear of the ground and stumps. It pays to blow the stumps that are directly under the line for while the logs can be lifted over them, they are more or less of a nuisance.

We do not know its capacity. As a rule these corners are not the best of logging chances and the roader is usually waiting on the yarder. The most we have taken out in a day is 12 carloads or about 65 M. feet. If the yarder is in an extra good show, an ordinary donkey is hardly fast enough on the main line. We helped ours some by lagging the drum, but even then it did not travel as fast as it should for an overhead rig.

The logs do not come in quite so handily for loading as when they are brought in by a yarder, usually coming end on to the track, which makes it harder for the loaders and would probably require a third man if the yarder were in a good show.

We do not recommend the rig to anyone; we use it ourselves only when we are forced to and will still go to considerable trouble to get direct yarding, but we are glad to use it for such places as we have been working it and feel that it is a marked improvement over the old ground roading system that we used for the long corners.

* Address delivered at the recent Pacific Coast Logging Congress.

Lumber Consumption in the U. S.

Statistics have been compiled by the Office of the Industrial Investigations of the United States Forest Service which show, for the first time, precisely how the lumber produced in the country is utilized. About forty-five billion feet of lumber of all kinds is the annual production in the United States; of this, nearly 25 billion feet (board measure) are further manufactured, the other portion remaining for rough construction lumber and for similar purposes. This is exclusive of that material which reaches its final use in the form of fuel, railroad ties, posts, poles, pulpwood, cooperage, wood distillates and the barks and extracts demanded by the tanning industry.

The quantity and kinds of wood received as raw material by shops and factories and converted by further manufacture into finished and saleable articles is shown in the accompanying table.

Between fifty and sixty per cent. of the lumber produced is subject to further manufacture. Nearly or quite one hundred different woods are used in the United States under their own names, while an unknown number find their way to shops and factories without being identified or separately listed, except under general names. In quantity the softwoods, the needle-leaf or coniferous trees, are most important, but there is a greater number of species among hardwoods or broad-leaf trees.

The Commissioners from England who are enquiring into the possibility of secuirng a supply of mining timber in Eastern Canada, visited St. John, N.B., recently on their return from Newfoundland. They had interviews with a number of prominent lumber merchants and representatives of shipping interests in the St. John Board of Trade rooms. They learned that there was a plentiful supply of mining timber to be had in New Brunswick, and expressed themselves as satisfied with the possibilities of securing the timber in that province. They also visited Halifax and left for points in Quebec.

How We Cut Sander Upkeep Expenses

I am foreman in the sanding room of one of the largest furniture manufacturing plants in the country. We use belt sanders, roller feed drum sanders and drum sanders of the new endless bed type. Each type of sander has distinct advantages, and we find that all three are necessary to enable us to get satisfactory sanding, economically. But it isn't so much the saving we make by distributing our work among all three types of sanders that I want to mention as it is a condition regarding our endless bed sanders that came up a short time ago.

Any sander-man—and this article is intended principally for sander operators—is familiar with the construction of the endless bed sander. Instead of stock being fed by rollers it is carried through the machine, beneath the drums, on an endless bed studded with rubber pads or disks, set close together. These rubber disks are resilient, equalizing slight variations in thickness of stock, permitting many pieces being sanded at one time. This works out very nicely if the variation isn't too great.

Of course when we installed our endless bed sander we knew that the rubber faced bed was not going to be permanent. But we saw the great possibilities of the machine and realized that the tremendously low cost of sanding that the machine would give us on our small stuff would more than offset the expense of occasionally replacing a few disks.

We had been operating the machine about ten months when the boss called me onto the mat. He said we were using more of the disks than he thought necessary, and put it up to me to locate the trouble and rectify it.

I examined the beds of the sanders closely and was surprised to find so many of the rubbers with chipped and broken edges. The operators were replacing two or more daily. There was no reasonable explanation why this should be so, for the stock in passing through the machine laid flat upon the bed, covering several rubbers at one time. There was no reason why particular strain should be exerted on the edges of the rubbers. I determined that the fault was in the way the operators were feeding stock into the machine. I didn't have to watch them more than an hour to learn that in this I was right. Here's what they were doing:

They were running the drums entirely too high, that is the cutting point of the drum didn't extend sufficiently below the platens to enable free and easy cutting. To compel the drums to take the desired cut, instead of lowering them a trifle, as could have been most conveniently done, the men were raising the bed, putting on more pressure. This resulted in a terrific strain on the bed, and it has been a wonder to me ever since that the machine stood it at all.

The bed was raised so high that to simply place stock flat on the table and slide it under the platens, as should have been done, was out of the question. To start the stock men were tilting it so the upper edge would catch under the platens and then they pushed it down flat. This exerted an enormous strain and gouging action of the lower edge of stock on the rubbers, resulting in chipped and broken edges.

When we got things straightened out, with the drums cutting as they should, and just enough pressure on the rubber, to assure stock feeding, it is an actual fact we got more and better sanding and the expense of rubber replacements dropped to practically nothing. And by eliminating the terrific strain on the bed, I am confident that the active life of the machine will be doubled.—L. F. in Berlin Quality.

"Ten Commandments" for Band Saw Filers

Here are a few important points that should have close attention, to be a successful filer:

One—Be on friendly terms with sawyer and mill foreman; cooperate with them in order to get good results.

Two—Have certain saws on bench every day, regardless of how well they are running. You might find two or three small lumps or one or two tight places. If sawyer should happen to knock one out do not neglect your daily (regular) saw on bench; go over it first, and then work on cripples.

Three—Look your band mill over closely, often, and see that there is nothing loose, to get out of alignment. Watch your guides and keep them set in alignment with saw line every day.

Four—Watch your teeth closely; see that swage is working properly; always try side gage when swaging. See that emery wheel is always same shape; do not let it wear more in one place than another, as it will change hook as well shape of tooth.

Five always keep your saws the same length on back. Do not let them get uneven, as it will cause them to oscillate on wheels and cause sawyer to slow up on his feed by not having confidence in the saws.

Six—Be certain that your roll is not dishing saws, as it will make considerable more work on account of having to level after putting in tension.

Seven—Keep your roll well oiled and all lost motion out of it.

Eight—If saws get to running badly, first satisfy yourself that the blade is O. K., then that the teeth are in proper shape. If this does not remedy the trouble, do not start to experiment by changing your saws. You will find your trouble in the band mill or carriage track, and possibly in carriage.

Nine—Never accuse any one in the mill of doing you wrong until you have set a trap for him and caught him with his hands in the fire.

Ten—Do not get neglectful with your work. Keep your filing room in good order at all times and your tools where you can find the one you want, at any time.—The Woodworker.

New Zealand's Imports from Canada

Imports into New Zealand, from Canada during the last two fiscal years included the following:—

Timber	1912-13	1913-14
Laths and shingles	£939	£4,856
Sawn, undressed	2,450	1,260
Sawn, dressed	400	

Paper to the value of £105,426 was imported during 1913-14. The slight increase under this head over the figure for the previous year was made up almost entirely of wrapping paper, of which £2,762 was imported from Canada, as compared with £101 in 1912-13. Printing paper from Canada enjoys a preference of 20 per cent. in the New Zealand market. The value of this import last fiscal year was £97,503, a slight decrease from the figure for 1912-13.

Tubular Steel Tripod

Several novel features have been introduced in the construction of the Morris Folding Tubular Steel Tripod. These are described in bulletin Y17, which has been issued by the Herbert Morris Crane & Hoist Company, Limited. A feature which will appeal to contractors, structural engineers, stone workers and other users of this kind of lifting gear is the fact that the tripod can be folded up without removing any bolts or pins. A broad flange is provided on each foot to enable the tripod to carry a load on soft ground, and a square point gives a good grip on harder surfaces. Another new feature is the provision of a small pulley at the top of the tripod, by which a small rope can be used to haul up the heavy lifting block or to handle very light loads quickly. Every tripod is tested with a fifty per cent. overload, so that the safety of the user is always assured. It is also worthy of note that even in the one-ton capacity the tripod is light enough for one man to carry on his shoulder. Those who have had experience of hauling around the home-made wooden shear-log will appreciate this feature to the full.

To Complete Canadian Northern

"Despite the chaotic condition of the money markets, due to the war situation, we intend to finish up the transcontinental line as quickly as possible," said Sir Donald Mann, president of the Canadian Northern, recently, before his departure for Victoria, to confer with Premier McBride. He added that the company has 3,000 men employed in British Columbia and would keep them at work until rail laying was finished. Grading, he believes, will be finished by the end of October. Steel has been delivered or is en route for all sections of the main line west of Yellow Head Pass.

The Hardwood Manufacturers' Association of the U. S.

The Board of Directors of the Hardwood Manufacturers' Association of the United States, at its quarterly meeting decided to hold the next Annual Convention of the Association at Cincinnati, January 28-29. The sessions will be held at the Hotel Sinton. This will be the 13th Annual Meeting, and the fifth to be held in Cincinnati. The meeting this year was held in Memphis, January 21-22.

Gordon Grant & Company, Limited, Port of Spain, Trinidad, under date of October 1st, report as follows:—Lumber—With no arrivals, stocks are being worked off. Nova Scotian white pine and spruce are always saleable.

Mr. Harry Brown, one of the salesmen of the Atlantic Lumber Company, 110 Manning Chambers, Toronto, volunteered for active service with the 48th Highlanders and is now with his regiment at Salisbury Plains, England. Mr. Brown is a son of Mr. Harry Brown, president of H. H. Brown Limited, Liverpool, England, one of the best known firms importing American and Canadian lumber.

Essay Competition for Woodworkers

Prizes to the value of Thirty Dollars are offered by the Publishers of the Canadian Woodworker for the

Best Two Essays

on Subjects of Practical Interest to the Trade

First Prize $20 **Second Prize $10**

The following must be regarded as the conditions of the competition:

1.—Competitors shall be engaged in some branch of practical woodworking in the Canadian Trade.

2.—The subject of the essay shall be at the selection of the competitor, preference being given to topics affording a solution to some practical problem of general interest to the trade or constituting a "short cut."

3.—Drawings (if any) may be sketched roughly, in which case they will be re-drawn at the office of the Canadian Woodworker. Preference will be given to drawings executed neatly in Indian ink.

4.—Essays of about 1,000 words shall be written or typed on one side of the paper only, leaving ample marginal space.

5.—Articles for the December issue competition must reach the Editor not later than November 30.

6.—Awards shall be made on the basis of practical interest rather than literary merit.

7.—The decision of the publishers in the matter of awards shall be final.

8.—The publishers reserve the right to publish the articles submitted.

Address all communications to THE CANADIAN WOODWORKER, 345 Adelaide Street West, Toronto, marking your envelope in the lower left hand corner, "Competition."

We make a Specialty of

Conveyor Chains

For Lumbermen

WE make them from carefully-selected iron, and every link is guaranteed ***strictly hand-made***—not the inferior machine-made.

The point is worthy of special emphasis.

We make the chains according to any dimensions desired, guarantee splendid workmanship; uniformity; dependability.

Prices are the lowest possible for the class of work we furnish, and Quality above criticism.

Let us quote for your needs!

Send for catalogue giving estimated weights of various sizes of chain; prove test; breaking, straining and safe-working loads, and giving hints regarding the care of chain which will prolong a chain's usefulness.

EDGINGS

Ontario

The Ontario Government has sold the timber in the township of Fralick to Manley Chew, of Midland, for $8.50 per thousand feet and $2 per thousand feet timber dues.

The Algoma Timber & Lumber Company of Michigan, which recently secured an Ontario charter with authorized capital of $120,000, report that they do not intend to commence operations in Canada at present.

The Beaver Wood Fibre Company, Limited, Thorold, Ont., has been incorporated with authorized capital of $1,000,000. The provisional directors are H. E. McKitrick, G. R. Kappele, Harry Riley, G. W. Morley and B. H. L. Symmes, all of Toronto.

The James Horrigan Company, Limited, Port Arthur, Ont., has been incorporated to carry on business as lumber and pulpwood manufacturers and dealers. James Horrigan, contractor, of Port Arthur, is interested. The authorized capital of the company is $100,000.

The Newaygo Company, Limited, Port Arthur, Ont., has been incorporated to carry on a general business as lumber merchants, and to erect sawmills, etc. The authorized capital of theh company is $200,000 and its present address is care Keefer, Keefer & Towers, Port Arthur, Ont.

The Shevlin Clarke Company's mills at Ft. Frances, Ont., were closed down for the season on October 13th. The company now have a large quantity of lumber in their yards. The planer will run all winter, giving steady employment to a large number of men. It is estimated that the season's cut will be something over 75,000,000 feet.

The Upper Wahnapitae River Improvement Company, Limited, has secured an Ontario charter for the purpose of constructing improvement works upon the Upper Wahnapitae River and its tributaries for the floating of timber. The authorized capital of the company is $40,000 and its head office is at Sudbury, Ont. The provisional directors are Wm. McVittie, Wilbur Cochrane and A. H. Skene.

A winding-up order in connection with the Northern Island Pulpwood Company which has been operating on the north shore of Lake Superior with head office at Port Arthur, Ont., has been made by Chief Justice Falconbridge. The company's capital is $100,000 and the principal cause of its difficulties is said to have been lack of sufficient capital. The assets consist of the plant at Port Arthur and timber cutting rights valued at about $400,000.

The Wells-Higman Company, of Traverse City and St. Joseph, Mich., purchased thirty-two square miles of virgin timber situated on Botchawana Bay, District of Algoma, Ontario. This land was bought of the Botchawana Timber Land Sales Company. It is thirty-five miles north of Sault Ste. Marie by water and twenty-five by land. The Wells-Higman Company intend to export this timber from Canada and keep the Traverse City plant operating for some years. The Canadian license shows a capitalization of $215,000, all paid in. The license allows the company to operate plants, run boats, export timber and expand along lines necessary to develop their regular business.

The Ontario Department of Lands, Forests & Mines, report that the paper mill being erected at Iroquois Falls by the Abitibi Pulp & Paper Company is rapidly nearing completion. It is expected that the roof will be in place during November. The plant is to be a 200-ton mill, but it will have an actual capacity of 20 tons in excess. Under the government lease it was to have been erected some time after the new pulp mill was in operation and market facilities had become established. The bulk of the pulpwood from the surrounding district now goes to United States markets for the manufacture of plain print paper. When the new paper mill is in operation, in the course of a month or two, the finished product will be turned out on the premises and it is expected that settlers within a considerable radius will have a profitable market for their pulpwood.

The Field Lumber Company, Field, Ont., notice of whose incorporation was recently published in the Canada Lumberman, have an authorized capital of $50,000, of which $43,000 has been subscribed and paid for. No stock of the company has been offered for public sale. The company operate at Field, Ont., on the C. N. R., new Ottawa and Selwood or Fort William line. Their sawmill and planing mill are located at Field where they also conduct a general store. The company own the townships of Gibbons and Bastedo, formerly owned by J. R. Booth, Ottawa. They also recently purchased three square miles of excellent pine timber in the Township of Fell which adjoins their other limits. The president of the company is Mr. Z. Mageau and the secretary-treasurer is Mr. J. U. Lamarre, who formerly conducted a store at Field which has been taken over, together with its stock, by the company. Other directors of the company are J. M. Cousineau, P. Marchildon and Jos. Vezina. They intend to manufacture about 4,000,000 feet a year, made up of pine, spruce and hardwood. They will also handle cedar poles, posts and ties.

Eastern Canada

A report from Daveluyville, P.Q., recently stated that the assets of B. Nault, lumber dealer, were to be sold on October 27th.

A report from Sayabec, P.Q., recently stated that the assets of E. A. Dufault, lumber manufacturer, were to be sold on October 23rd.

A report from Fredericton, N.B., states that Mr. W. D. Gunter of that city has purchased the Powys property in Kingsclear and will carry on lumbering operations there this winter.

A report from Truro, N.S., states that it is reported that Mr. G. A. Warman, of Truro, has bought out the Atlantic Lumber Company, with head office in Truro, and large holdings in Colchester, principally in the Salmon River country.

W. R. McCloskey Limited, has been incorporated with head office at Boiestown, N.B., with authorized capital of $40,000, to engage in a general lumber and mercantile business. Those interested in the company include H. T. McCloskey, Boiestown; P. J. Hughes, Fredericton, and R. W. McLellan, Fredericton.

The powers of the Chateauguay Electric & Manufacturing Company, of Sainte Martine Co., Chateauquay, P.Q., which has recently been incorporated

with authorized capital of $145,000, include dealing in and manufacturing all kinds of lumber. Those interested include U. Archambault, Ste. Martine, and J. A. Fournier, Montreal.

The sash and door factory of Mr. R. Neville, Jr., Outremont and Wiseman Avenue, Outremont, P.Q., has been destroyed by fire, the loss being estimated at $100,000. The mill was erected four years ago, and was very well equipped. A large quantity of lumber was also burned. The insurance covered about half the loss.

The Lewis Hardwood Company has secured a Dominion charter to carry on a lumber manufacturing and selling business, with head office at Lewiston, N.S., and authorized capital of $50,000. Those interested in the company include G. E. M. Lewis, and F. L. Lewis, of Truro, N.S., C. H. Andersen, of Lewiston, and John Lewis, of Brownville, Me.

R. C. Tait, Limited, have been incorporated in New Brunswick to carry on a general mercantile business. The powers given to the company include taking over the stock and business of R. C. Tait, of Shediac, N.B., and engaging in the manufacture and sale of lumber in all its branches. The authorized capital of the company is $99,000, and the incorporators include R. C. Tait and A. J. Tait, of Shediac.

The Lumber Corporation of Nova Scotia, Limited, of Halifax, announce that it has been instructed to purchase 26,000 cords of pit props, 6½ and 9 feet in length and 3 to 6-inch tops, to be sent in weekly shipments of 2,000 cords from Halifax to Great Britain between November 1 and February 1. The company hopes to have the orders filled in car lots by farmers and small operators within easy reach of lines of railway.

The Charlemagne and Lac Ouareau Lumber Company have just started up a new clapboard mill at Montcalm, P.Q., designed by Mr. I. N. Kendall, of Ottawa. This will replace one burned down last year. It contains a cut-off saw, two clapboard machines, two clapboard planers and butters, and a circular saw. The clapboard machines were supplied by the Lane Manufacturing Company, Montpelier, Vermont; water wheels by Barber & Sons, Meaford, Ont.; and the balance of the equipment by the William Hamilton Company, Peterborough, Ont.

The Cascapedia Booming Company, which has recently been incorporated in the province of Quebec, is now being organized. A meeting to elect officers will be held shortly. The company's capital stock will be $50,000. It is being organized for the purpose of booming the logs of the different operations on the Grand Cascapedia River. Montgomery & Sons Company, New Richmond, P.Q., and the Cascapedia Manufacturing and Trading Company will be the chief stock holders, and between them will probably operate the company. It is also expected that the other timber hodlers on the river will join in the organization when it is complete.

The Berkshire Lumber Company, Pittsfield, Mass., who recently acquired valuable timberlands in Shelbourne and Queens Counties, N.S., report that they are not making any plans to operate this tract of timber at present, as they do not feel inclined to sacrifice lumber on the present market. The timberlands secured are largely covered with pine and were bought more as an investment than anything else. They are only a short distance from Shelbourne where they would be manufactured, and the product could be shipped into Boston at a very low cost. At present, the company report they do not expect to operate upon this property for from three to five years at the earliest.

Western Canada

J. S. Maynes, lumber dealer, Harrowby, Man., has been succeeded by W. A. Blamey.

The Lumber and Land Company, Limited, Moose Jaw, Sask., has been incorporated in Saskatchewan, with authorized capital of $10,000.

A large New York State firm is negotiating with the Board of Trade of Medicine Hat, Alta., in connection with a proposition for establishing a 100-ton newsprint mill at that point.

The Ladder Lake Lumber Company, Limited, operating the plant formerly owned by the Big River Lumber Company, at Big River, Sask., has secured registration in Saskatchewan under the act respecting foreign companies.

A London cable states that the moratorium for bills expired on October 17th and that five companies suspended payment and had receivers appointed, among them being the Canadian Pacific Lumber Company. A meeting was recently held in London, of the 6 per cent. first mortgage bond holders of the Canadian Pacific Lumber Company, Limited, Vancouver, B.C., at which a resolution was passed to release the company from the payment of any moneys payable under the trust deed of April 1st, 1914. The company met with financial difficulty on account of the delay of the Exchequer Court in giving a decision regarding compensation for the expropriation of its property in Vancouver for wharf accommodation. Recent reports were to the effect that a settlement of this matter was expected in the near future.

Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing to the Department of Trade and Commerce and stating the number of the enquiry.

1017. **Pit wood.**—A Glasgow house, able to handle cargoes, is anxious to hear from persons in a position to offer pit wood suitable for this market. Prompt action needed.

1021 **Birch poles or props.**—Enquiry is received from Bristol for Birch poles or props of the following dimensions: Length, 6 ft., 6½ ft., 7 ft., 7½ ft. Diameter, at smaller end, 3 in., 3½ in., 4 in., 4½ in., applying to all lengths.

1022. **Match boxes, match wood.**—A Scotch match manufacturer desires to purchase match boxes, or wood such as aspen or pine, suitable for the manufacture of same; also, match wood splints, or wood suitable for manufacture.

1029. **Broom handles.**—A London firm of brush makers asks to be placed in communication with Canadian manufacturers of broom handles.

1031. **Handles and dowels.**—A London manufacturing company asks to be placed in correspondence with Canadian manufacturers of handles and dowels.

1034. **Veneer.**—A London firm desires quotations and samples from Canadian manufacturers of three-ply birch wood or equal boards; 13⅛ in. x 10⅛ in. x 3-16 in. thick, delivery to be made in logs of 5, 10 and 20 thousand.

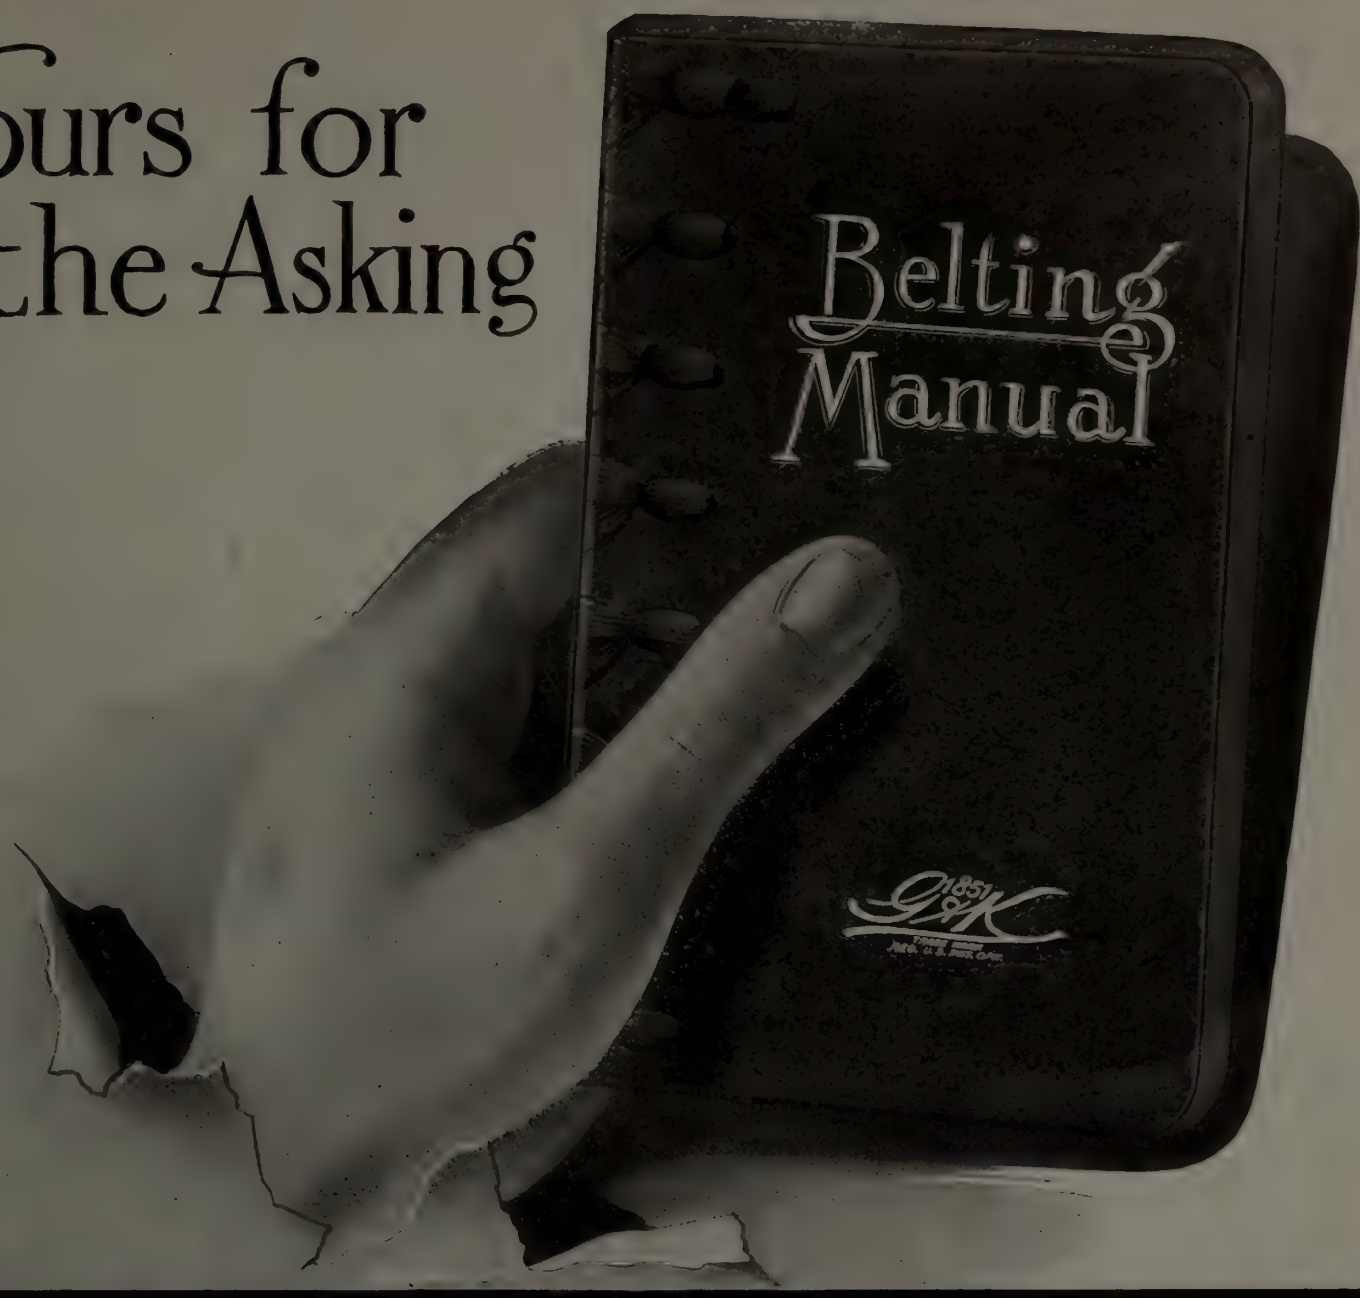
Yours for the Asking



SHOULD BE IN THE HAND OF EVERY BELT USER

The *"Belting Manual"* gives in a nut-shell all the information you need about Belt Transmission. It gets right down to rock bottom principles—every one of its 96 pages is a veritable nugget of invaluable information, suggestions, mechanical rules, tables, etc.

In fact, the *"Belting Manual"* is the most complete and authentic book of its kind—a book you cannot afford to be without. You will want to use it every day. Just one little hint may save you hundreds of dollars. Worth while?

Send for a copy and keep it handy for immediate reference. Use the coupon of your letter head. The book will be sent post-haste and post-paid.

RUBBER GOODS FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "Monarch," "Red Strip" and "Lion" are our leading brands for power transmission. (Write for Booklet B-1.)

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable. (Booklet P-1.)

Hose for Steam, Water, etc., etc., in various grades, made especially to give satisfactory and economical service under different conditions. (Booklet H-1.)

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion. (Booklet H-1.)

Forest Service Reports

Show that in Rocky Mountain Forests 100 years old the trees average 6 to 16 inches in diameter.

In Pacific Coast Forests of the same age the trees average 12 to 24 inches in diameter.

You cannot afford to plant a forest in either section.

You can afford to ***buy one.***

We have a number of excellent tracts that should interest the investor and operator.

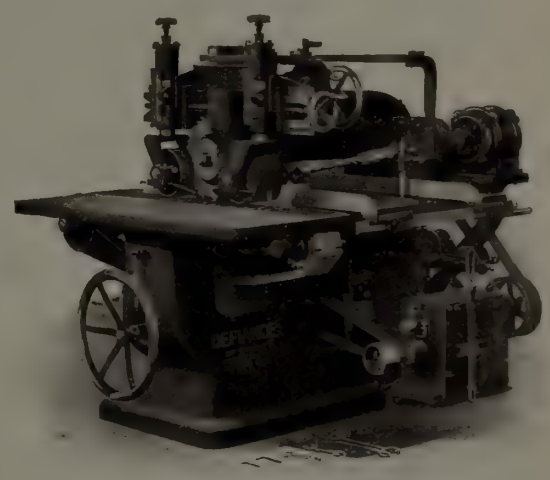
An Over-Cut Glue Jointing Saw

This machine is a new departure in a straight edger and rip saw and is attracting wide-spread attention both in America and Europe. It will accurately edge or rip hard or soft wood up to 4″ thick by 32″ wide at six changes of feed, from 35 to 155 feet per minute. It is the only saw on the market on which accurate glue jointing surfaces can be procured.

The feed chain is of the rack and pinion type with a groove for the saw. The feed changesare controlled byhammered steel gears and can be shifted instantly.



No. 121 Patent Chain Feed Straight Edger and Rip Saw.

DIXON'S SILICA GRAPHITE PAINT

When you paint your exposed metal work and machinery, consider the durability of the paint used—its actual protective value. Dixon's Silica-Graphite gives more permanent and lasting effects because of the use of two practically inert pigments—silica and graphite—in pure linseed oil, which form a firm, elastic veneer over the metal excluding all destructive agents. Dixon's Silica-Graphite is an inexpensive form of metal insurance.

Send for "Protective Paint" Booklet No. 238-13.

Ideal Band Resaw

Do you realize how good a resaw our Ideal is? Every woodworking establishment should have a band resaw, and while you are putting in one, why not put in a good one? Our Ideal Band Resaw embodies the highest type of workmanship, material and design, and is astonishingly low in price. There are a thousand of them in use, giving universal satisfaction, but if their merits were generally known, there would be five thousand. Let us tell you about it, and give you the names of your neighbors who know about this machine.

Wm. B. Mershon & Company

Saginaw, Michigan

Are your horses of use to you?

This seems an absurd question—and the answer is always **"Of course they are"**—In which case provide your stables with:

Johnson's Reliable Veterinary Remedies

Johnson's Horse Liniment, No. 1 (Alcoholic)

1 gal. jugs (Imperial)	$4.50 gal.
1 lb. bottles	8.00 doz.
2 lb. bottles	15.00 doz.

Johnson's Horse Liniment, No. 2 (an oil liniment)

1 gal. jugs (Imperial)	3.00 gal.
1 lb. bottles	6.00 doz.
2 lb. bottles	11.00 doz.

Johnson's Horse Colic Remedy

A sure and speedy cure for all kinds of Colic

1 gal. jugs (Imperial) 40 doses	5.00 gal.
1 lb. bottles 4 doses	8.00 doz.

28 "Service" Branches Throughout Canada

Canadian Consolidated Rubber Co., Limited

Montreal, P. Q.

"BUSINESS AS USUAL"

We have not, owing to the War, shut down any of our plants, discharged any of our workmen, reduced their hours of labor, or cut their rate of pay.

We are doing ***"Business as Usual."***

We intend to continue this policy to the extent of our ability, and, to that end, suggest that you confine your purchases, during the war and thereafter, as largely as possible to goods ***"Made in Canada."***

When in the market for Rubber Goods of any description — Belting, Hose, Packing, Tires or anything else—write or wire our nearest branch for prices and information.

It is our desire to serve you.

"Wilson Bros." Flooring and Trim

"Wilson Bros." stamped on every piece of this flooring stands for Quality. Look for the name. Hardwood and Pine. **Interior Finish of All Kinds.** Also Hardwood Veneer Doors to detail. We are equipped to fill large or small orders on short notice. Write us for prices.

Wilson Bros., Limited - Collingwood, Ont.

A Good Belt Saves Money

THE money wasted in keeping a stretching belt taut amounts to a surprising figure. If you use "Goodhue Belts" in your mill or factory you can save most of this money because "Goodhue Belts" stretch less by 15 to 25 per cent than any other belt. They are made from skillfully selected hides with the stretch taken out of each section before it is made up into the belt.
According to the conditions under which the belt is to run, we recommend "Extra," "Standard" or "Acme Waterproof" belts.

Send for further particulars and prices.

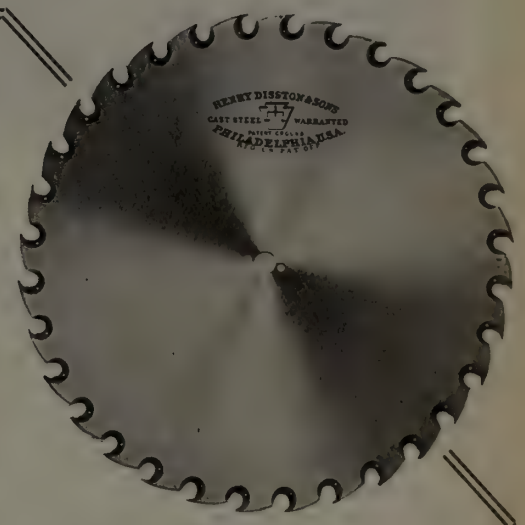
GOODHUE BELTS

J.L. GOODHUE & CO. Limited.

DANVILLE — QUEBEC.

More work with less power

with a saw that won't clog, that requires no gumming, little hammering, and that always retains its original size—that's what you get with the



DISSTON Inserted Tooth Saw

If you hit a nail and break a tooth—insert a new one. If your saw strikes heavy metal, you can insert a whole new set of teeth in a few minutes. No time wasted in gumming and your **saw is still the same size.** This means economy in first cost and increased saw life. You don't have to buy a saw several sizes **larger** than your requirements demand.

A file keeps it in order. Pointed and sharpened quickly and easily. Cuts all kinds of timber, frozen or otherwise.

Disston Points

The Disston Chisel Point Tooth is drop forged and pressed (not milled). It is strongly reinforced with a shoulder which affords permanent support against the saw plate. The Disston Point is secured firmly and permanently by a spring holder either slotted or solid. The large and increasing demand for Disston Points is convincing testimony of their quality and satisfactory service.

Write today for full information and our new book "Saw Appreciation"

Not altogether what we say but what users say

"We have used the Alligator or Warping Tug manufactured by you for the last 7 or 8 years, and consider them indispensable to lumbermen on waters of French River or similar streams."

Will move a bag containing 60,000 logs, in calm weather, 30,000 in a head wind.

West & Peachey - Simcoe, Ont.

"To be, or not to be, that is the question.
Whether 'tis nobler in the mind
To suffer the slings and arrows
Of outrageous fortune,
Or to take arms against a sea of troubles." —Hamlet.

Hamlet the Prince of Denmark is a character which

every budding actor aspires to play. The late Sir Henry Irving certainly inspired many to study the works of Shakespeare and those who were privileged to hear him in Hamlet's famous soliloquy are not likely to forget it. Most of us have been in a state of doubt on many occasions and said to ourselves: The question is:

TO BE, or not TO BE

We can serve the interests of our customers who use Babbit Metals and recommend without any hesitation.

OFFICE AND PLANING MILL, CORNER FRANKLIN AND HAYDEN STREETS

BOTH PHONES

SAGINAW, MICH. February 7th, 1914.

J.A.Fay & Egan Co.,
Cincinnati, Ohio.

Gentlemen:

The Fay-Egan "Lightning" No. 275-16" Planer and Matcher which you shipped us in September, 1911, has given us perfect satisfaction.

We have operated the machine every day since we installed it, and have put it to severe tests and it has proved satisfactory in every respect. The greatest test which we have put it to was dressing two sides 2 1/2" Kiln Dried Hard Maple, the lumber being twisty and crooked, and it required the best kind of a machine to work it. We think this work was a harder test than the machine should be put to, but owing to the fact that we had no other machine in our mill to work it, we were compelled to use our No. 275 Planer, and it did the work wonderfully. We think it will save us the expense of purchasing a heavier machine.

Another test that we put this machine to was the dressing of Hemlock. With three men, we are able to take off and put on over 80 ft. of lumber a minute, surfacing either one side, two sides or four sides. This is the class of work we expect the machine to do.

In conclusion, will say that we do not hesitate to recommend the machine to any one who has the same class of work to do.

During the time we have operated this machine it has cost us practically nothing for repairs.

Yours very truly,

JJ-S

M. J. Quinn

In fact, every one of the 275 we have put out has more than satisfied the purchaser in both quantity and quality of production.

The letter, herewith, shows how the East Side Lumber Company use their 275 and what they think of it. We have others from all parts of the country proving it to be the Greatest General Purpose Planer and Matcher on the market.

The 275 is just the machine for your mill or factory It is medium in price and weight, low operating cost, a fine Matcher and Floorer, a great surfacer, as well as an Inside Moulder.

Accessibility to all parts is a feature of the 275, a necessity in the general purpose machine.

If you need a General Purpose Machine why not get the Greatest—a 275? Write today.

Dominion Timber Regulations

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth :—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long, 1½ cents each.

Railway ties, nine feet long, 1¾ cents each.

Shingle bolts, 25 cents per cord.

And 5 per cent. on the sale of all other products of the berth.

Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

W. W. Cory,

Department of the Interior, Ottawa,
December 20th, 1912.

Deputy Minister.

Your Lumber Horse Needs

A talk with the Lumberman of Canada on the modern and sanitary system we have installed to serve your requirements.

FINANCIAL RESPONSIBILITY.—We are in a position this season to supply the lumber trade with the finest heavy horses suitable for camp work. We have shippers in the very best heavy horse district in Western Ontario, who make personal selections and take only the best. Every horse we ship out is guaranteed to be just as represented by us as to age, soundness, weight and quality—there is more than two million dollars behind this guarantee. These horses can be delivered off the incoming cars and transhipped in an hour from our yards.

SERVICE.—Our barn accommodation is up-to-date in every particular and has stabling accommodation for 500 horses. A track is also maintained for exercising horses while on the company's premises.

SANITATION.—Believing that prevention is better than cure, and to give the very best service possible we have this year employed a veterinary surgeon under salary. A daily and most thorough inspection is made by him of the entire barns and in this way the slightest indisposition is noted and the animal suffering immediately removed to the hospital on the grounds. "Safety first" is our motto in this respect.

TRANSPORTATION.—Our premises being directly on the lines of the C. P. R., G. T. R. and C. N. R., our rail facilities are such that we are in a position to ship on an hour's notice, and loading and unloading chutes are located right at the barn doors.

We gladly invite inspection of our entire system. Come and let us show you the most modern and sanitary system in Canada.

One Setter Can Work All Day With This Machine

With a steam set works you do not have to change setters twice or three times, a day. One man can do all this work, because the hard work is done by steam.

And you get better lumber, because the travel of the piston is as exact as in a steam engine, so that a steam set works of itself simply cannot cut uneven lumber.

Further, you get more lumber, because it will set up to four inches as quickly as any other machine will set two inches.

Let us send you further particulars.

To the Owner of Timber Lands

Far sighted owners of timber lands should take advantage of the times incident to the European wars, and prepare themselves for the day when the demand for timber is suddenly thrust upon them. This is certain to come at no distant day. Therefore cultivate a closer acquaintance with your holdings, and the best method of marketing them. Let us prepare the way for you. Remember, we not only report on the property, but assist in marketing the bond issue when necessary. Send for our booklet.

Machinery and Timber For Sale

The undersigned offer for sale, in large or small blocks all their remaining timber lands, mills and town property situated in the Town of Parry Sound, Ont.; and other Lumber Equipment, including boom chains, plows, sleighs, etc.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

We have the following Sawmill Machinery for sale:

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 8-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.

1 Double cylinder steam nigger, right hand.

1 Log Loader for right hand mill.

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.

1 left-hand steam nigger.

1 Log-loader.

1 Endless chain jack ladder with two kickers complete for right and left hand mills.

2 Roger Gang Edgers for 8-in. cants and lumber.

1 Waterous double edger, 6 saws.

2 2-saw trimmers.

1 20-ft. Slash table.

1 16-ft. Revolving Slash Table.

1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.

1 70-ft. Transfer Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.

1 Lath Mill with bolter.

2 Lath Trimming Saws.

FILING ROOM

1 Automatic Filing Machine for 12-in. D.C. band saws.

1 Automatic Grinding Machine for 8-in. S.C. band saws.

1 Automatic Machine for circular saws.

1 Hand Machine for cut-off saws.

1 Lap Grinder.

1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

POWER PLANT

2 Double Duplex, high pressure Water Pumps.

5 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.

2 125 h.p. Water Wheels.

1 Upright Engine for sawdust conveyor.

1 10 h.p. Engine.

1 Mitts & Merrell Hog.

1 Wood Machine for 22-in. wood.

1 Wood Machine for 16-in. wood.

1 Edger for ripping dry lumber, installed.

1 Edger for ripping dry lumber, not installed.

1 30 h.p. Generator, 250 volt.

1 30 light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and turn-tables, particulars of which may be had on application.

Also, contents of machine shop, containing Planer, Drill, Lathe and Machinery, with tools necessary for repair work.

All of the above open for inspection at Parry Sound.

Belts that Get Work Done

The supreme test of belt service comes in the saw mill. Here wet wood, knotty logs and varying stresses puts every belt on its mettle.

When a big log hits the big saw, that's the time either the belt or the log wins the mastery—that's the time when the victory belongs to a Goodyear belt.

"Extra Power"

This is a high speed belt for heavy drives. It shows the highest friction pull of any belt we know of. "Extra Power" stands up under most gruelling service. The duck is the heaviest and strongest we use. All materials are laboratory tested for super-power. The stretch is taken out in the making. The risk of ply separation is reduced to a minimum.

GOODYEAR
MADE IN CANADA
Saw Mill Belts

"Imperial"

This is a belt for high speed pulleys, wonderfully flexible. This insures a maximum arc of contact, utmost power delivery, no slippage—a fine belt for trimmer work.

Buy This Way

Let Goodyear experts help you. It costs nothing to confer with them. Involves no obligation on your part. They will be glad to confer with you and advise you. Remember that these Goodyear products are made at the Goodyear factory at Bowmanville, Ont. Here are employed the same methods and quality standards that have won Goodyear leadership in tires. Write to Goodyear experts today. State for what particular purpose you require belting, hose or packing.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster General for Canada, for transmission as second class matter.

Entered as second class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 34 Toronto, November 15, 1914 No. 22

Business Has Found Its Bearings

The attitude of the lumber salesman, and the lumberman in general, towards their fellows, illustrated by their conversations in company with others has been affected to quite an appreciable extent by the war situation and its industrial outcome. This change, slight as it may appear, is of interest and possibly of importance, and it indicates, in quite a remarkable manner, the actual state of affairs existing at present. In normal times the most noticeable feature of fellowship among the members of the lumber trade is their tendency to discuss almost anything but actual business. In fact when two salesmen of rival concerns cross one another's ways in ordinary times, shop talk is noticeably absent—with the exception of a few cases of men who make it their business to learn all they can about the other fellow's doings. There is no insinuation about this that reticence is a characteristic of the lumber salesman. Quite the contrary is the case. He is a good fellow to meet, sociable, entertaining and bright, in the vast majority of cases; but he does not often talk business with his direct competitors. Among the individuals in fact there has persisted still much of that old feeling which did so much to hamper industrial progress in old times—the feeling that one's business was sacred to himself, and above all not to be discussed with possible competitors.

Probably this feeling will pass away among even the greater number of individuals in the near future. Its end is being hastened by the widespread association movement among lumbermen which has made such progress of late, and the end is being quickened also by events which are occurring on the battle fields of Europe today; no less than in the fields of industrial competition.

An idea which has been mentioned by many lumbermen recently in conversation with the Canada Lumberman, is the fact that salesmen and others have a common meeting ground today for discussing trade conditions, which is working quietly toward establishing a slightly more trustful disposition among competitors. If it should bring about an increased confidence of this nature, it would at least be one pleasing development from the war. The mutual ground of discussion comes up in much the following manner: Two competitors meet and naturally talk about the war. Then they cannot refrain from going on to talk about trade conditions. The encouraging feature is that so many of them, having gone this far indicate to one another that they have accepted the gospel of good cheer, and are doing their own little best towards assisting in keeping up trade activity. In former times of industrial disturbance, much the opposite was the case. Men seemed to be predisposed to make statements that business was bad; they had a sort of feeling that they were doing something to be proud of when they expressed themselves so. They encouraged the continuance of poor trade conditions, instead of seeking to restrict them. Today we have in us all a conviction that Great Britain and her allies are unquestionably certain to compel Germany to give up its great dreams of conquest, and that thereafter there will be much better times for everyone; once the world has commenced to overcome the losses caused by the war. Having this confidence we cannot logically admit any other feeling in regard to business than that we have already experienced the worst, and conditions must improve. This belief has become so definitely developed among us all that one never hears any opposite opinion expressed. It is simply a question of how long we must wait, and as to the amount of preparedness which it is wise to undertake in the meantime.

This feeling has already done much to improve trade conditions. It has given us an industrial backbone which for a few weeks seemed to be wanting. It has set many of us looking about for new sources of trade, which have been found in a number of important cases. The condition in which we find ourselves today is so vastly improved as compared with that of the second week in August that it is impossible to make any comparison. We have found our bearings. We are full of national and industrial confidence as to the future, even though the difficulties of today are greater than any which we have experienced for many years.

The difference between the situation today and that which prevails during times of ordinary commercial and industrial depression is simply this, that in the latter case we frequently make our natural difficulties greater than they actually are by our determined habit of looking for and talking about depression. Today, although we have had great reason for feeling as we did in former times, we have adopted a practically national spirit of good cheer, and determination to make the best of the situation; confident in the ultimate success of our armies and in the gradual return of business prosperity. This is the really solid feature of the situation as it exists today, a feature which has already done much to save our industrial situation.

B. C.'s Foreign Lumber Trade

Soon after the outbreak of the war, business men in all parts of Canada commenced to talk about the great opportunities that would be presented for capturing the foreign trade of other nations and increasing Canada's importance as an exporting country. There was much generalizing at first, and very little specializing or going into details as to how it was to be done. Many of those who talked about these opportunities were up in the air when anyone asked them to explain how to find out just where new trade was to be developed and how to go after it. Since that time however, a great deal of quiet thinking has been done by many men who are in a position to get at the facts. As a practical contribution upon a definite line of industry and the opportunities which now lie before it, one of the best considerations of the situation that we have yet seen, is published elsewhere in this issue in the form of an article by Mr. Henry Pearce, of Victoria, B.C., dealing with the foreign lumber trade of British Columbia. Those who are in touch with the lumber trade of the Pacific Coast know that, although Canada formerly occupied an important place in this trade, United States manufacturers of late years have increased their foreign shipments of lumber greatly, while British Columbia's shipments have rapidly declined. The British Columbia Government recently took up the study of this situation and has worked actively and consistently upon it with a view to searching out its causes and discovering its

remedies. What Mr. Pearce has to say will put them more definitely upon the track than probably anything else which has come to their attention.

Briefly, the situation is very clearly illustrated by an instance mentioned in Mr. Pearce's article. Quite recently the Government of Australia commenced calling for tenders for lumber and timber—25,000,000 feet in all—for the new capitol buildings to be erected at Canbarra. The prevailing trade customs in connection with the shipment of lumber to Australia from tre Pacific Coast made it practically essential that these tenders should go through San Francisco firms of shippers and timber brokers, which meant a handicap of about 6 per cent. against Canadian lumber manufacturers. The Government of British Columbia cabled to its representative in Australia and it is now hoped that they have been successful in making arrangements which will enable the British Columbia firms to quote direct. They will thus be in a position to lay down their stocks in Australia under conditions identical with those under which United States manufacturers send their shipments.

Direct quotations are unquestionably at the root of the whole matter. It is little wonder that, in the past, British Columbia manufacurers have been unable to make much headway against United States firms, when they had to make their shipments through San Francisco houses. The volume of the trade done by United States firms made it possible for them to arrange for whole cargoes for this trade and to quote dealers c.i.f. at ports in Australia. The very fact that Canadian shipments have fallen off so greatly of late is an added handicap against securing future trade, because it increases the difficulty of making up cargoes. Therefore, the question resolves itself into one of finding out where the markets are and then arranging for shipping and banking facilities to enable Canadians to make direct c.i.f. shipments. This is where the government can come in. In order to be of the greatest assistance possible the government should appoint, as Mr. Pearce suggests, a man with the dignity of a Royal Commissioner, who should also have such an intimate knowledge of trade conditions as is required in the handling of this situation. Such a man must have a minute acquaintance with trade conditions and customs both at home and abroad, and be in a position to make definite arrangements to facilitate the opening up of trade. The great object to be attained is the inauguration of shipments direct from Canadian ports to foreign ports carried out under financial arrangements conducted by Canadians, thus putting the Canadian trade on an equal footing with that of its great competitor. Once this has been accomplished and direct shipments have commenced to reach such countries as Australia regularly, they will grow steadily and there will be no more necessity to lament about our inability to compete with our neighbors. It is a foothold in the foreign markets that is needed now. We have not as yet a real foothold in Australia for our lumber, and before long there will be little chance of getting one, unless we do something now, when the best opportunity that has ever presented itself is at hand. Very soon after the conclusion of the war there will be such a world-wide demand for lumber that the country which is in a position to ship to foreign markets successfully will reap splendid results. Canadian manufacturers of lumber will be ready to furnish the necessary stocks, if shipping and banking facilities are adequate.

A Rule Which Ought to Work Both Ways

So many lumber manufacturing and wholesaling firms in Canada carry on an international business, selling and buying in both countries that they look upon the two countries very much as one large market, paying very little attention to the peculiar situations which some times arise out of this fact. It does not surprise the Canadian lumberman much if he finds a Canadian consumer buying stock in the United States which has to be shipped a good many hundred miles, when he could buy something equally suitable for his purpose in Canada, possibly at a lower price, and perhaps a few miles only from his own door.

This sort of thing is going on all the time and every now and then it becomes so noticeable, or frequent, as to attract more than the usual amount of attention. Just at present a case in point is provided by a large demand which has suddenly developed out of the war in Europe. The War Office needs enormous quantities of saddles. Orders for these were given to British, Canadian and United States manufacturers. At first, the quantity of orders given to United States manufacturers made Canadian saddle manufacturers feel that they were being overlooked, and they made a complaint which resulted in an assurance being given by the War Office that Canadians would get as many orders as they could handle. The great size of the orders and the urgency for their completion however, makes it necessary that some of them should be given to United States manufacturers.

The peculiar point about the whole thing is, not that the Canadians want as much of this business as they can get, or think that the quantity of orders going to the United States was too great; but that the saddle makers in Canada, after complaining of orders being sent to the United States, failed to apply the same line of reasoning to their own case as they had to the War Office. When they got the orders for saddles they came into the market for supplies of birch, which is used extensively in the production of saddles. Did they look over the market and find that they could get this wood in Canada That is what we would have expected them to do. They may have done so to some extent, but no sooner had the saddle orders been received than United States lumber dealers found enquiries coming their way for birch. A lot of the orders for birch went across the line. It soon developed however, that practically the only place to get this stock was in Canada and back came the orders to Canadian lumber dealers, after being milked on the United States side.

So it happens that the saddle makers, who should know more about the situation, have been paying more for their birch than they would have paid if they had bought it in Canada. United States firms which have received similar orders for saddles are buying their birch from Canada direct. The saddle manufacturers in Canada do not seem to have given the Canadian manufacturer or wholesaler of birch a fair deal in this matter, but fortunately they have themselves been the only ones to suffer. The whole situation is discussed at considerable length elsewhere in this issue, by a prominent wholesaler who has had his ear to the ground in connection with this interesting new trade.

Feeding Loggers—An Important Camp Problem

If anyone who had to do with the management of a logging camp in Canada or in the United States in the early days of the lumbering industry—or even a few decades ago—should have been told that by the year 1914, the feeding of the men who work in the woods would have been reduced almost to scientific exactness, he would probably have laughed outright; yet in no other thing is the tendency towards improvement more noticeable to-day than in regard to the class of food which is put before the men employed in the bush. We are still a long way from perfection in this regard, yet there is a very general conviction that the feeding problem should be studied very carefully and standardized as much as possible. Look upon the situation which ever way you please—either as a business proposition or as one to be regulated by the dictates of humanity—it comes to the same thing. The man who works in the bush deserves to be fed well. He gives his best results in the form of work accomplished when he is fed well. Nothing has been more striking to the uninitiated visitor in the lumber camps of late than the fact that the men receive such excellent food and such a variety of it. In fact the stranger is more than likely to go away with the conviction that the men are over-fed.

It is not surprising therefore, that the secretary of an important

lumbermen's association, should recently have been commissioned to make an investigation of the whole problem of feeding the men in the woods, and should have presented a very interesting and valuable report. Mr. R. S. Kellogg, secretary of the Northern Hemlock and Hardwood Manufacturers' Association, presented the report at the recent quarterly meeting of the Association. Much of the report is published elsewhere in this issue and it will repay careful reading.

Two or three specially important points are brought out in this report, which were pretty generally recognized before, but which cannot be emphasized too much. One of these is the fact that a man who works in the bush requires much more food than a man engaged at a more normal occupation. The food problem therefore, becomes much more than the ordinary problem of feeding. It involves not only the health of the men, but their working capacity. Another important point to which attention is drawn is the possibility of reducing the waste connected with the food supply problem in logging camps. When, to the large amount of food actually needed in the camps for consumption, there is added the amount which may be wasted by an incompetent cook, the food bill becomes a very direct source of loss. The employment of a capable cook, in fact a cook who is an expert at his business.

It is evident from the report presented by Mr. Kellogg that the question is one which will bear a great deal more in the way of definite investigation, so as to bring about the desired results. The fact that one investigation has been made however, is good reason for congratulation. It provides an excellent starting point for future investigations and it affords also a practical set of principles and an interesting group of menus for meals, which will be very serviceable as a guide. We recommend everyone who has to do with the problem of feeding loggers to read Mr. Kellogg's report.

Editorial Short Lengths for Busy Readers

The New Brunswick government has removed the ban which prohibits the exportation of timber for pulp purposes cut on the Crown lands of New Brunswick, so far as it relates to the British Isles. This suspension of the regulation will probably remain in force until the close of the war.

During the forest fire season, closed recently by the heavy rains, approximately 12,000,000 board feet of timber was destroyed, and approximately 27,000,000 feet of standing timber killed in the State of Washington. The heaviest destruction occurred in Clallam county, where the estimated loss was 20,000,000 feet in killed and destroyed. In Pend Orielle county there were about 5,000,000 feet killed and 4,500,000 feet destroyed.

A recent report from Montreal stated that the military authorities had conceived a plan for dealing with a large number of German and Austrian reservists now in Canada who are regarded as a menace to the communities in which they reside because many of them are out of work. The plan is to send these persons to lumber camps during the winter, under an armed guard. They would thus be furnished with food and work and the product of their labor could be given to families of Canadian soldiers fighting at the front.

The Provincial Government of Alberta has given notice to its treasurer that, on or before June 1st of every year, owners of timber berths in the province will be required to pay to the Minister of Municipal Affairs a tax of 2½c per acre with a maximum tax of $25. The land affected includes all lands, owned, leased, held under licence, etc., for the special purpose of cutting or removing timber therefrom, or which are held as an investment, or for the accruing value of the timber growing thereon.

Mr. Ellwood Wilson, Forestry Superintendent for the Laurentide Company, Limited, Grand'Mere, P.Q., in a letter to the Canada Lumberman, tells of an interesting innovation which the company has been trying in connection with its woods operations. In conjunction with the Quebec & St. Maurice Industrial Company, the Laurentide Company imported from Newfoundland in August last, twelve reindeer, of which the former company took four. The Laurentide company have used dogs for a long time for drawing their sleds in winter, and find that they have many disadvantages. They fight. They get mangy. Their food has to be cooked for them, and in summer time they are very difficult to keep, as well as being a good deal of expense and a nuisance. The reindeer can haul heavier loads, can partly forage for themselves, can be used for food if necessary and cost nothing to keep in the summer. Then, too, seeing the poverty and lack of cattle among the Indians, the Laurentide company hope in time to be able to distribute some of these deer to the reservation on their limits and also to persuade some of the poorer settlers to use them. So far, their deer have done remarkably well and have demonstrated their usefulness in another direction, namely, clearing off burnt-over land and land which has grown up to hardwood brush so as to make it easier to reforest, by planting. The deer will eat every bit of hardwood, even bending down the smaller trees and eating the leaves and young shoots. They are particularly suited to the jack pine plains which cover such large areas north of this district and which abound in the reindeer moss. These deer will eat almost anything that cattle will. They had been running wild so long in Newfoundland that they are still somewhat difficult to approach but are rapidly becoming tame, and as soon as the rutting season is over the company will begin to train them. They require to be handled gently.

Mr. Wilson also reports that the Laurentide company has planted over 100 acres this summer and their nursery will have a capacity of 750,000 trees per annum by the spring of 1915.

It is reported from New Westminster, B.C., that the first shipment of lumber from a Pacific Coast port to an Atlantic Coast port by way of the Panama Canal is expected to leave New Westminster some time during the present month, the cargo amounting to 1,000,000 feet. The Robert Dollar Steamship Company placed an order with the three leading saw mills of New Westminster for this stock, which consists of heavy timbers and a variety of lighter stock in the rough. The order includes about 400,000 feet from the Canadian Western Lumber Company at Fraser Mills, the balance being divided between the Brunette saw mills and the Small and Bucklin company. It is believed that the successful carrying out of this initial order will open up an extensive trade for British Columbia coast mills.

From Sweden it is reported that the shipments of lumber products so far only amount to about 40 per cent. of what was calculated for the whole year, and in this connection it must be remembered that difficulties in navigation will soon arise on account of ice in the Baltic. A considerable decrease in the production has also been brought about through the war. Out of a total of 78 saw mills only 28 have been running with full force, 39 with about half force, while 11 have closed down entirely.

The swedish State Industrial Commission has resolved certain measures in order that the Swedish saw mills and planing mills may be kept running during the present crisis. There is to be started a very extensive felling and lumbering in the Government forests in order to procure the necessary raw material for the saw mills and pulp mills. Further, the Swedish Government will assist the mills by extending the time for the payment of their debts to the Government for lumber, which at present amounts to more than 2½ million dollars. This is on condition, however, that the mills be kept runnng all winter, even if they must store the products to a large extent.

A despatch from Grand Forks, B.C., states that twenty carloads of poles cut on the north fork have been shipped during the last two weeks for Ontario by the Western Lumber & Pole Company. These poles run from 40 to 65 feet in length, each pole undergoing the carbolineum process whereby the end is dipped into boiling pitch for ten minutes just before loading.

Foreign Openings for Canadian Lumber

Important Opportunities Developing for Widening Scope of Lumber Trade—Reports from Many Markets

One of the heaviest decreases in September imports into Great Britain is in wood and timber, and while the largest decrease was in shipments from Russia, there was a considerable falling off in receipts from practically all sources, the figures for the months of September, 1913 and 1914, being respectively:—

	1913	1914	
Value	£3,976,420	£1,773,318	= a decrease of 55.4%
Quantity (loads)	1,487,279	592,680	= a decrease of 60.1%

With the closing of the Baltic and the alternative Archangel route only open during a portion of the year, and with increasing difficulties of navigation in the North Sea, it is not surprising that the question of future supplies is receiving considerable attention.

As no branch of Canadian export trade is more thoroughly established and exploited than the lumber business, Canadian firms are kept constantly advised of the progress of events by their connections in this country, and will consequently be aware that recently very important inquiries are being made upon behalf of different industries.

Railway Ties

Another important feature to which some reference may be made is the future supplies of railway sleepers (or ties) for the United Kingdom railways. These are customarily obtained from Russia and Scandinavia, and the usual procedure is for the particular railway company to notify the important creosoting plants of their requirements, when these enterprises approach the timber importers and brokers with a view to obtaining quotations for the requisite supplies of wood.

It will be known that inquiries are now being put out upon behalf of several of the large railways, and it has been ascertained from the interests referred to that quotations for large supplies are being obtained from British Columbia and other parts of Canada, the successful termination of which should divert important orders to the Dominion.

It has been thought desirable to keep in touch with the business with the object of supplying any information which might be desired, but it is stated by the creosoting plants and timber importers that everything possible upon behalf of Canada is being done, and that the lumber firms in London associated with Candian interests are actively engaged in endeavoring to secure orders, and in this connection are in cable communication with Canadian sawmills and shippers.

It is understood that railways in other parts of the Dominion also purchase sleepers through London, and at least one important inquiry upon this account has also been referred to Canada. It might be mentioned in this connection that sleepers for United Kingdom railways are usually imported untreated to be subsequently creosoted in this country, while supplies for countries where no creosoting facilities exist must usually be creosoted in the country of production prior to shipment, because to send the wood to an intermediary country to be creosoted entails heavy additional expense which it is desired to avoid if possible.

Handles

It is understood that a large proportion of the inquiries with regard to wood and its manufactures are being made with a view to the future, and that in many articles considerable stocks are still available on this side. A number of applications however have been received for the addresses of Canadian manufacturers of broom and tool handles as reported in the shape of trade inquiries.—Weekly Trade and Commerce Report.

Welsh Requirements of Pit Props

The United States Consul at Cardiff, Wales, in a recent report discusses the Welsh requirements of pit props. After giving an outline of the situation, as already reported in the Canada Lumberman, he states that the imports into Cardiff in 1913 from Finland, amounted to 220,000 loads, there being approximately 1 1-3 loads to a ton of 2,240 pounds; from Sweden, 15,000 loads; from France, 550,000 loads; from Portugal, 250,000 loads; from Spain, 100,000 loads; into Newport, from all countries, 360,000 loads; into Swansea, 150,000 loads.

Pit Wood

Pit wood (all from France, Spain, or Portugal) consists of the trunks of trees from 15 to 20 years old, and is shipped green with the bark on. Of the imports, 55 per cent. is cut to 6½-foot lengths, diameter from 3½ to 8 inches; 35 per cent. is cut to 9-foot lengths, diameter from 5 to 12 inches. The remaining 10 per cent. is in 13-foot lengths, diameter 8 to 20 inches. Pit wood is sold by the exporter to the Cardiff importer per metric ton, f.o.b. Bordeaux, Lisbon, Oporto, etc. Prices have usually ranged from $3.64 to $4.37 per metric ton, and freights from $1.21 to $2.18 per ton of 2,240 pounds, the last named being an entirely exceptional rate. Prices, as between importer and coal mine, during the last few years have run from $5.34 to $5.83 per ton of 2,240 pounds, f.o.b. at the Cardiff docks. Since the war began prices have risen as high as $8.50 per ton of 2,240 pounds. At present writing prices have fallen to $5.83 per ton. The fall is due to slackened demand, a percentage of the collieries being idle. Terms, as between French shippers and Cardiff importers, are by draft at sight against documents where cargoes have been officially weighed at the port of lading.

The extension of time for the arrival in England of ships from Canadian ports with full deck loads of timber, which was reported recently in our columns, comes to an end on November 15th. After this date the restriction of deck cargoes to the level of the main sail will again be in force.

Small Woodenware Trade Openings

Referring to the British market for small woodenware, the following lengthy list of manufactures, published in the Canadian Weekly Trade and Commerce report, will guide Canadian woodworkers in their efforts to supply some portion of the present demand in Great Britain: Wheelbarrows, cheap cricket bats and croquet sets, skipping rope handles, bowls, tool boxes, pencil cases, rulers, writing and other cabinets, pipe racks, wooden brackets of all kinds, fretwork of all kinds, clock cases, wooden clogs and sabots, walking sticks, billiard cues, golf sticks, fancy boxes and small cabinet ware, writing desks, slates and school fittings, draughts and chess sets, ninepins, brush backs and ware, clothes pegs, wooden handles and knobs of all kinds, spokes, hammer and pick handles, gun stocks, boot lasts, brooms and brushes, broom handles, cornice poles and rings, wooden platters, spoons and butter prints, wooden hoops, spades, wickets, table and chair legs, balusters, bungs and spile pegs, wood wool, wooden pipe lighters, veneers, tree-nails, railway kegs, dowel pegs, wooden boot heels, mangle rollers, saddle trees; hubs, felloes, and cart and carriage ware, prepared woodwork for casks, bentwood furniture, parquet flooring, blind and builders' laths, electric light casements and fittings, wickerwork, chip boxes, jewel cases, tea chests, writing desks, pen holders, wood screws, photographic cameras and stands, serviette rings, paint brushes and handles, large quantities of cheap picture frames and mouldings.

German Woodworking Industry

Commenting upon the German manufacture of small wood ware and toys and games, the Timber Trades Journal, in its current issue, states: "Germans have done much in competition through extreme economy in materials and general management which in some manufactories has been reduced almost to a fine art. In the wood-converting industry, for instance, they have introduced machinery of an advanced type, which would either save time or material, and utilize wood which at one time was regarded as waste—a course of procedure which might often be copied with advantage in Great Britain. Extreme care has also been taken in the design of many of their mills, with the object of increasing the output and reducing hand labor to the lowest possible point. The economical production and transmission of power have also received especial attention—in point of fact, nothing is wasted."

War Office Supply Branch at Montreal

The Imperial Government recently opened an office at the Windsor Hotel, Montreal, to be used as headquarters for the purchase of British army supplies in Canada. In addition to many kinds of woolen goods, etc., the agents of the Imperial Government will ask for prices on 50,000 hair brushes, 50,000 shaving brushes, large quantities of picks, shovels, tent poles and mallets. It is also reported that orders will be given to saddlery manufacturers for 50,000 horse collars.

Match Wood—Match Boxes

An inquiry has been received from a Scotch match manufacturer for splints cut to sizes, or logs, for match wood and match boxes. About 1,500 cubic feet per week could be used. The manufacturer in question would be prepared to enter into a contract and would like to make arrangements with a producer in Canada for the supply of boxes and splints ready for use. For the information of those who might be interested it may be stated that the splints are packed in cases of seven rows, consisting of 1,200,000 pieces.

England Wants Canadian Box Shooks

In the Canada Lumberman of November 1st a report appeared, sent by Mr. Harrison Watson, Canadian Trade Commissioner at London, Eng., that a leading lumber broker of London desired to secure quotations on Canadian box shooks, as there was a possibility that the prices of Scandinavian shooks would soon advance sufficiently to enable Canadian shooks to share the trade. Specifications were furnished by the London broker and, through the courtesy of Mr. R. Grigg, Canadian Commissioner of Commerce, we are now able to publish these.

The enquiry comes from a prominent London, England, firm, and the specifications are as follows:—

Reference specification number one; Please quote lowest prices c.i.f. Garston, for the goods as specified below.

1d. Carbosil (B).

Sides 21¼ ins. x 9½ ins. x 5/16-in. in 2 pieces.
Ends 12¼ ins. x 9½ ins. x ⅝-in. in 2 pieces.
Tops and bottoms 20 ins. x 12⅞ ins. x 5/16-in. in 2 pieces.
Bars 9½ ins. x 2 ins. x ⅝-in.

Wood to be red &/ or white, but not more than 30 per cent. red, smoothly sawn.

All shooks to be tied with cord and to be stencilled plainly in red on the same side of each bundle with the respective letters mentioned.

The component parts of any side, end, top or bottom should be, as far as possible, confined to one set of measurements.

All measurements to be actual and all goods to be of good merchantable quality and to be in good seasonable condition.

Long Lengths

5/16 in.	4 - 5½ in.	420 Stds.
	6 - 7 in.	456 Stds.
	7¾ in.	36 Stds.
⅜ in.	4 - 7 in. and 8 in.	108 Stds.
½ in.	4 - 7 in.	60 Stds.
⅝ in.	4 - 7 in.	360 Stds.
¾ in.	4 - 7 in.	276 Stds.
	7¾ in.	48 Stds.
	8 - 9 in.	78 Stds.
	9½ in. and 10 in.	9 Stds.

The widths of all the above to rise by ½-in., approximately equal quantities of each measurement, except where otherwise stated.

Bars

2-in. x ⅝-in., 72 stds.; 2½-in. x ¾-in., 22 stds.

The lengths of all the above to be 5 to 12 feet, and intermediate ½ feet to be supplied as well as the even numbers. All prices to be per St. Petersburg Standard (1,980 feet b.m.). The boards to be tied with cord, 5 pieces for ¾-in. and upwards, and 10 pieces if less than ¾-in. Battens in bundles of 24 pieces. The widths to be plainly stencilled, preferably in red, on the same side of each bundle.

Wood for the above to be red &/ or white, but not more than 50 per cent. red.

Reference specification number two; C.I.F. Hull.

"A" Boxes

1 T 1 B 18¾ ins. x 13¼ ins. x ¼-in. in 3 or 4 pieces, t.g. and g.
2 Sides 18 13/16 ins. x 7¾ ins. x 5/16-in. in 2 pieces, t.g. and g.
2 Ends 13 7/16 ins. x 7¾ ins. x ½-in. in 1 piece.

Sides and ends to be planed one side, tops and bottoms to be sawn only. Both sides and both ends, to be printed. Tops, bottoms and ends may be made from red &/ or white wood, sides to be made from white wood.

Reference specification number three; C.I.F. London, Hull and Bristol.

No. 1 Boxes

1 T. 1 B. 19⅛ ins. x 13 ins. x 7/16-in. in 3 pieces t.g. and g.
2 Sides 19⅛ ins. x 6⅝ ins. x 9/16-in. in 1 piece.
2 Ends 11⅞ ins. x 6⅝ ins. x 11/16-in. in 1 piece.

No piece in tops and bottoms to be less than 3 ins. in width. All parts to be planed one side, and fine sawn on the other side. Edges to be planed. Particular attention to be given to see that three pieces forming tops and bottoms are well-seasoned. The wood to be red &/ or white, thoroughly dry, bright and well-seasoned. To be tied with wire.

Reference specification number four; C.I.F. Liverpool.

S. 3 Boxes

Inside measurements 17⅜ ins. x 12½ ins. x 8¾ ins.
2 Ends 13⅜ ins. x 8¾ ins. x ⅝-in. in 1 piece, planed one side.
2 Sides 18¾ ins. x 8¾ ins. x ⅜-in. in 1 piece, planed one side.
1 Top 18⅝ ins. x 13⅛ ins. x 5/16-in. in a or 3 pieces, unplaned.
1 Bottom 18⅝ ins. x 13¾ ins. x 5/16-in. if in 3 pieces, unplaned.
1 Bottom 18⅝ ins. x 13½ ins. x 5/16-in if in 2 pieces, unplaned.

The wood to be red &/ or white, thoroughly dry, and well-seasoned. All measurements to be actual after sawing and planing. To be tied with string.

Reference specification number five; C.I.F. London.

2-lb. Boxes

2 Sides 30⅞ ins. x 8⅜ ins. x ½-in. in 1 piece.
2 Ends 13½ ins. x 8⅜ ins. x 11/16-in., in 2 equal pieces, or 4 ins. and 4⅜.
1 T. 1 B. 29¾ ns. x 14½ ins. x ½-in. in 3 pieces, 5-in., 5-in. and 4½-in. or 4-in., 5-in. and 5½-in.
4 Bars 10⅛ ins. x 2½ ins. x 7/16-in.
4 Bars 9¼ ins. x 2½ ins. x 9/16-in.
4 Bars 14½ ins. x 2½ ins. x 7/16-in.

The wood to be red &/ or white, with as much white wood as possible, thoroughly dry, well-seasoned and sound, and sizes and thicknesses strictly adhered to. All measurements to be actual after sawing. To be bundled with wire.

Great Britain's Enormous Consumption of Pit Props

Some idea of the vast quantities of timber consumed in the coal mines of Great Britain may be gathered from the remarks of Mr. C. P. Markham, at the annual meeting of the Stavely Coal and Iron Company, held recently in Sheffield. At Stavely, he said, they used about three-quarters of a hundredweight per ton of coal, but the quantity used in South Wales was anything up to about four to four and a half hundredweight. The seriousness of the present shortage might be judged from a statement made to him by the leading people in the pit prop trade, that if the whole of the forests of Scotland were cut down there would not be sufficient timber to last the collieries of Scotland a fortnight. All kinds of substitutes were being tried, and no doubt something suitable would be found, but the outlook in the colliery world was very far from satisfactory.

Active Efforts to Secure Australian Trade

In connection with the efforts being made by the Government of British Columbia to encourage the Australian trade in British Columbia lumber, Hon. Dr. Young, provincial secretary, recently sent a telegram to Sir Richard McBride, Premier of British Columbia, who was at that time on a visit to Ottawa. In his telegram Hon. Dr. Young said:—

"Startling figures have been laid before me relative to conditions affecting the lumber trade. I suggest that you strongly urge Sir George Foster to negotiate with Australia for a preference tariff. In South Africa the 10 per cent. tariff on lumber has had a most beneficial effect in stimulating trade. British Columbia supplies 64 per cent. of the lumber imports. At present large orders from Australia to Puget Sound and San Francisco are likely to be filled out of logs now being shipped from this Province. Last year, shipments from Washington and Oregon to Australia were nearly twenty-three times greater than from British Columbia."

To this Sir Richard McBride replied as follows: "Have conferred with the Minister of Trade and Commerce relative to the lumber trade. He is very greatly impressed with your statement and will at once make representations to the Australian Government. Have a statement prepared in duplicate and forward through Provincial Government to the Premier and Minister here."

In a subsequent interview Hon. Dr. Young said:—"I am very hopeful that some good results will immediately flow from the present united efforts that are being made to place the lumber industry in this Province on a better basis in respect to conditions under which competition must be met in the overseas markets.

"Personally I would like to have the Canadian Government endeavor to negotiate a preferential tariff in respect to lumber. It has worked well in the case of South Africa, where we enjoy a 10 per cent. preference. With Empire unity greatly stimulated as a result of the war, fellow Britons in Australia will, I feel sure, be disposed to stand shoulder to shoulder with us in matters of trade and commerce. Therefore this may prove to be the psychological moment for us to press the point upon their attention."

A memorial sent to Sir Geo. E. Foster by Hon. Dr. Young, outlines the situation as above explained and makes the following general reference to the argument for preferential treatment of Canadian forest products entering Australia: "The hardwoods of Australia, the trade in which is gradually increasing, enter Canada free, and we are pleased it should be so, but we wish it clearly understood that we are not asking a free entrance for our lumber, not even a reduction in duty. Australia has a lumber industry to protect, and if for revenue purposes or the protection of her lumber industry, Australia considers it politic to retain the present duty or impose a higher, we have nothing to urge against such a course. We do not wish their manufacturers to suffer for our gain, but are content to rely on the natural requirements for our soft woods, made necessary by the continuous development of the Commonwealth, and that after putting on a duty to furnish a proper quota of revenue, and also protect their own home industry, they include also something additional which they can take off for the benefit of Canada, without hurting themselves. Preference, not free trade, is what we seek."

Opportunity Knocking for B. C. Trade

Languishing Export Lumber Business Can Be Revived—Direct Quotations c.i.f. the Chief Requirement—A Competent Royal Trade Commissioner Needed

Contributed Specially to the Canada Lumberman by Henry Pearce.

> "To quote direct; that is the crux of the export lumber trade question. . . . . Unless the mill owner in British Columbia is in a position to quote c.i.f., America will get control of the export lumber trade and keep it for all time. A fully accredited representative from the Dominion Government could, by visiting the world's buying markets, make arrangements whereby the mill owner in British Columbia would be in a position to quote c.i.f. to any port. . . . . Surely it is worth the trouble and expense to capture that trade and keep it for all time."

British Columbia has at the present moment, opportunity knocking at its doors, the opportunity of establishing for all time an export trade that will be to Canada what the coal trade has been to England.

The exploitation of trade is an Imperial necessity, war is closely allied to commerce, and the keeping and developing of trade in our empire, instead of letting our foreign competitors control it, is as important in war time from an Imperial point of view, as assisting the Empire with men and money. The American Government, since the war started have been making strenuous efforts to put themselves in an impregnable position, so that, when the demand comes, they will control this trade.

Statistics will show that in recent years American exports of lumber have steadily increased, and those of British Columbia spasmodically decreased. In consequence of the publicity given to these statistics, meetings of lumbermen have been called, the Minister of Commerce has directed his Trade Commissioners to prepare reports, and boards of trade have discussed the question as to why Canada, and more especially British Columbia, is not getting its fair proportion of the export lumber trade.

This business is not going to be developed by lumbermen grouching at the government; the government obtaining academical reports from their commercial representatives who have no knowledge of local conditions, or by rhetorical speeches at Board of Trade meetings. Business is a solid concrete fact of supply and demand, the supply having to be delivered in the manner it is demanded.

The Crux of the Situation

The B. C. Government a few days ago cabled the Australian Government, asking, if representatives from their country were negotiating for the purchase of a large quantity of timber, that they should be allowed to quote direct.

To QUOTE DIRECT; that is the crux of the export lumber trade question.

The mill-owner in this country (unless he is working a subsidiary business of an American controlled concern) cannot quote direct for the reason that he cannot quote c.i.f. He must quote through the lumber broker or shipowner in San Francisco. He is a mill-owner not a freight speculator, and has not banking arrangements to enable him to sell on D-A or D-P terms and so get put in funds immediately his cargo is placed on board.

The Canadian lumbermen are handicapped, their competitors in America have been established a generation before them, and have freight speculators, timber brokers and bankers, all assisting them, and above all a government acting as a glorified commercial traveller pushing their sales.

At recent meetings of the Lumbermen's Association and the Victoria Board of Trade there have been many reasons expressed by the lumbermen as to the falling off of the B. C. export trade.

The first should be dismissed as absurd; that of the American lumbermen selling at a loss. American industries have not been built up and maintained by selling at a loss.

The second is that there is no internal demand in British Columbia for low grade lumber, so that if an order is taken for two million feet to ordinary export specifications, the mill-owner is stocked wit hanother two million feet of low grade lumber which is unsaleable. It is quite obvious that as America has a demand up country for low grade timber, if British Columbia has not a demand elsewhere it is useless for it to enter into competition with America; but there IS an EXPORT demand for the lower grades and there is no reason at all why simultaneous export orders should not be booked for the ordinary export specification for one market, low grades to another and the higher grades for England and Europe, all shipments being made practically at the same time on different boats.

Thirdly, the lumbermen say they cannot compete with Puget Sound in loading ships, contending that now cargoes are so large it is impossible for any British Columbia mill to handle a big ship without paying excessive demurrage, whilst Puget Sound mills are able to split cargoes up, and so fill the ship quicker. Supposing, however, that export markets were found for our lumber (and the markets are to be found), what is to prevent any mill built on landlocked waterfrontage, from cutting its timber and putting it straight on to scows ready to be loaded when the ship arrives? Regular orders would have to be booked ahead, and the millowner would know what the actual shipping demands would be. It is not suggested that kiln dried lumber or the finished product should be stored on scows for an indefinite period, the suggestion is simply that when a millowner is to fill large orders, and naturally knows within a week or so when his ships are arriving he can store a large proportion of his cut timber especially the lower grades, on his scows. The capital value and upkeep of scows capable of running alongside of every hatch of a ship immediately it arrived, would not be nearly as much as the interest on the capital value of the cheapest waterfrontage on Puget Sound.

The last prominent argument is adverse labor conditions. It is hard to understand this because America claims that we have more advantageous labor conditions from a manufacturing point of view, than they have. Whether that be right or wrong, the one fact remains, that war will very materially alter the labor conditions in this country. A war of this magnitude is not going to adjust itself to labor conditions; labor must adjust itself to war conditions. This is no argument of classes against masses. It will be the masses who will insist on an adjustment of the labor question for the common good; and common good is industrial encouragement.

If all the existing lumber mills in British Columbia were working at full pressure there would be no reason to fear any adverse economic conditions that might obtain during the war. We can forestall the necessity of creating unremunerative work for the unemployed, by developing remunerative industries.

Greater Government Assistance Required

The lumber industry is crying for official and effective backing by the government. We have today an Australian Commission on the Pacific Coast making arrangements to buy timber products. We have an English Commission arriving in Canada studying the question of buying timber products, but we have no commission going to the markets of the world studying the question of SELLING our timber products.

An individual mill-owner cannot go to England and interview the Government, Board of Trade, shipping companies, and banking institutions. He cannot speak for, or pretend he is advising his Government. He would have no official status, and could only speak for himself. Neither could the lumbermen get together, and send a man to England. He would simply be the representative of a "lumber combine." The Government, however, could appoint a Commission of one or two people who had an international commercial knowledge and who understood the local conditions obtaining in the lumber trade of British Columbia. If that Commission did its work properly the effect would be felt immediately.

Preferential tariff with our Colonies is not going to make our trade. It might help to a certain extent, but it is not the solution of the diffifficulty. It has been suggested that preferential tariff has resulted in increased trade in South Africa. It is not wholly that. South African trade in itself has increased, and the South African merchant is biased. He does not like dealing with America. His is an old established business and he instructs his old established agents in England to purchase direct from British Columbia. There is something more than preferential tariff. A ten per cent. preference in duty, is very often not a one per cent. preference in frights. It is shipping and banking facilities that will develop our export trade.

The Trade Commissioners are undoubtedly doing good work, but they have not British Columbia knowledge of the lumber trade, and general knowledge of commerce throughout the world. They have local knowledge of their commerce and a cursory knowledge of the lumber trade throughout the world.

A man appointed by the Dominion Government with all the dignity of the office of a Royal Commissioner, can interview shipping companies, bankers, etc., confer with the governments, and all the time be in direct touch with the lumbermen here.

The Government should control an Inspection Bureau for the

grading and tallying of all export shipments. When this was suggested a little while ago, some prominent lumbermen said they were quite satisfied with the Pacific Coast Inspection Bureau, with headquarters at Seattle. After all, the buyer wants protection as well as the seller, and the most prominent buyers in our Colonies and South America agree that it would be of great assistance to them in buying British Columbia lumber, if it was graded and tallied with a British Columbia Government certificate. Bankers say they could handle the finance better, and shipowners say they could quote freights better. Surely it is only common sense to realize that, if we wish to exploit British trade, we should endeavor to exploit it under British, not American control.

The war is going to revolutionize the lumber trade of the world whether it lasts three months or three years. Whether it ends in such a victory as will reduce the German and Austrian Empires to third rate powers, or results in a patched up peace; there is one dominant fact, that the demand for lumber from the Pacific Coast will be enormous. The present stocks will soon be depleted, and with the Baltic closed, timber having been declared contraband of war, the Pacific Coast will soon be called upon to fill immediate demands. When the war is over and the Baltic open, so much lumber will be required to repair war's ravages that the demand must exceed the available immediate supply.

America is making a bold bid for the control of this export business. Unless the millowner in British Columbia is in a position to quote c.i.f., America will get that trade and keep it for all time. A fully accredited representative from the Dominion Government could, by visiting the world's buying markets, make arrangements whereby the millowner in British Columbia is in a position to quote c.i.f. to any port.

Great Britain has a fleet to protect British export trade. The British Government has formulated a policy to finance the insurance of that trade. British Columbia has the timber to fill the demand for a great export lumber trade. Surely it is worth the trouble and expense to capture that trade and keep it for all time.

Pacific Coast Shipments to Australia

Shipments of lumber to Australia from Pacific Coast points during the past twelve years were as follows:

Year	Oregon and Washington	British Columbia	Total
1902	40,668,373	20,631,920	61,300,293
1903	74,577,269	5,155,175	79,732,444
1904	94,384,911	7,699,076	102,083,987
1905	49,460,945	13,910,784	63,371,729
1906	82,377,126	25,241,110	107,618,236
1907	75,652,089	25,281,057	100,933,146
1908	119,895,764	12,063,042	131,958,806
1909	55,268,439	31,381,803	86,650,242
1910	110,101,945	39,068,228	149,170,173
1911	158,476,721	28,788,159	187,264,880
1912	172,326,274	25,406,046	197,732,320
1913	228,673,576	10.100,036	238,773,612
	1,261,863,432	244,726,436	1,506,589,868

It will be seen, therefore, that Pacific Coast shipments to Australia have increased from 61,300,293 feet in 1902 to 238,773,612 feet in 1913, or over 390 per cent., and that whilst in 1902 British Columbia enjoyed over 33 per cent. of the trade, last year she had only 4 per cent. The combined foreign shipments to all parts of the world from British Columbia, Washington and Oregon for 1913 reached the huge total of 600,000,000 feet. Of these shipments our natural markets of Australia, New Zealand, West Coast of South America, China and Japan, absorbed 83 per cent. of the whole in the following proportions:

	Per Cent.
Australia	40
New Zealand	1½
	41½
West Coast South America	20
China and Japan	21½
	83
United Kingdom and the Continent	7½
South Africa	3½
Miscellaneous	6
	100

From the above it will be seen that of the 83 per cent. our sister Dominions of Australia and New Zealand took 50 per cent., of which British Columbia mills supplied only a little in excess of 4 per cent.

It is said that the first sawmill in the United States was at Jamestown, from which sawed boards were exported in June, 1607. A water power sawmill was in use in 1625 near the present site of Richmond.

Spanish Market for Cooperage

The weekly report of the Canadian Department of Trade and Commerce in a recent issue contained the following:—Large quantities of cooperage are manufactured annually at Almeria in Spain for the shipment of grapes. In view of the fact that a very high grade of cooperage is now being made in British Columbia, the following particulars with regard to the possibilities of this trade furnished by the British Vice-Consul at Almeria should prove of interest: Grape barrels are chiefly made of oak and pine—probably more pine is now used than oak. Apart from a few shipments of oak staves from Liverpool brought there from the United States the remainder is imported direct from New Orleans. The quantities from this source for the three past years were as follows:—

	Tons.
1911	5,180
1912	4,604
1913	3,718

Of pine timber Portugal supplies as follows:—

	Tons.
1911	1,632
1912	3,036
1913	2,280

Very considerable quantities of pine are supplied by the country itself. It is brought chiefly from the west coast of Spain, from the Balearic Islands and from the Barcelona district. Lesser quantities are also brought from other parts of the country.

Dimensions of Staves

The dimensions of the pine staves are as follows, viz.: Length, 0.49 to 0.50 centimetres; width, 5.50 to 6 centimetres; thickness, 6 to 7 millimetres. The number of pieces to a barrel are 28 to 30. Ends, 0.42 x 0.42 centimetres—three pieces, although a proportion of four pieces is admitted—thickness, 10 to 11 millimetres. The prices of this timber range from 0.65 to 0.85 cents of a peseta ex store for the quantity necessary for each barrel. The hoops for these barrels come chiefly from the north of Spain, and from the Barcelona district. Occasional cargoes are imported from Italy. It is feared that the freight rates from British Columbia would practically preclude business. The shipments of barrels of grapes to the various markets during the past three years were as follows, viz.:—

	Barrels.
1911	2,382,640
1912	1,870,216
1913	1,974,290

This year it is expected that the total shipments will only be about 1,500,000, as the crop is a poor one.

New Customs Ruling on Lumber Entering the U.S.

Reference was recently made in the Canada Lumberman to the ruling made by the United States Department of Customs in connection with the duty upon certain classes of lumber entering that country. The ruling placed a duty of 15 per cent. ad valorum on a large number of items. Later information which has been received shows that all lumber which is further manufactured than planed or tongued and grooved, is now held to be dutiable. This covers all beaded material, rough lumber, novelty siding, mouldings and a large number of other items.

The new ruling caught a number of Candian mills with United States orders on hand. Some British Columbia mills with orders from Seattle wholesalers on their books are either compelled to cancel the business or pay the duty to get the lumber into the States.

When the new tariff was enacted the department held that under it, novelty siding, beaded material and other lumber coming under the "further manufactured" class was not dutiable. This position was maintained by the board of customs appraisers at New York City on a case which originated at Burlington, Vt., where Canadian lumber in question was entering the United States. Recently, however, on another case, an appeal was taken and the assistant attorney-general of the United States has now ruled that novelty siding, beaded material, moulding, etc. is dutiable and customs officials along the Canadian border have been so advised. As a result a number of shipments of such material have been held up on the border pending payment of the duty.

The customs officials also are holding that all coved material, such as coved flooring, is dutiable. The tariff specifically provides, however, that ordinary tongued and grooved flooring shall be duty free. The customs officials also hold under the new ruling that car roofing, which has a cove on the bottom, and battens are dutiable under the ruling of the attorney-general.

The council of the Board of Trade at Montreal has received notice that the next congress of Chambers of Commerce of the Empire will be held at Toronto in the autumn of 1915. This will be the first meeting of the Congress in Canada since 1903.

A Fine Example of Industrial Progress

J. H. Gignac, Limited, Quebec, P. Q.—Whose Expansion Commenced Thirty Years Ago and Still Continues—Widely Known Lumber Dealers and Woodworkers

It is always interesting to cast a retrospective glance over the modest beginnings of some particular branch of Canadian industry, and to compare them with the really wonderful development the same industry has since undergone, especially within the last quarter of a century.

Taking, for instance, the saw-milling business in old Quebec, a city which was a pioneer in the Canadian lumber export trade and shipbuilding enterprise, we find that the first saw-mill that was established there was built and started somewhere between the years 1823 and 1825 on Hare Point, by one of the early shipbuilders of the ancient capital, whose example was quickly followed by others in the same line of business. In its rudimentary form, such primitive machinery was confined to the squaring and shaping of the coarse timber used in the construction of river and ocean craft.

As far as the oldest survivors can recollect, it was not before the great fire of 1845—which ravaged that part of the city—that the first regular sawmill, with planing and grooving plant, was established in St. Roch's Ward for the dressing of wood used in house construction. This was the humble starting point from which has radiated all around an industry which, while seemingly putting out of competition the old-time carpenter handicraft, nowadays gives steady employment to legions of men, just as in other parts of this country and the United States the simple village blacksmith shop of a hundred years ago has developed into huge iron and steel corporations.

A Notable Instance of Progress

A notable instance of progression in this line is the case of the Gignac firm, of the City of Quebec, now known all over Canada under its corporate style of "J. H. Gignac, Limited." Thirty years ago, in 1884, Mr. J. H. Gignac, then quite a young man, who from the very start has always been the mainspring of the business, started in a small way a more modern wood dressing workshop than those which existed at the time. The original firm was styled: "O. Gignac & Fils," taking its name from his venerable father, who has retired from business, having attained the fine old age of 86.

Due to Mr. Gignac's unfaltering perseverance and above all to his enlightened belief in improved machinery and co-operative methods, the Gignac establishment has grown and expanded from year to year, until it has attained its present imposing size, the proportions of which would suggest the expenditure of enormous capital by a powerful joint stock company, whereas, in reality, it is but the fruition of individual energy and executive ability. The head of the present company is efficiently seconded by Mr. F. X. Huot, chief foreman, and his eldest son Mr. Arthur Gignac, as secretary-treasurer.

A few figures gathered from the history of the firm will give a better idea of its growth. In 1884, it started with 6 men in the shop. From 9 men in 1885, the force grew to 30 in 1886, 40 in 1887 and 1888. From 1889 to 1900, the average personnel in the mills ranged from 75 to 100. Ten years afterwards, it had doubled, and in 1914 the firm has under its orders from 400 to 600 employees, in its extensive shops, lumber yards and wharves on the River St. Charles.

Growth of the Plant

In 1884, the premises consisted of an ordinary sawmill with 6 machines only, planers and groovers included. In 1904, the plant comprised about 60 machines. In 1909, when the firm celebrated its 25th anniversay, it had 102 machines in working order, every one of them up-to-date, all the old ones having been discarded. At present, the number of machines in the sawmills is 134. From the original modest wooden shack in which Mr. Gignac started business in 1884, to the four-street block and over-street extension now occupied by the offices, workshops, lumber sheds and yards proper, there has been a big jump. Ten years ago, the ground area covered by the whole Gignac establishment was 97,000 square feet; to-day it has been enlarged to 119,000 square feet.

The mills are conveniently situated alongside the Canadian Pacific Railway Quebec-Montreal line, with which they are connected by a private siding, as well as with the Canadian Northern and Quebec & Lake St. John lines. In close proximity to their main property, the Gignac Company own and occupy for their own use a wharf frontage of 705 feet on the meandering shores of the River St. Charles (which, by the way promises to be a most attractive high water stream for new manufactures when the dam and lock now under way by the

Extensive modernly equipped plant of J. H. Gignac, Limited, Quebec, P. Q.

Government are completed. This also means for the Gignac Company an additional area of 159,000 square feet of lumber yards.

System and economy are the watchwords of the Gignac establishment. The 200 h.p. steam engines running the mills burn nothing but the sawdust and shavings which are pneumatically fanned into the boiler room. A perfect dry kiln is another of the features of the equipment. Needless to say, with such facilities for manufacturing and shipping, with the most improved machinery in existence, the company is in a position to supply a large market. The number and variety of its products would require columns to enumerate if we had to enter into details. Its catalogues and price lists include, outside of the ordinary sash and door business, a most elaborate selection of pressed hardwood mouldings, show cases, office and store fixtures, church pews, school desks and benches, trunks, club bags and suit cases, mantel pieces, toboggans; in fact anything that wood may be shaped in.

The Head of the Firm—J. H. Gignac

Mr. J. H. Gignac, the head of the firm, is himself a living encyclopedia on the "lignum" question. He is the happy possessor of a most complete collection of forestry samples from all over the world. His home, his den specially, is nothing if not a decorative exhibition of the most precious species in the line. His business offices on Church street are walled in the finest mahogany, and we understand he is working in his leisure hours on a revised technical catalogue of Canadian and American trees. In his youth, he studied drawing and architecture, and for many years he was one of the official teachers in the Provincial School of Arts and Manufactures. He is the President of the Canadian Manufacturers' Association, Quebec Branch. He was four times elected as a City Alderman and for the past twenty-five years has been a Councillor of the Local Board of Trade; but public life, in which he certainly would have played an important part, if he had yielded to the requests of his fellow citizens, had little attraction for him. He preferred to return quietly to his favorite studies and avocations. His specialty as a lumber manufacturer and an expert on forestry did not however prevent him from undertaking important public works. He is the contractor for the new Dorchester Bridge in the St. Charles River, which the city will shortly inaugurate.

Some of the notable contracts of his lumber firm proper are the inside woodwork of the Beauport Church (a remarkable Gothic treatment in hardwood); the first Canadian Northern elevator; wood work of the Chateau Frontenac; Lake St. Joseph Hotel; Banque Nationale in Paris (France); Eastmure Building in Toronto; Lake Edward Sanatorium; Quebec Court House; Quebec Tercentennial Grand Stands and Triumphal Arches, etc.

Mr. Gignac is a firm believer in national industry and in practical means to bolster it up. The firm's favorite slogan is "Patronize Home Products." It has done a good deal to advertise Canadian lumber abroad. As far back as 1884, its products won a first prize and medal at the Antwerp Exhibition, and, in 1886, at the Colonial and Indian Exhibition in London (Eng.), it was awarded a diploma and gold medal. For the past twenty-five years, it has been a constant exhibitor at the Quebec Provincial Exhibitions, where its display is always made on an extensive scale, as may be seen by one of the photo engravings which accompany this article.

A serious fire occurrrd in the lumber yards owned by Brady Bros., at Tonawanda, N.Y., recently, destroying between 3,000,000 and 4,000,000 feet of lumber.

Ottawa Fire Insurance Rate Advanced

Ottawa, November 9 (Special to the Canada Lumberman): All the agents of Fire Insurance Companies in Ottawa, to-day received instructions from the Fire Underwriters' Association to increase their rates in the Capital from 25 to 50 per cent. All rates on lumber and all kinds of manufacturing and mercantile risks are to be increased 50 cents on the dollar on all new business. On residential buildings the increase is to be 25 cents on the dollar for three-year policies. The mercantile, manufacturing and lumber risks were formerly from 75 cents to $1.50 per $100 and from 65 cents to $1 on residential property.

The notice sent out by the Fire Underwriters' Association received by the agents to-day reads as follows:

Owing to the serious deficiency in the water supply, rates in this city are increased from to-day as follows:

"All rates on mercantile and manufacturing risks, except those of 'fireproof' or 'mill' construction or equipped with automatic sprinklers, are increased on buildings and contents by 50 cents on the no-coinsurance rate and proportionately on the coinsurance rates.

"All rates on lumber yards are increased by 50 cents on the no-coinsurance and coinsurance rates.

"Rates on all risks under the three-year tariff are increased by 25 cents for three years, or half of this amount if written for one year.

"All sprinkled, mill constructed and fireproof buildings will be re-rated and ratings published immediately."

The action of the Fire Underwriters' Association is the result of the serious conditions regarding fire protection in the city disclosed by the report on the water pressure by Mr. Norman Wilson, inspector for the association, made early last week and presented to Mayor McVeity. The city has decided to carry out his proposals without delay. These were to purchase three new fire engines of 1,000-gallon capacity each; to install a new overland intake pipe; and to provide for an additional electric power transmission line to the new Slater Street booster plant. This afternoon the board of control agreed to call for tenders for the fire engines at once.

Lumbermen and merchants of all kinds are much concerned about the latest demand of the Fire Underwriters.

The Powers of Dominion Charters

An important ruling re pulp and paper companies, as well as other concerns, has just been handed down by the Privy Council of Great Britain in an appeal from a decision of the British Columbia Supreme Court, in regard to the companies' case. In brief, this long drawn out matter has been interpreted that a company, having a Dominion charter, does not require an extra Provincial license to do business in any of the nine Provinces of Canada. It is expected that Ontario will thus lose about half a million dollars' revenue annually. The Province has been deriving an annual income of this amount from licensing companies which have been paying this tax, and they will decline to pay it any longer. In Quebec there will be no difference in revenue, for the reason that all companies having a Dominion charter, have always been recognized by the Provincial Government.

Estimates made by pulpwood buyers in New Ontario are to the effect that the amount of pulpwood taken out by settlers this fall is about thirty per cent. in access of any previous record. It is reported that about 120,000 cords are ready to be teamed to the railway line when sleighing permits.

Feeding Men in Logging Camps

VALUABLE REPORT UPON SOME OF THE ESSENTIAL POINTS
By R. S. KELLOGG

Editor's Note.—The following is part of the report presented by Mr. R. S. Kellogg, secretary of the Northern Hemlock & Hardwood Manufacturers, at their recent quarterly meeting. The report also contained a complete set of menus for each meal for thirty days.

Probably no occupation calls for a greater expenditure of energy or grows larger appetites than Northern woods work in winter. Expressed in technical terms, the standard army ration in the United States provides more than 5,000 calories of energy daily, while authorities say that only about 3,500 calories are required to keep a man in good physical condition. The scientists define a calory as the quantity of heat required to raise one pound of water four degrees in temperature. Translated into United States, a calory is equivalent to the energy required to raise a weight of one ton 18 inches. While the army ration provides in excess of 5,000 calories per man, studies of the consumption of food by woodsmen in Maine in winter time show a requirement of 5,000 to 8,000 calories of energy daily, which doubtless holds for woods work in Wisconsin and Michigan. This means that the heat value of the food daily consumed by the Northern woodsman is sufficient to raise his weight of water from the freezing to the boiling point, or is equivalent to the energy required to lift a dead weight of one ton to a height of 1¾ miles. Large as these figures seem, they are probably no surprise to the camp foreman who has watched the swift disappearance of eatables in the cook shanty or to the logging superintendent who has been called up at the company office to justify the cost of feeding his men.

In addition to the very large amount of food actually required for men in logging camps, there has always been a great deal of expense because of the waste arising from feeding a large number of men under rather crude conditions or from actual ignorance and carelessness on the part of incompetent cooks. Probably no employee has it in his power to make or lose more money for the logging operation than has the cook. Large as is the expenditure required for feeding men by wholesale, the subject has so far received almost no careful study and regulation comparable with the attention that has been given other phases of logging operations.

Without in any way assuming to have solved the problem, because the time has been too short and the means altogether inadequate for the purpose, I have endeavored to bring together a few suggestions for bills of fare for logging camps that are presented here today. Supplies are costing more than ever before with no prospect of much reduction in price in the near future. It becomes especially important therefore to devise a ration that shall combine economy with sufficient quantity and variety to keep men well nourished and satisfied. In the recommended bills of fare worked out for thirty days, there are no two meals which are exact duplicates. This, of course, is carrying the variety further than is necessary, but it has been done for the purpose of showing a large number of suitable combinations of economical elements. Any one can, if he so desires, pick out from this list a good rotation based upon seven or any other convenient number of days and lay in supplies accordingly.

Variety May Be Overdone

It is recommended that at any one meal there be only one kind of meat, one kind of cake or cookies, and one kind of pie on the table except as may be necessary to clean up left overs. I have eaten in camps where it is customary to have five kinds of pastry on the table at one meal. This greatly increases the opportunity for waste and makes it impossible to give sufficient variety from day to day. One kind of vegetable for breakfast and two kinds for dinner and supper are sufficient. Where the menu shows an additional vegetable (in parenthesis) it is with the idea that it may be either omitted from the program or substituted for potatoes if thought best. Likewise, either a cereal or pancakes may be omitted from breakfast if greater economy is desired. All sauce is to be made of dried fruit which is much more economical than canned fruit and very good if rightly cooked. Dried fruit is greatly improved by soaking over night before cooking. Pie many times may be made from the left over stewed fruit. Hash and soup, of course, are a standard means of saving many leftovers. Gravies and dumplings are economical and desirable. By far the cheapest meat available this year will be salt fish and hog liver. Corned beef—an old stand-by—is practically out of the question because of excessive price, unless camps have facilities for making it themselves. Fresh frozen fish will be a cheap meat through the winter and it is placed on the program for Friday night suppers. Mutton will doubtless be the cheapest fresh meat that can be obtained and it can be served to good advantage in a variety of ways if sufficient ingenuity is exercised in the cooking. Besides being cheaper per pound, mutton has a larger ratio of meat to bone than beef. The tougher cuts of beef are just as nutritious as the expensive cuts and can be made very palatable if rightly cooked. Long, slow cooking is required for them and could any camp cook be induced to experiment with a fireless cooker no doubt good results would be obtained. When we occasionally adorn our private dinner tables with a sirloin steak that costs 30c a pound and is 50 to 75 per cent. water we are a long way from either economy or scientific nutrition.

Since discussion of the subject began, a logging superintendent has increased the proportion of salt meat used and he writes:

"We have greatly reduced our camp cost by using more salt meat instead of all fresh meat as was our custom in the past. This alone will reduce the cost of feeding men at least 7c per day."

Energy Producing Foods

The cereals are among the best energy producers and very readesirable. Especial attention should be given to the use of corn meal, desirable. Especial attention should be give nto the use of corn meal, hulled corn, macaroni, graham mush, etc. Beans, of course, are a universal standard in feeding men for heavy work and a good substitute for meat. The program provides for their constant presence on the table for dinner and supper. Sugar is also a valuable element of food, and sirup or molasses should be on the table for breakfast and supper. Eaten with pancakes, fried mush or bread, sirup gives a good food at small cost. By way of variety, some camps have occasionally secured bargain prices on strained honey and used it in place of sirup. Some of the glucose jellies which are put up in large buckets can also be used for this purpose. In order to avoid the excessive use of sugar, which is often left an inch or two deep in the bottom of tea cups, a member of the association suggests having part of the tea pots set on the table already sugared and others without sugar for men who do not care for it in their tea. Another member has recently adopted the expedient of serving meat to the men in individual side dishes, hotel fashion, to prevent the excessive consumption of meat to the exclusion of other foods. If this works out all right, it will be a matter of much interest.

The most important thing to bear in mind in connection with camp bills of fare is that much more can be accomplished by having a variety of well-cooked, nourishing, but not necessarily expensive foods, than by attempting to maintain a hard and fast menu day after day without change. There probably isn't a logging camp of more than fifty men anywhere in which it would not be possible to double the cook's wages and still save substantially on the cost of feeding if the right kind of cook could be obtained. In other words, the wages paid the cook should be the last thing to be considered in connection with his employment. Some cooks are too expensive if paid only their board and others are cheap at $100 a month.

Probable Costs of Food This Winter

I understand that meat products for camp use will probably cost about as follows this winter: Cow beef, whole carcass, 10c per pound, with hind quarters around 1½c and 2c above this figure and fore quarters 1½c under. Skinned hams about 15½c and a good grade of bacon 16½c to 17c. Mutton will be the cheapest fresh meat available this winter at from 7½c to 8c with the exception of hog liver at about 5c. Barrel pork for frying purposes should be about $20 and suitable for baking with beans about $18. A good grade of pork sausage which will not shrink much in frying will cost about 13½c. Sausage can be purchased much cheaper than this, but it is not economical. Incidentally, I may say that it is possible to take 30 pounds of meat, 20 pounds of cereal and 50 pounds of water and make 100 pounds of commercial sausage. No doubt some of you can recollect having run across a product of this sort. Liver sausage should cost about 10c, Bologna sausage 11c, good Frankfurters 13c and head cheese 10c. Sheep brains will cost about 7c and when mixed with corn meal and fried make a very satisfactory dish. Fresh frozen pickerel at 9c offers a means of serving fresh fish through the winter at reasonable cost. Dried pollock, a good substitute for codfish, will cost about 5c a pound and genuine codfish 9c to 12c. Mackerel and salmon are higher than usual, but round shore herring at $6.50 to $6.75 per 200-pound barrel are very cheap eating. Ordinary mince meat will cost about 9c, but condensed mince meat at 13c is recommended since it can be made up in such proportions as desired at camp. Good American cheese will be about 15½c and oleo all the way from 11½c to 21c, a recommended grade running from 15c to 16c. Corned beef quoted at $30 a barrel is out of the question if we are figuring upon economy. Sour crout should cost about $7.50 per 40-gallon cask.

The cost of the principal fruits and cereals this winter will run

about as follows, f.o.b. shipping point: Dried peaches, 6c to 7c; apples, 7½c; apricots, 11c to 12c; prunes, running 60 to 70 to the pound 8c to 9c. There is a good crop this year and canned apples should be bought for $2.75 a dozen or less in gallon cans. Tomatoes in gallon cans will cost about $3.00 a dozen. Pie material in the shape of gallon cans of pumpkin is priced at $2.50 a dozen, and rhubarb at $2.60. Corn in 2-lb. cans will be about 75c a dozen and peas 80c. Cut beet pickles in 3-lb. cans ready to serve are listed at 85c per dozen. Medium sour cucumber pickles will cost around $8.50 in 30-gallon barrels, jelly, any flavor, 50c per 15-lb. pail, and corn sirup 28c per gallon in barrels or $1.75 in 5-gallon cans. Condensed milk is quoted at $3.50 to $3.60 per dozen cans, hotel size. Flour of good grade will be in the neighborhood of $5.75, graham flour about $5.50, and corn meal $4.50 to $4.75 per barrel. Dried peas are listed at about $1.75 and beans at $2.75 per bushel or less. Beans have dropped since the flurry following the outbreak of war. Oats are high this year and oatmeal is quoted at about $2.75 in 90-pound sacks. Rice of good quality is reported at 5c, macaroni at 6c, and barley for soup at 4c per pound. Crackers are listed at 6½c in 20-lb. boxes with discount for large orders. Potatoes and all fresh vegetables should be reasonable in price throughout the winter. Camps situated so that they can cultivate adjacent cut over land, can produce an abundant supply of vegetables very cheaply.

At the logging meeting on August 29 the suggestion was made by one or two members that the Association should establish a Domestic Science Department and put a man on the road to instruct camp cooks in the feeding of men. Such a radical innovation may not be made at this time, but there is no doubt that the subject warrants a great deal more study than has so far been given it, and if I am able to make a helpful contribution toward this end I shall feel more than repaid for the effort required.

Death of Mr. P. W. Strickland

The sudden death of Mr. Percy Wade Strickland, president and general manager of the Canada Lumber Company, Limited, Toronto and Weston, Ontario, came as a shock to his many friends in the lumber business, both n Canada and in the United States. Mr. Strickland, who was 53 years of age, was a son of the late Geo. W. R. Strickland, of Lakefield, Ont. He was born in Lakefield in 1861. After attending the local grammer school, he went to Port Hope College. After completing his studies there, he returned to Lakefield and went into the lumber business with his father.

In 1892 Mr. Strickland went to St. Paul, Minn., where he joined the staff of one of the large lumber companies. A few years later he accepted a position with the late Frederick Weyerhaeuser and took charge of several mills in Wisconsin, making his headquarters at Strickland, Wis.

About 1902, Mr. Strickland went into business for himself in Minneapolis, forming a partnership known as Barnard & Strickland. Some years later Mr. Weyerhaeuser offered him the position of secretary and general manager of the Rock Island Sash and Door Works and the vice-presidency of the St. Louis Sash and Door Works, which offer Mr. Strickland accepted. He continued in this position until 1910, when illness obliged him to resign.

Returning to Canada, Mr. Strickland rested for a year and then formed the Canada Lumber Company, Limited, of which he was president and general manger at the time of his death. During his business life in the United States, Mr. Strickland, in addition to his business interests was frequently honored by appointment to the position of chairman in several important lumber associations. Mr. Strickland is survived by his wife and one son, Mr. L. F. Strickland who has been associated with his late father for some time in the management of the Canada Lumber Company's business.

Mr. Edward L. Jewett, a prominent citizen of St. John, N.B., who was formerly well known among the lumber trade, died recently at his home, after a brief illness. The late Mr. Jewett, who was 70 years of age, was a native of Bangor, Me. At sixteen years of age he went to St. John, N.B., and became associated with his uncle, the late Mr. E. D. Jewett in the lumber manufacturing business under the name of E. D. Jewett & Company, of which firm he later became a member. He also engaged in lumber manufacturing on his own account, operating a mill at Millidgeville. During the past few years Mr. Jewett had retired from active business.

Mr. Chas. Miller, St. John, N.B., widely known throughout the province of New Brunswick as a prominent lumber manufacturer, died on November 4th at the age of 55, as the result of a paralytic stroke, which he suffered on the previous day. The late Mr. Miller was a native of Hollis, Me., but went to St. John when a small boy. He was engaged both in the lime and lumber businesses, operating a large lumber and shingle mill and several lime kilns. He is survived by his wife, four sons, a brother and his mother.

J. M. Donovan Brings Home a Bride

J. M. Donovan, Toronto, Ont.

Mr. J. M. Donovan, of the Long Lumber Company, Hamilton, Ont., one of the best known lumber travellers in Ontario was married recently in Helena, Ark., to Miss Cornelia Smith, daughter of Mr. & Mrs. C. E. Smith, of Helena. The bride was given away by her father, and the groom was attended by Mr. Gammage, of Memphis, Tenn. Following the wedding, a short reception was held at the home of the bride's parents after which Mr. and Mrs. Donovan left for Hamilton, Ont., where they now reside. Mrs. Donovan was extremely popular among her home friends and has brought with her to Canada their good wishes for herself and her husband in their new home. The Canada Lumberman, and all of its readers who are acquainted with Mr. Donovan, will join heartily in the congratulations and good wishes which are being extended to Mr. and Mrs. Donovan.

Mr. A. J. Morris, vice-president of the Mississippi Hardwood Company, Jackson, Miss., spent a week in Toronto recently upon business. Major R. S. Wilson, of the Wilson Lumber Company, Toronto, is president of the Mississippi Hardwood Company. Before taking up his present position, Mr. Morris was well known to the lumber trade in Toronto, where he was Major Wilson's assistant. Mr. Morris reports that just previous to the war his company was working up a very nice export business in hardwoods to Great Britain. This trade of course had suddenly decreased with the outbreak of the war. A fair amount of business was being worked up however, in the United States and Mr. Morris reported that considering the general trade situation, his company was doing a fair business.

Mr. Arthur J. Hendry, brother of the president of the B. C. Mills Timber and Trading Company, has succeeded Mr. R. H. Alexander, who recently retired, as assistant manager. Eric Hamber, formerly comptroller for the company, has been appointed general manager. Mr. Hamber, who is a son-in-law of the president, was formerly prominently connected with the Dominion Bank.

Mr. G. H. Millen, joint manager and director of the E. B. Eddy Company, Limited, Hull, P.Q., recently celebrated his 76th birthday. Mr. Millen is still hale and active and attends to his office duties every day.

Better Conditions Developing at Boston

Editor Canada Lumberman: Boston, November 5

The general conditions of the lumber business here are pretty poor at best but we can see a good deal of hope in the general situation. The exports, from reports from Boston and New York, are running very heavy at present—not for lumber, but for general merchandise, and particularly food stuffs. They are about the largest ever known. Finances are showing a marked improvement. We heard of money being offered today for the first time at 5½ per cent. by a broker. It is generally felt that money conditions will be much better before long. The cut of lumber in Maine has been very much curtailed of late. Many mills have shut down, and this seems to have put a stop to the fall in prices, in the spruce schedule at least. Of course, as Canadians doubtless know, there is considerable shortage in the Ottawa alley. Our own mill is shut down and most of the other mills. We don't know just what the shortage is, but should assume it would amount to at least 25 per cent. on the cut, perhaps a good deal more; the Ottawa Valley cut still being very large, this would certainly make a shortage of 100,000,000 or more—probably more.

We have found in our travels that there is a general intention to make a small cut next year; that is, the cut in the woods will be light, so we cannot help feeling that conditions next year may not be nearly as bad as a good many people have thought. Nevertheless, there is very little doing in either Boston or New York now and in the markets all through the eastern part of the United States.—Shepard & Morse Lumber Company.

The British Columbia Government will display, among other things, a cargo of birch at the Panama Exposition. Mr. P. D. Roe, of Port Moody, will take out the lumber.

A Few Puzzles for Lumber Consumers

Why Do Saddle Manufacturers Buy Canadian Birch from United States Wholesalers? Why are Some Canadian Woods Neglected?

"We are enjoying good business and have no fault to find with trade conditions, considering the general situation," said a wholesale hardwood dealer to the Canada Lumberman a few days ago. "There is a fair amount of ordinary trade going on and the extra trade arising out of orders for army equipment is being spread about in many parts of the country so as to make some lines of the lumber trade quite active. Even without the trade in army equipment stock, we would be doing fairly well and with it we feel pretty well satisfied; but it needs a great deal of hunting to find out where the orders are and then a lot of figuring to get them. Large quantities of lumber are being used by manufacturers of motor trucks and transportation wagons, the manufacturers of these vehicles being all very busy. The saddle manufacturers have also received orders up to their capacity and as they require a lot of good birch for saddles we are doing a nice trade with them, too.

"There are some things about this class of business that puzzle me," continued the lumberman. "You saw in the papers several complaints about the amount of orders for saddles that went to the United States firms. Canadian saddle manufacturers at once raised objections to this, claiming that these orders should have come to Canada. The matter assumed such proportions that the war office thought it advisable to make a public announcement upon the subject and to assure Canadian saddle makers that orders for saddles would be given to them up to the limit of their capacity, but that the amount of stock required made it necessary to send many orders to United States manufacturers as well. I do not wonder at the Canadian saddle manufacturers taking the stand they did. Their trade had been very quiet before the war and they felt, very rightly, that as Canada was bearing a share of the burden of defence of the Empire, Canadian manufacturers had a distinct right to get the best share of any benefits which were to be given outside of the British Isles. I am glad to see them getting all this trade and hope they will be kept busy at it, so long as the war continues. But the saddle manufacturers ought to follow the example set by the war office and place their own orders in Canada. The major portion of orders for lumber to make these saddles is going to United States firms, but much of the lumber sold by these United States firms to Canadian saddle manufacturers is bought by the United States firms from Canadian lumber manufacturers and dealers. So you see, we are coming out of the thing alright and are not making any complaint on our own account, because we get the business anyway, but why does the Canadian saddle maker prefer to buy in this round-about manner? He does not save any money by it; in fact he loses. We sell the stock to the United States firm and the latter sells it to the Canadian saddle maker at a higher price. We could sell it to the saddle maker for less money and in a less round-about way. We are now getting a good deal of this trade direct, but still there is enough of it going by the other route to make one wonder why this is the case. The stock does not actually move over to the States, as we simply get the order from the United States houses and make the shipment to the saddle maker direct. It is not a question of grades, or quantity of stock available, or anything of that nature, as a few of us in Canada have most of this class of stock, and the orders have to come to us in the end. The United States saddle manufacturers who have secured a share of the war office orders seem to know more about this business than the Canadian firms. They are buying their stock in Canada and shipping it away down south to their factories.

A Long Trip for Canadian Birch

"A few days ago a strange thing happened when I was waiting at a small railway station for my train. The freight agent asked me how to bill a car load of birch to a certain city in the Southern States. I told him all I could, which was little enough, as I had never made any shipments to that city. That is a long way to ship birch I thought, however, and I told him so. Then he gave me proof of the matter by showing me the carload of birch and the name of the firm to which it was consigned. A little investigation showed me that it was for saddles. I wrote the firm in the south and now we are getting their orders for birch; good big orders, too. It is a long way to ship such lumber, but they must have it down there and there are not many besides ourselves who can give it to them.

"I might go into this matter much deeper and ask a lot of questions which it would be hard to answer, for I have been in the business a long time and do not know the answers myself as yet. Look at the trim business. Canadian people think that they must have oak trim. Birch and ash have a hard time against oak and chestnut. In the United States, however, birch and ash are used extensively for this purpose. We sell large quantities of these woods over there. The United States people admit that high grade birch and ash are just as fine a line of trim as oak and chestnut, and are considerably cheaper. Why do not Canadians feel the same way about it? I cannot tell you, but it is a fact. Like the saddle makers, they seem to have made up their minds the wrong way and to have persuaded themselves that they must have United States lumber, even at a higher price. I wish someone would give me the explanation of this. I have puzzled over it for a long time.

"Here is another case of much the same nature. Down east they use birch and maple for stair risers. They take 10-in. and up stock 1½-in. in thickness which would cost on an average $45 to $50 a thousand. In western Ontario they want oak again. Everything seems to be oak. As they insist upon it they get it and they pay $10 to $15 a thousand more for it, if they buy a similar grade.

"A greater puzzle still is the case of wagon stock. Here again the Canadian manufacturer calls for oak in many cases in which the United States manufacturer uses birch. The United States manufacturer, moreover, is turning out ten wagons to one turned out by the Canadian manufacturer, and there are just as many of these American wagons used in Canada as there are Canadian wagons. The Cnadian wagon manufacturer finds the competition of the American wagon almost too much for him, yet he uses a more expensive imported stock of lumber, and the United States manufacturer imports the Canadian stock which is cheaper, but fills the bill as well.

Piano Stock a Case in Point

"In the production of pianos the question comes up again, but in another form. It is something like the case of the saddle maker. The piano manufacturers use a lot of 1-in. and 3-in. birch and they want fancy stock. The enquiries are largely sent to United States firms and these firms charge a fancy price. Now the birch sold by United States firms to Canadian piano manufacturers comes in most cases from Canada. A few days ago we quoted a Canadian piano manufacturer on an order for birch and we did not get the order. A little later I was in Buffalo and a good friend of mine there who buys a lot of our birch told me that he was selling birch to this Canadian piano manufacturer and that I might as well have the business myself direct. When he told me the price he was getting, it turned out to be several dollars a thousand more than what I had quoted the same stock at to the same firm. Well, I thought, if the Canadian manufacturer wanted to do business in this way it was his own concern, not mine, and I told my Buffalo friend that he was welcome to go ahead and take the orders, as I would be just as glad to sell the stock through him as the other way, since the quotation I had given was turned down. The birch went from us direct to the piano manufacturer, but the Buffalo firm got a good commission upon the price.

The Agricultural Implement Case

"I could go on and tell you about cases like this. I know where an important firm of agricultural implement manufacturers refused to buy our stock. They bought in the United States. One day I was on the water front and I saw some of this stock being unloaded. It was not of the grade the company thought it was. We could have sold them that kind of stock at much less than they were paying for it. I learned afterwards from the shippers of this stock, when I was calling upon them one day in the United States, that they had taken out the better class of boards after the stock had been inspected and had sold them to another company. Then they sent the balance to the Canadian firm. They had done this quite a lot and as everyone seemed to be satisfied they saw no reason to change their way of doing things. It was some time before the Canadian firm found out that they were not getting what they were paying for, and they then made a complaint. After that the Canadian firm went on buying United States stock, but they had already lost a good deal of money, and although they had been treated in this manner they still continue to think that they can get better value on the other side of the line.

"Probably you do not want to hear of any more instances. I can give you a great many more, but there is the simple fact of the whole situation, that many Canadian consumers of hardwood buy their stocks from United States firms, when they could do better on the Canadian side. Some of them make a great kick when orders for the goods that they manufacture go to American firms, but they send their own orders for lumber abroad. They lose money upon it and there is no objection to this from our point of view; but I wish someone would come along and tell me why it happens so often."

Imports of timber into Australia from Canada during 1913 were valued at £67,989. In 1912 the value was £70,922 and in 1911 £121,328.

Wood Substitute Claims "Simply Rot"

Editor Canada Lumberman:— Buffalo, N.Y., Nov. 3.

It is true that there has been a campaign started throughout the United States with a view of curtailing the sale of lumber. They are not altogether a philanthropic bunch, but like most steel men, are out for what there is in it.

We, as manufacturers of lumber, sanction putting into the modern skyscraper buildings just as little inflammable material as possible; in fact making them as near fireproof as a building can be made, but the argument does not apply to the ordinary two to five storey building and it is simply rot when they apply it to residences.

The writer has lived in Buffalo something over forty-five years and during that period has seen but very few frame buildings completely destroyed by fire. This fact favors the wood structure, as four-fifths of the residences and dwellings in Buffalo are of wood construction. But, although 75 per cent. of the dwellings here in Buffalo are roofed with the wooden shingle, we cannot recall where the roof caught from a spark from any neighboring fire.

Some of the cities whose ordinances excluded the use of the wooden shingle have, since giving the matter more careful consideration, rescinded it. Metal, cement, stone and brick have their places, and it is only fair to favor their use in the business district of large cities, but they can never take the place of the artistic frame house, cottage or bungalow, nor will metal ever take the place of highly finished hardwoods even though they may get out a good imitation of them.

Interior finish of metal is lifeless and cold and it retains an odor that is indeed unpleasant. The next time you are in a sleeper, note the difference. The odor in an old time wooden sleeper is sweet compared with a metal car that has been in use only a few months, the latter having a stale metal smell. We mention this not because we do not favor the steel passenger and sleeping coaches as the safer, but simply to call the public's attention to the fact that with a metal interior finish in their homes or living apartments, the odor thrown out would not be at all pleasant; to the contrary, decidedly stale.

Steel is bound to substitute wood in places, but the demand will never cease for hardwoods and the increased building and construction work going on throughout Canada and the United States will always create a large demand. If cement and steel had not been used during the past ten years to the extent it has, work would have been retarded for a lack of wood to take its place.

We are willing to leave it to the buyer, and for that reason we should **stoutly contend against any unreasonable restriction** that might be brought about to prevent the use of either hard or soft woods.—New Ontario Colonization Company, Limited.

A Vital Matter for the Retail Trade

A wholesale lumberman in Toronto who has given considerable attention to the insurance situation in connection with building materials, writing to the Canada Lumberman says:—

"The use of heavy timbers for slow burning construction has been going on for some twenty-five years past, and I do not think that the insurance companies will be able to show that there has been as great a loss on buildings using timbers, particularly white pine or fir, as in buildings constructed with steel. A number of instances can be cited where buildings constructed with steel beams and girders have collapsed on account of the twisting of the steel under the heat of a conflagration. There are frame planing mills and factories, using woodworking machinery, standing in Toronto to-day that have been on fire several times, but the loss to both buildings and machinery has been small because such a fire is easily put out, while factories built of brick have been gutted with heavy loss because of the difficulty of getting at a fire which is enclosed within a brick furnace.

"The effect of extending the brick limits in Toronto has been to fill up the newer districts with cheaply constructed brick terraces which are far more liable to destruction by fire than isolated frame houess would be.

"I have not at present any suggestion to offer as to what may be undertaken in the way of a campaign to further the use of lumber for building purposes. This is a matter which would require careful consideration, particularly by the retailers who are most directly interested in this end of the business. It certainly looks as if the brick, concrete and steel manufacturers were making strenuous efforts to advance the interests of their respective materials."

The same writer draws attention to the fact that the fire losses in the residence sections of the cities and towns of the central and eastern States, which are largely built of frame houses, have been small as compared with losses in residence sections built of brick, either isolated or in terraces. Moreover, insurance rates on frame buildings in residence sections of such cities as Buffalo, Rochester and other cities in the eastern States are very much lower than on brick buildings in the residence section of the city of Toronto.

Shingle Trade Suffering From Substitute War

One of the most vigorous sections of the war upon lumber by manufacturers of substitutes, is the attack of the patent roofing companies upon the wooden shingle. After standing idly by for several years and watching the patent roofing companies invade their territory, the shingle manufacturers both in Canada and the United States are now showing an appreciation of the dangerous situation that has developed. The American Lumberman has been devoting considerable space to this feature of late. The following excerpts are from letters to the American Lumberman, which were published in recent issues:

Opinions of Leading Western Shingle Manufacturers

F. A. Traill, president of the Shephard-Traill Company, Seattle, and until recently manager of the Red Cedar Shingle Manufacturers' Association, wrote:

"I have your favor of the 12th, and thank you for calling my attention to articles on page 25 in the last issue of the Lumberman. I have read both items with a great deal of interest. I am sorry that there is now no organization of shingle manufacturers to follow this matter up, as the Red Cedar Shingle Manufacturers' Association had to throw up the sponge owing to lack of support by the millmen themselves, and is now in the hands of a receiver, who is winding up its affairs.

"There is so much that can be done, and so easily done, but I almost wore myself out trying to make the millmen see the necessity of doing something to save their own business, without avail, and now I am afraid it is going to be a hard job to get the mills together again to do anything, until it is too late. I do not think that the shingle business would to-day be in the present serious condition if years ago, when the patent roofing people first began their campaign, they had taken steps to combat the lies that have been spread by our competitors. Even now a very little effort would disclose in nearly all towns exactly the same condition as shown in Milwaukee. What little investigation I have made shows that this is the general condition, and our friends the enemy, have just pulled the wool over the eyes of our city fathers, by making strong statements, without any real effort to back them up by facts. These statements, not being controverted, were taken as gospel truth without any real investigation as to the actual facts. What would be the chance of getting the facts in Chicago along the same lines as were obtained in Milwaukee?

"I have checked over the report of the Toledo (Ohio) fire department for 1910, which I have here. I find that there were 51 fires originating from sparks from chimneys out of a total of 794 alarms, less than 8 per cent. The loss from these fires, which we might possibly figure originated in the roof (and we have no means of knowing whether all of these were shingle roofs) amounted to $2,470.48, out of a total loss of $261,692.36, or less than 1 per cent. I also checked the 1911 report for the amount of loss in frame buildings as compared with brick, stone, cement and other fireproof buildings, and I find that 96 fires in brick and similar buildings showed a loss of $256,272.93, while 385 fires in frame dwellings only totalled a loss of $55,569.88. The average loss on frame was about $144, while the average on the fireproof amounted to $2,669. This shows even greater discrepancy than Milwaukee. As I find time I will dig up more statistics as I may find them in the various reports of fire departments I have here. If you have a good statistical man on your staff I would suggest writing the various fire departments for their reports, and see what can be dug out of them."

The British Canadian Lumber Corporation, Limited, Vancouver: "We are glad to see that you are about to start a propaganda on behalf of the sale of wooden shingles. This is a matter that should have been attended to years ago, and we think now it should be prosecuted with the greatest enthusiasm. We believe that had the shingle industry combined to advertise wooden shingles to anywhere near the extent that the manufacturers of patent roofing have done, there would now be a much greater sale for the wooden shingles as there is no doubt whatever that the wooden shingles for certain purposes have not yet been equalled. The idea of giving the shingles a coating of non-inflammable paint would offset any arguments regarding the danger of fire."

The Coast Central Mill Company, of New Westminster:— "We agree with you that the wooden shingle manufacturers must awaken to the danger to their industry caused by the attacks of manufacturers of competitive roofing, and by other interests that are claiming wooden shingles to be responsible for so much fire loss. It does not seem to us worth while to try to convince the public that fires are not caused by wooden roofs, but it is important that some steps be taken to make shingles more fire resistant than they are."

The Smith-Shannon Lumber Company, Vancouver:—"That some organized campaign should be carried on to combat the efforts of the patent roofing people we thoroughly believe, but we have not been able to figure out what would be the most effective way of doing this. In what way do you propose to raise funds so that the booklet you suggest can be distributed to the points where the subject is under discussion? We have a shingle association here, of course, which is quite efficient, but no proposition, we believe, has ever been put up to it in a sufficiently concrete form to be interesting."

Adams River Lumber Company's Flume

In a recent issue of the Canada Lumberman an article appeared describing the various methods of constructing flumes for the carriage of timber over long distances. We have pleasure in publishing now an illustration of the flume erected and operated by the Adams River Lumber Company, Limited, Chase, B.C. The purpose of such a flume is to bring logs from otherwise inaccessible districts. The flume in

A Part of the Eight-mile Flume of the Adams River Lumber Company

the illustration, when completed, will be 11 miles in length and will tap a recently acquired timber berth of about 25,000 acres. It will give easier and less expensive transportation for logs from this limit than what the company had from its old limits on Upper Adams River. The drive on Lower Adams River will be eliminated. The maximum curvature of the flume will be 10 degrees, and the grade will vary from 2/10 of one per cent., where the flume leaves the head works on Adams Lake to a maximum of 16 per cent. in Bear Creek Canyon. The curves have been held down to permit transporting

Large Log Dump at the Head of the Adams River Lumber Company's Flume

80 to 100-foot poles and piling. Most of the timber will be handled direct into the flume from log chutes. The flume will be extended into the timber as it is logged, the same way as logging railways are extended to follow the cutting. The flume is being erected under the supervision of Mr. W. D. Starbird, of Spokane, Wash., and the section illustrated was put up by Mr. J. H. Tracey, the firm's woods superintendent.

The Adams River Lumber Company have also built a dam which creates two small lakes to supply a head of eight feet of water for fluming purposes. As a result of the opening up of the new limit, about one-half of the output of the company's saw and planing mills is now fir, the balance being cedar, spruce and pine, whereas cedar formerly predominated. The officers of the Adams River Lumber Company are J. P. McGoldrick, Spokane, president; A. J. Lammers, vice-president and managing director; W. J. Lammers, secretary and assistant manager; R. J. Mason, treasurer.

An Interesting Point of Law for Loggers

An interesting legal point in connection with employment of men in lumber camps is involved in the case of Spreckley vs the Campbell River Lumber Company, which recently came up for trial before Judge Holway in British Columbia, the judgment in which had not been given when latest reports were received. The point at issue was whether an employee, hired by the month at a given rate, can be summarily discharged, despite the fact that he is a competent workman. Spreckley brought suit against the Campbell River Lumber Company for alleged wrongful dismissal. The company claim that Spreckley, who is a cook, was a competent man, but had been summarily dismissed because of a previous arrangement made by Mr. Seeley for the company with a former employee, to the effect that on his return the cook camp should be turned over to him to run under contract. Several members of other lumber companies testified that the custom in vogue was to discharge an employee without ootice at any time. One witness stated that he was at liberty even to discharge a good man at any time providing he could secure a better one in his place. The plaintiff testified that other companies, for whom he had worked previously, made him agree not to leave their employ until a substitute had been secured.

Timber Limit Case Judgement

The Supreme Court, Ottawa, has recently overruled a judgment given in the court of Montmagny and later upheld in the Quebec Court of Appeal, King's Bench. The judgment is an interesting one to lumber merchants, being in connection with the case of Howard vs. Stewart, involving the sale of timber limits by a settler to a lumber merchant named Howard, when the seller only had a location ticket on the ground. Later when the settler secured letters patent in his favor, he re-sold the same ground to Mr. Stewart. Hence the litigation. The court at Montmagny annulled the sale to Mr. Howard and this judgment was upheld by the Quebec Court of Appeals, but the higher tribunal at Ottawa has legalized the sale. The case involved a sum in the vicinity of $5,000.

Fifth Annual Commission of Conservation Report

The conservation movement has made distinct progress during the past year, according to the "Fifth Annual Report" of the Commission of Conservation, which has just been issued. Considerable advance is reported in the conservation of forests during the year. The Commission has co-operated with the Board of Railway Commissioners and the several provincial and federal forest services concerning the prevention of forest fires, with the result that much has been done to prevent forest fires along railway lines, especially in Western Canada. In addition to the report of the chief forester, Mr. Clyde Leavitt, there are addresses on forestry by Dr. B. E. Fernow and Mr. R. H. Campbell. The report contains a number of splendid illustrations and gives in concise form much information that is of value to all Canadians interested in the conservation of our natural resources.

Big Drop in Ontario's Revenue

Premier Hearst, minister of lands, forests and mines, recently intimated that returns from revenue thus far received indicated that the actual revenue to be derived from his department this year would be some $500,000 less than the estimate of $2,800,000 made at the beginning of the present fiscal year. The falling off is attributed largely by the Premier to the hard times and the war and to the action of the banks in refusing necessary assistance to the enterprise of the holders of licenses in the timber districts.

Mr. James A. Conners, of James W. Sewall's office, Old Town, Me., is making a careful exploration and estimate of certain timberlands along the line of the C. P. R. in Maine. Mr. Sewall is at present in northern New York on a cruising trip.

Problems of Retailing in the Effort to Treat All Customers Alike

There are many things in the conducting of a retail lumber business that we all think alike on because their general effect is practically the same on everyone engaged in the business. Moreover, these things are desired by everyone and every practical business man recognizes both their justice, and at the same time, the difficulties in the way of their being made practicable. We know, for instance, that it would be better to conduct business on a strictly cash basis that would preclude the charging of any sale accounts whatever. But in a world where three-fourths of business is done on credit, it is a practical impossibility to do business on a rigid cash system. The only business that can approach its attainment is a close monopoly, such as the Federal post office for example, or any line of business that has no competition. Understand what I mean by a cash basis, is the cash being paid on delivery of the goods, and no charge accounts being put on the books. Then again there is another thing that, though we recognize the justice of it, yet it is practically unattainable in the retail trade, and that is selling to everybody, at the one and the same price. These two things—a rigid cash basis, and one-price-to-all—are beautiful theories to talk about and wish for, but in their strict application to the retail lumber business as it is now constituted, is a proposition where theory and practice are widely apart, and the difference so great, that it is practically impossible to unite them into a working proposition under the present order of things in the business world and the social economics of the time.

I would not use such positive terms in relation to this subject, had I not been for the greater part of my life in daily contact with human nature as it is exhibited in the business of buying and selling. Some things we know and we know that we know them, and there are some things we assume to know but we know that we do not know them though we may attempt to convince others that we do. I have often thought that a good deal of our life is made up of "bluff." We would stand a poor chance in getting along as well as we do if we didn't do more or less of "bluffing it through." In every case there are two extremes and a medium. Applying this to the subjects under consideration we have the cash-on-delivery system as one extreme, and at the other the lack of any system, with holding our sales down as near as we can to a cash basis, as the medium policy of action. In the case of prices, the policy of one-price-to-all is one extreme and the other extreme is the policy which is, and has been, practically universal in the retail lumber business, namely, giving to every man a price that will sell him the goods which in old fashioned terms means, "barter and dicker." The medium of this is what every progressive dealer is trying to do; the giving of the same prices to all alike as far as competition will allow. It is not easy even to do this, and its success largely depends on how much we can make our business non-competitive, for the less competition we have the more closely we can adhere to a uniform scale of prices. Therefore, if a dealer wants to establish the policy of selling to all at the same price, and make a success of it, he must first of all conduct his business in such a way, and with such attractions in it, as to influence every body to trade with him in preference to anyone else. This is the goal which he should constantly strive to reach and in proportion to his advance towards it, so will be the progress in the success of his one-price policy.

Will Not Make Much Progress.

An old saying tells us "we must take things as they are, and not as they ought to be." This is a comfortable doctrine and easy to comply with, and many there are who follow it, but they are not likely to make much progress. I believe instead that we should all the while be trying to make things better than they are, and in this way keep ourselves on the road to perfection though we know we will never reach it. I mean, however, as far as our abilities will permit, and these will grow greater the more we use them.

I have spoken of the practical impossibility of doing a retail business on a strictly cash basis. It may be nearer possible in some lines of trade in the large city, but conditions there are very different from what they are in a farming community, and in a newly settled country especially, and the reasons for this are such obvious facts to every country dealer that it almost seems superfluous to mention them. But, for the sake of discussion, take the present conditions of this fall for example. The great war in Europe will create an unprecedented demand for foodstuffs of all kinds and the American farmer knows it, and he likewise believes the longer he holds his grain the higher the price he will get. But he wants to do some building, and to do it he must turn his grain into money, providing, he has to pay cash for his material. But, does he sell his grain or go and borrow the money to do this? Not much he don't if he has a good "stand in" with the lumber dealer. If he is a reliable man and a regular customer, the dealer will willingly give him two or three months time on the material and glad of the chance to charge his full yard prices for the accommodation.

Another farmer, not so reliable, comes in and wants some lumber, and also wants to hold his grain. He is told he can have it, but he will have to give a secured note for the time he desires it. Maybe he will agree to this, but like as not he will go to the bank and borrow the money, and naturally feeling peeved at the dealer for not allowing him to "run his face" he makes that money "talk" by figuring around for the lowest prices. If the dealer finally sells him he has to because of being the lowest bidder, and the prices he bets are far different from those he is charging the time customer, although the two men may be in the alley at the same time and getting stuff off from the same piles.

This is no theoretical illustration. It is done every day in the retail lumber business. Every country dealer knows that when the average farmer is compelled to pay cash down for what he buys at a lumber yard, he is going to get all he can for his money, and at the same time "shoot full of holes," the one-price-to-all theory. No matter how much the retailers may desire to sell for cash only they don't want to on a lean profit basis. You may sell a bill or two against mail order house competition and on their terms, but you really are not hankering to sell all your bills on such a basis. If dealers are willing to do this, that the nearer they get to what I call a cash basis, with the farmer, the more they will have to contend with the figuring around instincts of a man with the cash in his hand. Take it home to yourself. If you want to buy a bill of goods for your family and can't spare the money for them just at the time, what do you do? You buy them of your home merchant on time and pay him his own prices. But, if you have the cash to pay on delivery, you will want him to "throw off," or if it is near convention time, you will wait till you can make your cash go further at the bargain stores in the large city, as many of you are prone to do on these occasions. You do this because you have the same human nature as the poor renter whom you require to "shell out" before he takes the stuff from the yard, and it is this same human nature that has to be taken into account and reckoned with in every transaction, and in every policy we adopt in business relations. Selling for cash only is a will-o'-the-wisp that a generation of retail lumbermen have chased with varying experiences, but, as yet, have never succeeded in pinning it down to a complete success.

Have Learned to Govern Their Credits

The more progressive have learned to govern their credits in such a manner as to eliminate the worst features of the credit system. A few months back I discussed this governing of credits, and told of instances of dealers who had had the courage to do it and of their success in their efforts, and this is what we all have got to come to; the circumscribing of our credits, and keeping them in due bounds and giving them in a businesslike manner.

There is another angle though to this limiting of credits which is worth considering. It is the question whether or not it would have the effect of curtailing business if it should be universally adopted. Those who are close to the consumer in a country town know that when business is dull the temptation is great to stimulate building by offering to sell to reliable parties on anv time that will suit their convenience or ability to pay, and a good deal of it myself in cases where I knew the men were reliable and good for any amount they contracted to pay. But if I had suggested their borrowing at the bank, or giving me an interest bearing note, they would have shaken their heads and said they guessed they could get along awhile longer with the old house or barn.

As a matter of fact, a good share of the improvements made in a new country are made possible by the retail lumbermen in this way. If they had been stingy in giving credit to reliable parties, there would have been a retarding of progress in their respective localities.

A Scheme to Increase Business

It is being advocated in some quarters that in order to develop the lumber business and encourage the consumption of lumber all through the year, a system of long time credit should be established by the lumber industry as a whole. The proposition in brief is something like this: A reliable farmer who wants to put some new improvements on his farm could have the opportunity to do so by giving a joint note of himself and wife for the material, further secured by a lien on the farm. The dealer in turn could use this note to pay the manufacturers and wholesalers from whom he bought his stock, and they in turn—if they needed it—could borrow money at the banks on it as security, or discount it as any other commercial paper. The theory of this scheme is plausible and would be all right if it could be made to work as proposed. There is no doubt but that it would stimulate the consumption of lumber and in this respect benefit the manufacturers. The question is, would it work? It looks as though it would all depend on the willingness of the banks to buy and carry the paper. No doubt the inducement would depend somewhat on the rate of interest carried by the note, and the discount they could buy it for. The farmer would not be willing to pay more then the lowest legal rate of interest, and in such times as these, or any time when money is in great demand, the inducement would be too small for the bankers to invest

in this class of paper. As I said before, the suggestion is a good one for it would relieve the retailer from carrying a burden that would be transferred to the banks of the country where it really belongs. It would require a large amount of capital to swing this scheme, and it is a question whether there is enough profit in such paper to make it an object for the banks to take it.

One difficulty I can see in it is that most of the improvements made in this way would be by farmers who were still in debt for their land or had a prior mortgage on it. In this case the lien would act only as a second mortgage, and it is rather difficult to float commercial paper with this class of security. Doubtless some of you who are doing business in a new western town would like to be able to sell your lumber bills in the same way as the implement dealers sell harvesters and threshing machines, which as you know are sold on the several years time and the notes given sent in to the manufacturers who carry them till paid, and I presume if you followed these notes up you would find that very often they would be deposited with the banks as collateral for loans made to the manufacturers.

I'e often wished I could get a farmer to give me his note as willingly as he does to the implement man for a machine that will be worn out by the time the last payment on it falls due. A bill of lumber put into a barn will outlast a dozen threshing outfits, the way some men use, and fail to take care of them.

"Crazy" Ideas Have Been Adopted

We used to laugh at the "pops" for what we thought was their crazy scheme for storing their grain in government warehouses and issuing currency on the security. But it don't look so visionary now when it is proposed to do practically the same thing in our new Federal banking system. It won't be long now before we will be using currency whose value is based on commercial securities, and among them no doubt will be warehouse certificates, and thus it often is that what we deem "crazy" to-day turns out to be good judgment on the morrow. So it may be discovered that there is as much good reason for the proposition I have been talking about as there is in issuing currency on commercial securities. Time brings us round to the right angle of vision to see things as we don't view them now.

The One-Price-To-All System

I have made mention in the beginning of this article of the practical impossibility of carrying out the one-price-to-all system in the retail lumber business, and some of you may question my consistency, who remember that I made the assertion some time ago that if a certain matter is the right thing to do, the right way may be found to do it. I think you will agree with me that, as a general rule this is true. Laying aside the abstract principles of right, I want to ask, is it a right principle of business to attempt the giving of one price to all under the present competitive system of doing business? If it is practicable under this system, it is the right thing to do, and if it is impractical, it is not the right thing to do and no satisfactory way can be found to do it. I have, during my experience as a dealer, discussed the practical phase of this question with scores of lumber dealers and hard-headed business men in other retail lines of trade, and I have never found one yet who believed it practicable in a country town for any business that had competition. Even the banks don't treat everybody alike in this respect. One man is charged a lower rate of interest than another because of the difference in responsibility. The largest depositor receives favors that are not given to the man who has no deposit at all, and yet the same two men may be good citizens and equally responsible. It seems to be fundamental in human nature to want and seek to obtain an advantage not given to the "other fellow."

Take the farmer, for instance, who has 3,000 bushels of wheat to sell. He goes to the grain buyer and finds the market to be 80 cents, but because he has this quantity to sell, he thinks the buyer should give him more than he is giving to the man with the single load. In the abstract sense of right, he is not entitled to it, but in a business sense he is, and the grain buyer is warranted in giving him a raise, if the market prospects will allow it. The lumber dealer wants to buy twenty cars of lumber and he too expects to get some concessions in prices from what he would expect for a single car. If he can't get it from one manufacturer he will try another, and another till he does get it. The one who gives it, however, is discriminating against some other dealer whose order is on his desk for one or two car loads, and it is possible that this same dealer is a local competitor of the one who has bought the larger lot of stock, and who, if he knew it, would make a vigorous protest against the discrimination. The independent dealer operating a small yard, would like it very much if the mill men would adopt the one-price-to-all policy and stick to it, for then his big line yard competitor would have no advantage over him as far as buying in the market was concerned. No doubt the mill men would like it too, but they are practically compelled to discriminate in this way by the forces of competition, and if the principle of competition is a right one, then they have a right to conform to it, and to the best advantage of themselves, as lumber dealers. We favor the competitive system when we are buying, but we would rather not have it when we are selling the stock bought under it, and we wish that some power would compel that fool competitor to sell at the same prices that we do. This is the nub of the whole proposition. If we could do just as we pleased, and conditions were such that we had no competition, we could then adopt and enforce a rule of selling to everybody at the same list of prices, and treat saint and sinner alike in this respect. But unfortunately for our desires to put everyone on the same level in selling to them, there is no such spot in the retail lumber business on this planet.

Could Not Make It Work

For a number of years I ran the only yard in a town. When the local competitor was gone, I conceived the idea of equalizing prices to everybody as far as possible. I had the chance that I had often thought I would like to have of treating everybody alike in this respect. I was tired of "soaking" my friends to even up for what I lost to the close figurers, and I thought here was a chance to carry a good altruistic theory into effect. But, alas, for my good intentions. I found that I could not equalize unequal circumstances or conditions. They were dead set against me. I discovered before many months of my monopoly of the business there that forces were at work to subject me to outside competition, and compel me to discriminate in favor of the largest buyers. To give you one illustration of how this worked, there was a family living in town whose estate comprised some thirty or forty farms occupied mostly by renters. All the improvements on these farms were made by the family, requiring, as they did, a large amount of lumber and other material every year, which I only had a limited share of under the old regime. When, therefore, the change was made, they at first resented my monopoly of the yard business there, and bought some stuff at other towns, but this not proving very convenient to them, and at the same time, as annoying to me, they finally came and made the proposition that I furnish them all their material, at a reduced scale of prices on everything they bought. I tried to persuade them to discount their purchases on a percentage basis, couldn't get them to do it. So I finally made them out a price list on the staple items, which averaged about six or seven per cent. discount from yard prices. This, with a settlement every sixty days, proved a satisfactory deal all round, and was far more profitable to me than haing to figure on the bills for every building they put up, and in competition with dealers in the neighboring towns. I leave it to any experienced dealer if that was not the best solution of the problem. As it was, they would not accept the policy of the same price to everybody, because they considered the volume of their trade during the year justified their wanting a concession from the prices charged those who only bought a small amount compared with what they did.

I found further along in my experience with the one yard situation that people were more inquisitive about the prices I was charging them, than formerly, because they suspected I would be taking advantage of my position. This was favorable to quoting the same prices to all, but when the same people wanted any considerable amount of material for a building, they thought I ought to do better, and they did make me do better by going to the next town to get figures on their bills. So I found that I had to play the business game in the same old way, or let the business slip away from me.

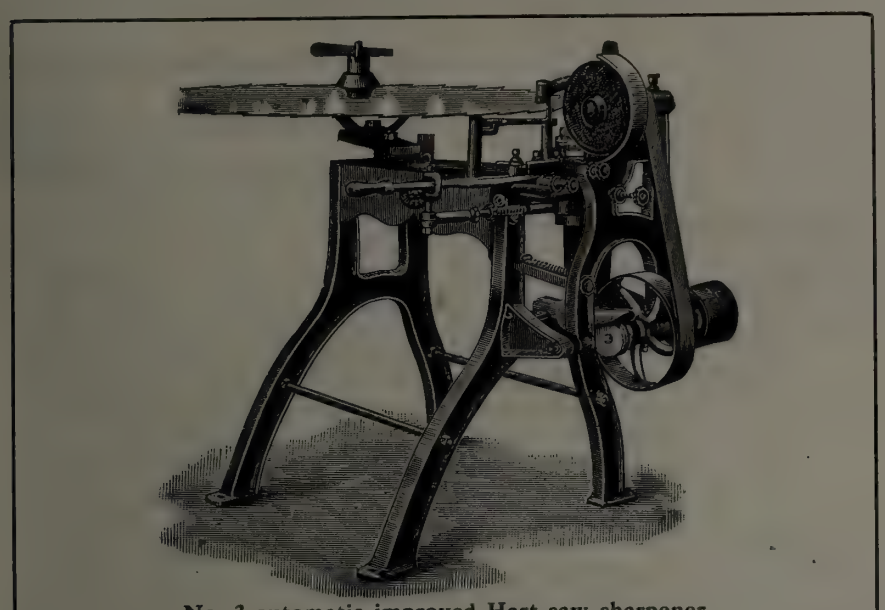
I am fully aware of the fact, and recognize the justice of the proposition, that a maintenance of the same prices to all means also equal rights to all and special privileges to none and, moreover, it is a kind of price fixing that really benefits the consuming public as a whole, but in order to carry it out in practice in the retail lumber business, the public must first be educated away from the idea of price competition and that special privileges are wrong in principle. Until this is done, the one-price-to-all policy will be for all practical purposes, an "irridescent dream" to the country retail yard dealer.

Get Trade By Good Service

There is one thing, though, that every dealer can do and equalize to everybody who trades with him. He can give the same service and treat all alike in this respect, even though he can't give the same prices to all alike. He not only can do this, but he should do it as a matter of the best business policy, and in carrying out this policy, it will have the effect of reducing the necessity of giving one man a price and a different one to another. A monopolizer of trade is one who gives the most and the best service. It may be a little harder to do it, but a dealer can also treat everyone alike in his credit service. There is not the inherent difficulty in doing this that there is to the equal price question because he can govern his credits more easily than to keep people from figuring to get low prices. When a man wants you to give him credit, he is asking of you a favor and you are in the position of grantor and can dictate your own terms. Therefore, there is nothing to hinder you from adopting a policy of giving the same terms to all alike, and serve all alike in requiring a prompt settlement of accounts. This is service you can give, and govern at the same time. In some things you can't treat people all alike because all people are not alike.—C. H. Ketridge in the Mississippi Valley Lumberman.

The No. 3 Automatic Improved Hart Saw Sharpener

The accompanying illustration shows the No. 3 automatic improved Hart saw sharpener, manufactured by the Canadian Hart Wheels, Limited, Hamilton, Ont. These machines not only sharpen saw teeth perfectly in less than one-third of the time required for filing by hand, but they keep them gummed and uniform in size and shape. No files are required where the Hart sharpeners are used, except for fine teeth. The work is all done with precision. The saws are kept perfectly round and the teeth project the same distance from the centre. By the use of these machines saws can be kept in better order in less than one-half the time required for filing by hand. They



No. 3 automatic improved Hart saw sharpener.

save power, because, where they are used, saws are kept in good order always, and every tooth does its share of the work. They effect a saving in saws because the saws are kept round and true. The saws do not get dull quickly and require very little grinding to sharpen.

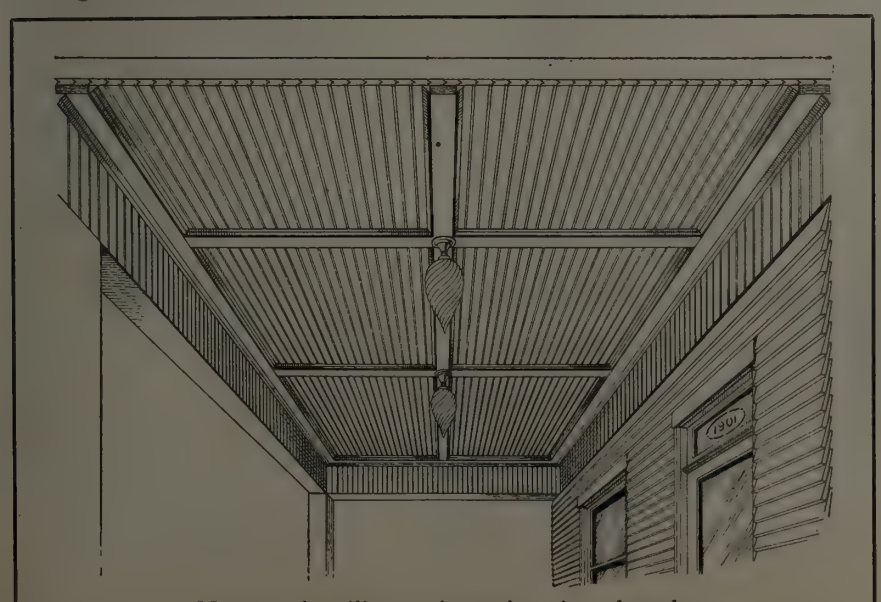
The improved Hart saw sharpeners are exceedingly simple. They do not readily get out of order, and are so provided with stops that exact work is done without any trouble. They are very easily and quickly adjusted to any sized saws whether rip or cross-cut.

The company ship these sharpeners complete with tight and loose pulleys, belt and three emery wheels, packed and crated in their own tables or stands.

The No. 3 automatic is for saws 8 to 72 ins. in diameter. Its capacity is two teeth per inch up to 3½-in. pitch of teeth. Circular cross-cut saws can be sharpened on this machine also, but not automatically. The emery wheels are 8 ins. in diameter with ¾-in. hole. The approximate weight of the machine is 450 lbs.

Short Lengths Available for Porch Ceilings

The accompanying illustration shows a new design for porch ceiling, which has been worked out by the Arkansas Soft Pine Association. The main idea of this design is to encourage the use of short length material. The suggestion should prove of considerable interest to retail lumbermen. The idea simply is to use short length ceiling stock and block the surface into panels by using short length for the cross beams and short length mouldings. It will be seen from the illustration that the design makes an attractive porch ceiling and that retail lumbermen should be able to turn over annually a fair amount of stock for this purpose, thus enabling them to sell at a profit a class of lumber which is frequently a source, either of worry or loss.



New porch ceiling esign using short lengths.

Hints on Leather Belt Driving

Belts stuffed with tanners' dubbin on the flesh side will become as smooth all over as the hair side, and their life will be much increased. Three times the adhesiveness is gained by softness and pliableness in leather belts over those which are dry.

Long belts are preferable to short ones, but care must be taken that the length be not too great.

Horizontal, inclined, and long belts give a much better effect than vertical and short ones, and those that have the driving side below than otherwise.

Belts of course, loose leather will do better service in dry, warm places. For wet or moist situations the finest and firmest leather should be used.

Experience says the hair side of a belt put next to the pulley will drive thirty-four per cent. more than the flesh side.

The strongest part of belt leather is near the flesh side, about one-third the way through from that side.

Leather belts must be well protected against water, and even moisture.

Short belts require to be tighter than long ones. A long belt, working horizontally, increases the tension by its own weight, acting in the curve formed between the pulleys.

Sufficient care is seldom taken to let belts run free and easy, and it has been one of the greatest errors, more or less prevalent in all large factories, to run the belts so tense as greatly to injure them and rapidly increase the wear of the bearings.

In many instances the tearing out of lace-holes is often unjustly attributed to poor belting, when in reality the fault lies in having a belt too short, and trying to force it together by lacing; and the more the leather has been stretched while being manufactured, the more liable it is to be complained of.

To obtain the greatest amount of power from belts, the pulleys should be covered with leather; this will allow the belts to be run very slack, and give twenty-five per cent. more durability.

A careful attendant will make a belt last five years which, if neglected, might not last one.

It has been found in practice that belts must not run faster than 30 ft. per second nor have a tension of above 300 pounds per square inch of section.

The friction of a belt is double on wood to what it is on cast iron.

Long belts are less liable to slip than short ones.

The softer woods are better for pulleys than the harder kinds, but pear wood and nut tree are best for cord-wheels. Grease must not be put on wooden wheels on which belts run.

Tightness by tightening pulleys must be applied to the slack side of belts.

The belts should be cut from the centre of the skin.

Thickness of belt does not always give strength.

If too great a distance is attempted, the weight of the belt will produce a very heavy "sag," drawing so hard on the shaft as to produce great friction in the bearings, while at the same time the belt will have an unsteady flapping motion, which will destroy both the belt and the machinery.

The connected shafts should never, if it can be avoided, be placed one directly over the other, as in each case the belt must be kept very tight to do the work.

It is also desirable to locate the shafting and machinery, so that belts shall run off from each other in opposite directions, as this arrangement will relieve the bearings from the friction that would result were the belts all to pull one way on the shaft.

If possible, the machinery should be so planned that the direction of the belt motion shall be from the top of the driving pulley.

In punching a belt for lacing, it is desirable to use an oval punch, the longer diameter of the punch being parallel with the belt, so as to cut out as little of the effective section of the leather as possible.

Begin to lace in the centre of the belt and take much care to keep the ends exactly in line and to lace both sides with equal tightness. The lacing should not be crossed on the side of the belt that runs next to the pulley.

Never add to the work of the belt so much as to overload it.

A good leather belt, one-inch wide, has sufficient strength to lift 1,000 lbs.—Timber Trades Journal.

The Jeffrey Manufacturing Company, Montreal, have removed their office to 42[illegible] Power Building. The warehouse will remain at 55 Cote Street.

WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (14 agate lines make one inch.) ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

Wanted–Lumber

Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 7-tf

Lumber Wanted

Hemlock running chiefly 14 ft. and 16 ft. lengths, 1-in. Spruce, Basswood, Birch; also Cedar Posts. Send detailed list giving lowest wholesale prices. Address Box 85, Canada Lumberman, Toronto. 21-24

Wanted To Buy—1000 Birch Logs

fresh, clean, straight and sound, 14-in. and up diameter at small end, 8 ft. to 16 ft. long. Delivery to commence as soon as possible. Terms: 75 per cent. cash when alongside track at railway station, balance when loaded on cars. Write P. O. Box No. 1595, Montreal, stating best price. t.f.

For Sale–Lumber

For Sale

400 Spruce Spiles, 60 ft. long, 7 in. tops. Also any quantity Spiles 35 to 50 ft. long. Prompt shipment.

The Northern Lumber Mills, Limited,
21-t.f. North Cobalt, Ont.

For Sale

Two cars of Poplar, Balm of Gilead and other softwoods. Three miles west of Galt, C. P. R. or G. T. R. Railroads. Write Uriah Snyder, New Dundee P. O., Ont. 21-22

For Sale—White Pine Bevel Siding

Either in Idaho White Pine, Silver White Pine or Michigan White Pine. All grades at prices so low that you will be sure to buy. Write us.

American Lumber and Mfg. Company,
22-1 Pittsburgh, Pa.

For Sale

St. Frances Valley, Arkansas, Band Sawed Red Gum, dry, choice stock, all grades. Inspection guaranteed under National Rules.

The Crittenden Lumber Company,
19-22 Crittenden, Arkansas, U.S.A.

Dimension Timbers

50 pieces Red Pine, 6 x 10 x 18, $30.00.
20 pieces Red Pine, 8 x 10 x 18, $30.00.
10 pieces Red Pine, 8 x 12 x 20, $32.00.
15 pieces Red Pine, 10 x 12 x 16, $32.00.
30 pieces Cedar, 8 x 8 x 12, $19.00.
30 pieces Cedar, 9 x 9 x 12, $19.00.
20 pieces Cedar, 10 x 10 x 12, $20.00.

Send for full list. Spruce and Yellow Pine also.

South Shore Lumber Company, Limited,
21-24 St. Lambert, P.Q.

For Sale

One car 4/4 in., 2 to 4 in. Clear Quartered White Oak Strips.
One car 4/4 in., 4 to 5½ in. Clear Quartered White Oak Strips.
Will make attractive prices to move this.

Duhlmeier Bros., Cincinnati, O., U.S.A.
21-22

Lumber For Sale

200 Pieces 1 x 15 and up 22 ft. Cypress.
375 Pieces 1 x 15 and up 24 ft. Cypress.
Clear for boat building, in stock at Montreal.

GEO. C. GOODFELLOW,
c Montreal, Que.

White Pine

Have on Georgian Bay, in dry, Good White Pine (as graded in mill):—
20,000 ft. 1 x 4 and up, 10/16 ft., say 20 per cent. 8-in. and up.
54,000 ft. 1¼ x 6 and up, 10/16 ft., say 50 per cent. 8-in. and up.
20,000 ft. 1½ x 4 and up, 10/16 ft., say 65 per cent. 8-in. and up.
For prompt shipment, will name prices about 1/3 off.

Apply, The Rideau Lumber Company, Ltd., Ottawa, Ont. 21-22

For Sale

1 car 2 in. Rock Elm, No. 2 and 3 Common.
1 car 2¼ in., 3 in. and 3½ in. Sound Rock Elm Hearts.
1 car 2½ in., 3 in. and 3½ in. Maple, No. 2 Common.
2 cars 2 in. Maple, No. 2 Common.
1 car 2 in. Maple, No. 3 Common.
1 car 1¼ in., 1½ in. Beech, No. 2 Common and Better.
2 cars 1½ in. Beech, No. 1 Com. and Bet.
3 cars 1½ in. Beech, No. 2 Com. and Bet.
30,000 Cedar Posts, 8 ft. long.
1,000 cord 4 ft. Hardwood Slabs.

This stock is dry and in good shipping condition.

Minimum charge 25 cents

WANTED—Position as engineer. Can handle A.C. work. References. R. E. Keech, 412 Pavone Street, Benton Harbor, Mich., U.S.A. 22-1

Position wanted as inspector of lumber. Twenty-five years' experience. Best of references. Any kind of lumber. Have some capital. Will not work for small firm. Address J. Golden, Rutter, Ont. 20-22

Position wanted as manager of retail woodworking business. Thoroughly experienced in lumber factory and office routine. Expert organizer and capable of producing maximum results. Twenty years with one large Ontario company. At present engaged. Box 88, Canada Lumberman, Toronto. 21-23

POSITION WANTED by stenographer and bookkeeper. Young man, stenographer and bookkeeper, desires position with lumber company, with a chance of advancement. One year's business experience, and best of references. Address Lock Box 42, Highland Park Station, Des Moines, Iowa, U.S.A. 22-1

I want a position as superintendent of mill or woods, or both. Thoroughly understand the wholesale and retail business. I have built, owned and operated a large mill for ten years, and have a sound knowledge of all machinery. Worked up a large quantity of my lumber in manuafctured goods.

ROBERT WELLS,
277 Albert Street,
22 Ottawa, Ont.

WANTED—Position by young married man who has a general knowledge of the lumber business and who is particularly adapted for the sash and door business. Has had practically four years' experience as buyer. Willing to go almost anywhere and to consider any proposition. Would go to lumber camp or work in mill. Firms with interests in South America, desiring the services of a general man, please consider this. Box 100, Canada Lumberman, Toronto. 22-24

Wanted–Employees

Advertisements under this heading two cents a word per insertion. Minimum charge 50 cents

Hardwood Salesman Wanted

Wanted a high grade hardwood salesman who is thoroughly acquainted with the furniture, piano and interior finish trade of Canada. We can offer such a man an exclusive territory in a well established line. Send full particulars and references in first letter or application will not be considered. Address Box 99, Canada Lumberman, 347 Adelande Street West, Toronto, Ont. 22-23

WANTED—A reliable bushranger, with knowledge of bush work, log driving and river repairs. Able to speak French and English. Must be sober. Trois Pistoles Pulp & Lumber Company, River Trois Pistoles, P.Q. 22

Miscellaneous

For Sale

Telephone Poles. P. O. Box 213, Almonte, Ont. 22

Wanted

Second-hand medium size log haul up chain and refuse carrier. Box 101, Canada Lumberman, Toronto. 22-23

Wanted

Prices on block of 500 acres of Beech, Birch or Maple for wooden work. Same must be located on or near C. P. R. Address B. M. W., care Canada Lumberman, Toronto. 22

Electric Lighting Plant

wanted, without power, direct current, capable of supplying 250 to 300 16 c.p. lamps. Must be in first class condition. Name lowest cash price. Correspond with Clarke Bros., Bear River, N.S. 21-24

Sawing Contract Wanted

Want to secure contract for the sawing of 1,000,000 to 5,000,000 feet of logs. Have No. 1 portable sawmill, fully equipped. Location immaterial.

HUGH BAIRD & COMPANY,
22-1 Markdale, Ont.

Wanted

Second-hand patent snow plows, also boom chains. Plows are for use on road where sleighs 6 ft. wide from outside to outside are run. Address The Schroeder Mills and Timber Company, Salines, Ont. 21-22

Sales Agents Wanted

Large United States chain manufacturers now represented in Quebec Province want to secure sales agents in Ontario, Western Canada and Maritime Provinces for all kinds of logging chain, dredging chain, etc. Apply Box 80, Canada Lumberman, Toronto. 20-22

Sales Engineers Wanted

A large firm specializing in the manufacture of motors of all classes desires to secure sales engineers in various parts of Canada. Firms who can carry a stock of motors are preferred. Write stating the territory that you can cover. Box 96, Canada Lumberman, Toronto. 21-24

For Sale

Fifty good lumber horses from 1400 to 1700 pounds. Also harness, sleighs, water tanks, snow plows, blankets, chains, camp stoves and all camp supplies. Can all be seen at Berriedale, near Burks Falls, Ont.

Highland Lumber Company, Ltd.,
20-23 Berriedale, Ont.

Agents Wanted

Large firm making low voltage transformers and electrical measuring instruments wants sales agents for Canada. These transformers are for sign lighting, bell ringing and toy requirements. The electrical measuring instruments include a complete line of switchboard and portable ammeters and voltmeters. All agents to work on a commission basis. Write, stating what territory you can handle, to Box 93, Canada Lumberman, Toronto. 21-23

For Sale

Rare bargain. Band mill located in best lumber and log center on Puget Sound. Rail and cargo shipping facilities. Excellent log pond. Ten and a half acres of land. Price one-fourth of appraised valuation. Must sell quick. Box 765, Canada Lumberman, Toronto, Ont. 8-t.f.

Sales Agents Wanted

Large firm manufacturing a complete line of electric centrifugal pumps, automatic electric compression water systems, electrically-driven multi-stage turbine pumps, electrically-driven double acting pumps and a number of other lines, wants sales agents for various parts of Canada. Write, stating what territory you can handle, to Box 94, Canada Lumberman, Toronto. 21-2:

Do You Want to Buy or Sell?

If you wish to purchase or dispose of a particular stock of lumber or logs, a mill property or timber limit, or some second-hand machinery, the CANADA LUMBERMAN AND WOODWORKER will bring quick returns. Use our "Wanted and For Sale Department."

Saw Mill Machinery For Sale

Sawmill near Sellwood, Ontario, daily capacity 60,000 feet. All machinery including:—Log Ladder, Bullwheel, Steam Kicker, Log Loader, Stationary Steam Nigger, 42-in. Steel Carriage, 10-in. Steam Feed, 8 ft. Double Cutting Bandmill, Cast Iron Lumber Table, 5-Saw Slab Slasher, 48-in. Big Champion Edger, Trimmer, Transfers to Edger and Trimmer Tables, Sorting Tables, etc. Also, Independent Lathmill, Filing Room Outfit and Power Plant complete. This machinery is of the latest design, practically new and in excellent condition. Offers will be accepted for all or any part of this machinery, where it stands or F.O.B. cars Sellwood.

The Waterous Engine Works Company,
22-t.f. Brantford, Canada.

Wood Used for Indian Sleepers

Practically the only imports of wood into Burma are pine shooks for the manufacture of candle boxes, the United Kingdom and Japan supplying the greater share. Burma exports a large amount of teak wood, which is also used locally for building operations. Railway sleepers are manufactured from the locally grown ironwood trees or pyinkado (Xylia dolagriformis). This is a large deciduous tree, with a straight, though at times fluted, stem. In the deciduous forests of Burma it is very common and grows to a large size, boles forty feet long and eight feet in girth being not uncommon.

The heartwood is dark reddish-brown; annual rings darker, but not distinct; very hard and difficutl to saw, especially the seasoned timber; close-grained and somewhat twisted, cutting to a smooth, shiny surface. Recent experiments by the forest department gave pyinkado a breaking strength of 6.07 tons per square inch. The weight is said to be sixty pounds to the cubic foot.

The primary use to which the timber is put is for sleepers, and owing to its strength, hardness, and durability it is admirably suited for that purpose. It is extensively used for house building in the form of posts, beams, and scantlings; in bridge construction; for buffers of railway tracks; for telegraph poles; for boats, dugouts, and canoes; for shipbuilding; for agricultural implements, such as plows and harrows; for cart poles and axle cases, and for paving blocks.

The chief conservator for forests, Burma, computed the possible outturn of sleepers, within reach of the railway, to be 646,800 sleepers available annually. He estimated that there are 5,390,000 trees over 7 feet 6 inches in girth. The above figures are, as stated, for trees to be found within fairly easy reach of the railway and by no means represent the possible outturn for the whole of Burma. Scantlings sell at $26 per ton of approximately 50 cubic feet and sleepers at 57 cents each.

Menus for Logging Camps

R. S. Kellogg, secretary of the Northern Hemlock & Hardwood Manufacturers' Association, has prepared an interesting standardized menu for logging camps. At the meeting of logging superintendents held in Green Bay last August, a committee, of which Mr. Kellogg was a member and J. Quinlan chairman, was appointed to draw up a standard bill of fare for use in logging camps and Mr. Kellogg has just completed the work.

From statistics and information gathered from many sources, including the army and navy reports of the United States Government and reports from the University of Wisconsin, Mr. Kellogg has compiled menus for a month. The menu is about a yard long and a foot wide and contains in tabular form, menus for thirty breakfasts, thirty dinners and thirty suppers. Mr. Kellogg is preparing a lengthy report to accompany the menus and will present it at the next meeting of the association, which will be held in Milwaukee the latter part of this month. It is expected that the menus will be issued in pamphlet form for the use of lumbermen.

A sample breakfast from this unique collection of gastronomical delights is as follows: Oatmeal, pancakes, fried potatoes, beefsteak, bread and butter, coffee, cookies, doughnuts.

But after the lumberman has worked for about six hours in the open air of the woods, he is ready to tackle a dinner something like this: Pea soup, pot roast of beef and gravy, boiled potatoes, macaroni and cheese, beans, bread and butter, tea, apricot pie.

Then the lumberjack wields an axe for another six hours and is prepared to sit down to a table loaded in this manner: Tomato soup, carrots, baked potatoes, fresh fish, prunes, beans, bread and butter, tea, cookies, cake.

Douglas Fir Gets the Preference

Classifying Douglas fir as the finest American wood for all purposes, Yale University has let the contract to northwestern mills for the lumber to be used in the construction of seats in its big stdium now nearing completion at New Haven, Conn. The order calls for 200,000 feet of No. 2 clear and better to be cut of Douglas fir exclusively. The size of the order and the high price paid are not regarded by lumbermen as of as great importance as is the fact that the lumber is to be taken from the northwestern mills. Every practical wood grown in the United States was tested by the university engineers and despite the fact that the distance from the Pacific northwest is greater than from any other point, and the freight higher, the order was placed for fir.

One of the most practical fire retardent methods that has been adopted in this country is that of fireproofing doors and interior trim by facing them with veneer and putting a corss-banding of asbestos between the veneer and the main core body, says T. C. James, in the Woodworker. This serves the purpose of checking a fire, which may destroy the outer veneer face and ruin the wood work generally, but it would not gain much headway, because the asbestos will check it pretty much as a tin covering on a wood door will prevent it burning through. A process for applying veneer in this way has been patented in this country, and the idea is making considerable headway, especially for door work for large offiffice and public buildings.

Reductions are announced by steamship companies in the rate from the British Columbia coast to the United Kingdom. When the war broke out, the rates were materially increased. Protest was made by British Columbia lumbermen, and it was pointed out that the 2 per cent. insurance offered by the British Government would increase the carrying charge only about $1 per thousand, but several times this amount was charged by the steamship companies. It affected the trade greatly, and the high cost of transportation prevented a contract being secured for a cargo of 3,500,000 feet for South Africa. The reduction of 20 per cent. will help trade with the United Kingdom, where there are opportunities just now in view of the Baltic countries not being so accessible as before the war.

Review of Current Trade Conditions

Ontario

Wholesale lumber travellers all agree that the best feature of the trade today is that of the smaller towns, where stocks are moving fairly well, though by no means as actively as at normal times. Tihs movement is generally supposed to be the result of the farmers spending some of the money which they have recently been fortunate enough to take in from the sale of their excellent crops. In the large centres, there is little or nothing to be reported in the way of news, as trade is very quiet. The building trade has fallen off greatly. Most of the demand in the large cities is for consuming manufacturers. The box trade continues fairly active. Wholesalers are taking a keen interest in the outlook for woods operations this winter. Many of them have already made up their minds that stocks will be exceptionally short next spring. There is no question that the large lumber producing districts in Ontario will have a greatly reduced output this winter. This is estimated all the way from 25 to 50 per cent., while in some districts reports of even greater curtailment are given out. Considering the very sane attitude taken towards business activity by nearly all Canadian manufacturers, and the tact that several important lines of demand are developing out of the war, wholesalers are inclined to expect increased activity in the consumption next spring. No one ventures to say to what extent the demand will increase, so much depending upon the war situation, but there is a really definite and widespread feeling that the most noticeable characteristics of next spring's and summer's trade will be a fairly good, if not a quite active demand, accompanied by considerably reduced stocks of every description.

A prominent firm of wholesale lumber dealers in Toronto reports that it is doing a very satisfactory trade, considering the general trade situation. At present, this firm is within 15 per cent. of its normal volume of trade as compared with last year. In accounting for this it explains that much of its trade is with the large contracting companies whose trade has kept up much more satisfactorily than the trade of the small retail dealers.

Hardwood manufacturers and wholesalers in Ontario and Quebec are experiencing a heavy demand for thick birch, which is being sold to saddle makers for saddle trees. This demand has developed out of the requirements of the English war office, which has sent orders to all Canadian saddle manufacturers and many large United States manufacturers. Birch seems to be the only suitable wood for this purpose, and practically all of it is coming from Ontario and Quebec.

Eastern Canada

There has not been much change in the lumber trade of New Brunswick during the past month. The local demand has come practically to a standstill. The English deal market has improved considerably and some important mills which formerly cut for United States market are now turning their logs into product for the English market. The United States market has been very dull, although a slight improvement is reported during the past week or two. Practically all the companies operating in the woods on the Upper St. John will reduce their cut this winter. On both the Upper and Lower St. John, the total will probably be about 100,000,000 feet. Lath are quiet and easier and stocks are plentiful. Low grade stocks are large and stocks of merchantable spruce boards are heavy, although, if market conditions should improve there would not be much of an excess. The demand for shingles is weak and stocks are large. Box shooks are very dull, as the fish catch has been light.

Although the volume of trade at Montreal has dropped greatly as compared with previous years at this time of year, the situation at present is looked upon by many wholesale lumber dealers as containing fair promise for good trade conditions next spring. Stocks at the mills are low in most cases and any improvement in the demand will be likely to stiffen prices. Much the same set of conditions is reported from Boston, where business in general is slow, but lumbermen are hopeful as to the near future. There is already an improvement in the financial situation at Boston. In Maine, the lumber cut has been curtailed and the fall in prices has stopped, particularly in regard to spruce. A prominent Boston firm report a general intention among the mills to make a small cut next year. From this they expect improved trade conditions to develop. At present, however, all reports agree as to the prevalence of a very quiet trade throughout Boston, New York and the eastern States generally.

Montreal reports a fairly steady trade with New York. Canal shipments are expected to end about November 20th. Shipments to Great Britain are almost nil, on account of scarcity of vessels, and the large amount of grain and flour being forwarded to England. The customary rush of lumber shipments, previous to the close of navigation, has not appeared. Three Quebec and New Brunswick firms are reported to have sold their new cut of English spruce deals at a slight advance.

Ottawa Valley mills have shut down in many cases, and a shortage in the Ottawa Valley cut is certain. Recent estimates place the reduction at anywhere from 25 to 50 per cent., which will involve a shortage of 100,000,000 feet at least, and probably more.

The demand for eastern spruce at Boston is growing more encouraging every day. No general improvement is yet reported, but the increase in the demand for export, and the greater building activity which has been reported in New England, taken together with the fact that retail stocks are unusually low, are leading to a belief that improvement is pretty certain. The demand for eastern spruce at New York is still quiet. Hemlock continues dull both at New York and Boston. The demand for shingles at Boston is quiet. White cedar extras have been offered at $3.40, while choice lots will sometimes bring 5c to 10c more. Choice makes of red cedar extras are bringing $3.35 to $3.50. A few Washington mills have quoted $3.20 to their agents at Boston. Improvement is expected in the lath trade. A few manufacturers have advanced their prices on 1⅝-in. to $4.15.

Great Britain

The latest reports received from Great Britain state that spot prices for wood goods are very firm, as a result of the continued absence of receipts from the Baltic, Finland, the White Sea, Sweden, Russia, etc. In the face of this, government orders have been very large and some well informed timber merchants state that they will not be surprised if some dealers go to the extent of seeking to advance prices greatly during the abnormal market conditions which are likely to prevail. Other merchants are urging that this is not a time for taking advantage of such a situation and there is a general inclination to follow this principle as firmly as possible.

Fairly good business is reported in the spot market at London. Consumers who had been holding back for a time are coming into the market again to satisfy their immediate requirements. Deliveries at London docks for the week ending October 17th amounted to 13,005 standards as compared with 7,624 standards in the corresponding week of 1913. At Foy, Morgan & Company's recent auction sale 3 x 11 2nd Quebec spruce was sold at £15 10s; 3 x 10 1st at £16; 3 x 9 2nds at £15 and 3 x 8 3rds at £13.

At Liverpool, further improvement in the trade is reported, especially in connection with whitewoods, such as spruce deals, which are required for the winter camp at the seat of war. Liverpool merchants, according to latest advices, did not expect very extensive receipts from New Brunswick or Miramichi, as stocks were reported very light at manufacturing points, and most of them were already placed. Reports from the same source stated that prices were advancing, and higher prices were being paid for future arrivals. Receipts of pine deals at Liverpool have been greatly interfered with lately by the large number of vessels taken off the Atlantic route for the movement of troops. At Manchester, the trade is a little quieter, although indications are that some lines will advance in price still further. Rumors are current of some very large requirements of spruce by the Government for use on the continent.

At Glasgow a slight improvement developed in the market recently and is being maintained. Buyers are showing a little more disposition to increase their stocks, which is a healthy sign in regard to the immediate future. The bulk of the business being carried on today has been a direct result of the war. The demand from the usual sources of everyday business is very restricted, but is showing signs of improvement. Spruce continues active at particularly firm prices, which show a tendency to advance.

United States

Several reports have been received from United States points which suggest the possibility of an improvement in trade conditions, and even a comparatively early return to general trade activity. One of the most important factors in bringing about such a revival, if it comes to pass, will be the enormous quantities of material which are being manufactured on rush orders from the Government of Great Britain for a great variety of supplies and equipment rendered necessary by the war in Europe. The orders which have been received in the United States up to date include great amounts of grain and food stuffs, many thousands of horses, motor trucks and heavy automobiles for army use, saddles and harness in such quantities as have never

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. Bole, Pres. F. H. Goff, Vice-Pres. E. C. Barre, Gen. Mgr. W. A. Saurwein, Ass't. Mgr.

been ordered before, blankets and hosiery and, in fact, a variety and quantity of material so great as to have an almost immediate effect upon the trade situation throughout the United States.

The benefit which will be felt in the lumber trade, from these developments will be both direct and indirect. The indirect benefits will be the result of the growth of a more optimistic feeling among manufacturers and merchants in general, accompanied by the freer circulation of money following payments for these goods. The direct benefits will be the consumption of quite extensive amounts of lumber for boxing and crating material for shipping these goods to foreign countries. Shoes, clothing, blankets, saddlery, harness, machinery, etc., must all be safely and strongly packed or crated for shipment. Those who are in touch with the box and crate producing industry state that this will mean a greater manufacture of such articles than has ever been known before. In addition to this, many of the goods ordered will require extensive amounts of lumber in their production. Saddles, for instance, will consume great quantities of thick birch. Trucks, motors, etc., will consume lumber in large amounts. Another benefit which is already making itself felt is the opening of foreign lumber markets which United States lumber firms had formerly found very difficult of access. These markets are now deprived of their former supplies and will look to both United States and Canada for lumber stocks. A special instance of this situation is the English lumber market, which formerly imported great quantities of lumber from Russia. According to the British Board of Trade figures for September, 1914, only 9,740 loads of hewn timber were imported from Russia, whereas during September, 1913, the total was 66,257 loads. The reason for greater confidence is not only found in the increased demand growing out of the war, but manufacturers at many points in the United States, in the north, south, east and west report many encouraging orders for large quantities of lumber. Among these are such interesting orders as several millions of railroad ties for England and France; 7,000,000 cross ties for the Interborough Company of New York; large quantities of piling and ditching material required at Colon, Panama; 25,000,000 feet of spruce ordered by English buyers; an increasing demand for box lumber from factories; orders from England for large amounts of picture mouldings, and an order from New York for 10,000,000 Washington shingles.

A firm market for northern pine is reported at Chicago, although the actual quantity of stock changing hands is small. There is a steady consumption of low grade stock for box material. White pine continues dull at New York, with retail yards running as low in assortments as possible. The demand for northern pine at Buffalo is quiet. At North Tonawanda it is expected that the amount of stock on hand for the winter will be considerably greater than last year. During the past fortnight the trade in northern pine at North Tonawanda has shown some improvement and better business is expected shortly.

An improved feeling is reported among hardwood men at Cincinnati. A revival of business is noticeable which is expected to result in a good demand during the next month or two. Small quantities of hardwoods are moving right along. At Buffalo, very little business is reported in any of the hardwoods. Plain oak is in better demand than the other hardwoods, but is weaker in price than it was a month ago. The market for southern pine at Buffalo is still quiet.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

St. John River Cut Will Show Large Reduction

St. John, N.B., November 9 (Special to the Canada Lumbreman): Very few changes have taken place in the local lumber industry during the past month. The demand for stock for building purposes in and about the city is almost at a standstill, about the only trade being that of the fittings for the steamers which are transporing horses to England for use in the war. The contract for fitting up the two steamers now here has been let to A. R. C. Clark of this city and totals about $15,000 per steamer. Very little house building is being done, as all houses started in the spring are now about completed, and no new work is being started. Therefore the outlook for the building trades for the winter months is discouraging, but it is to be hoped that spring will show a marked change in this line of trade. Of course everything hinges upon the condition of things in the war zone.

The English deal market has shown considerable improvement during the past month. Any persons who had fall deals to sell could get probably $18 per M. for the ordinary specification, but there are no deals for sale here that we know of. Some of the mills have already closed down for the season, viz., J. E. Moore, South Bay; Randolph & Baker; F. E. Sayre & Company; Miller, Moore & Company, and Chas. Miller. These mills will remain closed until next spring. All the other mills sawing here are manufacturing deals for the English market. All American logs which have been cut on the American side of the St. John River, and which as a rule go back into United States after being sawn, are being cut into English deals for England, the prices being better there than in the United States. These logs cut out a very desirable specification both in widths and lengths. Messrs. Stetson, Cutler & Company who always put the product of American logs into the United States are now sawing for the English market. The price for the product (for the stock) from these logs is from $20 to $21 per M. superficial feet right through, f.o.b. sellers' mills.

A good many of the Maine mills at Bangor and elsewhere are sawing for the English market, rather than trying to sell in the United States, where practically no price which would leave a profit can be obtained. What effect this turning of spruce from its natural market to a foreign one will have upon the United States market remains to be seen, but it would not be unreasonable to believe that prices in the American market will increase. We understood that during the last few days some improvement has taken place in the American market, but it is only slight and any undue movement of stock towards this market would probably upset it at once.

Nearly all the concerns which will cut logs during the coming winter on the upper St. John have started work. In some cases the cut will be very much reduced. It is said that Messrs. Stetson, Cutler & Company will not make more than about half of last year's cut, as they have on hand at present enough logs to run them well along to June or July of next season. Probably their total cut this year will not run over sixteen or seventeen million. Randolph & Baker will probably cut 12 to 15 million on Big Black, Green and Grand Rivers. Murray and Gregory will probably get from 12 to 15 million; J. E. Moore & Company and their subsidiary concerns, ten million or more. It is not known just what the total cut for the coming winter will be, as a lot depends on the outlook for next year, also how the fall and winter weather sets in, and also upon help, which at present is quite plentiful, but of poor quality. Probably the cut from the upper waters of the St. John will not be over 60 million feet for next year. Of course, beside this, many logs will be cut on the lower reaches of the river. Taking in everything probably 100 million would not be an over estimation. Prices for logs are about the same as during the past year, viz., $14 to $14.50 for up river logs, with excess battens at ¾ price. Prices for the logs from lower sections of the river are about $14 for logs; two-thirds price for battens and from $7.50 to $8 for fir and small spruce, delivered at St. John. Of course, should the market show any tendency to fall, the price and demand for logs will also fall and operators will shorten up their woods cut. No one can tell just what way to turn this year. It is simply go ahead and see, as one goes along, how the market turns. This is positively not a year to speculate.

Prices for laths have fallen to about $2 on the wharves here, and there are few buyers. This is from $1 to $1.50 per M. less than at this time last year. Laths are being piled up by mills rather than sacrifice them.

The quantity of low grade stocks on hand is large enough, and merchantable spruce boards are a drug on the market. Of course, there is no heavy excess, and if the foreign markets keep up all this stock will be worked off by spring, especially as now about all the mills are shutting down a month or more earlier than usual.

Shingles are in very poor demand and stocks are very heavy, but not so bad here as on the north shore of the province. It is to be hoped that something may happen to restore the shingle industry, which is certainly in a bad state.

The box shook trade is very dull. Very few fish have been taken all along the coast and what were caught were largely sardines and went to canning factories.

St. John has lost one of its most esteemed lumber manufacturers in the death of Mr. Chas. Miller, which took place very suddenly on November 4th, Mr. Miller had been a life-long manufacturer of both lumber and lime, and was a man endowed wtih more than the ordinary business ability. His colleagues in the lumber trade here will undoubtedly miss his able and kindly advice.

Montreal Wholesalers Hopeful of Improvement

Montreal, November 9, (Special to the Canada Lumberman):— Everything considered, business is fairly satisfactory. Naturally, at this time of the year, orders drop off, and the war conditions have helped to restrict trade. But, as one wholesaler put it, things might

Getting Acquainted

Is somewhat of a problem, at times, occasionally decidedly unpleasant You have probably found it so in both your buying and selling experience.

Why take a chance of having your pride, feelings or temper ruffled—stick close to your old friends, not quite the excitement maybe, but there's that peace of mind, that satisfaction in knowing that they can be depended upon.

There is no more dependable place on earth to get your Dressed Spruce, than Fenderson's—the value is in it—beautifully dressed—excellent grade—bone dry—you can bank on its being good when you place the order.

If you would help your business grow, handle better stock than the other fellow, your customers talk it over, if pleased, they build your business—if not pleased, they tear it down. Be jealously careful of your strongest advertising medium.

Remember

The most value for every dollar.

Each car chuck full of satisfaction.

Make that next car a Fenderson car.

You'll like it.

John Fenderson & Co.

MILLS AT
Sayabec, Que. Cedar Hall, Que.
Salmon Lake, Que. St. Moise, Que.
Jacquet River, N. B.

WE CARRY THE LARGEST AND BEST ASSORTMENT OF DRY SPRUCE IN CANADA

be a great deal worse. While there is much room for improvement, the market is not nearly as bad as some pessimists are inclined to picture it. The most serious feature is the continued falling off in the building permits. For last month the total was $701,510 (in which is included one building of $165,000), a decline of $1,887,465. Up to the end of October the total for the year shows a loss of $5,043,920, these figures excluding the harbour work, which is done without a permit. Even with this included, there is a decrease for the ten months of $1,593,920.

Many wholesalers are very sanguine as to next season's prospects. Stocks at the mills are stated to be very low, and if the European situation takes a decided turn, we may reasonably expect that Canada will benefit materially from the favorable position. A heavy domestic demand for lumber will result, and Europe will also require large supplies.

A steady business has been done with New York. The last canal boats will leave here about the 20th. Freights have not advanced this season.

The shipment of lumber to the United Kingdom is practically at a standstill. This is due to the great scarcity of steamers and the enormous shipments of grain and flour to the other side, which have precedence over lumber. In the ordinary way, lumber firms at this time of the year are exceptionally busy rushing shipments before the close of navigation, but this season they have been seriously handicapped by the conveyance of troops and the call for grain. Three mills in Quebec and New Brunswick have sold their new cut of spruce deals for the English market at a slight advance over previous prices.

Ottawa Mills Closed by Low Water

Ottawa, November 9; (Special to the Canada Lumberman):—There is only one mill operating in the Ottawa Valley at present, that of the W. C. Edwards Company. The low water in the Ottawa has caused all the other mills to close down. Gilmour and Hughson shut down their plant last week, throwing 150 men out of work. The serious effect the insufficient water has had on this year's lumber cut will be shown when the figures from each mill in this district are totalled early next January. It is estimated that the total will not be more than half of last year's cut. The absence of rain has not been the only cause for the low water in the river. It will be remembered that the big conservation dam at Temiskaming broke early last summer and caused the usual level in the lakes above the dam to fall.

Trade generally is not very brisk, though there is a fair amount of building going on in the city. Prices remain unaltered and are not likely to change for some time to come. Comparatively little activity is shown on the timber limits this season. The Colonial Lumber Company of Pembroke have recently put in seven camps.

Ottawa lumbermen, perhaps more than any other class of merchants, have reason to be more concerned about the lack of fire protection in the city, the serious condition of which has just been brought to the attention of the civic authorities by Mr. Norman Wilson, C. E., inspector for the fire underwriters' association. About two weeks ago Mr. Wilson made a test of the water pressure in the city. A few days ago he submitted a report on his test to Mayor McVeity and in it he proposed that the city should purchase three fire engines of not less than 1,000 gallon capacity, and also install without delay an overland intake pipe from the point in the Ottawa River from where the city draws its water supply. Mr. Wilson emphasizes that Ottawa is in a serious situation with regard to fire protection. A deputation from the Board of Trade urged the council to carry out the proposals of Mr. Wilson, the spokesman for the deputation being Mr. E. R. Bremner, of the Watson & Todd Lumber Company, and Mr. Gordon C. Edwards, of the W. C. Edawrds Company. Fire insurance companies have also notified some of the lumber companies that they must keep watchmen night and day on duty at their plants and install a clock system.

In addressing the Canadian Club a week ago, Sir Harry Johnston, the noted British explorer and Colonial administrator, said he had a conviction that Canadian lumber jacks would be the best class of men to go to the front in Europe for Canada.

Owing to the low water in the Ottawa both J. R. Booth and the E. B. Eddy Company have been compelled to close down their pulp mills and buy the product from other mills.

New York Hardwood Trade Prospects

Mr. J. V. Hill, eastern inspector for the Hardwood Manufacturers' Association of the United States, has recently been investigating market conditions in the east. In a report he says:—"I find, as a result of my visits to the different lumber yards, that the wholesaler is very anxious about the future supply of lumber, and is particularly anxious to ascertain about how much stock the mills have on hand and the extent of curtailment of production due to the war. I find that some of them have about decided that it would be good policy to purchase lumber at prevailing prices rather than wait until the demand increases and prices advance. They seem to feel that there will be a considerable shortage of dry stocks by the first of the year, and it would not be at all surprising if some of the large buyers of lumber in the New York territory would soon send out enquiries for stocks. I found a considerable shortage of stocks on a number of yards that I visited in New York, as well as in Boston and Philadelphia.

"In going over the situation here, I find that there are about one hundred and fifty retailers of lumber in New York City, and about the same number of wholesale and commission men. This does not include Brooklyn, Jersey City and Hoboken. I find that the retailer buys his lumber almost exclusively from the wholesaler and commission men. I also find that these parties discourage buying direct from the manufacturer. In some instances I find the commission men are getting a commission from the manufacturer and then selling here at a price above what the manufacturer gets. Some of the dealers exact very high grades from the manufacturer, and put it on the market here as one grade higher than what they purchase. This, however, is an old story as it has always been the case. Candidly, I believe that if the consuming trade in the New York territory is worked hard enough by salesmen of the manufacturer of lumber they will be able to develop a nice business. It is astonishing how little many of the foremen of the big yards know of lumber manufacturing concerns. In one case I asked a foreman if he received stock from some of our members—naming a half-dozen of the biggest hardwood producers in the country, and he said that he didn't remember ever receiving stock from any of those I mentioned. Practically all of the supply comes through the middleman."

Quebec Cullers' Report

The following comparative statement of timber measured and culled to date is furnished by the Supervisor of Cullers, Quebec, P.Q., under date of November 5th:—

	1912 Cubic Feet	1913 Cubic Feet	1914 Cubic Feet
Waney White Pine	1,055,200	216,600	593,080
White Pine	1,760	7,560	.....
Red Pine	12,200	960	1,040
Oak	109,400	158,800	343,240
Elm	276,640	211,520	305,240
Ash	520	1,000	680
Birch and Maple	38,640	47,680	50,800

St. John Transatlantic Shipments

Transatlantic shipments of wood goods from St. John, N. B., during October and during the nine months ending with October, for 1914 and 1913, are reported by W. Malcolm MacKay, St. John, as follows:—

Fancy Woods and Veneers

THEIR ORIGIN, VALUE AND USE—COMMENT AND VIEWS ON AN IMPORTANT BRANCH OF THE TRADE.

Making Inlaid Flush Veneered Doors

The inlaid flush or sanitary door has come into general use the last few years and to-day ranks at the head of the large and varied class of veneered doors. The first requirement in making a sanitary door is a good stock of dry core all of the same kind of wood. It has been proven time and again that the use of more than one kind of wood in the core of a veneered door leads to trouble, a trouble that usually develops after the door is finished and hung, and manifests itself by showing uneven lights and shadows on the face of the door, caused by the uneven shrinkage of the different kinds of wood used in the core.

Soft pine makes the best core. The fewer pieces of hardwood, hemlock or similar woods used the better the finished product. It is a common custom to use hardwood edge strips on both sides of the stiles, rails and muntins used to make up a flush veneered door core, but the safest way is to use a hardwood rim on the outside only and to make the entire core of soft pine.

There are two general ways to make the core; one consists of building up a door of stiles and rails with flush panels; the other consists of making the core in one piece, like a large rail with a strip on the outer edge. The first method is the best when cross-banding is not used, as is frequently done when the face veneer is ¼ or ⅜-in. in thickness. The second method is generally used when cross-banding is put on, and has many advantages, as all the joints are glued while being made into a core, while in the stile and rail method the core is dowelled together with no glue on many of the joints.

The cross-banding should be in one piece of either a large sheet of rotary cut veneer or be taped and glued up of narrow pieces. The thickness of the cross-banding depends on the thickness and size of the door—on a 3 ft. x 7 ft. door 1¾-in. thick ⅛-in. cross-banding is best. Often it is necessary to make a flush door 1⅜-in. thick to suit some builder who does not know much about a slab door, and in that case a cross-banding of 1/16-in. is used. Most door manufacturers will not guarantee a sanitary door made 1⅜-in. thick and always charge as much, and sometimes more, than for one made 1¾-in. or thicker.

The face veneer must be carefully selected, and if not in one piece must be jointed and glued in the joint. The glued veneer joint is the only safe joint to use on any kind of veneer. The joint that is laid up with tape only is bound to open up sooner or later and show a broken line in the varnish.

When the door is veneered and ready to be inlaid, it should have a wooden strip nailed on each end to protect the face veneer and form a shoe on which to slide the door from place to place.

The routing out for the inlay is a task for an expert workman, and no other should be allowed to try it. The "Kelly Router," driven by electricity, is the ideal method to use. A form must be built up to guide the router, and it is this feature that makes the inlaid door so expensive when bought in small lots or odd sizes. The cut for the inlay should extend through the face veneer only, and not touch the cross-banding, as on the cross-banding depends the strength and rigidity of the door. After routing, the corners are cut out with a chisel, as the router-bit is round and cannot leave a sharp outer corner. The strips of inlay are now cut to exact width and length and put in the grooves, and with a good grade of glue and well hammered down, it is not necessary to apply pressure to the face of the inlay after it is in place. The surface of the inlay should be nearly even and a little higher than the face of the door.

The door is now ready for the sanders, where the finishing work is done. This can be done on a drum sander if care is taken and good paper used, or it can be done on a belt sander. A combination of both drum and belt sander is advisable when ⅛-in. or thicker face veneer is used. If 1/16-in. face veneer is used the drum sander is very liable to cut through at the corners unless the door is perfectly straight and the machine especially set up for this work. By using a fine paper on all the drums and reducing the cut to nearly nothing, a 1/16-in. face veneer can be safely sanded on a drum sander. The door is now ready for the carpenters, who put any trimmings on desired or repair any minor defects.

The finishing with filler and varnish is just as important as the making, for many a good inlaid flush door is ruined by the purchaser when applying his finish. The inlay should be traced over with a very thin and white filler or shellac before trying to stain the balance of the door, otherwise the stain will strike into the inlay and spoil its effect. After the stain is well dried, give the whole door a coat of good varnish, using a narrow brush for the inlay, and brush lengthwise the inlay, after which varnish the balance of the door as quickly as possible, but do not brush across the inlay. This applies especially to doors finished with mahogany stain, which is very penetrating and is absorbed by the varnish and will discolor even the second and third coats of varnish. Do not use water stain on any kind of a veneered door, and insist upon the top and bottom edges being finished the same as the faces.—Neal Spoor in Veneers, Indianapolis, Ind.

Grade Yields of Hardwoods in Northern States

Secretary Kellogg, of the Northern Hemlock and Hardwood Manufacturers' Association, recently sent to his members a letter of inquiry regarding the percentage of different grades of lumber produced from logs in the Michigan territory, and the result of this investigation is extremely interesting. We are reproducing herewith the report on the investigation as published in a recent issue of that Association's Bulletin:

TIMBER	1st. & 2nds. Per cent			No. 1 Per cent			No. 2 Per cent			No. 3 Per cent		
	High.	Low.	Av.	High.	Low.	Av.	High.	Low.	Av.	High	Low.	Av.
Ash	25	12	17	36	20	27	30	15	23	40	18	33
Basswood	26	12	19	37	20	29	37	13	25	40	18	27
Birch	25	15	20	41	15	28	30	13	21	40	20	31
Hard Maple	20	5	14	40	20	30	31	14	22	50	22	34

"The reports show a wide range due chiefly to variations in timber and methods of sawing."

The Importance of Sanitation in Camps

By Eugene R. Kelley, M. D.*

A great problem of the modern industrial world is industrial hygiene. Since the Civil War the development of efficient machinery and of mechanical power to operate this constantly improving machinery has been accelerated at a fairly bewildering rate of speed. The net result has been a degree of mechanical efficiency and a rate of mechanical output such as was never before known.

For several years during this process of industrial evolution little or no attention was paid to the human element—the worker. But during the past two decades experience has shown that aside from the personal interest of the worker, the prosperity of the industry itself necessitates an ever increasing attention to the worker's physical welfare, if his or her efficiency is to keep pace with the ever increasing efficiency of the machine. This has led to the discovery of the subject of industrial hygiene.

The chief forces that have been concerned in bringing the problem to the front have been, I think, in the order of their relative importance:

1. The workers themselves.
2. The employers.
3. Organized society, or "The State."

This tendency towards improved industrial efficiency has also expressed itself in many varying forms; we can see it in the increasing strictness of the great transportation companies relative to liquor drinking among employees; in all the agitation relative to the hours of labor; in such admirable examples of mutual help as the Typographical Unions' National Tuberculosis Sanatorium; in the establishment by great corporations of such departments as, for instance, the National Cash Register Company maintain for its employees' physical welfare.

The point where the state as such become actively concerned in this movement is in the consideration of the environment in which the worker must labor and live. This study of relation of environment to the health and efficiency of the worker and the application of the necessary or advisable remedial measures, determined as a result of the study, is known as Industrial Hygiene.

Industrial hygiene is, comparatively speaking, a new branch of science in this country. The subject has been developed to a much greater degree in Europe. But it has rapidly become a very important part of public health administration in many states. In Massachusetts and in the "cotton belt" of the South, the most prominent problem of industrial hygiene is that of the great textile factories. In Pennsylvania and Ohio the great coal and iron industries, with their accompanying subsidiary processes, are receiving the greatest attention. In New York City perhaps the question of environment of loft and tenement workers in the garment industry requires the most study and attention. But all these industries alike are being thoughtfully

studied and the conditions improved by the employees, employers and the state, working for the most part in an ever increasing spirit of co-operation.

In the state of Washington the most important aspect of industrial hygiene is that of camp sanitation. The greatest industrial camp problem in the United States is in our state. Factory development, in the usual sense of the word, is as yet in a rudimentary stage with us, hence, industrial hygiene in this state means principally camp sanitation or camp hygiene. The conditions of the lumber business are such that the health hazard while at work is practically nil (aside from accidents), but the conditions of living in camps are necessarily those of such close human association that the health hazard is bound to run higher than that of ordinary family life, unless the dangers to health inherent in camp surroundings are abolished or minimized by careful attention to camp sanitation.

For several years the State Board of Health has attacked this problem in a partial and rather unsystematic manner, doing what we could to better camp sanitary conditions by precept, example, advice and regulation. I feel that we can now prove that this work is needed, effective, a money saver to the employer and a health and life saver to the employees and employers alike, and that it should be put on a more permanent and efficient basis. I am also glad to be able to testify that in almost every instance as far as my recollection goes, where camp conditions have been brought to our notice, whether from disease occurrence or otherwise, that the owners and managers have been most courteous and cordial, and have promptly adopted and carried out our advice and directions.

Briefly, what are the essentials of camp sanitation. They are few in number, simple in nature and economical in application—provided always the start is made right from the beginning. They are:

(a) A pure water supply.

(b) A careful and scientifically correct disposal of the wastes of the camp—urine, excreta, manure and garbage.

(c) Fly prevention and fly proofing.

(d) Adequate ventilation, washing facilities, etc.

(e) Proper degree of kitchen and eating house cleanliness.

(f) Proper location in regard to drainage, etc.

In all this the State Board of Health is after practical results. We are not so much interested in the refinements. We do not expect to make a camp a parlor. The owners of camps where we have worked will, I think, testify unanimously to that, but we do mean to have a camp reasonably clean and protected against the most serious menace to health inherent in camp surroundings, to wit, typhoid fever.

The typhoid figures for this state are extremely interesting. Our figures are only reliable from 1908, as that is the first year that our vital statistics law went into effect.

In 1908, we had reported to the State Board of Health 1101 cases and 286 deaths from typhoid fever.

In spite of the great increase of population since 1908 for the state as a whole the typhoid death rate has gone down tremendously since then, and since 1910, the actual number of deaths has also decreased each year, as can be seen from the table:

Typhoid Fever in Washington

1908	1108	286	27.8
1909	1260	306	28.
1910	1566	324	28.
1911	1102	223	18.3
1912	770	159	12.4
1913	1028	136	10.2

Outside of the Centralia epidemic deaths last year are 124, which would give a rate of 9.4 deaths per 100,000 of population. This means that in spite of the most disastrous epidemic in the history of the state, last year we had only about one-third as many deaths from typhoid fever as in 1909 and 1910. If the 1910 rate had prevailed in 1913, our deaths would have been 392 instead of 136.

What is the reason for this remarkable life saving? Disregarding minor causes, I think the principal reasons are:

1. Improvement in water supplies and general sanitation in our cities.

2. The specific anti-typhoid campaign in Yakima which alone accounts for 25 per cent. of the reduction for the state.

3. General enlightenment on the part of the public in regard to typhoid, its nature, how spread, how prevented, etc.

4. Improvement in the general average of camp sanitation throughout the state.

As an example of the difference between camps wherein sanitation is disregarded and camps constructed on sanitary principles, let me call your attention to these parallel cases.

A. Construction camps in 25 miles of construction on the North Coast cut-off, in the valleys of the Palouse and Snake, had in four months at least 150 cases of typhoid with about 15 deaths among 2,000 workmen. These camps were built without our knowledge and were the immediate occasion of the regulations on camp sanitation.

B. Construction camps in 40 miles of construction on the Great Northern Wenatchee Oroville extension, in the valley of the Columbia, with almost identical climatic and other general surroundings to those of the Palouse camps, with an average of 800 to 1,500 men employed over a period of two years, had two cases of typhoid, both cases coming down sick within a week of coming on to the work, showing that they received their infection elsewhere. These camps were laid out and built under the direct supervision of the State Board of Health.

Results in these two sets of camps simply show the difference between neglect of sanitary principles and careful, painstaking following of these principles.

Quite recently two radically different types of statements were made at the Federal Commission on Industrial Relations hearings in Seattle. I was particularly interested in these hearings because our department, in possession of more unbiased facts and more definite knowledge of camp conditions in all probability than any other body in the state, was not called upon to testify at all.

We had the spectacle of some witnesses, who plainly showed by their testimony that they did not know what camp sanitation is, declaring that the sanitary condition of most camps in this state was the most horrible imaginable.

We saw a lumber operator whose own camps are in very fair sanitary condition, as I can testify from personal knowledge, endeavoring to maintain by inference that all camps are satisfactory.

Now the truth is that both of these viewpoints are wrong. There are a few, a very few camps in the state that are practically perfect from a sanitary standpoint. There are many other camps which need some corrections, usually very simple and very easily done when once pointed out. I wish I could say, after our department's seven years' work and agitation in this matter, that there are but few, but the truth is there are a good many that still range from bad to vile, from the standpoint of sanitation.

Personally I believe the time has come for the enlightened progressive operator to unite with the State Board of Health in a vigorous campaign to correct these things so that at least one just cause of industrial unrest can be eliminated. To do this will cost the employer very little—perhaps $200 on an average for a camp of 100 men, over and above the cost of the type of camp where sanitary principles are ignored. The people who will benefit most and the ones for whom I am most interested, are the employees, but I believe in terms of financial interest, leaving out the humanitarian aspect entirely, that it is an improvement worth your while.

Re-Arrangement of Canadian Western Finances

The Canadian Western Lumber Company, Limited, and the Columbia River Lumber Company, Limited, have issued circulars to their debenture holders in England, stating that, on account of the decrease in business following the outbreak of the war, they have found it necessary to make a re-arrangement of the companies' financial affairs. A scheme of re-arrangement has beer submitted, which it is expected will prove satisfactory.

The Original Optimist

Robinson Crusoe was the Original Optimist. Times looked bad for Robinson—couldn't have looked much worse. But he didn't say "What's the Use;" didn't lie down, whimper, kick, and growl at destiny.

No, Crusoe used his head; he thought—then he thought some more—real serious line of thinking. Just what to do was the puzzle Crusoe was solving. Finally it came to him in a flash—"I have it," said Robinson,—**"I'll advertise."**

A thousand miles from no where—a possible buyer coming within reading distance of his ad every few years—that was Robinson's outlook. It was hard times,—business depression, a stringent money market,—also what Sherman said about war.

But Crusoe, as before mentioned, was an Optimist, also a believer in persistent advertising.

He wanted a ship—how would he get it? Answer—"Advertise." And he did—flung a shirt from the top of a pole.

The first advertisement brought no returns.

But Crusoe wasn't discouraged. He changed the "copy"—put up another shirt. Yes, times were hard—awful hard; but Crusoe won out—he got his ship—and he did it by **Persistent advertising.**

Crusoe was the original Optimist.

The St. Mary's Wood Specialty Company, Limited, St. Mary's, Ont., are reported to be in the market for a slab re-saw of the Fisher type, also an Ober axe handle lathe and an Ober rod machine.

Simon Buschlen, Port Elgin, Ont., is drawing up plans for the erection of a basket making factory. The building will be one storey, 50 x 50 ft. The owner will purchase basket-making, wood-turning and pump-making machinery.

The Hawkesbury Board and Paper Mills, organized by Montrealers, will shortly commence work on the erection of its mill at Hawkesbury. T. E. Helmick, of the Herald Building, Montreal, is one of those interested in the proposition.

The Beaver Wood Fibre Company, Limited, Thorold, Ont., which was recently incorporated with authorized capital of $1,000,000, will acquire the property and plant of the Beaver Company in Thorold, with an output of about sixty tons a day of beaver board.

James Horrigan & Company, Limited, Port Arthur, Ont., notice of whose incorporation was recently published in the Canada Lumberman, advise us that they are engaged in the contracting and timber business. At present they are operating pulpwood camps at Point Magnet, Ont.

The Windsor Lumber Company, Windsor, Ont., have commenced the erection of a planing mill at Cameron and Wyandotte Streets. Up-to-date machinery will be installed, with individual motor drive. The building will be one storey, 48 x 60, frame construction, with concrete foundation.

Playfair & White, Midland, Ont., were the successful tenderers for the coming winter's output of ties, posts, etc., cut by the Indians of the unceded part of Manitoulin Islands. The Department of Indian Affairs reports that very few tenders were received, but the prices offered were very good, considering existing circumstances. The prices secured are not made public by the Department. The tenders were for 25,000 cedar railway ties, No. 1 and No. 2 quality; 25,000 cedar posts, 1 ft. long by 8 in. and under in diameter, and 500 cords of shingle blocks.

Eastern Canada

The firm of Lariviere & Frere, Roxton Falls, P.Q., manufacturers of doors, etc., has been dissolved.

The woodworking factory formerly operated by H. E. McArthur, Limited, at Stellarton, N.S., is now being operated by D. Porter & Sons.

The Chaleur Pulp and Lumber Company, Limited, has been incorporated with authorized capital of $75,000 and head office at Montreal. The incorporators include H. S. Ross and E. R. Angers of Montreal.

The Nairns' Falls Power and Pulp Company, Limited, has been incorporated with authorized capital of $100,000 and head office at the village of Malbaie, P.Q. The incorporators include L. A. Martin, R. Pepin, L. E. Morin, L. G. Morin and W. E. Morgan, all of Montreal.

The sash and door factory of M. F. Schurman & Company at Summerside, P. E. I., was recently damaged by fire. The loss is estimated at $6,000, which is partly covered by insurance. A number of valuable woodworking machines and a considerable quantity of manufactured and rough lumber were destroyed.

The Allaby-Wheaton Company, Limited, has been incorporated in New Brunswick to carry on the general mercantile business formerly conducted by R. V. Allaby. The powers granted to the company include the carrying on of a general lumbering business in all its branches. The authorized capital of the company is $20,000, and the head office is in the Parish of Norton, Kings County. The incorporators include R. V. Allaby, of the Parish of Norton, and H. E. Wheaton, of the town of Sussex, N.B.

Tenders are being received by the Deputy Minister of Marine and Fisheries at Ottawa until noon on November 10th for the supply of 300 white pine logs averaging 35 ft. long, not less than 14 in. at the small end under the bark. The logs must be of straight growth, without knots or other defects. Tenders are also being received up to the same date for 50,000 ft. B.M. of rock elm to be in logs 25 to 40 ft. long (average length 35 ft.) not less than 10 in. diameter at the small end under the bark. These logs must be of good sound rock elm, of straight growth and without defects. Further details of the specifications may be obtained by application to the superintendent of the Government shipyards, Sorel, P.Q., or the purchasing agent, Ottawa. The price is to include delivery in the shipyard at Sorel.

Western Canada

The Forests Products Company of Vancouver, are planning to erect a four-machine shingle mill at Port Moody, B.C.

The new mill of the Huntting-Merritt Lumber Company at Eburne, B.C., has been started. This plant embodies many new features of operation.

The Sunset Sash & Door Factory, 724 Broadway West, Vancouver, B.C., who recently lost their plant by fire, will erect a new factory to cost $10,000 next spring.

Plans have been drawn up by the Edmonton, Dunvegan & B. C. Railway for the construction of a sawmill to cost $20,000 near the St. Albert Trail, Edmonton. Work is to start at once.

Tenders are being received by the Minister of Lands of British Columbia until December 24th for licence X282 to cut 4,439,000 feet of merchantable timber on cancelled, pre-emption No. 80, Upper Thurlow Island, Range 1, Coast District. Three years will be allowed for the removal of the timber.

At a general meeting of the members of the Crown Lumber Company, Limited, recently held at Vancouver, B.C., a resolution was carried that the company be wound up voluntarily, and that Mr. O. L. Poynton be appointed liquidator.

The Canyon City Sawmills Company, Limited, Creston, B.C., have erected temporary buildings for their yard and sheds at Regina, Sask. Permanent buildings will not be erected until next spring. The manager of the business at Regina is Mr. N. J. Eastman.

J. S. Deschamps, Rossland, B.C., has started the construction of a new sawmill at Kinnard on the Nelson-Rossland branch of the Canadian Pacific Railway. The new mill will be a portable, with a capacity of 20,000 feet per day, and is expected to be in operation shortly.

The sawmill which is being erected by the Alberta & Great Waterways Railway at Edmonton, Alta., is being completed as rapidly as possible. Frame work is now up and machinery capable of turning out 200,000 feet of lumber daily will be installed. The address of the above company is care of J. D. McArthur, St. Alberts Trail, Edmonton.

The Illinois-Timber Company, Limited, has been incorporated in British Columbia with authorized capital of $25,000 and head office at Vivtoria, B.C., part of the powers of the company being to purchase certain timber licences from John C. Spry, also to acquire other timber licences, timber lands, etc., and carry on a lumber manufacturing business.

The sawmill and planing mill belonging to the Forest Mills of British Columbia Limited, at Comaplix, B.C., were destroyed by fire recently, together with the Lardeau Hotel, located near by. The total loss is estimated at a quarter of a million dollars. It is stated that the fire was of incendiary origin and started in three places simultaneously.

Sealed tenders are being received by the Minister of Lands for British Columbia, until December 2nd, for the purchase of pulp licence X272, to cut 8,923,000 feet of timber on expired timber licence 37,125 in the vicinity of Topaz Harbor, Range 1, Coast. Ten years will be allowed for the removal of the timber. Further particulars may be obtained from the chief forester, Victoria, B.C.

Sealed tenders are being received by the Minister of Lands for British Columbia, until December 8th for the purchase of licence X232 to cut 2,825,000 feet of merchantable timber, and 14,000 ties, situated in the vicinity of lot 7222, Rau Shuswap and Fraser Rivers, Cariboo district. Three years will be allowed for the removal of the timber. Further particulars may be obtained from the chief forester, Victoria, B.C.

The Alberta North West Lumber Company, Limited, whose head office is at Ponoka, Alta., have secured an extra-provincial license to carry on business in the province of British Columbia, with provincial headquarters at 901 Vancouver Block, Vancouver, B.C. Mr. R. S. Lennie, Vancouver, is attorney for the company and its capital stock is $20,000. The objects of the company include the carrying on of a lumbering business and lumber trade in all its branches.

The Minister of Lands, Victoria, B.C., is receiving tenders for timber as follows:—Until November 30th for nine pulp licenses covering 205,547,000 feet B.M. of hemlock, balsam fir, spruce, cedar and Douglas fir, situated on the coast of British Columbia, thirty years allowed for removal; until December 2nd for pulp license X272, covering 8,923,000 feet B.M., near Topaz Harbor, Range 1, Coast, ten years allowed for removal; until December 8th for license X232 covering about 2,825,000 feet B.M. of merchantable timber and 14,000 ties near lot 7222, Rau Shuswap and Fraser Rivers, Cariboo district, three years allowed for removal; until October 31st for license X216 to cut 720,000 feet B.M., situated near T. L. 34,894, Upper Stave River, New Westminster district, two years allowed for removal.

Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing to the Department of Trade and Commerce and stating the number of the enquiry.

1043. **Wood pulp.**—A Birmingham firm is open to consider quotations on sulphite.

1044. **Printing paper.**—A Nottingham firm is open to receive quotations and samples of printing paper.

1045. **Wood pulp.**—A London firm using thousands of tons of mechanical and sulphite pulp annually is open to receive offers c.i.f. London.

1046. **Mechanical wood pulp.**—A Sheffield firm is open to receive quotations.

1047. **Pulp wood.**—A West Hartlepool firm inquires for pulp wood in quantities from 4,000 to 5,000 English fathoms of 216 cubic feet, 4-inch top and upwards, of white wood free of bark and bast.

1048. **Wood pulp.**—A West Hartlepool firm inquires for quotations on sulphite, soda and mechanical pulps for 500 tons each of the former two, and 100 tons of the latter.

1049. **Printing paper.**—A Nottingham firm inquires for quotations, sample on file at Department of Trade and Commerce, Ottawa.

1050. **Wood pulp.**—A Hayfield firm inquires for sulphite wood pulp. They use about 100 tons per month. The same firm is also open to purchase mechanical wood pulp. Samples on file at Department of Trade and Commerce, Ottawa.

1051. **Matchwood.**—A Lancashire firm of matchmakers and merchants wishes to get in touch with Canadian exporters of cotton wood or aspen, about 12-foot lengths and 20 inches in diameter.

1059. **Wood pulp.**—A Glossop firm would like to hear from exporters of spruce wood for paper-making purposes or sulphite pulp.

1060. **News print.**—A Cape Town commission house with connections throughout South Africa requests immediate correspondence with a view of selling Canadian news print.

1061. **Wrapping paper.**—A Cape Town commission house is prepared to take up a selling agency of Canadian-made wrapping paper, immediate correspondence requested.

1064. **Wood match splints.**—A London firm has a large market for wood match splints, and desires to be placed in immediate touch with Canadian manufacturers.

1066. **Canadian doors.**—A London correspondent stated to have a large demand for Canadian doors, also red pine sawn timber, and pit props, wishes to get in touch with shippers in the Dominion.

Your Second Setting

Where will it be? Logically where there is a worthwhile supply of timber that can be bought at a fair price and the conversation of which will yield a fair profit.

By far the greatest number of these locations are.

In The Great Out West

Others are making selections now. The most desirable tracts go first and are going rapidly. This is the year to get the best of what is left, even though you do not contemplate operating until the last log has passed through the mill you are now running.

We know there are more and better opportunities in the west than in any other section of the country.

Each year many fine tracts of timber pass into the hands of operators and the range of choice becomes more restricted.

WE CAN SAVE YOU MONEY

Did you ever stop to figure how much it cost you to shut down your machines to change knives or to sharpen up? Men's time waiting, loss of use of machine, loss on knives. It's these things that count. Wouldn't you save money if your knives would stay sharp twice as long? Just try one set of **White Knives** and see the difference—see if you don't get a whole lot more wear. May we quote you?

Coe Veneer Machinery

The Standard of the World for Sixty-Four Years

Slicer

Lathe

Clipper

Dryer

Fore sight is nothing more than the exercise of discrimination in your business deals.

The shadow is always cast before the event, and you know the way the wind blows by—observation.

We always drum the advisability of strict investigation before buying any machine, especially veneer machines. The fact is we court it for all Coe Veneer Machines, whether for Rotary Cutting, Slicing, Clipping, Sawing, Stamping or taking Green Veneer just as it may be, Rotary Cut, Sliced or Sawed, regardless of thickness size or variety of wood and delivering it dry, ready for the glue room, or for crating and shipment, without split, warp, check, discoloration or a polished surface.

We claim the above, but we make it easy for you to prove, in-as-much as we do not depend upon theory, but are quite satisfied with what practice makes in evidence.
If you are willing to judge by comparison and service, drop us a line and we will undertake to clearly show and fully demonstrate to you any and every type of Coe Machine, especially the ones adapted to your needs.

We are specialists, you must rememember, in veneer producing machines and sixty-four years' of close observation, active work and the incentive of making Coe Veneer Machines best, has placed us in the lead and we mean to keep it.

Now figure this out—the consumption of timber is increasing, the supply is diminishing and the demand for veneers is now more than ever. Further investigation will prove to you that veneer and thin lumber production will pay better as time advances.

Write for new edition of Coe Catalogue—the better machines for producing more and better veneers.

The Coe Mfg. Co.

Established 1850

The oldest and largest manufacturers of veneer mill equipment in the world.

"Wilson Bros." Hardwood Flooring

is the Flooring that is manufactured expressly to supply the demand for the best. It is made by modern machinery from carefully selected stock, and every precaution is taken throughout our entire system to make it fulfill the requirements in every particular. Write us for prices.

Wilson Bros., Limited - Collingwood, Ont.

GOODHUE BELTING For

Saw and Planing Mills

In a Goodhue Belt you get only the best leather with the stretch taken out of it. A Goodhue Belt will always run evenly and "clings" to the pulley transmitting 100 per cent. of your power.

For the wet places in the mill we have a special waterproof leather belt—"Acme". Other Goodhue Belts are "Extra" and "Standard" recommended according to the conditions under which the belt has to run.

Goodhue Belts stretch less than any other belt by 15 to 25 per cent.

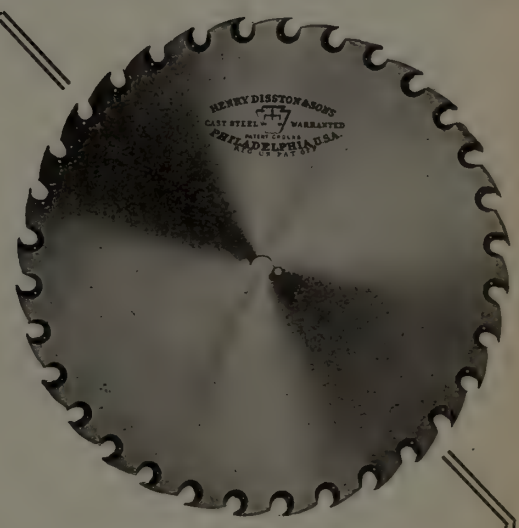
SEND FOR PRICES AND PARTICULARS

J. L. Goodhue & Company, Limited

DANVILLE - QUEBEC

More work with less power

with a saw that won't clog, that requires no gumming, little hammering, and that always retains its original size—that's what you get with the



DISSTON Inserted Tooth Saw

If you hit a nail and break a tooth—insert a new one. If your saw strikes heavy metal, you can insert a whole new set of teeth in a few minutes. No time wasted in gumming and your **saw is still the same size.** This means economy in first cost and increased saw life. You don't have to buy a saw several sizes larger than your requirements demand.

A file keeps it in order. Pointed and sharpened quickly and easily. Cuts all kinds of timber, frozen or otherwise.

Disston Points

The Disston Chisel Point Tooth is drop forged and pressed (not milled). It is strongly reinforced with a shoulder which affords permanent support against the saw plate. The Disston Point is secured firmly and permanently by a spring holder either slotted or solid. The large and increasing demand for Disston Points is convincing testimony of their quality and satisfactory service.

Write today for full information and our new book "Saw Appreciation"

Montreal, P. Q.

"BUSINESS AS USUAL"

We have not, owing to the War, shut down any of our plants, discharged any of our workmen, reduced their hours of labor, or cut their rate of pay.

We are doing ***"Business as Usual."***

We intend to continue this policy to the extent of our ability, and, to that end, suggest that you confine your purchases, during the war and thereafter, as largely as possible to goods ***"Made in Canada."***

When in the market for Rubber Goods of any description — Belting, Hose, Packing, Tires or anything else—write or wire our nearest branch for prices and information.

It is our desire to serve you.

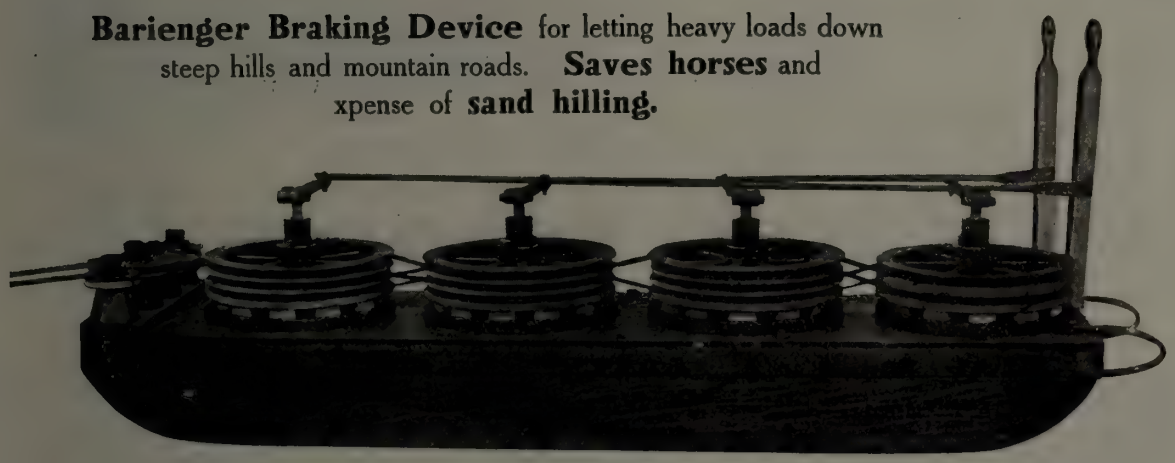
You Need a Brake This Season

Barienger Braking Device for letting heavy loads down steep hills and mountain roads. **Saves horses** and xpense of **sand hilling.**



Now is the time to consider the use of this brake for another season before hauling roads are planned and built. By using this brake lumbermen are able to work much steeper roads, and in consequence, shorter roads and there is a considerable saving in the cost of building roads.

The Connecting Link

Way back in 1880 the **Wanted and For Sale** columns of the Canada Lumberman and Woodworker were used extensively by the lumbermen of Canada for the purchase and sale of timber, lumber and machinery.

Time has but served to enhance the value of this medium, until to-day the **Wanted and For Sale Department** of the Canada Lumberman has become a national market.

Twice a month "the paper with the green cover" brings together buyers and sellers of lumber and machinery from all the principal lumbering centres of Canada and the United States. By covering this wide field, the percentage of waste circulation for advertisers has been reduced to a minimum.

For quick and satisfactory results, get your advertisement in the **Wanted and For Sale Department** of the

No Poor Cutterhead Work Now

The top and bottom cutterhead journal bearings of the Berlin New **91** Matcher can never heat from being too tight, nor pound from being too loose. The operator never has to adjust them. He merely keeps their sight feed oil cups filled.

Automatic Take-up bearings have eliminated at least one cause for poor cutterhead work, have done away with a frequent cause for shut-downs, lost time, reduced output. They have put matcher operators in the position of not having to worry over and spend valuable time on cutterhead bearings. As a result the knives get more needed attention, as does also the rest of the machine. Only one Matcher is equipped with Automatic Take-up bearings.

The Berlin New 91 Matcher

Perfect cutterhead bearings are a tremendous help toward high quality planing; but a perfect running cutterhead with knives kept sharp by frequent grinding, and jointed to a perfect cutting circle, is practical assurance of the finest possible work.

The illustration above shows a cutterhead journal bearing always perfectly adjusted. The cap is not pressed down to cause heating. It is merely held down. With natural wear the cap settles to the journal, the bronze wedges follow, holding it in position; it cannot jump up even under heavy pressure. As long as the operator keeps a supply of oil in the sight feed oiler, this automatic bearing can give no trouble.

The jointing device is shown in position to joint the knives to a true cutting circle, after they are set as nearly as possible to position with a hardened steel jig. Carefully jointed, every knife does its share of the cutting. You get knife marks—not revolution marks. Surfacing with cutter heads prepared in this manner is beyond criticism.

An output amounting to 250 feet per minute and upwards, and for 90 per cent. of every working day, is thus made standard wherever a New 91 is used.

Can you say as much for the matcher you are operating?

Ask for a Descriptive Circular.

54″ Vertical Re-Saw

This is an exceptionally rigid machine and will give high grade results at a fast feed under the hardest conditions of continuous service.

The upper band wheel rests directly on the straining device making a very sensitive tension; therefore a very thin saw can be used.

We also manufacture Horizontal Re-saws and will gladly mail catalogue upon request.

Mereen-Johnson Machine Company, MINNEAPOLIS, MINN.

INDUSTRIAL LOCOMOTIVES

The designs of our small locomotives are the result of wide experience.

All details are accurately finished to standard gauges and are absolutely interchangeable on all locomotives of the same class and size.

This cuts out long delays when parts wear out, as parts liable to wear can be kept on hand or shipped promptly from our works.

Dominion Timber Regulations

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth :—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long, 1½ cents each.

Railway ties, nine feet long, 1¾ cents each.

Shingle bolts, 25 cents per cord.

And 5 per cent. on the sale of all other products of the berth.

Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

W. W. Cory,

Deputy Minister.

Your Lumber Horse Needs

A talk with the Lumberman of Canada on the modern and sanitary system we have installed to serve your requirements.

FINANCIAL RESPONSIBILITY.—We are in a position this season to supply the lumber trade with the finest heavy horses suitable for camp work. We have shippers in the very best heavy horse district in Western Ontario, who make personal selections and take only the best. Every horse we ship out is guaranteed to be just as represented by us as to age, soundness, weight and quality—there is more than two million dollars behind this guarantee. These horses can be delivered off the incoming cars and transhipped in an hour from our yards.

SERVICE.—Our barn accommodation is up-to-date in every particular and has stabling accommodation for 500 horses. A track is also maintained for exercising horses while on the company's premises.

SANITATION.—Believing that prevention is better than cure, and to give the very best service possible we have this year employed a veterinary surgeon under salary. A daily and most thorough inspection is made by him of the entire barns and in this way the slightest indisposition is noted and the animal suffering immediately removed to the hospital on the grounds. "Safety first" is our motto in this respect.

TRANSPORTATION.—Our premises being directly on the lines of the C. P. R., G. T. R. and C. N. R., our rail facilities are such that we are in a position to ship on an hour's notice, and loading and unloading chutes are located right at the barn doors.

We gladly invite inspection of our entire system. Come and let us show you the most modern and sanitary system in Canada.

DIXON'S SILICA GRAPHITE PAINT

When you paint your exposed metal work and machinery, consider the durability of the paint used—its actual protective value. Dixon's Silica-Graphite gives more permanent and lasting effects because of the use of two practically inert pigments—silica and graphite—in pure linseed oil, which form a firm, elastic veneer over the metal excluding all destructive agents. Dixon's Silica-Graphite is an inexpensive form of metal insurance.

Send for "Protective Paint" Booklet No. 238-13.

The Mark THE E. LONG MANUFACTURING Co SAW MILL MACHINERY ORILLIA, CANADA *of Quality*

Efficiency at the Tail End

The installation of a "Long" lumber trimmer will insure the economical handling of all the lumber your mill can cut.

They are built in several sizes—all simple, solid and inexpensive.

May we send you the bulletin?

The E. Long Mfg. Co., Limited, Orillia, Canada

Vancouver—Robt. Hamilton & Co.
Calgary and Edmonton—Gorman, Clancey & Grindley, Ltd.
Winnipeg—The Stuart Machinery Co., Ltd.
Montreal—Williams & Wilson, Ltd.

WATEROUS SAWMILL MACHINERY

Mills Like This, Fifty Years Ago—

Earned for Waterous Sawmill Machinery the reputation which it enjoys today—of being the most up-to-date, most economical, nicest operating equipment in the country. Many old time lumbermen will recall the real success achieved by the old Waterous "Clipper" mills in those days when the lumbering industry was beginning to boom in Canada.

Sawmilling conditions and sawmill machinery have changed since then, but the reputation of Waterous equipment has remained the same. To-day, fifty years of experience are combined with the best engineering and mechanical skill to produce the Waterous Machinery that is being used in more than sixty per cent. of the sawmills of the Dominion.

We build everything from a Portable Outfit to a 200,000 ft. mill complete. Our catalogues and any information we can give you are at your service

The Waterous Engine Works Co., Ltd.

Brantford, Canada

Vancouver, B.C **Winnipeg, Man.**

$5,000,000.00
worth of mixed metal sold annually.

"FROST KING" METAL

Our thirty-five years experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. **Price 30c per lb., Fort William and East; West of Fort William 35c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.**

For extra duty, such as over-hanging saws, our FAULTLESS BABBITT will stand where all other metals will fail. Price, Fort William and East, **40c per lb.**; West of Fort William, **45c**, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.

B. J. COGHLIN CO., Limited ∴ ∴ **MONTREAL**

THE "BOYS" ALL LIKE THE VULCAN

Hundreds of Lumbermen and Construction Contractors can tell you why they've finally used the Vulcan. They get the greatest oven capacity a turnover of 15 gallons of piping hot water as many times a day as they want it and splendidly cooked food.

The Oxford Vulcan Camp Range

Lumber Camps need a Range built for heavy service, not a range that just **looks** heavy. That's where the Vulcan shines again. Six hundred pounds of new, smooth iron built into a Range designed especially for Camp use. The fire-box will take large, rough sticks.

The Vulcan wins the "Boys'" hearts. Lots of hot water, well cooked food and a beautiful ruddy glow of warmth when they come in these cold nights. That's the kind of things they appreciate.

Wouldn't it pay you to have a Vulcan Range up at your camp? You bet it would. Anyway it would pay you to make further investigations; get free booklets dealing with Camp Lines. Send for one.

A Stove All Will Appreciate

Oxford Camp Heater

A dandy Camp Heater. One with the weight and Camp conveniences built into it. Holds an exceptionally large stick and throws off a splendid glow of heat. This is the Heater to toast the hands and feet in cold weather and enable all to defy Jack Frost and Zero. The Oxford Camp Heater is made in three sizes. There's a size to suit your requirement. Send for a free booklet.

CACHE BAY - - ONTARIO

Versatile Redwood

CALIFORNIA CLSCO REDWOOD

The wood that is readily applicable to a thousand uses, serving each as efficiently as could any wood that grows.

CALIFORNIA CLSCO REDWOOD

Cypress makes good silos, mahogany makes good trim, pine is good for siding boards, and for cooperage stock it's elm. But Humboldt air-dried Redwood can be used for these and a thousand other purposes with as satisfactory results as are obtained from each specialty wood.

Humboldt Redwood is cut from the forest of North California. It will not check, is fire repelling, beautifully figured and always clear, free from pitch, easily worked, will not shrink, takes finish equal to mahogany and is in every other way a most desirable wood for all purposes.

To the Owner of Timber Lands

Far sighted owners of timber lands should take advantage of the times incident to the European wars, and prepare themselves for the day when the demand for timber is suddenly thrust upon them. This is certain to come at no distant day. Therefore cultivate a closer acquaintance with your holdings, and the best method of marketing them. Let us prepare the way for you. Remember, we not only report on the property, but assist in marketing the bond issue when necessary. Send for our booklet.

Loans on Timber Lands

For Long Periods of Time in Amounts from $25,000 and up

We have been in the lumber business for over half a century.

We now control and operate a number of mills. We also loan money to lumbermen.

It will be to your advantage to deal with practical men who know the requirements of the lumber trade all over Canada.

Our business is to know the wants of the lumbermen and to meet them.

Canada's Big Hardwood Market

There is an increasing demand in Canada for Hardwoods and Veneers. The specialized woodworking industries of this country are away the best managed and most progressive industries. They have a world wide market for their goods.

Reach the lumber and veneer buyers of Canada's woodworking plants through this paper, the recognized authority in the field.

Canada Lumberman and Woodworker, Toronto, Ontario

Machinery and Timber For Sale

The undersigned offer for sale, in large or small blocks all their remaining timber lands, mills and town property situated in the Town of Parry Sound, Ont.; and other Lumber Equipment, including boom chains, plows, sleighs, etc.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

We have the following Sawmill Machinery for sale:

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 8-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.

1 Double cylinder steam nigger, right hand.

1 Log Loader for right hand mill.

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.

1 left-hand steam nigger.

1 Log-loader.

1 Endless chain jack ladder with two kickers complete for right and left hand mills.

2 Roger Gang Edgers for 8-in. cants and lumber.

1 Waterous double edger, 6 saws.

2 2-saw trimmers.

1 20-ft. Slash table.

1 16-ft. Revolving Slash Table.

1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.

1 70-ft. Transfer Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.

1 Lath Mill with bolter.

2 Lath Trimming Saws.

FILING ROOM

1 Automatic Filing Machine for 12-in. D.C. band saws.

1 Automatic Grinding Machine for 8-in. S.C. band saws.

1 Automatic Machine for circular saws.

1 Hand Machine for cut-off saws.

1 Lap Grinder.

1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

POWER PLANT

2 Double Duplex, high pressure Water Pumps.

5 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.

2 125 h.p. Water Wheels.

1 Upright Engine for sawdust conveyor.

1 10 h.p. Engine.

1 Mitts & Merrell Hog.

1 Wood Machine for 22-in. wood.

1 Wood Machine for 16-in. wood.

1 Edger for ripping dry lumber, installed.

1 Edger for ripping dry lumber, not installed.

1 30 h.p. Generator, 250 volt.

1 30 light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and turn-tables, particulars of which may be had on application.

Also, contents of machine shop, containing Planer, Drill, Lathe and Machinery, with tools necessary for repair work.

All of the above open for inspection at Parry Sound.

Arkansas Soft Pine

For the Interior

Everyone interested in the building of houses has well founded reasons for preferring *Arkansas Soft Pine* for interior woodwork. "Everyone" includes the Architect, the planing mill operator, the dealer, the contractor, the painter, the owner.

Preference Based on Knowledge

Arkansas Soft Pine is preferred by the architect because he may rely on it to give the service expected and to live up to its reputation.

It is preferred by planing mill operators because with it perfect machine work is assured without loss of material.

It is preferred by the retail lumber dealer because it pleases his customers.

It is preferred by the contractor because with it his men can do more and better work.

It is preferred by the painter because with paints, stains, enamel and varnish he can make interior and exterior permanently attractive and inviting.

It is preferred by the owner because it gives him full value for every dollar he invests in a building.

It is one item of stock for which there is a regular demand in hundreds of yards. Are your customers buying it?

Make Belts Pay!

When a belt breaks down, figure more than the first belt cost. Figure men's time, men's wages, loss of output, a new belt, lost motion and lost money all around.

Remember that Goodyear belts are made to meet real service conditions. These are the belts that Goodyear experts have designed for driving edgers, trimmers, planers, moulders, rip saws—lumber mill machinery of high speed, variable load and small pulleys.

You cannot buy a Goodyear belt on mere price, because every Goodyear belt is a service belt. And any man who knows belts knows that service is the best kind of economy.

"Extra Power"

This is the master belt for heavy drives. It shows the highest friction pull of any belt we know of. Fully 10 per cent. better than the next best quality belt. This belt is made to stand up under most gruelling conditions. It is a friction belt—waterproof throughout. The rubber is calendered into the fabric. It laughs at green timber and hard knots. The duck used in its construction is the heaviest and strongest used in any Goodyear belt. It has the famous sealed seam that makes it virtually one piece at this point—a feature found in all Goodyear belting—from heavy conveyor belts to lightest small pulley belts.

Every Goodyear belt is cured under carefully regulated hydraulic pressure. This means complete belt unity—a belt that will always hold fast and true.

GOODYEAR
MADE IN CANADA
Saw Mill Belts

"Imperial"

This is a belt for high speed small pulleys. Its flexibility makes it conform to the pulley without imposing strains on the outer plies, This insures maximum arc of contact, maximum power delivery, no slippage. A fine belt for trimmer work.

Buy This Way

Whatever your needs in belting, hose and packing, remember that Goodyear experts have solved every working condition and have designed a specific Goodyear product for every particular service.

When you buy the Goodyear way, you buy for service—the best form of economy. Asking questions costs nothing, involves no obligation. This service assures you of the same quality standards in saw mill equipment that have won Goodyear leadership in tires. Also remember that every Goodyear product is a home product—made in Canada, at the Goodyear Bowmanville, Ont., factory.

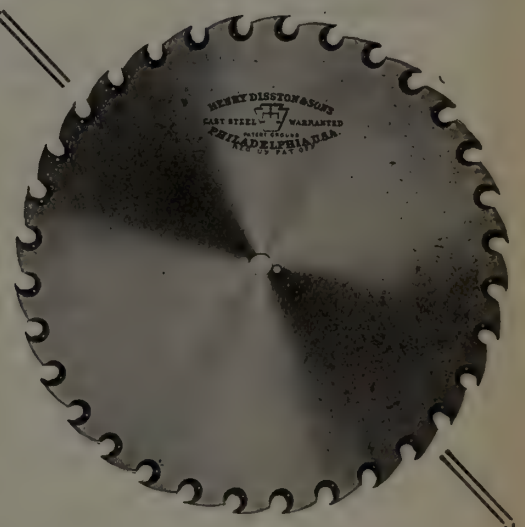
Maximum feed through the heaviest cuts with the DISSTON Chisel Tooth Saw



The large throat-room secured in the Disston design insures easy running. Choking down is practically impossible even under the heaviest feeds—insuring the greatest possible output per horse-power applied.

The extra large chambering capacity in the Disston chisel tooth saws in connection with perfect side-clearance, highest grade material and workmanship adapts these saws to the manufacture of lumber from the log in any class of wood.

"MERIT" VENEER MACHINERY

STANDARD OF THE WORLD TODAY

If you are desirous of getting into the best money making proposition of the lumber business at the present time we would suggest making inquiries about water-proof 3 ply veneers.

Perhaps you know there is such a product made?

We can tell you "all" about it—or let us be more modest and say, we can tell you "a whole lot" about it. We have told some manufacturers already and they are deeply interested. Why not you?

First of all we have the only rotary veneer cutting machine or lathe that will satisfy modern requirements as to construction and workmanship and as to capacity and quality of the veneer to be used. It is the machine universally known as the self-contained

One-Piece-Frame Veneer Lathe

Please get this right in your mind and figure out what it means.

Our dimensioning machine or Clipper is the acme of.....complication? No! of simplicity —that is all.

Our driers have solved the question of artificial veneer drying without any of the detriments commonly accompanying such efforts. No crooked, blistered or crushed stock, no costly, yes pretty nearly prohibitive buildings to house the driers, and none of the users of the Merit Drier come to us with statements that they eat up the profits in coal bills, one of the chief reasons why Merit balanced plate driers are steadily pushing ahead.

Then the water-proof glue formulae. We have it. It is waterproof.

We are the only specialists in the whole world making nothing but machinery for rotary cut veneer products and all our efforts are consequently centered on this one line of the wood-working industry. No side-lines to distract our attention and we are trying to pave the way for manufacturers on this continent to secure and hold a trade for a constantly increasing demand for water-proof ply-wood.

When we finally tell you that it is the simplest of all lumber reducing propositions, it should have your special attention, we believe.

You are invited to investigate our machines (we have references), market conditions, etc., and you are welcome to all our experience gathered from various parts of the world and particularly from Russia, the home of the water-proof 3 ply panels. We will even be glad to put you next to large buyers in England (at the present time) of 3 ply veneer as they can not get all they want of this material.

In other words, we are anxious to get you started right and we can help you if you will tell us where you live. Or—why not call on us?

TERMS OF SUBSCRIPTION

Canada, United States and Great Britain, $2.00 per year in advance; other foreign countries embraced in the General Postal Union, $3.00.
Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster General for Canada, for transmission as second class matter.

Entered as second class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 34 Toronto, December 1, 1914 No. 23

Birch as a Stock for Dump Wagons

Following an article published in the Canada Lumberman of November 15th which gave the views of a wholesale lumberman in regard to the purchase by important lumber consuming industries in Canada of Canadian birch, through United States wholesalers, we have received a letter from a Canadian carriage manufacturer criticizing the statement that Americans use birch in wagon manufacture.

The point referred to was the statement that Canadian manufacturers of wagons were using high-priced oak from the United States for purposes for which Americans were importing Canadian birch at a lower price with equal satisfaction, and that these same firms suffered very much from the competition of American wagons in which Canadian birch was used. The letter we have received says: "There is not very much of a puzzle about this, because no reputable wagon manufacturer in the United States uses birch in his wagon, and neither would any Canadian manufacturer of wagons think of using birch instead of oak. There are not by any means as many American wagons used in Canada as those of Canadian make."

Whoever may be right in this matter, the thing the Canada Lumberman is interested in, is to place before its readers the situation as it appears to both sides. We published the interview with the wholesaler in the first place so as to put his views before the large number of lumber consumers who read the Canada Lumberman, hoping that some of them would reply and explain the situation from their point of view and that, in the end, we might be the means of bringing the consumers and the producers a little closer together. We think that the discussion of the matter in these columns will do good and we hope that others will let us have their views, not with he idea of stirring up any dispute, but with the idea of helping to clear up the situation.

With this hope in view, the statement made by the carriage manufacturer was shown to the wholesaler and his reply was as follows: "We know of two of the largest manufacturers of dump wagons in the United States who use enormous quantitits of birch in preference to any other wood. They put it into the sides and ends of their dump wagons." To emphasize the point he showed the Canada Lumberman his order book which contained large orders for birch from these firms. Moreover, he declared that he knew of other Canadian firms who were selling birch to these companies and others in the same line of business.

In his interview this wholesaler had stated that there were as many of these American dump wagons used in Canada as Canadian wagons. While not able to substantiate this with figures, he states that, by his own observation, he is certain that enormous quanities of American dump wagons are used in Canada, and this being the case, he cannot understand why the Canadian manufacturers fail to use the same class of stock as the United States manufacturers who undersell them in the Canadian markets. The case is all the more interesting he says, because one never sees any Canadian wagons of this class in the United States. For the sides and ends of dump wagons, the class of stock required is a good, tight, close-grained, strong stock, for which, this wholesaler asserts, Canadian birch is quite famous.

In reply further to the wholesaler the carriage manufacturer in a letter to the Canada Lumberman says: "I know that dump wagons are built in New York State and so far as I know, they may be using birch in the boxes, but the number of dump wagons manufactured, as compared with the number of farm wagons manufactured, is very small. There are not many American dump wagons coming into Canada now, nor for the past year or two, and there will be fewer than ever imported. I still maintain that there is not one single farm wagon manufacturer in the United States who uses birch to any extent in his product. There are a thousand farm wagons made where there is only one dump wagon made. . . . . The running gear of all wagons is made out of oak and hickory and it will be a long time before birch will be considered as a substitute. The boxes are made of poplar, cottonwood or gum, and there is not a wagon manufacturer in the United States, or Canada, who would think of using anything other than these five woods.

This is how the matter stands at present, so far as the wholesaler and the consumer who have given us their views are concerned. All the reports published by the governments both in Canada and the United States agree in impressing upon lumber consumers the fact that a great deal of improvement can be brought about in connection with the economic use of lumber, and a point to which attention is most frequently drawn, is the large amount of imported stock used, upon which heavy freight charges are paid, when it might be possible to use wood that is grown far nearer to the point of consumption.

This is the real point at issue in the above discussion. It is not so much a question of the use of native woods in one country or the other, but rather a question of the economic use of the best class of wood that can be secured with the lowest freight charges.

Will Fight Against Substitutes

Evidently the strong campaign which is being carried on in the United States by manufacturers and distributors of so-called fireproof building materials, against the use of lumber is at last being given its proper share of attention by the lumber-producing and selling business in the United States. We are glad to note also that the lumber industry and trade in Canada are, to some extent, aware of the danger involved in this situation, inasmuch as the campaign is more than likely to be carried into Canada in the very near future.

The movement which was started in the United States a year or so ago in favor of the inauguration of a general advertising campaign to promote the use of lumber had this matter as its chief factor. The recent very successful Forest Products Expositions held in Chicago and New York were largely the outcome of the general appreciation of the importance of counteracting the campaign in favor of the substitute materials. These two developments have clearly pointed out that further and much more definite steps must be taken in order to meet the very critical situation which has developed. Lumber manu-

facturers in the United States knew that something should be done along these lines. They have now come to realize, however, that they cannot accomplish much without the active co-operation of the distributors. The interest of the wholesalers and retailers has fortunately been aroused by the activities of the manufacturers of substitute materials, and it is now believed that the time is suiable for developing a widespread co-operative campaign on the part of all who are interested in the use of lumber. It is quite evident to-day that wholesalers and retailers are willing to co-operate with manufacturers especially in taking steps to prevent passage of anti-wood ordinances promoted by competitive interests. Manufacturers are ready to co-operate with distributors through the associations already in the field.

For the purpose of discussing the whole subject the National Lumber Manufacturers' Association now announces that it proposes to call a general conference of representatives of all branches of the trade to be held in Chicago during the month of January, 1915. An invitation has been issued to the officers of all these associations to attend a preliminary meeting at Chicago on December 15th in order to arrange a programme. The intention is to arrange for addresses by men qualified to discuss the extent of the inroads of substitute materials upon the lumber market, comparative costs of building materials, the discrepancy between building codes, the publicity methods used by substitute manufacturers, the extent of co-operation possible between the lumbermen of cities in relation to legislation, statistics and the holding of local Forest Products Expositions with the materials furnished by the manufacturers.

The Canada Lumberman believes that if a campaign of this kind is inaugurated and carried out vigorously, it will involve great benefit for the lumber trade in which manufacturers, wholesalers and retailers will all be benefitted. On the other hand, unless something of this nature is done and done quickly and thoroughly, the lumber business will always have this thorn in its flesh, and will be losing a very material volume of business annually. Elsewhere in this issue we have published two interesting letters received from our readers, one of which takes the point of view that a campaign in favor of fireproof materials and against the use of wood as a building material is a movement to be greatly commended. The other letter takes the view that the lumber industry is unfairly attacked by the fireproof materials people, and that statistics and facts all point to the conclusion that lumber is not only a valuable building material, but, in conjunction with the use of automatic sprinklers, is an eminently safe and economical material. These two letters present the opposite points of view very definitely and briefly, and we believe that the perusal of them by our readers must lead to only one conclusion, namely, that those who oppose the use of lumber in mill construction, moderate sized office buildings and residences are not justified in doing so.

The arguments used by those who are warring upon lumber, in their publicity, are frequently so clearly of a biased nature as to injure their cause if they are examined critically. Nevertheless by means of such material, spread over the daily press, where it is widely read and not very closely examined, the fireproof campaign is making remarkable headway. The lumber interests can, in a short time, make just as good headway and, on account of the strong case which they have to present, their argument will be much more effective in the long run.

The arguments against lumber are so frequently based upon untruths that they will be easy to refute. For instance, much has been made of the statement that frame buildings ought not to be allowed within city limits. Frame buildings have been condemned as fire traps which cause fires to spread and become conflagrations. In spite of these claims, the fire records of Chicago during the year 1913 show that the average frame dwelling is safer from fire than the average brick dwelling. Moreover it is shown by the same records that the number of fires in brick buildings was greater than the number in frame buildings, in proportion to the number of buildings in existence. It is argued further, by the opponents of lumber, that frame buildings increase the risk of a large conflagration, yet the history of the great fires in San Francisco, Baltimore, etc., show that buildings of brick and stone vanished as completely before the great wave of fire as wood could have vanished. In the Baltimore fire the fireproof buildings are shown to have suffered a loss running as high as 98 per cent. in many instances. A great deal is said of the greater merit of brick and stone for the walls of buildings, but nothing is said about the fact that the contents, furniture, etc., and many other parts of the buildings except walls and roof are combustible and that the fire seldom originates in the outside wall. They urge a man to put up a brick building when he wants a frame building, and lull him into a false feeling of security resutling in the occurrence of fires from carelessness.

It is not necessary to multiply references to these points. The gist of the whole situation is that the outcry against lumber is, to a very great extent, based upon self-interest and encouraged by the facility with which one can impress the majority of the public by means of sensational head lines in their daily papers. It is an outcry which is certain to meet with a very considerable measure of success, even if it is strongly opposed, but without such opposition it is practically certain to bring upon the lumber industry an enormous loss.

The Tump Line Band from Northern Canada

Many years ago, at the time of England's war in the Soudan, when she needed skilled river men to guide her transports of floating rafts loaded with men and supplies, on their long voyage on the river Nile, a body of Canadian river men, accustomed to driving the timber rafts of those days down the great inland rivers of Canada, was formed and sent out to do the work. The "Nile Voyageurs," as they were known, were one of the most picturesque and valuable features of that remarkable campaign, and Canadians were proud of the part which this hardy body of men took in England's war. Since those days many things have happened. The last timber rafts have floated down the Ottawa. The days of the old square timber trade have passed and with them have passed that splendid generation of men who knew the ways of the rivers so intimately; but the spirit of the northland is still found among the men of the lumber camps and the mines, and many of the men of our northland frontier, if called upon to-day, would be glad to respond to the call to go to the front and fight for Great Britain. Canada is sending a creditable-sized army to take part in the war. Our contingents are made up of trained men who will compare well with any others engaged in the war. Among the northmen of Canada however, there might be formed a hardy band of soldiers who would unquestionably be specially adapted, both by nature and experience, for giving valuable service to the Empire at the front. They would have the advantage of their life-long experience in the open-air struggle with nature. They would supply a body of exceptionally capable men. A few communications which have recently appeared in the daily press show that many of these men are ready, waiting only for the call.

The special fitness of the men of northern Canada for fighting the battles of the Empire, comes from the life they have led. They art accustomed to hard pioneering work. They know the open-air, the woods, the rivers and the lakes. They are resourceful, vigorous and daring, and, what is of practically equal importance, ammenable to discipline. They have been trained in the life of the woods and rivers and can stand fatigue almost better than any other class of men. They can maintain themselves and look after themselves when far from their base of supplies better than any other class of men. In short, their life has fitted them especially for the work of campaigning against the enemies of the Empire, and since some of them have openly expressed their readiness and desire to take up their share of the work, the government must surely accept their services.

Attention was first drawn to these men as a possible source of recruits, we believe, by one of their number who wrote to the daily press, complaining almost bitterly of the impossibility of taking part in the war. He and his fellows seem to be almost excluded from joining the contingents, because of the regulations regarding recruiting. Many of them are beyond the age limit, or have other draw-

backs which place them outside of the available supply of recruits; but they have sailed the lakes, built bridges and mills, surveyed and prospected, and in general fought the open-air fight against nature all their lives. The letter written by this man of the north is almost pathetic in the simplicity of its appeal. "I can ride and shoot and cook a camp meal for over a dozen men, or drive an eight mule team" he says. He admits that he has lost a tooth or two, but he can tramp thirty miles and is as hard and fit as any man. "What means is there for us to enlist and go to the front?" He asks—"not to watch bridges. We are willing to go as privates and trust to our own efforts if we are to gain promotion."

These men naturally would prefer to leap over many of the barriers of training and go right into the business of fighting. They do not expect to have such a privilege, but they are so much in earnest that some of them have already taken steps to prepare themselves in case they are called. Mr. John Gray, 312 Indian Road, Toronto, who has spent much of his life in the north and knows these men, says that they are absolutely self-reliant and have overcome obstacles of every description by their own efforts. They never turn back. They belong to the great tump-line band of the north and want to be ready when the call comes. During August, Mr. Gray says, a number of them were talking the matter over and decided to form a tump-line band of 100 from among the men they knew. The word was passed along and the result was that a steady stream of applications to join was received. Soon there were over 300 enrolled. The only requirements were that they should be abel to shoot quick and straight, to take care of themselves in the open in any kind of weather and to pack thirty miles with a fifty-pound pack and tump-line. Their enthusiasm and patriotism are such that they have quickly got ready and are saying very little about themselves, but are waiting in confidence that if they are needed they will be called. Mr. Gray is still receiving names of those who wish to join the band. The Canada Lumberman hopes, and believes, that every lumberman in Canada would like to see the men of the north get their chance. Everyone who knows them and their manner of life, knows also that the service they will give upon the field of battle will be of priceless value.

Editorial Short Lengths for Busy Readers

An interesting example of the former dependence of many important industries upon products secured from Germany, and their efforts to obtain, or produce in some other manner, the goods which they are now unable to obtain from that source, is afforded by the case of the E. B. Eddy Company, of Hull, P.Q., and in fact of practically all Canadian paper manufacturers. Since the opening of the war paper manufacturers have been searching for suitable substitutes for the chemicals and dyestuffs used in paper making. In the past, these have been obtained from Germany. The chemists of the E. B. Eddy Company are now making extensive experiments in this connection and it is reported that they have already met with some success. It is expected that Canadian pulp and paper manufacturers will apply for the suspension of certain patents, held in Canada by Germany. for the manufacture of some of these products necessary in pulp and paper manufacturing, so that they can be manufactured in Canada by Canadians.

Through new specifications for axe, sledge, adz, pick and other hickory handles, the Panama canal authorities have recently purchased large quantities of this class of material for one-fourth less than formerly paid, and at the same time are getting just as serviceable stock. The war department and the navy department, as well as the Panama canal commission, have adopted these specifications, which were prepared by the forest service primarily for the use of the various branches of the federal government. Subsequently, however, they have been approved by the trade, both manufacturers and dealers, and adopted by several of the leading railroads.

The new rules are the result of a long study of the subject, covering exhaustive strength tests, investigations of the growth of hickory in the woods, processes of manufacture, and market conditions. Under the new specifications handles are selected according to weight, as influenced by the density of the wood, and they now include material which may be either partly or wholly of heartwood, known generally as red hickory. Red hickory was formerly discriminated against in commercial grading, but it is now accepted, since it has been found that weight for weight it is just as serviceable as the white hickory. Handles which contain small sound knots or bird pecks, so located as not to affect the strength, are also accepted.

"Lumber dealers in Toronto report that business is quiet," says a recent issue of Bradstreets. "While the lumber business at this season of the year always tends to be a little slow, it is more so than usual this year owing to the marked falling off locally and outside in building operations, dullness in the furniture trade, etc. The fact that construction work throughout the Dominion is almost at a standstill is also a factor responsible for inactivity in this market. Rough materials for trestles and other temporary structures are no more in demand than building materials, box lumber or those woods used in the manufacture of furniture. While some wholesalers state that prices with them have remained stationary local retailers say that they have been forced to let considerable of their stock go at recessions in price which is a condition to be expected in times of tight money and poor demand. With regard to the latter the falling off in demand is partly due to the restricted volume of merchandise moving. The usual fall requirements of wood for apple boxes as well as the heavy movement of canned goods, however, are factors of much benefit to the trade. The development of trade with the United Kingdom as a result of the closing of the Baltic ports is considered by Toronto lumbermen as likely to create considerable activity in the spring. Meanwhile those companies interested in the pulp industry of course are enjoying good business as the result of the increased demand for news print.

Students of history are well aware of the fact that the foundation of the lumber industry of the Maritime Provinces was laid during the period of the great Napoleonic Wars in Europe. About the opening of the Nineteenth Century, the whole of Europe, with the exception of Russia and England, was practically under the domination of Napoleon. Great Britain, secure behind her "wooden walls" and Russia strong in her "snowy steppes," were the only countries of any importance whose destinies were not controlled by Napoleon and his givernment. It will be recalled that following the battle of Jena in 1806, when Napoleon humbled the power of Prussia, that he issued from Berlin what is known in history as the "Berlin Decrees," which forbade the nations of Europe to trade with Great Britain. The Motherland on her part made a counter-blow by proclaiming the famous "Orders-in-Council" prohibiting the nations of the world from carrying goods to a large number of French and other European ports controlled by France. Up to that time, Great Britain was dependent largely on Norway, Sweden and the ports on the Baltic Sea for her supply of shipping timber. The supply being practically shut off by the Berlin Decrees and the effects of the war, she turned to her colonies to obtain her supply of lumber for ship-building and for other purposes. An era of prosperity dawned on this side of the water about that time. Picton, Yarmouth, Lunenburg, Campbellton, Chatham, Newcastle and dozens of other seaboard towns began exporting lumber to Great Britain in large quantities, and in time this lumber was sent across the Atlantic in Maritime-Province built ships. Remarkable to state that, today, almost the same conditions obtain. Owing to the blockade of the Baltic Sea by German ships, it is impossible for England to draw any supply of lumber from Russia, Swedish and Norwegian lumbermen have reduced their operations owing to the fact that the North Sea, on account of the extensive fields of mines that have been laid by Germany and Great Britain, is not considered safe for shipping. Hence we find that in New Brunswick and throughout Nova Scotia the larger lumber operators, who possess a spirit of enterprise and energy are going to take advantage of prevailing conditions and are planning an active winter's work in their different lumber areas.

The Reader's Viewpoint on Trade Topics

Campaign Againt Lumber Stirs Up Criticism of Alleged Fire Proof Material Publicity —Consumer Wants Uniformity of Grading

Lumber Ready to Meet Legitimate Competition

Editor Canada Lumberman:— Chicago, Ill., Nov. 19th.

Your letter of November 2nd relating to "a campaign against the use of lumber," has reached me.

Lumber must frankly meet the legitimate competition of rival structural materials. If their methods of publicity or their superior salesmanship give them an advantage they are entitled to it, and if we cannot meet them on such a field, they will hold that advantage.

We are getting a new line of illustrations in these days which may serve a purpose just here. Lumber has long been entrenched behind habit and custom. It is a wonderfully flexible, and livable material, and it is comparatively cheap. We lumbermen of this day inherit the traditional reputation of lumber—but these are days in which old-established preferences and forumlae are being challenged. We have been too easily-content to take our ease in our old fortifications, not realizing that modern progress was throwing shells and aerial bombs at us, and also undermining our whole structure. This is the day when we know that offensive warfare wins against defensive warfare. The question is, how shall we apply that fact to our business?

The "fire-resisting-material" men have allied themselves with the fire insurance men, first of all. That is a big advantage to start with, because at first thought the fire insurance men seem to be doing the public-spirited thing when they spend their money and their energies to "reduce fire waste" and to "conserve life and property." Furthermore, they have the sympathy of the head-line public, because they are assumed to be "experts" in all matters relating to fire waste and building construction, and in making proper and equitable premium rates.

Now here is a curious fact. The insurance men have been pushing their "fire protection" propaganda for many years, but **fire waste has not diminished**—either relatively or in the aggregate.

What is the natural inference? Is it not this: that their methods are the wrong methods?

We ought not to expect too much in any limited time, but we ought to expect something which tends to prove that the scheme is all right if you give it time. The proof is against the scheme, so far.

At the Fire Prevention Convention in Philadelphia last year it was agreed that no material and no structure is entitled to be called **fireproof.** The best that can be said is that one is more fire **resistant** than another.

The rotten spot in the insurance system is easily detected. Fire-resistant buildings housing combustible materials, or exposed to exterior fires, are **not "fireproof."**

The fire insurance men know that, but they stop short of the remedy. As long as combustible materials are housed in structures, so long fires will occur, and some adequate provision must be made for putting out the fire, or loss will occur, and may be a great loss.

Just here comes in the joker. The device that completely meets the need—within practical limits—is the automatic sprinkler—that smothers the infant fire,and no harm comes of it.

And this is how the Joker affects lumber; it **puts out fire in a wooden** building just as well as in a **fire-resistant** building. A fire-resistant building to be safe must be sprinklered, and when sprinklered it is no safer than a **wooden** building when sprinklered.

Is that plain enough? That is the effective line of attack to overcome the attack by the fire insurance and fire-resistant-material men.

There is a lot of detail to be considered. The balance must be struck in each case between value and hazard and cost and the public welfare.

Police regulations which destroy unjustifiable hazards are an aid on one hand. Building regulations, sane and practicable and unprejudiced, to prevent unjustifiable creation of new hazards, are an aid on the other hand. Neither of these hands should be raised against lumber or any other material, except for cause.

Why does the insurance man prefer fire-resistant buildings unsprinklered to wooden buildings sprinklered?

The answer is easy; because he can make more money out of it under the present system of rate-making and business-getting. A sprinklered mill construction building gets a lower rate than an unsprinklered fireproof. As the insurance agent is paid a commission on the amount of the premium, the higher premium looks best to him. The insurance company is satisfied, because it controls the rate and can make that high enough to satisfy its idea of thrift. Human beings are not safe in unsprinklered fireproof buildings. They are safe, within practicable limits, in sprinklered mill-construction buildings.

Fire-proofed lumber and shingles are unnecessary—keep them sprinklered and they won't burn from any inherent fire. The problem of conflagrations is not so difficult to deal with as the insurance men pretend it is. A conflagration fund of five per cent. of all premiums collected for three or four years and honestly administered would take care of all conflagrations ever afterward, if such police and building regulations as I have indicated went hand in hand with suitable installations of automatic sprinkler equipment. If the lumber fraternity would clearly size up the problem and its solution, and then ally itself with all the trades which utilize and depend upon lumber and then collectively boycot every insurance interest that fights lumber unfairly and underhandedly, the fight would be won.

The automatic sprinkler is the strongest ally that the lumber business can possibly tie up with. Now is the time to go about it.—Geo. H. Holt, President Holt Timber Company, Limited.

Should Organize to Oppose Campaign Against Lumber

Editor Canada Lumberman: November 20th.

We are interested in the article which recently appeared in the Canada Lumberman under the heading "A Campaign against the use of Lumber." As we are manufacturers of lumber, we do not come in contact with the building trade and do not feel capable of passing any comment on the subject. We realize however, the serious effect that an organization opposing the use of lumber would have on the lumber industry. It would appear to us that the wholesalers in the cities ought to organize with a view of getting in touch with the architects and contractors in their cities and demonstrating to them the many ways in which lumber can be used in place of other structural materials. We also think that the Canadian Lumbermen's Association ought to take this matter up, and when this movement, which seems to be strongly organized in the United States, crosses into Canada, have ready an organization capable of coping with the situation.—Manufacturer.

Senator Edwards Approves Fire Proof Campaign

Editor Canada Lumberman: Ottawa, Ont., Nov. 3rd.

Answering yours of yesterday regarding fireproof building materials: When one is giving his opinion on any subject affecting the general interest, he should take a broad view and have in mind the result to the community, regardless of his personal interests.

The document which you enclosed states that a campaign is in vogue in the United States advocating the construction of fireproof buildings, the intention being to eliminate the fire risk to as great an extent as possible, and you desire me to give an expression of my opinion on such campaign; to which I have no hesitation in replying that it is one of the most meritorious campaigns I have heard of, and if carried into effect, not only in the United States but in every country, will contribute most enormously to the enrichment of the world, by very largely eliminating the enormous loss sustained annually through destruction by fire. A certain number of narrow-minded, selfish lumbermen no doubt will protest, but I cannot understand any far-seeing lumberman doing so.

A sudden change in conditions of construction on a large scale would temporarily affect the lumber trade, but even should it do so, can there be any justification for opposing that which would be so beneficial to the world at large. The fact cannot be overlooked that the present world supply of lumber, relative to its consumption, is very small, and what appears to me the great question, is, where the world is going to get its supply of lumber, say thirty or forty years hence. From my standpoint, there can be no greater blessing than an advocacy of fireproof construction. In factory, warehouse and all such buldings, even to the construction of saw mills, the use of lumber should be eliminated to the greatest possible extent. I do not think the same elimination could comfortably take place in household construction, but to my mind, it would be a great feature if dwelling houses could also be made perfectly fireproof, or as nearly so as possible, and I fail to see why such should cause lumbermen any worry. My fear is that too soon there will be a world-wide famine in lumber, and instead of opposition to its elimination in building construction, the very reverse should be the case. On the other hand, the strongest advocacy should take place for the preservation and perpetuation of our forests and for tree planting, having the object of creating further forests.

In my opinion the question is not how much of our existing supply of lumber we can put into use, but how can we preserve and perpetuate our forest resources, for no matter what restriction goes into effect in the matter of building construction, enormous quantities of

lumber for many and various purposes will always be required, and the great and important question, looking but a few years ahead of us is: Where is it to come from?

In case any of my friends who should observe my views on this question are inclined to criticize me on the ground that I am advocating the use of cement, knowing that I am the president of a cement company, my answer is a simple one; I have lived for seventy years on producing lumber. I have never made enough out of the cement business, and do not expect to in the near future, to enable me to subsist for six months.

Wm. C. Edwards.

Iron and Concrete Don't Make Fire Proof Buildings

Editor Canada Lumberman:— Bay City, Mich., Nov. 6.

The articles which have been appearing in the American Lumberman are pretty convincing evidence that the use of iron and concrete in the construction of buildings does not make fireproof buildings and that they are no more desirable than wood. Most buildings that are called fireproof are not fireproof and are not any safer in many cases, so far as fire is concerned, than well constructed wooden buildings.—E. B. Foss & Company.

Consumer Wants Uniform Grading

Editor Canada Lumberman: Preston, Ont., November 21.

I have read the article, which appeared in the Canada Lumberman of November 15th, giving the views of a wholesale lumberman in regard to the uses of Canadian hardwods, and was very much interested.

The answer, in my opinion, is easy. Having been using, and purchasing both Canadian, and American hardwood for the last thirty-two years, I find, that the grading on the American side, is much better than the grading on the Canadian side, and that it will pay me better to give a few dollars a thousand more for well graded lumber, than for poorer graded lumber. This, I think, is the experience of most manufacturers. That and that only, is the reason why the American lumber so often gets the preference.

While we are on the subject, why not get the pine sawyers to adopt a uniform standard of grading. **We manufacturers have the greatest difficulty in specifying by name the grade of white pine, which we want to buy, as each manufacturer has a name, and classification for different grades, and as we are not mind readers, we cannot tell until we see the lumber, what the pine man's pet names for his grades represent.**—Don. M. Campbell, general manager, Preston Car & Coach Company, Limited.

Canadian Birch for Piano Stock

Editor Canada Lumberman: Woodstock, Ont., Nov. 19th.

We have read the article published in the Canada Lumberman of November 15th regarding the use of Canadian birch. We can scarcely conceive of a Canadian manufacturer buying birch lumber in the United States. We have never thought of doing such a thing. All our requirements in this line are bought from Canadian manufacturers. About the only lumber we import from the States is quarter-sawn white oak and poplar. True we buy a few cars of chestnut but the Canadian supply of this class of lumber is limited.—Karn-Morris Piano & Organ Company, Limited.

A Hint to the Man Higher Up

Editor Canada Lumberman: Does it not seem a senseless task appealing to the people of Canada, through newspaper, street car and billboard advertising to use Canadian manufactured goods, when the municipal, provincial and Dominion building departments pass specifications calling for American lumber almost exclusively? Take for example public schools throughout the Province. Georgia pine joisting is called for when red pine or hemlock would answer just as well. It might be here mentioned that Georgia pine grading rules allow 1⅞-in. thick to pass for 2-in. grading. Canadian hemlock, spruce, red or white pine must all be cut to dry 2-in. thick or they would immediately be condemned. There is a small difference in the American and Canadian prices, but, if the above is taken into consideration in the buying and allowance is made on thin lumber, Canadian lumber would then be as cheap, if not cheaper, than the American. This method of measuring would give Canadians fair competition.

In a good many localities, cypress sash are specified. It is a well-known fact, the world over, that there is no equal to Canadian pine grown in northern Ontario, for sash and door purposes. One of the largest manufacturers of doors in western Ontario has no hesitation in telling Canadian salesmen that he has not bought any Canadian lumber in years. Interior trim in most of the schools is specified Georgia or yellow pine. Why not use clear Norway, chestnut, or black ash, the product of Canadian mills?

What applies to schools, also applies in the majority of cases to hospitals, armouries, public libraries, post offices and churches.

A large quantity of lumber being used in the construction of the new Welland canal has been brought from the States. Now stop and consider what all this means to Canada. The sawmills of Canada are in themselves one of the largest employers of labor. Keep sawmills busy and you keep the wheels of commerce moving in many ways.

Bushmen are hard on wearing apparel and, as a matter of fact, they are also consumers of foodstuffs in large quantities. Horses have to be harnessed and fed. Machinery has to be bought for the mills, axes and tools for bush operations, etc.

As this country depends to a great extent upon the farming and bush operations for its prosperity, it will be readily agreed that if this is going to apply to the lumber industry, it means that lumber consumers should see that their requirements are as nearly as possible filled from Canadian mills.—Lumber Salesman.

A Good Word for the Wooden Shingle

The Engineering Record of New York City, one of the most widely read journals in the United States engineering field published an article a few weeks ago in which it referred to the wooden shingle as a dangerous building material. Since then, the Engineering Record has had reason to reconsider its views. In its issue of November 14th, under the head of "Fireproofing of Shingles" it publishes the following:—Comment was made some time ago on the fire danger from the use of wooden shingles, and it was suggested that building ordinances prevent the use of wooden shingles or require that they be fireproofed. It may not be generally known that a considerable amount of research in the fireproofing of shingles has been under way for some time, both in the United States Forest Products Laboratory at Madison, Wis., and independently by an expert retained by the educational bureau of the Paint Manufacturers' Association of the United States. While final conclusions have not yet been reached, Henry A. Gardner, who is conducting the latter work, emphasized in a paper read before a convention of painters this summer that the mere use of a good quality of linseed oil paint carrying suitable pigments cut down the fire hazard very considerably. Not only has the dried paint shown itself resistant to fire, but its effects are in themselves very important. First, the protection of a shingle from weather hinders it from warping and thus prevents the formation of pockets in which hot cinders may lodge. Furthermore, the irregularities of the surface which might retard burning particles are filled up by the paint. As to the actual retarding effect the results are very gratifying. It is very difficult to estimate quantitatively the degree of protection afforded, but untreated shingles, badly attacked by a 1-minute exposure to flame, are barely marred when painted. Under the 3-minute tests the unpainted shingle is severely burned, and while the painted specimen has been attacked the actual burning is limited to the area on which the flame was directed, the paint preventing the spread of fire and retarding the charring of the wood. Tests are under way, also, of various chemical retardants, a paint made with silicate of soda having given, thus far, very encouraging results. Research along these lines, needless to say, is well worth while, for there are good arguments in favor of the use of wooden shingles. Their protection, therefore, is a matter of no small economic importance."

Frame and Brick Dwellings as Insurance Risks

In connection with the campaign of subtsitute building material manufacturers against the use of lumber a very important discussion of lumber as a building material, from the fire insurance point of view is contained in a statement by a representative of a prominent United States fire insurance agency in Chicago. "In the question of desirability from a fire insurance standpoint," this statement says, "as to whether there is any real difference in loss ratio between a frame dwelling with a shingle roof and a brick dwelling with a gravel roof, if statistics could be obtained they would prove that there is no radical difference in the loss ratio of each to the premiums of this class. A brick dwelling after a fire contains salvage to the insurance companies in the walls, but because of the numerous window and door openings it is as serious in exposure to its neighbors as a frame dwelling. Naturally, a frame dwelling would have a higher loss ratio on account of the difference between frame and brick as far as salvage goes, but from an insurance standpoint it is immaterial which class of construction is used.

"Conflagrations are no respecters of construction. Total losses have occurred in reinforced concrete buildings occupied only for office purposes; as an illustration, the concrete office of the Emerson-Brantingham Company at Rockford, built and occupied for office purposes. Enough combustibility in the furniture, fixtures and stationery caused a total loss to construction. It would be as easy to have conflagrations start through a brick dwelling house district as it would through a frame dwelling house district. When sufficient heat has been engendered, plus the velocity of wind, fire will sweep through any form and character of construction, rendering same practically a total loss from every standpoint. The question of frame construction in the outlying parts of Chicago or Cook County, is, therefore, no more

serious a menace from a fire standpoint than if the same were constructed of brick, especially as the brick would be full of window and door openings and after all is but a frame construction with a brick covering.

"It is not possible to obtain statistics that show enough results on the dwelling house business. Ordinarily, a frame dwelling constructed these days is not expensive and the loss on same, if total, as compared with the premium charged for it, is a far less ratio of loss to the insurance companies than a four or six-storey double apartment building which proves, after a fire, to be a very heavy loss.

"It would seem to me as if, on account of the smaller values in the ordinary frame dwellings as compared with the increased values in brick dwellings and especially apartment buildings which must be classified as a dwelling house these days, that figures, if they could be obtained, would prove that a frame dwelling house business at the rates charged would show a higher rate of profit to the insurance companies than it will on the balance of the so-called preferred brick dwelling and apartment building classification."

Novelty Siding and Beaded Lumber Again Duty Free

In order to keep in touch with the customs regulations regarding lumber products entering the United States, one has to be continually on the watch. Recently, a decision was made by the United States Board of General Appraisers of Customs to the effect that novelty siding and beaded lumber were free of duty under clause 647 of the tariff act of 1913. In the November 15 issue of the Canada Lumberman we published a report that this finding had bee reversed by the Assistant Attorney-General of the United States on appeal, and that a duty of 15 per ceit. would have to be paid in future. A despatch from Washington now announces another change which puts this class of product back again on the free list. The Washington report says: The matter of the classification of novelty siding and beaded lumber under the present tariff law having been reconsidered by the Board of General Appraisers upon the request of the Government, the board has rendered another decision, reaffirming its former judgment, as follows:

"The merchandise which is the subject of these protests was returned by the appraiser as manufactures of wood and assessed with duty at the rate of 15 per cent. ad valorem under paragraph 176 of the tariff act of 1913. It is claimed to be free of duty under paragraph 647 of the same act.

"Considerable of the lumber involved is similar in all respects to the novelty siding that was the subject of G. A. 7546 (T. D. 34,305), which the board held to be entitled to free entry , and from that decision no appeal was taken by the Government. It follows then as to all such novelty siding as is involved here that the action of the collector must be reversed.

"The question as to the other lumber involved is practically the same as that which was raised in the novelty-siding case, except that the Government contends that this lumber, being beaded, is advanced beyond the condition of the novelty siding, and therefore should be held to be manufactures of lumber.

"The evidence establishes very clearly that the beading effect is produced by a planer and matcher, similar to that used in producing novelty siding, it being but a question of how many blades are used in the planer. In G. A. 7546, supra, we said:

"The witnesses, who appear to be men of extended experience in the milling and lumber trade, practically unite in saying that planed lumber, as known to the trade, embraces all forms of lumber that are made through the use of a planer or planer and matcher. Very clearly it would seem as though paragraph 176, supra, was not framed to include such lumber, for the very obvious reason that it has not lost its identity as lumber by being manufactured into an article with a distinct and new name. Te most that may be said here is that these boards are lumber manufactured, which is altogether different from being manufactures lumber. In United States v. Dudley (174 U. S., 670) it was held that boards and planks, planed on one side and tongued and grooved and adapted for flooring, ceiling, and sheathing, were, nevertheless, not manufactures of wood.'

"The claims for free entry of this beaded lumber must be sustained, and the action of the collector is reversed in each case."

The Robert Dollar Delivers Its Cargo

C. C. Yount, a West Virginian, who, after making a fortune in Bolivia, some years ago, embarked in the lumber business on Vancouver Island, B.C., recently visited New York to superintend the receiving of a cargo of Pacific Coast lumber, which reached that port on board the steamer "Robert Dollar." Before leaving New York for a trip to South America, Mr. Yount made some interesting and timely comments on the condition of business in the lumber trade on the Pacific Coast. He declared that business was so dull in British Columbia that he was going to Bolivia and Chile on a trip of inspection to "see what was doing down there."

"Business in British Columbia is pretty dead now," said Mr. Yount. "You can sell all the lumber you want, but it is impossible to get transportation. You cannot charter ships out there for any price. Almost everything in the way of bottoms is under the British flag and few of those are left on the Coast. The stock of lumber out there is short. All the lumbermen stopped cutting when they found there was no way to ship, as they did not want to tie up their money in products and pay interest on it. General business is tied up on account of the shutting down of the lumber industry. All railroad building has stopped. There is no distress, however, although strict laws prevent an exodus of laboring men over the American border."

The "Robert Dollar" is the American-owned ship under the British flag which applied for American registry some time ago at Rio Janeiro, her application resulting in complications which have been given some publicity. The "Robert Dollar," when she sailed from Vancouver, B.C., flew the British flag. When she arrived at Rio Janeiro Congress had passed the bill allowing registry to foreign-built vessels, irrespective of age. The owners of the "Robert Dollar," sought to change the flag of the vessel in Rio Janeiro. The permission was granted by the American consul, but the Brazilian Government officials, fearing possible difficulties with England, refused to clear the vessel except under the British flag. After considerable diplomatic correspondence, it was agreed to send the vessel out under the British flag, but that she would carry a provisional permit from the American consul for American registry. On her arrival at San Lucia, the change from the British to the American flag was effected.

The cargo which the "Robert Dollar" brought is declared to be the largest that has ever reached New York from Western Canada. It consisted of 5,500,000 feet of Douglas fir and will be followed by regular shipments through the Panama Canal by other steamers of the Dollar Line. All of this lumber, however, was not consigned to New York itself, as a large part of it is intended for use in improving the harbors of Montreal and Toronto, Canada. After unloading in Brooklyn that portion of her cargo which was intended for New York consignees, the "Robert Dollar" proceeded to New London, Conn., where she discharged the remainder of her cargo for shipment from there to its ultimate destination by railroad.

B. C.'s Forest Revenue for October

The total amount of forest revenue of the Forest Branch of the British Columbia Department of Lands for the month of October, 1914, was $179,299.01 made up as follows:—

Timber Licence Fees	$124,938.15
Timber Licence Transfer Fees	415.00
Timber Licence Penalty Fees	1,870.00
Timber Lease Rentals	5,167.69
Timber Lease Transfer Fees	15.00
Timber Mark Fees	22.00
Handloggers Licence Fees	225.00
Scaling Fees	3,989.84
Scaling Expenses	159.50
Tmber Royalty	34,434.34
Timber Tax	4,043.19
Trespass and Penalties	205.00
Timber Bonus	3,439.71
Exchange	3.58
Miscellaneous Revenue	75.94
Timber Sales Rentals	152.34
Timber Sales Cruising	110.00
Timber Sales Advertising	24.00
Interest on Leases	8.73
Total	$179,299.01
Collections for the forest protection fund from timber licencees, lessees, etc. $10,639.61	
Contributed by Provincial Government 10,639.61	$21,279.22

Forest protection expenditure during the month of October was $82,478.23.

The total amount of timber scaled in all districts was:49,838,526 feet b.m. of saw logs, 305,904 lineal feet of poles and piles, and 18,262.05 cords of railway ties, shingle bolts and cordwood.

The quantity exported from all districts was as follows: 8,894,084 feet b.m. of saw logs, and 36.055 lineal feet of poles and piles.

Timber sales completed during the month of October amounted to 5,731,000 feet b.m., the total estimated value being $12,319.34.

A decided improvement in the total volume of Canadian trade was shown by the comparative statement of exports and imports for the month of October. The increase for October was almost equal to the total decrease shown in the figures for the seven months of the fiscal year. The October trade amounted in value to $139,537,008, an increase of $24,974,093. For the seven months the total value of the trade was $640,171,607, a decrease of $25,993,741. Exports of forest products during October showed an increase of $430,648 for the seven months. For the month of October the exports of forest products showed a decrease of $170,377.

Poles Consumed in Canada During 1913

A report upon the consumption of poles in Canada during 1913 has been issued in bulletin form by the Forestry Branch of the Department of the Interior. Reports received from 424 pole purchasers were used as a basis for the statistics in this bulletin. These pole purchasers consisted of 218 telephone companies, 155 electric light and power concerns, 29 electric railways, 18 steam steam railways and 4 telegraph companies.

The statistics have been divided into two main groups: first, those received from steam-railway, telegraph and telephone companies, and second, those received from electric railway, power and light concerns.

The accompanying table gives the details of the poles purchased in Canada in 1913 by kinds of wood divided into these two main classes.

Poles Purchased, 1912 and 1913, by Kinds of Wood and Chief Uses—Number, Total Value, Average Value and Per Cent. Distribution

TOTAL OF ALL USES

Kind of Wood	1912 Number	1912 Value	1912 Av. Value	1912 Per cent.	1913 Number	1913 Value	1913 Av. Value	1913 Per cent.

*Less than one-tenth of one per cent.

The consumption of wooden poles in Canada varies greatly from year to year. There was a decrease of about 30 per cent. in the numbers purchased from 1910 to 1911, an increase of 3.9 per cent. from 1911 to 1912, and a decrease of 12.2 per cent. from 1912 to 1913.

Eastern white cedar (Thuja occidentalis) still heads the list, as it always has done in the past. The supply of good eastern white cedar poles, however, is visibly decreasing, as is demonstrated by the fact that at least 20 per cent. of the poles purchased in 1913 were imported from the United States. The western species of red cedar (Thuja plicata) is more abundant and is now taking the place of the eastern species, especially in the greater length-classes. Poles of this wood are used extensively in the western provinces and more particularly in British Columbia, where this tree grows. In the Prairie provinces the poles are about half of the eastern species and half of the western. Of the red cedar poles purchased in 1913, over 8 per cent. were imported from the Pacific States, and were classed as "Idaho red cedar," although these are of the same species as those obtained from British Columbia.

Out of a total of 534,592 poles, 12.1 per cent. were reported as having been imported from the United States in 1913.

While the total number was a decrease from 1912 to 1913, the total value showed an increase of 6.7 per cent., caused by an increase in the average price amounting to $0.39.

Telephone and telegraph companies and railway companies operating telephone and telegraph lines used 87.8 per cent. of all the poles purchased in Canada in 1913. This is a decrease in numbers of 14.6 per cent., and an increase in value of 0.3 per cent., the average value to these companies increasing by $0.26.

All the jack pine, balsam fir, white pine, chestnut and ash poles were purchased by companies of this class.

The electric railway, power and light companies' purchases formed only 12.2 per cent. of the total, but these poles cost on an average $3.68 more than those purchased by the telephone and telegraph companies.

The total number was an increase of 10.3 per cent. over 1912; while the average price was an increase of $0.66. These companies imported over 5 per cent. of the poles they used in 1913. They purchased all the cypress poles imported into Canada during that year and also all the western larch poles from British Columbia.

The average prices given for certain kinds of poles which have been purchased in small quantities cannot be considered as indicative of the intrinsic value of that particular wood for pole purposes, or even as a fair gauge of its market value, as these individual prices are affected by so many outside conditions, such as cost of transportation, size, etc.

The greater part of the poles purchased in 1913 were less than 25 feet in length, and of this class the two cedar species and eastern tamarack together formed over 97 per cent. All the chestnut and ash poles were of this length, and the eastern tamarack poles were more numerous in this class than those of western red cedar, which is only true for this length-class.

In the 26-to-30-foot class the two cedars formed together 98.9 per cent., and tamarack poles became of little relative importance. While the cedar species still formed by far the greater part of the poles in the 31-to-35-foot class, poles of spruce became more important, and cypress poles appeared for the first time. White pine and western larch poles appeared in the 36-to-40-foot class, and here red cedar became more important than white, which is not the case with the shorter classes of poles. In the class of poles over 40 feet in length, red cedar formed over two-thirds of the total.

Quebec Issues Interesting Forest Figures

In the first volume of a Statistical Year Book, just issued by the Quebec Government, much information is given regarding the forests of the province and the pulp and paper industries. The pre-eminence of Quebec province in this regard is shown in a statement showing that, while the province has 130 million acres of forest area capable of yielding merchantable timber in the form of saw-logs, pulpwood, etc., Ontario has only 70 million acres, New Brunswick 9, and Nova Scotia 5. British Columbia comes second to Quebec with 100 million acres, and the three prairie provinces combined with another 100 million, making a total of 414 millions. Quebec province now produces about 30 per cent. of the total forest products of the Dominion, and 22,000 men are employed every winter in the forests of the province cutting timber.

How greatly the embargo on the export of pulpwood from Crown lands affects the province may be gathered from a table showing that private forests in the province make a total of only 6,000,000 acres. The forests not yet mapped out into timber limits cover an area of 78,000,000, and of these the Year Book says: "These forests lie in the basin of the St. Lawrence as well as that of Hudson Bay. No cutting has ever been done on those vast territories, but fire, storms, insects and fungi cause great damage every year. Moreover, the growth in volume of the trees is very slow, as in all virgin forests. To the Forest Service has been assigned the duty of making an inventory of them, so that they may gradually be utilized as the country's needs require. The timber in these forests consists chiefly of spruce, balsam fir, poplar and banksian pine; the quantity per acre varies between 5 and 9 cords. This region can furnish millions of cords of pulpwood, and, as there are considerable water powers, it can easily be foreseen that before long many pulp and paper mills will be erected in it." From the above, it will be seen that opportunities in the pulp and paper line in the province have not all been snapped up.

A table regarding the income to the province from its forests shows that the amount collected by the Provincial Government for stumpage, ground rent, fees on transfers, penalties and fire-tax, from the year 1867 to 1913 made a total of $35,528,930. Last year the amount was $1,510,171. The penalties inflicted for illegal cutting during the past four years amounted to $200,000. The pulp mills of the province are now turning out over 60 per cent. of the pulp manufactured in the Dominion.

The B. C. government has decided to make a concession to loggers in acknowledgement of their protest against the export tax on logs. Some weeks ago it was announced that to relieve the situation in the province, where there were about 250,000,000 feet of logs on hand, the embargo on the export of logs would be lifted. It was pointed out, however, that the benefit of this order was nullified by the tax which was levied. The export tax has now been removed from fir logs, inclusive of the royalty of fifty cents per thousand. The levy was $1 per thousand. On Nos. 1 and 2 cedar logs no change is made,

Commercial Travellers' New President

Mr. J. G. Cane, Toronto.

The Commercial Travellers' Association of Canada at its recent annual meeting conferred the honor of the election of president on one of its oldest members, Mr. J. G. Cane, who is also one of the best known lumbermen in Canada, being the head of the wholesale lumber firm of J. G. Cane & Company, McKinnon Building, Toronto. Mr. Cane has been engaged in the lumber business throughout his whole business life. He was born in 1864, near the village of Weston, where his father operated a saw mill. He was educated at the public and high schools at Weston and started, at an early age, to work for his father. After learning a good deal about the manufacturing business in this way, he went into the planing mill business and secured a good insight into it for a number of years in the city of Toronto. Next he widened his experience by going into the wholesale lumber business as a travelling salesman for the Hargreaves Lumber Company of Toronto. Later he occupied a similar position with the firm of McCool, Boyle & Wilson, of Toronto. His next position was with the old Toronto Wood & Shingle Company, after which he felt sufficiently in touch with the lumber business to make a venture on his own account. In 1894 he started in business for himself under the name of J. G. Cane & Co.

Mr. Cane has now been a commercial traveller, in the lumber business, for about 28 years. His connection with the Commercial Travellers' Association has been a long and honorable one. He held office in the Association for about nine or ten years as a director. Then he was elected second vice-president and subsequently first vice-president, which has now been followed by his selection for the position of president. In addition to his business interests and his connection with the Commercial Travellers' Association, Mr. Cane is a member of several fraternal associations.

As indicated above, Mr. Cane inherited his aptitude for the lumber business. His father, Mr. Martin Cane, started in the lumber business as manager of mills for Edward Scarlett, of Weston, whose mill he subsequently purchased and operated for a number of years.

American Money in Canadian Mills

American capital is invested in fifteen British Columbia shingle mills and six British Columbia saw mills. The fifteen shingle mills have a total of eighty-four machines, which on the customary rating gives a capacity of 2,530,000 shingles in ten hours. The saw mills in which American capital is interested have a combined ten-hour cut of 509,000 feet of lumber. The shingle mills controlled or partially controlled by Americans include the following plants and equipment.

Company	Location	Machines
Campbell River Lbr. Co.	Whiterock	3
Canadian-Puget Sound Lbr. Co.	Victoria	3
Colebrook Mill Co.	Whiterock	3
Cottonwood Lbr. Co.	De Roche	4
H. D. Blackford	Vancouver	6
Hadden Shingle Co.	Cloverdale	3
Lulu Shingle Co.	Eburne	5
McMartin & McMillan	Ladner	2
L. W. Parr	Vancouver	2
Surrey Shingle Co.	Cloverdale	5
Stoltze Shingle Co.	Ruskin	8
Thurston-Flavelle Lbr. Co.	Port Moody	4
Shields Shingle Co.	Chilliwack	6
Westminster Mill Co.	N. Westminster	14
Vancouver Lbr. Co.	Vancouver	16

The six saw mills in the province of British Columbia, owned wholly or in part by Americans are:

	10-Hour Capacity
Cameron Lumber Company, Victoria	65,000 ft.
Campbell River Lumber Co., Campbell River	40,000 ft.
Genoa Bay Lumber Co., Genoa Bay	40,000 ft.
Small & Bucklin Lumber Co., N. Westminster	61,000 ft.
Vancouver Lumber Co., Vancouver	133,000 ft.
Victoria Lbr. & Mfg. Co., Chemainus	170,000 ft.

Louison Lumber Company's New Mill

The accompanying illustration shows the new mill of the Louison Lumber Company at Jacquet River, N.B. Readers of the Canada Lumberman will recall that the plant operated by this company was

Louison Lumber Company's New Plant—Jacquet River, N. B.

destroyed by fire on July 8th of the present year. The company immediately commenced work upon the construction of the new mill and commenced sawing on September 25th, since which date they have not lost a day's operation.

The equipment in the new mill consists of an 8-ft. right hand, single cutting log band mill, a 6-ft. Berlin H. 6 horizontal resaw, with the necessary edger, slasher, trimmer and lath machine, also two shingle machines and space provided for a third. The machinery is all new, and the mill is modern in every respect, having a capacity of from 70,000 to 80,000 feet in ten hours.

The old mill which was destroyed by fire contained a twin slabber, 48-in. Wickes stock gate, circular, 2 edgers and a full equipment of lath machines, slashers, trimmers, etc. The former plant was covered by $40,000 insurance, which partly covered the loss.

How Clothes Pins Are Produced

In the Canada Lumberman of November 1, a reply was published to a question asked by Clarke Bros., Bear River, N.S., regarding the manufacture of clothes pins. The following additional information has been received from the United States Forest Service: "Clothes pins are made from several species of wood but beech is used to a greater extent than any other. Elm, oak, yellow pine, cedar, locust and white or paper birch are also used. The raw material is procured at a clothes pin factory in the form of logs. The logs are sawed into bolts about 16 in. long; the bolts are sawed into boards ¾ in. thick by an ordinary shingle saw; the boards are converted into ¾-in. squares by a gang saw and then cut into 5-in. lengths. These pieces ¾-in. square by 5 in. long are then turned into clothes pins by automatic lathes. The slot is next cut by a peculiar arrangement of knives inserted into a circular saw which gives the slot the proper flange. The clothes pins are then polished by a friction process. This is accomplished by putting the clothes pins in cylinders or drums which revolve, each cylinder holding about 40 bushels of clothes pins, and the rubbing of the clothes pins against each other makes them as smooth as if polished with the finest sand paper. A few minutes before the polishing process is complete, a small amount of tallow is thrown into the cylinders which gives them a gloss."

How Many Shingles from a Cord of Cedar?

Editor Canada Lumberman: Can you let me know how many shingles can be made from one cord of 4-ft. medium-sized cedar?—Chas. Goulah.

A prominent New Brunswick shingle manufacturer, replying to an enquiry regarding this point writes as follows: "Our shingle mill foreman tells us that in the early days of shingle making here when they bought cedar from the farmers, it was bought either in lengths of 4 ft. 2 in., or 4 ft. 4 in., so that it would make either three or six bolts of 16 in. long, the strong measurement being required for saw cuts. Two and one-half cords of 140 cubic feet of stock, 4 ft. 2 in., was considered equal to 1,000 superficial feet, which sawed out 10,000 shingles in four grades.

"At the present time the measurement on cedar that we get only gives us 8,000 shingles per thousand feet, in six grades, which is what is made at the present day, while prior to thirty years ago they only made four grades."

Apple wood, used almost exclusively for saw handles, also furnishes the material for many so-called briar-wod pipes and particularly for the large wooden type used in printing signs and posters.

Consumption of Cross Ties in Canada During 1913

A bulletin upon the consumption of cross ties in Canada during 1913 has been issued by the Forestry Branch of the Department of the Interior. The bulletin is based on reports received from 47 steam railways and 32 electric railways purchasing ties in 1913. The total number of ties purchased was 19,881,714, valued at $8,740,849, and of this total, 3,254,587 ties, valued at $1,827,358, were reported as having been purchased in the United States. This brings out the fact that Canadian railway companies import 16.4 per cent. of their tie material and pay on an average 13 cents a tie more for this than for the native article.

The accompanying table gives the details of the ties purchased in Canada in 1912 and 1913, by kinds of wood.

Cross-Ties Purchased, 1912 and 1913, by Kinds of Wood—Number, Value, Average Value and Per Cent. Distribution

Kind of Wood	1912 Number	1912 Value $	1912 Av. Value $ ct.	1912 Per cent.	1913 Number	1913 Value $	1913 Av. Value $ ct.	1913 Per cent

*Less than one-tenth of one per cent.

The decrease in the number of ties purchased in 1913 was 6.7 per cent. of the total for 1912. Out of twenty kinds of wood reported, the two most important—jack pine and white cedar—were reported in smaller quantities than in 1912, as were seven of the other kinds of wood.

The use of Douglas fir increased, and ties of that wood formed 12.2 per cent. of the total as compared to 10.2 per cent. in 1912. The use of this wood has steadily increased since 1908. Four other British Columbia species, namely Western larch, spruce, hemlock and red cedar, all showed increases from 1912 to 1913. The eastern species of these woods all showed decreases during the same year. Oak ties, of which the greater part are imported, were purchased in increased numbers, but all the other hardwoods, with the exception of elm, showed decreases.

The average price of ties of all classes was practically the same in 1913 as in the preceding year. The two most important woods were purchased at a slightly lower price than in 1912, and of the others, five showed increases and eight decreases.

A total of 19,490,491 ties, or 98.0 per cent. of all those purchased in Canada, were used by the steam railways. This total is a decrease of 6.4 per cent. from the total for 1912.

The ties imported for use by this class of companies amounted to 3,235,022, valued at $1,813,256, and formed 16.6 per cent. of the total.

Oak ties were the most expensive on the list among the more important woods and were used for switch ties and on lines where the traffic was exceptionally heavy. By far the greatest number of the oak ties were imported (96.8 per cent. coming from the United States) and were made up of a large number of commercial species. The fact that it pays to apply preservative treatment to a hard, strong, and even durable wood like oak, is demonstrated by the fact that the steam railways in Canada in 1913 purchased 525,623 treated oak ties, this number forming over half (54.3 per cent.) of the total.

Hard pine from the Southern Atlantic and Gulf States forms an increasing proportion of the tie material imported into Canada each year. This wood does not grow in Canada, and is the product of at least four different species of pine, the most valuable of which is longleaf pine (Pinus palustris). The wood of the hard pines, when used for ties, usually decays before it fails through mechanical wear, and therefore it repays the cost of a preservative treatment that will postpone this decay. Of the hard pine ties used in Canada by the steam railways in 1913, 17.5 per cent. were treated.

Altogether about 12 per cent. of the ties purchased by the steam railways in 1913 received some sort of treatment to prevent decay.

While the electric railways in Canada in 1913 purchased only two per cent. of the ties, they paid the highest average price for their material.

The total for 1913 was a decrease of 19.1 per cent. from 1912. The two cedar species in this class formed together three-fifths of the total, and jack pine, which was the most important wood used by the steam railways, was of only secondary importance. As a general rule the more durable native woods were purchased by these companies and the treated ties formed less than one per cent. of the total. Oak and cedar ties were imported in the largest quantities, together with all the hard pine, beech and maple. Of the oak ties reported 9.3 per cent. were treated, as were all the imported beech and maple ties.

The only western species reported were red cedar, Douglas fir and western larch. These companies paid, on an average, 16 cents a tie more than the steam railways. This price was an increase of 8 cents over that of 1912, increasing with the cedars and with oak. All the other woods showed decreases in average cost.

In Canada in 1913 about 10.0 per cent. of the cross-ties purchased by both classes of railways were given a preservative treatment to retard decay. The practice is a fairly recent one, as is seen by the fact that in 1910 practically no ties were treated at all, and that the percentage of treated material has increased steadily since that time. The treatment, under present market conditions, is most profitable when applied to the harder, stronger woods that if used untreated would decay before the end of their mechanical life.

Estimating British Columbia's Timber Resources

One of the forestry projects upon which the Commission of Conservation is engaged is a survey of the forest resources of British Columbia. This work was started last year and it is hoped that a fairly definite idea of the forest resources of the province will have been secured by the end of next year. For this work, the Commission has secured the services of Dr. H. N. Whitford, formerly of the Philippine Forest Service, and of R. D. Craig, for some years with the Dominion Forestry Branch, and later engaged in private forestry work in British Columbia. The plan of work is to collect, check and compile all available information. A large percentage of the accessible merchantable timber of the province is held under timber limits, and for most of these limits, one or more cruises have been made. The limit holders are co-operating generously with the Commission by furnishing information relative to the amount of timber on the individual limits. In addition a large amount of detailed information has been secured through forest surveys conducted by the Provincial Forest Branch, and by the Forestry Branch of the Canadian Pacific Railway. All this information is being used by Messrs. Whitford and Craig, and is supplemented by information collected at first hand, as well as by data secured from timber cruisers, surveyors, explorers and others. Previous estimates indicate that there is something like three hundred billion feet of saw timber in British Columbia, which is supposed to be approximately one-half the amount of merchantable standing timber in Canada. This is only one-fourth to one-fifth as much as the estimated forest resources of the United States. In addition to the amount of saw timber, there is a vast quantity of pulp wood of which no reliable estimates have been made. Fires have uselessly destroyed many times the amount of timber now left standing in Canada.

The Fire Protection Work of the Dominion Railway Commission has now been organized for nearly three years, and has shown excellent results. From being the greatest single source of fire damage, the railways now give promise of dropping well down in the list of minor agencies. They have also accomplished a great deal in the way of reporting and extinguishing fires not due to railway causes. The Board's order gives the Chief Fire Inspector very wide discretionary authority in determining what specific measures are necessary for the proper prevention and control of fires along railway lines. This is particularly the case with regard to special fire patrols in forest sections and the construction of fire guards in the prairies. The order also requires the use of efficient fire protective appliances on locomotives, prohibits the use of lignite coal, requires the issuance of instructions covering the reporting and extinguishing of fires by railway employees, and gives the Fire Inspection Department power to regulate the burning of inflammable debris along the right of way. The Railway Act requires railway companies to maintain their rights of way free from dead or dry grass, weeds and other unnecessary combustible matter. In carrying out the above requirements, the Fire Inspection Department of the Board co-oeprates closely with the fire protective organizations of the Dominion and provincial governments. Under the plan of co-operation now in effect, more than seventy officials of these fire protective organizations have been appointed officers of the Fire Inspection Department of the Board, for the purpose of maintaining a constant supervision over the work of the railway companies, to insure that the necessary measures shall be taken for the prevention and control of railway fires. Practically all the railways have shown great improvement in fire protection work. The Canadian Pacific and Canadian Northern Railways have organized especially for the handling of fire protection work, as a partial result of the Board's requirements.—American Forestry.

Hastings Mills, Vancouver, 1914.

Growth of the Lumber Industry in B.C.

Outline of Development Which Has Been Coincident with Industrial Expansion of Pacific Coast Province

By R. H. Alexander

The development of the lumber industry is almost synonymous with the development of the province itself, in which, without doubt, it has contributed in a most important degree.

The earliest, and probably the first, instance of export of forest products from British Columbia is of a much earlier date than generally referred to, as it took place just one hundred and twenty-six years ago. It is mentioned in "Vancouver's Discovery of Puget Sound," by Professor Meany, of the University of Washington, a book replete with interest to all desirous of knowledge of the early history of British Columbia.

John Meares, a retired lieutenant of the British Navy, made a voyage from China to the Coast in 1786, and returned with a valuable cargo of furs. The next year a company of English merchants in India fitted out two ships for a similar cruise, giving him command of the expedition in a ship of 230 tons, called the "Felicia Adventurer." He arrived at Nootka on the west coast of Vancouver Island, May 13, 1788, and bought a small tract of land from the Indian chief, Maquinner, at what they called Friendly Cove, and which still bears the same name, erected a trading post and commenced building a sloop to be used in the fur trade on the Coast, and, curiously, this was the first introduction of Chinese labor on the Pacific Coast, as he had brought with him a number of Chinese carpenters to build his vessel. While it was being built he traded for furs, and in September, 1788, he left for China with a cargo of furs and took on a deck-load of spars, intended for the China market. The trade with China commenced so many years ago in a vessel of 230 tons, is now being prosecuted by steamers of 6,000 tons gross measure and over, taking a cargo of between 3,000,000 and 4,000,000 feet.

The Pioneer Sawmills of the Province

It is also interesting to note that the first export sawmill in British Columbia was located about 75 years afterward not so very far from the scene of this first shipment, being at Alberni, on the West Coast. The first sawmills in the province were at Esquimalt and Snooke, on Vancouver Island, and were only for the requirements of the early settlers. The first sawmill of any size for the prosecution of the export business was established at Alberni about 1861 or 1862, but the business did not prove successful, and was in operation but a few years, when it was closed and the machinery sold to one of the mills on Puget Sound. History, however, repeats itself, and Alberni is again resounding to the hum of the sawmill, three having lately been built.

There was a small sawmill at New Westminster in 1862, catering to the local trade, from which I think one cargo was sent abroad. Parties who had been connected with this enterprise started the first mill on Burrard Inlet a year or two afterward, at Moodyville, which was followed by the building of the Hastings Mill on its present site in 1865, and with the erection of these mills, the export trade of the province may be said to have commenced. Still later the mill at Chemainus came into operation, and for many years the whole export trade was done by these three. But several later erected mills have, within the last few years, joined the ranks of export shippers, and the quantity so disposed of has risen from twenty-five million to ninety million feet, and the prospect is that owing to the quicker route to be afforded by the Panama Canal this branch of the trade will increase to an extent that can hardly be foreseen at the present time.

With the expansion of the export trade it is interesting to note the increase there has been in the size of the vessels. In the early days of the trade a vessel carrying over 400,000 feet was a large one, and to be called upon to supply a cargo of one million feet would have staggered the manager of any of the mills, while now it is a difficult matter to obtain a vessel carrying less than one million feet, and steamers carrying between three million and four million feet are quite common visitors.

Growth of Rail Shipments

In the foregoing remarks the sea-borne export business only has been referred to, but it is insignificant in quantity when compared with what is now shipped by rail and consumed beyond the confines of British Columbia, which is about ten times as great as the export by sea. The advent of the Canadian Pacific Railway opened up a market for our lumber to the East, and from that time the mills rapidly increased in number. It was a considerable time before our Douglas fir established itself, but it crept further and further East, until now we have customers on the Atlantic seaboard both in Can-

Hastings Sawmill, Vancouver, 1889.

Logging in City of Vancouver, 1889.

ada and the United States, and the quantity shipped is ever on the increase.

In 1886, when the Canadian Pacific reached Vancouver, the output of the sawmills in the province did not exceed 100 million feet, and in 1912 it had increased to 1,262 million feet. In the same years the revenue derived by the province from the lumber industry was respectively $3,768 and $2,600,000. So that while the output has increased about twelve times the revenue has increased seven hundred fold. The early completion of the Grand Trunk Pacific, Canadian Northern and Kettle Valley railway lines will further increase the shipments in supplying the needs of new settlers.

While the manufacture of the raw material from the log into the finished lumber has advanced from the small water mill, with one upright saw and the shingle-weaver with his frow and draw-knife, to lumber and shingle mills fitted with all the most modern appliances in the way of machinery, requiring enormous quantities of the raw material for each day's operation, the methods of winning that raw material from the forest have also undergone great change and improvement.

When the "Bull Puncher" was Boss

In the earliest days the logs were put into the water by individual hand-loggers, and the camps used oxen for their motive power. The hand logger selected a locality where a well-timbered side hill sloped towards the water; his outfit in the way of logging appliances was comprised of an axe and a cross-cut saw, some wedges, and last but most important was his jack screw. After the tree was felled, he barked the upper side, laid a few skids, and with the aid of his jack screw rolled the log over the skids, when its own weight sent it rushing down the hill into the water.

The camps built skid-roads from the beach and used ox teams to haul the logs over them. The lowest paid man in a camp was he who walked ahead of the team with a bucket of grease and a swab, with which he greased each skid to reduce the friction, and the highest was the teamster, or "bull puncher," as he was called. A good teamster was an artist in manoeuvring a team of six or seven yoke of oxen in the thick woods. He was generally, also, an artist in the use of strong language, with which, and a liberal use of a goad, he stimulated the "bulls" to exert themselves.

As the roads increased in length, teams of horses and mules were substituted on the main roads for oxen, which have in turn been superseded by the use of steam haulers, and even these, in some cases have given place to the use of what the logger calls a "flying machine"—a system of wire cables from which the log is partially suspended whilst in transit to the railway which transports it to the water. The main roads at the large camps are standard gauge roads, equipped with powerful locomotives and suitable cars.

What the Lumberman Creates

A little consideration on the part of readers will bring home to them the importance of this great industry. It furnishes the greater portion of the revenue, and makes possible the development of the province, without the general public being heavily taxed. The number of operatives in the mills is only a small proportion of those dependent on the industry, for to these must be added the great army of men in the woods, the crews of the steamers engaged in towing the logs to the mills, the stevedore's crews engaged in loading the vessels, mechanics in foundries and machine shops, clerks and salesmen in stores, the producers of fruit, vegetables and other farm produce, and the host of others who cater to the various requirements of the industry or those engaged in it. Lastly, it will take an acre of ground, producing 20 bushels of wheat each year, 75 years to furnish the railways an equal weight for transportation that one acre of good timberland in British Columbia supplies.

Nature has with many other blessings endowed the province of British Columbia with an asset in its forests, the future value of which at the present time is absolutely incalculable, and it behooves the citizens and the government to unceasingly foster and judiciously protect the industry to the fullest possible extent

Increased B.C. Exports to the U.S.

A recent issue of the United States Daily Consular & Trade Reports contains a report from the United States Consul at Vancouver, B.C., in which it is stated that the declared exports to the United States from the Vancouver Consular district for the three quarters ending September 30th, 1914, amounted in value to $10,454,091, as compared with $6,139,745 during the corresponding period of 1913.

The greatest increase in exports to the United States is shown in timber products, with a total of $4,021,635 for the first three quarters of 1914, as compared with $1,325,023 for the corresponding period last year, a gain of $2,696,612, or more than double the declared value for the January-September portion of 1913. Of the various wood products included in the exports, shingles show the greatest advance, the total value for the three quarters of 1913 being $252,803 and for the like period of the present year, $1,742,128, an increase of $1,489,325. Of the wood products paper also shows a heavy increase, advancing from $517,451 to $1,170,896, and lumber exports rose from $59,978 to $386,480.

The rapid growth of the exports of wood products from British Columbia to the United States during the present year is due to several causes, among which are the Government tax on timber exports from the Province, which practically prohibits the exportation of logs, the lower value of timber in British Columbia, because of the large areas of virgin forests in the Province, and the absolute prohibition of the exportation of cedar in an unmanufactured state, which necessitates the manufacture within the Province of all cedar shingles intended for export. The removal of the duty on shingles and certain grades of lumber imported into the United States has enabled the British Columbia manufacturers to compete more successfully with the mills in the Pacific Coast States, and has been a factor in increasing the export trade in this class of products.

Canadian Shingles Increase in U.S.

For the first eight months of this year, under free trade, importations of Canadian made shingles into the United States, totalled 765,627,000 pcs., as compared with 288,047,000 pcs., for the corresponding eight months of 1913, when shingles were protected by a 50-cent tariff.

The value of Canadian shingles imported into the United States for the first eight months of this year was $1,776,930, as compared with $743,030 for the first eight months of 1913.

Of the 765,627,000 Canadian shingles imported this year 201,842,000 wer shipped in through the Puget Sound gateway, as compared with 30,706,000 for the first nine months of last year, under the protective tariff.

The detailed statistics of Canadian shingle importations, during the first eight months of 1913 and 1914, follow:

	1913		1914	
	M. Shingles	Value	M. Shingles	Value
January	27,284	$ 67,097	42,706	$ 99,845
February	19,621	51,157	57,700	134,000
March	24,536	60,732	81,771	195,987
April	42,568	108,066	114,763	260,084
May	39,747	99,577	116,595	267,739
June	42,865	115,441	116,761	270,014
July	41,364	106,440	114,222	270.555
August	50,062	134,520	121,109	274,706
	288,047	$743,030	765,627	$1,776,930

1913 importations absorbed a 50c per M. duty.

1914 importations are free of duty. Under a 50c. duty this volume of shingles would have yielded a revenue of $382,813.50.

British Columbia's Lumber Industry

Among the displays at the British Columbia Exhibition held in Vancouver recently was one of the timber resources, which gave a comprehensive idea of the importance of the wood products, the large proportion of the manufacturing life of the province which they represent, and what a large number and variety of articles may be produced from the forests. The exhibit covered the timber industry from the logging camp to the mills and allied industries. The revenue from the forestry branch is equal to $6.63 per capita of the population. The total government revenue from the forests of British Columbia during the past nine years has been sufficient to pay for all the roads, bridges, and wharves constructed, and has been the most important factor in the commercial and industrial development of the province.

The annual cut of British Columbia timber is approximately 2,000,000,000 feet. There are 420 mills and 790 logging camps in the province, employing about 60,000 men. The timber industry represents one-half of the industrial capital, one-half of the pay roll, and 37 per cent. of the annual production of wealth in British Columbia. The first shipment of British Columbia wood pulp to an Atlantic coast port was forwarded recently to New York by way of the Panama Canal. The consignment consisted of 500 tons and was the product of the Powell River Lumber Company. Other shipments will probably follow, as the all-water route by the canal has so reduced the cost of transportation that British Columbia mills will now be able to compete with eastern companies in the markets of the United States. The pulp plants in the province are working full capacity to meet the demands for their product.

The Russian Government has placed an embargo on all kinds of lumber, to prevent its exportation; walnut lumber, including Circassian walnut, much prized by American furniture makers, is specifically mentioned.

North Shore Loggers Fairly Active

Thessalon, Ont., November 17 (Special to the Canada Lumberman): Lumbering is fairly active in this part of Algoma. The Thessalon Lumber Company; Graves, Bigwood & Company; the Hope Lumber Company, and others are logging extensively, principally owing to the very large amount of timber blown down last year which would deteriorate very much if not cut this year.

The demand for cedar ties, posts, etc., which was very good for some years past for the American market is not in evidence this year. This trade seems to have entirely ceased, owing to the money stringency and unsatisfactory railway conditions in the United States.

The pulp wood industry here has undergone an entire change. In former years the wood was taken out by the settlers for small contractors and the work distributed among the settlers in the agricultural area. The raising of the embargo on pulpwood exported from Crown lands this year has put the business in the hands of the lumber companies and it will be conducted along the same lines as logging operations. This cuts out the small contracts formerly taken by settlers. One contractor who, last year, purchased 6,000 cords from the settlers, tells me he cannot get a market this year as the manufacturers are buying in larger quantities direct from the lumbermen. While this legislation was intended to let the lumbermen get out the fallen tmber, and thereby save the dues for the treasury, as well as saving the timber, it does not appear to be giving general satisfaction. It was intended only to apply to fallen timber, but, so far as I can learn, the amount of spruce timber blown down in the storm of last November is very small. This is easily accounted for as the spruce grows mostly in the valleys and is well protected from wind storms by the surrounding mountains and the larger timber. As the raising of the embargo was only intended to save the blown down timber and therefore will only apply to this year, it is expected that another season will bring better conditions for the settlers and small dealers in pulpwood.—J. B. Dobie.

North Shore Trade Picking Up

Thessalon, November 16; (Special to the Canada Lumberman): This has been a very fine fall for bush work. Men are very plentiful and the lumbermen are getting their logs skidded very reasonably. In this vicinity there are more logs being got out than there have been in the last few years, as a result of the down timber and the fires of last May. The mills are now about shutting down for the season. Some of them have already closed and the next few days will see them all shut down for the season. The yards at the mills are all filled up with lumber, all of which is sold.

The last sale of the season was made a few days ago when Eddy Bros. & Company, Limited, sold their entire stock to a Buffalo firm. This was the finest stock on the shore. I understand that it brought a fancy price as some firms from England were bidding for it.

The Hope Lumber Company are operating about fifty miles north from here and have a large Packard freight truck for hauling their supplies. This truck hauls four tons at a load and runs about five miles an hour. It does the work of fifteen pair of horses, which is a great saving. This method of working will enhance the value of timber in the north by facilitating the hauling of supplies, which was the only drawback on a long tote road.

There will be great activity in the pulpwood business this year owing to the Ontario Government permitting its export for this year, the pulpwood being in good demand on account of the war.

H. H. Bishop, the well-known lumberman, of the Thessalon River, arrived among us from Chicago recently. He left at once for the tall timbers, intending to bring out some big game.—Algoma.

Liverpool Trade Quiet and Unchanged

Farnworth & Jardine, Liverpool, Eng., in their wood circular, under date of November 2, say: In the business of the past month there is little change to report. The arrivals were moderate, and in the aggregate the deliveries fairly satisfactory, but the demand generally, except for woods suitable for some special Government requirements, is quiet. Stocks, with few exceptions, are not too heavy, and values firm. Ocean deal rates are stronger, and tonnage scarce.

Canadian woods.—Pine timber.—Imports during the past month were on a more liberal scale, but there is no improvement in the demand to report; stocks are ample; values steady. Waney pine—First Class: The arrivals, entirely to Manchester, were chiefly on contract, but also a few small consignment parcels still unsold; the demand is quiet, and deliveries light; stocks, slightly increased, are quite sufficient; values firm. Second class: There is little enquiry. Red pine—The demand is very restricted. Oak.—Imports arrived rather more freely, but chiefly on merchants' account for special railway requirements; the demand, however, is very quiet, and stocks, though not heavy, are adequate; values steady. Elm.—Imports of about 17,000 cubic feet, just arrived at Manchester, were entirely on contract; the consumpton disappointing, and stocks have increased, but values are firm. Pine deals arrived much more freely; there is little change in the demand to report; deliveries have been disappointing, and stocks are adequate values steady. Red pine deals were imported moderately; there has been rather more enquiry, and values are firm; stocks are light.

New Brunswick and Nova Scotia spruce and pine deals.—The import to the Mersey, including Manchester, during the past month was rather less than the corresponding period last year, viz., 10,390 stds., against 11,900 stds. in 1913; the demand has been fairly active, and deliveries satisfactory; recent sales show a further advance, and prices now rule on a very high basis; stocks are not too large. Ocean deal freights are firm and tonnage scarce. Pine deals continue in fair request; stocks are light; prices steady.

Birch.—Logs.—Imports nominal; the demand is quiet, and the deliveries light, but prices steady; stocks are adequate. Planks arrived freely; the consumption was rather disappointing, but stocks are not too heavy.

British Columbia and Oregon pine.—About 17,000 cubic feet arrived during the past month; the deliveries have been fair, but the stock is still heavy; values firm.

London Demand Greatly Increased

Churchill & Sim, London, England, in their monthly wood circular under date of November 5th report as follows:—

The main features of the wood trade in London during October have been the heavy Swedish importation on the one side, and the great expansion of the demand on the other, as evidenced by the deliveries for the month totalling some 48,000 standards by comparison with 27,000 standards in October, 1913. The quantity of prepared boards received from Sweden has been the heaviest item, and with this exception, the aggregate supplies have been smaller than usual, owing to a complete cessation of shipments from Finland and a very greatly reduced quantity available from Russia. A large business has been arranged during the month for Swedish productions, and Archangel shippers have been able to realize some stock where freight was included in the sale. Unfortunately, at a time when merchants are impatient for delivery of pressing orders, a serious congestion of traffic at the docks is proving a great hindrance to further business, and is causing steamer owners to fight shy of chartering with London as a destination. This is not the first season that the trade has experienced such troubles, which are no doubt temporary, but extremely inconvenient and expensive to all parties while they last, and when normal times and seasons return it may be hoped that some comprehensive steps may be taken to relieve the London trade of its present day disabilities which tend to greatly circumscribe its area of distribution of wood. Freights are inclined to harden on account of the lateness of the season and the dangers of North Sea traffic, and for the reasons stated above, owners are giving preference to cargoes destined elsewhere than London for the moment.

From the St. Lawrence the imports were:

Pine Deals	244,000 pieces	against	437,000 pieces in 1913.
Spruce Deals	535,000 pieces	against	971,000 pieces in 1913.
Birch Planks	147,000 pieces	against	284,000 pieces in 1913.

and from New Brunswick, etc.—

Pine Deals	19,000 pieces	against	28,000 pieces in 1913.
Spruce Deals	503,000 pieces	against	420,000 pieces in 1913.
Birch Planks	359,000 pieces	against	328,000 pieces in 1913.

About the usual supplies of pine and spruce came to hand from the St. Lawrence during October, but there was little alteration in market conditions and prices. A large importation of spruce from the Lower Ports arrived, this market having considerably benefitted from the cessation of the Petrograd and Riga supply of whitewood. Prices have been driven up to a high level, which buyers are inclined to regard as somewhat dangerous for any but immediate shipments, so that business is checked pending the evidence of a continuance of the great demand of the past two months. There is no alteration in the position of Canadian hardwoods, but prices of birch planks are suffering from want of demand for the moment.

October witnessed a small importation only from the Southern States. The stock in London, both of pitch pine timber and Oregon pine is heavy, but the October demand was very satisfactory. London prices improved during the month both for sawn timber and for Oregon pine, especially for the latter.

Freight Advances Stiffen Liverpool Prices

Smith & Tyrer, Limited, Liverpool, Eng., in their monthly report under date of November 2, say:—The business done during the past month has been very largely owing to the demand for government work. Stocks are not getting depleted so rapidly as was anticipated and probably they will be sufficient, in conjunction with the winter import, for the requirements. The rise in freights has stiffened prices. Hardwoods have shown little change. Spruce deals continue in good demand, chiefly for war office material, and prices are well maintained. Cargoes are now offering very sparingly and liner parcels meet with ready buyers. Birch.—There is more demand for logs, and planks have a better tendency, but stocks are still ample. Pine

deals have moved off slowly with a sluggish demand. Hemlock is more enquired for, and some transactions for sleepers have taken place. Pacific Coast woods are without much enquiry. Oregon pine timber is moving rather better but stocks are sufficient. Clear spruce can only be sold at a low figure.

Liverpool and Manchester Stocks

H. W. Lightburne & Company, Liverpool, Eng., and John E. Moore & Company, Limited, St. John, N.B., furnish the following report upon Liverpool and Manchester stocks on November 1st.

Spruce and Birch

Month Ending, 31st October, 1914.

Liverpool

Barbados Market Report

S. P. Musson, Son & Company, Barbados, report under date of November 2nd as follows:—Lumberstuffs.—White pine—The only arrival during the fortnight has been the Trn. Schr. "Emily Anderson" from Ostrea Lake, with some 240,000 ft. which had been previously sold to arrive. As advised in our last, the market is in a good position for further shipments, and we value first arrivals at around $34 for merchantable, and $26 for second quality. Spruce—The "Emily Anderson" also brought some 35,000 ft., which had also been sold to arrive. The market is lightly supplied, and sales could be made around $27.50 for shippers. Pitch pine—No receipts. Shingles—The market is fully stocked, and further supplies are not needed at present. Shooks —No receipts. Wood hoops—We note the arrival of some 2,686 bundles by London steamer for dealers' accounts.

United States Trade Situation Much Improved

Washington, D.C., reports state that Government officials in various departments interested in the business situation are now confident that the most serious effects of the European war on American business have passed. The restoration of the credit balance with Europe has greatly eased the situation, the increasing demand from Europe for American food supplies and the sudden development of an abnormal trade in articles needed by the huge armies now in the field aiding to that end.

No accurate figures on the contracts of the latter character are obtainable, but orders for horses, mules, army clothing, harness and the like have flooded factories and stockmen in some districts. It is said that, including ammunition orders, this business reaches the huge total of more than $200,000,000. In several lines factories are straining to highest capacity to meet the demand.

Other factors that have aided in clearing up the situation are the opening of the federal reserve bank system, which business experts look upon as the backbone of the country's resources; the opening of the Panama Canal, which has already increased freight traffic to the west coast of South America, and the entry of more than eighty foreign built ships into American registry, under the emergency act passed by the last session of Congress.

Of the shipping situation, officials report that there is a growing scarcity of carriers for American export commerce, because of the rapid increase in the bulk of that traffic. Freight rates have risen remarkably and it is said that shipping companies are now selecting their cargoes with greatest care, avoiding articles of even a semi-contraband nature. Huge shipments of grain are awaiting transportation at many ports.

Reorganization of Yellow Pine Association

Readers of the Canada Lumberman will recall that a few months ago the Yellow Pine Manufacturers' Association of the United States met with a serious blow in the form of a legal decision in connection with the case of the State of Missouri against the Association. This decision prohibited manufacturers of yellow pine in the States of Missouri from affiliating in any way with the present Yellow Pine Manufacturers' Association.

It is interesting to learn now that the Association does not intend to permit the industry to remain in the chaotic condition that would follow the abandonment of all organization. A meeting will be held in New Orleans, La., on December 8th at which a proposal will be made for the formation of a new organization, whose function will be chiefly to handle grades and inspection. Just what will be done with reference to the important and very efficient departments of the Yellow Pine Manufacturers' Association, as at present constituted, is rather uncertain.

A National Bureau for Lumber Use

An open letter to the lumber industry of the United States, written by one of the most able of retail association secretaries—Adolph Pfund, of the Wisconsin Retail Lumber Dealers' Association, has been widely published in United States lumber journals. This letter urges the need of a national organization to combat inroads on lumber use by substitute building materials. It is an old problem presented in a new way. Mr. Pfund's plan has features that merit the serious consideration of every manufacturer, wholesaler and retailer. First he would disseminate information concerning the proper uses of woods. He would have this handled through a central bureau of national working scope, which would carefully avoid promoting the use of one word as against another. Then he would encourage the development of fire-retarding paints. Following that he would have a system of information concerning wood construction, readily available for use in any city, town or hamlet where ordinances may be introduced, limiting the use of wood. And last but not least, the Pfund plan calls for a uniform building code, for cities of all classes, wherein wood could be presented on the basis of its scientific merit and not hampered by so-called "safety first" prejudice.

Value of Fire Wind Forecasts

On the Pacific slope in the country west of the Rockies the dangerous winds which, during the summer, are likely to cause widespread and destructive fires, commonly result from high pressure areas in Northern British Columbia, advancing southward towards Washington and Montana. Passing wholly over the interior, such a wind has but a small moisture content, and consequently is very drying. The value to forest protective organizations of being informed about such winds before they arrive is obvious. Co-operation with the government weather bureau to get forecasts of such winds was initiated in the United States by the Western Forestry and Conservation Associaion, of which Mr. E. T. Allen, Portland, is forester.

This co-operation work has been extended until now it includes both the Canadian and United States weather bureaus; while the fire wind forecasts are daily received and used through the fire season by the British Columbia forest service in Canada, and, in the Pacific states by the United States forest service, the various state forest services, and the many private forest fire protecion associaions, of which the Western Forestry and Conservation Asosciation is the central body.

The system has proved of considerable value to the British Columbia forest service this summer, but is at present of greater value to the protective organizations in the States, because there the much greater number of weather stations enables the forecasts to be made more definitely and accurately. With the opening of Northern British Columbia, now taking place by two railroads, such as the G. T. P., P. G. E., etc., many more weather stations will be established.

Interesting Redwood Exhibit at New York

An interesting exhibit of redwood has just been completed and installed at the Country Life Permanent Exposition in the Grand Central Terminal, New York City, N.Y. The A. Sherman Lumber Company, of the Grand Central Terminal, have full charge of this exhibit, through Mr. Geo. F. Gray, their resident manager. The exhibit was made possible through the efforts of Mr. Gray who realized that, in order to put this beautiful and useful wood before the eastern home builders and architects, an exhibit of this nature would be most beneficial. All who are interested in lumber and its use are invited to visit the exhibit and thus secure a good first-hand knowledge of redwood's adaptability and beauty. At an early date, a special day will be set aside at the exposition for redwood when a concert, lecture and moving picture exhibit will be given, the latter showing the operations of the Redwood Manufacturers Company, both at their plant and in the forest.

Sawing Frozen Timbers—Hammering Saws

Frosted steel is always brittle and a saw should never be used until the frost is taken out of the plate. This can be done by prying over the end of the carriage with a piece of board, holding the end firmly against and moving it along the saw. The friction will, in a few minutes, warm the saw and take out the frost. This will guard against the saw's cracking or breaking from frost being in the plate. In frozen timber run the saw as close as possible; that is, run as narrow a set of swage as will clear the plate and prevent heating. As frozen timber cuts much cleaner, less set is required. Do not have the set or swage extend as far into the body of tooth as in summer sawing; the point being narrower, requires less depth to support the corner. Keep good, sharp corners; file the teeth perfectly square across, line the saw nearly straight with the carriage, and frozen timber can be sawed as easily as any kind.

In sawing frozen timber some sawyers give their saw a little more lead, thinking it will aid in slabbing a log. This is a mistake, for the reason that if a saw is lined into a log, after the first or second cut or after the frozen cap is taken off, it will have a tendency to run into the log and make the lumber thin at the rear end of the cut. To prevent this the saw must be guided a little with the guide pins, and it will then run out in the first cut worse than before. It will be a trifle full between the rim and the centre and will heat at this point, causing it to tremble, flutter and work badly.

As to large circular saws cracking and breaking over the collar line, I claim saws never break in this manner when running straight, but invariably when "laying over" or crowding out of the log. To have a saw run perfectly true it is absolutely necessary that collars and stem of mandrel be true and well fitted, as any imperfections in these may lead to no end of truoble.

To guard against a saw breaking over collar line, great care should be taken to have it hang perfectly true on mandrel. To ascertain if the collars are defective, place the saw on the mandrel and tighten up the collars by hand. Test the saw with a straightedge, and, if found correct, tighten up the collar with a wrench, and test again with a straightedge to see if the position of the blade has been altered. If the change is noticed it is safe to assume that the saw is true and that the trouble lies in the collars, and they require truing up before satisfactory results can be obtained.

For large saws I prefer a collar that has a perfect bearing on the outer rim of at least ¾-in. (in a 6-in. collar), the other part being chambered out so that it will not come in contact with center of saw. For a collar larger than 6-in. this rim should be proportionately greater.

If the collars have become worn at the outer edge, so that when tightened with a wrench the saw will be full or convex on the log side, it will heat at the centre and become more convex, causing it to lay over from the log. The arbor should be so lined that the saw will lead into the log just enough to clear the centre in good shape, so that it will not rub against the log and heat the centre. If it heats and becomes expanded at this point it will dish and run either in or out of the log (usually out), causing the same kind of trouble as referred to above.

Another cause of saws cracking over the collar in this manner is that the saw, when adjusted for a certain (high) speed, is usually dishing when not in motion, but when running at the speed for which it is made is perfectly straight. If the speed be reduced while in the cut, the saw will become dished for want of necessary speed to straighten it out. In a case where it heats at centre, it will run either in or out of the log, forming a wedge between the saw and headblocks, eventually cracking or breaking the saw at or near the collar line by forcing it over this rigid point. Hence the importance of maintaining a uniform speed and having the tension adapted to it.

As stated before, large saws for a high-speed mill are, when properly adjusted, dishing when not in motion and great care should be taken to see that they are straight when running at their normal speed. In other words, they should dish or drop through as much one way as the other. To see that a saw is right in this respect, lay it on an anvil or board, hold a straightedge across saw at right angles with the part that rests on the board and the opposite edge that is being raised to allow the saw to drop through at the centre, and take the measurement of the amount it drops through. Then turn saw over and repeat the operation, noting if it drops or dishes alike on both sides. If it does, it is correct.

In mills where there is trouble from saws cracking over the collar, the saw should be tested to see that it hangs perfectly true and flat on the long side. This can be done by holding a 24-in. to 30-in. straightedge lightly on face or log side of saw in motion. If it is found to be correct in this respect, the centre should be carefully examined to see that it does not heat above a normal degree. If it heats quite a little at the centre the cause should be located and corrected; it is usually caused by a hot arbor. Where this is the case the arbor should be made to run cool, but where it is impossible to do so, I would recommend that the tension of saw be readjusted so as to leave it a little stiffer toward the centre. This will offset the tension produced by the heat of the arbor. This same adjustment of tension is advisable where there is not sufficient power to maintain a uniform speed when the saw is in a heavy cut. If saw is left a little stiffer for a distance of about 10 to 12-in. from the centre, the tendency will be to prevent it from laying over and crowding out, should there be a reduction in the speed.

Suppose we have a saw that has just come off the mandrel, has been doing heavy work and is dished. Take the long straightedge, lay it over saw and find out where the dish lies. Put saw on the anvil, with dish side up and begin hammering on high side. This saw has undoubtedly lost its tension (or it would not be dished) and must be brought back to its normal centre. Remember to do as much work on the one side of the saw as on the other, being careful to get one hammer blow as near over the other as possible. Begin striking in next the eye, working towards the rim. If saw has been blistered, or is in any way out of normal condition, work around this spot and do not touch it until you have finished the other part of the saw.

Now suppose that you have gone over the saw once, treating both sides alike. Hang it on the hook at the side of the bench, take the long straightedge and see what effect your blows have had on the plate. Next, take the short straightedge, roll the saw around on the hook and test for lumps. This should be with about a 16-in. straightedge at first, using a shorter one afterwards. Mark high lumps with a cross, the longer lumps with a wavy mark. Put saw back on the anvil and strike the lumps with the round-face hammer. The lumps marked with the wavy mark are sometimes knocked down with peen end of the hammer, but in my experience I have not found this practical; in nearly every case I get better results by using the round-face hammer.

After you have knocked the lumps down thoroughly, treating both sides of saw alike, put it on the floor, take the long straightedge, lean the saw a little either way from you, and see what effect the hammer blows have had on the tension. Put saw again on the bench, placing your arm under it and lifting up, holding it on the forearm as far as the elbow. Raise it up and down, drawing the straightedge back and forth over saw, turning it either way clear around the saw, making a mark at the place you started from. This will show the effect the hammer blows have had on the tension. If the body of saw is loosened up properly it should now drop away from the long straightedge on either side, but will show a little more crown or dish on one side than it does on the other. The saw must be dished each way for either a right or left-hand mill, and particular notice should be taken to find the mark "Log Side," before starting in to hammer.

Now suppose that you have worked all the lumps down and got both sides of the saw as near alike as possible but have probably got more tension than you want. To reduce the tension, place saw again on the bench, and strike the first blow near the roots of teeth. Make a mark where you put the first hammer blows and strike light blows clear around the saw, we will say about 1-in. apart. Here you will see where the effect of the wrist-and-elbow motion comes in. If you have practiced this thoroughly you will be able to stiffen the saw very easily, but be careful not to take out too much tension; the tension must fit the speed of the mill.

Do not start to hammer a saw until you have taken the speed of the arbor with an indicator. This will give you an idea of about how much tension to take out or leave in the saw. After you have gone around the rim and taken out as much tension as you think necessary, place saw again on the floor and test it, rolling it from you with the light shining against the straightedge. If you have not taken out enough tension or, more plainly speaking, if saw is not stiff enough, place it again on the bench, make another mark, start your first hammer blow about 1-in. in toward the eye of the saw, and go around it as before, taking care not to strike too heavy blows.

Having completed this operation, stand the saw again on the floor, place your left hand on top of saw and with the right hand take hold of the eye of saw and try to pull it through. You can do this if your saw is open enough. If you cannot do it this way, put both hands on top of saw and place your knee against the eye, giving a strong pull. If the saw is very stiff for slow motion; for fast motion, it should be quite limber in the eye.

The saw is now ready to go on the mandrel and should be tested to see if the tension is correct for the speed. A good way is to stand the saw up beside a perpendicular post, a studding in the filing room will do. Set saw straight up, then lean over it against the studding so that the bottom will come about 12-in. from the teeth on the floor. Drop the top of saw against the studding and see that it drops through the eye. Make a mark on the floor where the saw stood, roll it away and reverse it, putting the other side next to the post. If it drops through the same as it did on the opposite side, the tension is true. This method can only be used on high-speed saws, as a stiff saw will drop through the eye of its own accord.

The next move is to put the saw on the arbor and see that it runs true. Let it hang true on the arbor, and set the outside guide so that you can just see daylight between the saw and guide. Put on your log and proceed with the first cut. If the saw runs true and does not "snake" it will stand up to its work, and it is evident then that you have your tension right. But if it does "snake" and the

top of the saw lops over either way, it has too much tension, some of which must be taken out.

To take out more tension do not use the same lines as before, but go back to where you first started, near the roots of the teeth, and go around the saw as before. There are several things to look at in doing this: Be sure that saw is dished properly and be sure that you have taken down all the lumps. After you have examined the saw it is best to take the straightedge and tension gauge and go over it, to see that it is perfectly level. You can do this by using straightedges of different lengths. I have used straightedges as short as 4-in. on 6-gauge, 60-in. circular saws, and found them to be practical.—E. C. H., in The Wood-Worker.

Timber Stand on U.S. National Forests

The district forester, United States service, recently has completed an estimate, by species, of the timber on the twenty-eight national forests in Alaska, Oregon and Washington. Of the total stand of 292,594,000,000 board feet, Douglas fir ranks first with 95,756,000,000 feet, and is found on all but three of the national forests—the two in Alaska and the Fremont in south-central Oregon. On account of the abundance of western hemlock timber on the two national forests in Alaska, this species ranks second with 72,851,000,000 feet. Yellow pine holds third place, with 30,363,000,000 feet, and is found chiefly east of the summit of the Cascade mountains in Oregon and Washington. These three species constitute 68 per cent. of the total stand under the jurisdiction of the forest service in these three states. This estimate which is only approximate and will be improved upon as opportunity offers, segregates the remaining amount of 32 per cent. into twenty other species, some of which, like redwood, are found on only one or a very few of the national forests in this region.

The Efficient Stock Sawyer

There is no part of the wood-working plant where brains and the right order of efficiency count for more than at the stock sawyer's bench. There is little need to dwell on the importance of the stock sawyer, for on him depends the quality of the material entering into work and also the quantity of saving or wastefulness in the utilization of lumber. The point that needs dwelling on, and an interchange of ideas and views, is that of how to get the best order of efficiency out of this work.

It is comparatively easy to determine points of efficiency in the handling of material through various machines in the mill or factory, because it simply involves certain operations on specified quantities of timber of certain shape and size. This makes it a simple matter to take stock of and eliminate lost motions and wasted energy. When it comes to the stock sawyer's bench, however, more complications arise than the average efficiency expert ever dreamed of in his philosophy of eliminating lost motions and wasted energy.

The efficiency expert conceives systems and detailed records of work done and time required, as among the first essentials of attaining results. There are things which are simple enough in the operation of many machines that are serious handicaps and stumbling blocks to the right order of efficiency at the stock sawyer's bench. Indeed, often to get the best order of efficiency one must break through all the red tape of system, and do the work in such a manner that it is almost impossible to keep a time check or record of how long it takes to do this or that. This is because the right order of efficiency often calls on the stock sawyer to do work on several different orders or items at the same time; that is, to cut one board into parts that will apply on a number of different orders.

To understand more clearly the work of the stock sawyer let us take specific instances, for the work varies in different institutions and with different materials. Let us consider, for example, a stock sawyer in a jobbing planing mill. Here we find the work considerably different from that of the furniture factory, because often the stock sawyer has nothing in hand but a single order to fill. He selects from the lumber yard material that will fill this with the least possible waste, and what waste he has is set aside to be utilized some time in the future on an order that it will fit.

Suppose the stock sawyer has an order for window and door casing, say part of the interior trim on some job. Let us say, for example, the dimensions include a finished size of 4/-in. x 6-ft. 5-in. for door casing and 4½-in. x 5-ft. 4-in. for window casing. If the order calls for yellow pine this item is very simple and the best order of efficiency can often be had by not taking it to the cross-cut saw at all in the beginning. Reference to the length will show that 12-ft. stuff can be used for one length of door casing and one of window, and 16-ft. stock for three lengths in windows.

If the yellow pine has been properly sorted for widths when it is piled in the yard or storage shed, the best order of procedure is to get enough 6-in. strips of the right lengths to make this order. If they vary somewhat in width it will be advisable to take them to the rip saw and rip them to uniform width. It is better for the planer man and makes for greater efficiency there, to let them go to the planer full length and not do the cross-cutting at the swing saw, but let them be cut to specific lengths afterward. If it is a standard or frequently used pattern no harm is done if a few extra strips are included in the round, because these can be stored away and utilized on the next order.

All that is a simple and easy operation and can easily be checked up. But suppose the order calls for oak? Then an entirely different order of procedure is called for. In the first place, oak and other hardwoods are not bought and sorted to widths and lengths like pine. In the next place, it is not the common practice to buy comparatively clear strips and boards in oak, that can be worked up without much loss. These are difficult to obtain and cost too much money. The usual practice is to buy oak board of random widths and lengths, varying in grade from No. 2 common to select, and possibly a few clear strips and boards for special purposes. Quite commonly an order of this kind, gotten out of oak, would come from a pile of No. 1 common oak boards varying in width and length.

The order for the casing alone would call for boards substantially 6-in. wide in the rough. Maybe these will be available from the lumber yard, but the chances are that they will be so mixed in with other widths that it will take too much time and work to pick them out for widths and lengths. Some sorting of lumber may be practical, but generally the best and simplest proposition would be to take the mixed run of lengths and widths in boards that comes nearest to fitting the order. Then, when it comes to working these up, get all the other items on the order for this job of interior trim, and any other jobs that may be in the mill calling for oak. The idea in assembling a lot of items or orders in this way is so that the lumber as it comes may be worked up economically. Incidentally, that is why all the red tape of systems, and efficiency ideas of keeping a time check on work, must be broken through to get the best results.

Along with the call for oak casing there may be window heads, stools, base and perhaps a number of special items. By checking over these and noting their widths and lengths the stock sawyer of parts—that is brainy parts—can judge as each board comes on his swing saw bench what item or items it will make to the best advantage. He will find not only variety of widths and lengths in the lumber itself, but there will be knots to cut out, and certain clear spaces between knots which may determine by their lengths what they are best fitted for. Again, a wide board may have a shake or some other defect interfering with its width, and so it goes. Each board must be measured by the eye of the stock sawyer as it comes on his bench, and cut and trimmed to fit such item or items as will, in his judgment, utilize the most of the lumber to the best advantage.

This makes it necessary to cut a piece on this item and a piece on that order, and so mix up his cutting to utilize the lumber properly, that it is not practical to keep a check on either the time or material used for getting out any particular item. What he is after is results, not records, and the only way that he can get the right kind of results is to keep his mind free from time checks and timber records and concentrate it on the problem of getting the most good material of the right size out of the lumber, with the smallest volume of ultimate waste.

In the matter of waste, the more variety that he can handle in orders, without becoming confused, the better are his chances to reduce the waste pile and utilize all of the good part of the lumber brought in. Some waste will result that will have to be piled aside against the time when something will come along that it can be utilized for. This waste, however, will be infinitely small when he is getting out a number of articles varying in dimensions, as compared to the getting out of one particular item or order at a time and setting aside stock which will not work into it.

In working oak it will generally be found advisable to cut such stock as has been under discussion to individual lengths before it goes to the planer. Especially should this be done if it is necessary to eliminate knots and defects, because oak knots do more harm to planers than the saving in time and energy that would result from handling long, whole boards would amount to. It is well to bear in mind, however, that if there is edging or ripping to be done on the boards it is often best to do this before cross-cutting, so as to have the long strips for working into moulding of various kinds that will be used in putting up inferior hardwood trim.

Efficiency at the stock sawyer's bench means settling down to systematic study and work that differs materially from that conceived by the average efficiency expert. Insttad of concentrating on one item at a time, the efficient stock sawyer must train himself in the systematic handling of a multiplicity of items, to the end that he may reduce the boards to available stock at one handling, and thus eliminate the waste incident to piling boards and parts of boards aside and handling them again to get something out of them.—C. F. J. in The Wood-Worker.

Pulpwood operations along the line of the Temiskaming & Northern Ontario Railway have been much heavier than usual this year. Traffic officials predict that the tonnage of spruce hauled to the mills will be 30 per cent. in excess of that of last year. This means that probably 120,000 cords of pulpwood will be handled by the railway.

The Cost of Lumber Production

An Analysis Made From Actual Experience

[Editor's note:—The similarity in logging and manufacturing conditions in Wisconsin and Northern Michigan and in many parts of Eastern Canada, as well as the fact that the products of the mills in these States are important factors in Ontario markets, will make the following article on the cost of lumber of much interest to Canadian lumbermen].

At a recent meeting of the Northern Hemlock and Hardwood Manufacturers' Association in Milwaukee, President R. D. Goodman, of Goodman, Wis., presented some statistics compiled by him from his own operations and from information received from other members of the association as to the cost of lumbering.

He introduced his remarks with the following:

Lumber is the only great industry still completely at the mercy of the law of Supply and Demand. While fluctuation in price between certain limits is necessary for the regulation both of production and of consumption, in other industries well established costs of production almost wholly determine the selling price. Very slight price changes are sufficient when uniform systems or principles of accounting and standardized methods of figuring costs enable the manufacturer to gauge his production by the demand for his product and thus maintain stable values instead of wasting his energy and tying up his capital in producing a commodity for which there is no demand. He can devote his attention to bettering the quality and developing the uses of this commodity and advertising and marketing it and thus to a great extent he is able to create the demand for his product.

This is the first advantage of Uniform Cost Accounting—that it furnishes the information required for the maintenance of a stable or but slightly fluctuating price level.

The second advantage is that the definite knowledge of costs leads inevitably to economies and efficiencies in production. In submitting a tentative table of costs producing various kinds of lumber in Wisconsin and Northern Michigan I feel that the first criticism the average lumberman will make is that the figures are higher than they should be. The costs presented are not higher, however, than actual cost of some of the large and well managed mills in the state. The statement was presented at the October meeting of the Northern Hemlock & Hardwood Manufacturers' Association, by the writer, and neither at the meeting nor after the meeting was a single member in a position to state that his actual costs were any less.

Cost of Lumber

A basis of uniform cost sheet for Wisconsin and Upper Michigan:

LUMBER—COST SHEET

Logs	Ash	Basl-wood	Birch	Maple	Soft Elm	Oak	Hem-lock

EXPLANATION—

Stumpage

Stumpage Expense

Actual Logging

- Sawing
- Swamping
- Skidding
- Loading
- Loading
- Supplies and Repairs

Roads and Spurs—Proportionate cost of Camp Buildings, Roads and Railroad Branches

Log Haul or Logging Railroad

- Sleigh Haul
- Railroad Maintenance
- Railroad Operation

Freight—Railroad Freight when shipped on line of Common Carrier—This amount is an arbitrary. Mills located in their own timber have other expenses which offset this item.

Overhead—Logging Supt.—Office Expense, Workmen's Compensation, Fire Insurance, Depreciation of horses and equipment, Foreman's scaler and clerk.

Mill to Pile

- Mill Labor
- Supplies and Repairs—Mill and Yard
- Oil and Waste
- Power
- Superintendent
- Sorting and Piling

Plant Overhead—Depreciation to Mill—Insurance on mill and on lumber, taxes on same, liability insurance, office expense, extraordinary operating expenses.

Shipping—Cost varies with manner of selling lumber, 25c. more when shipping on grades.

Sales Expense (must include commissions)

General Expense

Discount and Deductions

Interest—6 per cent. on estimate of $150.00 of investment in Fixed and Working Capital for every M. feet manufactured per annum.

Stumpage Cut.—By stumpage is meant the amount per thousand credited to timber account during a given period for each thousand feet of logs cut. In the past there was not much distinction made between the cost of stumpage cut and the cost of standing timber, as it was figured that the growth of the timber and its increasing value took care of the carrying charges. But in Northern Wisconsin and Upper Michigan timberalnds are not held in unbroken groups, but in forty-acre tracts and these forties give the timber plot the appearance of a checker-board. With various timber owners cutting in the same general tract and with settlers taking up the cut-over land any systematic forestry is made impossible. In most of the hardwood forests the deterioration of timber from old age offsets the growth of the younger trees and the loss through fire in many cases becomes an actual carrying charge. Through various kinds of competition the ever increasing use of substitutes and the ever widening field of competition in the South and on the Pacific Coast has resulted in a stationary range of timber values for the past four or five years and gives no assurance of increasing timber values in the years to come, so that the stumpage cut each year must bear not only the timber cost, but the carrying cost of the entire group, so that the cost of sumpage may really be figured at about twice the present value of the standing timber.

Stumpage Expense: The only portion of the timber in a given working tract, which produces income over a given period is that portion of it which is cut during that period so that the taxes levied on the timber must be carried by the stumpage—the cost of fire protection; cruiser and other supervising costs of the entire timber tract is divided up on the actual stumpage cut and placed on the various kinds of wood in proportion to their relative value.

Actual Logging: This item consists of sawing, swamping, skidding, loading, supplies and repairs. It will be noticed that the cost of actual logging is much greater for hardwoods than for softer woods, especially hemlock. It also varies with the average size of the logs, those kinds of wood which run to larger trees produce more logs per acre and decrease the cost of logging. This accounts for the variations in this item through the different woods.

Roads and Spurs: This item covers the proportionate cost of camp buildings, roads and railroad branches spread over the estimated thousand of feet they serve. Their cost varies with the stand of timber and the character of the country. The average used is for Wisconsin and Upper Michigan—it would not hold good for Lower Michigan.

Log Haul or Logging Railroad: This item represents the cost of transporting the log from the point where it was loaded in the woods, either to the mill or to the cars of a common carrier. If the operation includes a logging railroad, the operation of this road and the maintenance of the main line is covered by this item.

Freight: The cost sheet we are considering is a uniform cost sheet. FREIGHT is one of the most variable of items. Some operators have to pay more than the amounts I have used and some less, and those operators who have built their mills in the woods or on their own logging railroad escape this item altogether, but in escaping it meet with other forms of expense, one of which is the necessarily higher rates of wages and a larger investment in taking care of employees.

Overhead: This item represents the items of general expense in the logging department which are not directly affected by the number of thousand feet cut—such as salaries of logging superintendent, fore-

man, scaler and clerk; proportion of the office expense; cost of workman's compensation; fire insurance, fire patrol and fire loss. The items of fire patrol and fire loss vary greatly throughout the year, but should be prorated in figuring a uniform cost sheet. Under this heading also are included the depreciation not made up by ordinary repair and replacement, such as the obsolescence of steam machinery and the depreciation of horses, this latter item should be figured around 20 per cent. per annum on the total value of the horses in the logging department. Under this item also is included the average cost per thousand of contingencies of loss inherent in logging operations—forest fires, wrecks, the extraordinary cost of cleaning up odd corners or isolated groups of timber; depreciation in hardwood logs occuring between the time they are cut and the time they are sawed. Every lumberman can add from his own experience to this list.

Cost of Logs at Mill: This item represents the total cost of logs delivered on cars at mill per M. feet Scribner Scale.

Over-Run: Scaling of logs is not an exact science. The Scribner Scale itself is an approximation, but using this scale and sawing a fair run of logs to fair advantage an over-run of 20 to 30 per cent. in No. 3 and Better lumber is obtainable. By dividing the cost of the logs by 130 per cent. we obtain the cost of logs per M. feet of lumber produced when the over-run is 30 per cent.

Logs to Mill: This item is explained in the previous paragraph. Up to this point in the cost sheet I have been figuring costs per M. feet log scale. We now pass to costs per M. feet of lumber produced.

Mill to Pile: This item is what is generally called "Cost of Manufacture." It represents the following specific items:

Boom Expense—Cost of unloading logs, sorting and handling in mill pond and maintenance of mill pond.
Mill Labor.
Supplies and Repairs—Mill and Yard.
Oil and Waste.
Power.
Superintendence.
Sorting and Piling.

Plant Overhead: This item varies greatly with the size and character of the operation, the amount of standing timber and the conservativeness of the management. In my operation it is more than $1.50 per M. It consists of the following items of expense: Depreciation to Mill (this is depreciation not covered by repairs and renewals and should be sufficient to take care of the obsolescence of machinery and the rate which will reduce it to junk value when the timber tributary to it has been cut: Fire insurance on mill and lumber; Taxes on same; Liability Insurance; Office Expense; Extraordinary Operating Expenses.

Shipping: Cost varies with the manner of selling lumber; 25 cents more should be added to this item when lumber is shipped on grades.

Sales Expense: Sales Manager and Sales Office Expense; Travelling Salesmen, Commissions and Advertising.

General Expense: Salaries General Officers; Association Dues; Legal Expenses, Donations, Bad Accounts.

Discount and Deductions: These are within one or two cents of the actual figures for three Wisconsin mills over a period of five years. Under this heading is included the usual 2 per cent. cash discount, when taken; interest at one-half of one per cent. per month on overdue accounts; allowances made for alleged shortages and off grade lumber cost of re-inspection, etc. While this item is not properly chargeable to the cost of lumber, for convenience it is included in our uniform cost sheet, so that our total costs will be directly comparable to the gross price asked for lumber and not the strictly net returns on same.

Interest: 6 per cent. on estimate of $150.00 of investment is fixed and working capital for every M. feet manufactured per annum. This estimate is made on the basis of mill cutting twenty million feet per annum with a fixed capital of $150,000 and a working capital consisting of accounts and lumber in pile of $150,000. These figures fall considerably below the average investment under such circumstances and do not include timber or timber land. It will be noted that there is, in this cost sheet, no mention made of planing mill or the cost of dressing lumber. In the territory to which this cost sheet applies it is not the custom to count dressing as a part of the cost of manufacture, but as extras for which a definite scale of prices is made in addition to the cost of the rough lumber. The utilization of by-products is not figured, except in the determination of the stumpage cost of hemlock. It is figured that the average stumpage cost of hemlock is $3, and $1 has been deducted from this to cover the value of bark and lath produced.

If the reader, who I suppose to be a manufacturer of hardwood, will examine the stumpage prices of the various woods and bearing in mind the distinction made between the cost of stumpage cut and the value of standing timber, and if he will then correct this item to suit his particular locality and his particular tract of timber, and if he will correct his cost of logs at mill accordingly; if he will then take his own average per cent. of overrun and divide the cost of logs at mill by 100 per cent., plus his over-run, he will obtain a cost of logs at mill per M. feet of lumber which, added to the cost items taken from the cost sheet, will give him what might be called the standardized cost of lumber in his operation. It may be that he will have something to his credit in the item of logging freight—if he does it may be that this advantage will disappear when he makes his price f.o.b. Milwaukee or Chicago, and some other operator who may figure that he is at the disadvantage on the log freight may get this back in having a better rate to market.

The costs given in the cost sheet are not minimum—they do not represent the highest efficiencies in labor cost under temporary periods of surplus labor when wages have been reduced, but they are intended to represent the normal average cost in Wisconsin and Upper Michigan with prices of supplies and labor about on the average of the year 1913, nor is it to be assumed that reduced wages in conditions like the present will greatly alter the costs I have computed, for as an offest to a slightly lower wage scale are higher prices in many of the supplies; the added expense of carrying heavy stocks and a general slackening of the cut.

The next step in the problem of adjusting selling price to cost is to determine an average yield of grades in each of the woods used throughout this territory. Through the assistance of Mr. R. S. Kellogg, secretary of the Northern Hemlock and Hardwood Manufacturers' Association, data on this subject has been collected from over fifty of the mills in Wisconsin—the average result has been used in preparing the following determination of prices. The prices obtained by this method do not differ greatly from the actual prices obtaining during the first half of the year 1913, with the exception perhaps of maple.

In the following tables the per cent. of grade is figured on the entire cut of the log.

Adjustment of Prices to Cost

F. O. B. Chicago is assumed to be a 10-cent rate from mill.

In comparing these figures with prices of any one operation it must be borne in mind that the most variable factor in the whole dis-

cussion is the quality of the timber. The hardwoods vary in relative proportion in character and in the uses for which they are best fitted—in different parts of the territory covered. This is of itself an interesting study and this is true to a lesser degree of hemlock. These variations in quality affect costs and values, but the figures I have presented represent a fair average in each kind of wood.

If lumber is being sold quite generally at prices averaging from $1 to $3 below these costs, as reported sales would indicate, it seems to me that every manufacturer of lumber in Wisconsin and Upper Michigan should set his bookkeeper and sales manager figuring on the problem.

How much can the costs be cut by greater efficiency in the various departments? How can the production be curtailed? How can the demand for lumber be developed?

Causes of Trouble with Edger Saws

One time we shipped six 20-in. solid saws, 9-gage, with thirty teeth. By the time the bill was due we got a report that the saws were not satisfactory and that they were subject to our order unless we made hem run right. We sent a man to look them over, and cautioned him about seeing that the rollers and everything were in line. He found the saws alright and properly fitted, but the edger made crooked lumber, which was not the fault of the saws. But as everything, down to separation of man and wife, is put on a saw, we had to defend ourselves as best we could.

On going to the mill I found, as they stated, the edger was making crooked boards, while some were straight. I watched that machine for a half day before I could detect the trouble—and when I found what I thought was the trouble, it was not. The upper rollers were divided and were driven by a chain. The centre boxes were worn and allowed one end to run a little ahead of the other, but when wide boards were run, so that both rollers took it, the lumber was straight. At noon I had liners removed and rollers set perfectly parallel with the lower rollers, and I was sure of straight lumber, but there was the same trouble.

I inquired of the edgerman how the old saws ran, and he said they ran much better. I examined them, found them of a lighter gage, in good shape, but worn too small. The superintendent said the old saws did alright, and threatened to take ours off if I could not make them go, as the machine was O. K., and it looked like his contention was good.

When night came I carefully examined the rollers; they were in line with the mandrel. I noticed that the front feed roll was of the sectional kind, built of spurs or teeth. These teeth were badly worn; besides, the roller calipered ¼-in. smaller where most of the lumber was fed. This settled it with me. I explained it to the superintendent, but to no avail. I told him to change the spurs, the rollers having a nut on one end for the purpose of removing the worn ones and placing them at either end, or distributing them so as to make the roller same size where the most work was done.

He insisted on taking our saws off. I told him alright, but I would stay and see if the old saws made straight lumber. They did not, but, strange to say, they did a little better than the new saws. They were 10-gage, 36-tooth, spring-set, with a nice tooth on them. Our saws were 30-tooth, with a full-swaged tooth. I reasoned it out that the spring-set tooth had less resistance, so the lumber went a little better, but not satisfactorily.

Up to the time the new saws were ordered there was no complaint, though occasionally crooked boards came through. I proposed the next night to change the spurs on the roller, agreeing to do this on my own time and to pay the helper, with the understanding if the saws made one crooked board in the next half day. I was the loser; otherwise my time and expenses were to be paid, and the saws paid for, too. There was the whole trouble. Not a crooked board went through that machine. The superintendent was converted. He not only paid for the edger saws, my time and expenses, but gave me an order for two large circulars.

My advice to edgermen is to look out for worn front rollers. They not only get smaller where the most work is done, but they get dull, allowing the larger or sharper part to pull the board around.

In another case we almost lost out, when the fault was in no way in the saws. All operators know that smaller saws of same gage run better. In this instance the saws were worn down to 14-in. A change in management demanded more lumber, and it was decided to make all the 3 and 4-in. stuff from rough logs on the edger. The new company was to furnish lights for the town, and as this necessitated more fuel, a little waste from the edger was thus consumed.

We shipped them eight 24-in. solid saws, 7-gage, heavy enough for any work. Saws had thirty-six teeth and were spring-set. The edger was an old, heavy, rigid machine, and saws shifted from a yoke, and not by a guide. The collars were badly worn, as well as the babbitt in the yokes. The new saws ran very well on certain stuff, and again there would be ½-in. to 1-in. difference in the lumber while edging thin stuff.

We sent a man over to locate the trouble, he being a good mechanic and a close observer. He found that when making 4 x 4 or 3 x 4 there would be so much spreading of the saws as to ruin half the lumber. The foreman, as usual, put it on the saws, stating the old saws did alright. He gave our man the noon hour to fix the saws, saying if they did not run he could take them back, as he had prices and "guarantees" from others.

The loose collars and yokes showed that when saws were set on 4-in. the backs of two saws could be closed to 3¾, while the front measured 4¼-in. The foreman contended that the saws ought to run straight, and we agreed on that point; but suppose one saw is just "skimming" the side of a cant, would not the saws spread The saws were taken off, found alright, given a little more set, but to no avail. On straight-grain stuff, free from knots, there was no trouble, but, as stated, the scantling and studding were made from the rough, small crooked logs.

At night our man took the saws off, put on the old ones, and the lumber was better. They would not take over 3-in., so the 4 x 4 had to be made on the bad saw, with quite a loss of time. The foreman's argument held good, and when a man contends for his point he doesn't see defects. The company ordered new saws and advised it was returning ours by freight.

I took the next train, with 50-lbs. of high-grade metal in my grip. When I got there our saws, sure enough, were boxed and a 'phone order sent in for a new set of another make. After a straight talk with the foreman I got two 24-in. sticks and drove a finishing nail in the centre of each. I showed him that 7-in. from centre there was a little spread, but asked him how be could expect a saw with ¼-in. wabble or side-play, to not be influenced. These saws should have had guides.

I had my plan arranged to babbit the six yokes that night, knowing that it would be only temporary, as the collars were equally loose on the shaft. The foreman contended that babbitt would not stay; in a few hours it would cut out. He was right—for the kind of metal used, and the way they were babbitted. In the bottom of the yoke was an oil cellar, but in pouring, no attention was paid to this and the cellar was filled with metal.

I burned each yoke clean, protected the oil cellar, put in a wool felt wick (something they had not seen), and, after giving plenty of relief, I replaced our saws. The edgerman, who was my helper, said: "Boss, there's gwine to be fun wid all dem yokes; dey will burn out, or cotch fire." His previous experiences confirmed his belief. Cheap metal had been used, and when the oil chamber was taken care of, there was no resilient waste or wick used to convey the oil to the yoke. The grooves were badly worn, and not true, which was very hard on the metal.

As they were rushed on their 4 x 4 stuff, I told the foreman to send it all to the edger. He tried to down the saws, but to no avail. I saw some 6 x 6 on the board, and asked him to pass along a few 6-in. cants. The edger had a variable feed and took them alright. The foreman was pleased and asked for my bill. I figured it up, got my check, had their good will, and continued to get their future business. The foreman countermanded the other order, though the firm tried to hold them to it. I knew the result of a short delay, so that night's work won.—The Woodworker.

Fassett Company's Mill Running Continuously

In the Ottawa correspondence of the Canada Lumberman of November 15th, a report was published to the effect that the low water in the Ottawa River had caused all the mills, with the exception of the W. C. Edwards & Company's mill, to close down. This was unfortunately an error. The Fassett Lumber Company, Limited, Fassett, P.Q., advise us that they started running their mill on January 1st. It has been operated continuously since that time and the company are in hopes of keeping it running right along.

Does Away with Timber Underweights

The Canadian Pacific Railroad has announced a new regulation relative to the shipping of long-sawn timbers requiring two or more cars, which is a radical departure from the old rules and the rules generally in effect on railroads in the United States. The new rule provides that the weight on long-sawn timbers requiring two or more cars will be on the basis of 3.2 pounds per foot, with a minimum of 33,000 pounds for each car used. This regulation becomes effective December 1st and will apply from British Columbia points routing via the C. P. R. to points in Eastern Canada, namely, Ontario, Quebec, Nova Scotia and New Brunswick. Heretofore, and in the United States, the railroads endeavored to actually weigh all such shipments. The new rule will do away with all underweights that might possibly be obtained on shipments of long timber requiring two or more cars.

Steel Mine Props May be Used in England

A cable from London, Eng., under recent date, says: Apropos of the recent enquiry into the ability of Canada to supply timber props for mines, in which matter no decision has yet been reached by the commissioners who visited Canada and Newfoundland, it is learned that, owing to the continued scarcity, the mine owners are considering the advisability of replacing the timber with steel props. The first cost of steel props would be greater, but it is reported that they would last considerably longer. The Board of Trade states that steel props are already largely used in the United States, where their cost and efficiency have both proved satisfactory.

Death of Mr. Thomas D. Adams

Mr. Thomas D. Adams, one of the best known lumbermen in New Brunswick for many years, died on November 15th at his home in Bathurst, N.B. Mr. Adams has been a prominent Bathurst citizen for many years and was formerly president of the Adams-Burns Company, which was, until a few years ago, one of the largest lumber concerns in the province. Mr. Adams had been in poor health for the last year and the end came suddenly. Mr. Adams was born in Douglastown, N.B., 71 years ago. When a young man, he removed to New York, where he was remarkably successful. He went to Bathurst, N.B., about 20 years ago and took over the business of the St. Lawrence Lumber Company under the name of the Adams-Burns Company.

Vancouver Reports Cross Tie Enquiries

A report from Vancouver, B.C., states that inquiries for cross ties are now being put out by several large railway companies in Britain and quotations for supplies are now being obtained from British Columbia and other parts of Canada. Hemlock lath are another item that will occupy attention of manufacturers at Vancouver. Large quantities of these are used in Europe, but the source of supply has been temporarily shut off. Hemlock is not much used on the Coast, but if the demand keeps up it will soon be able to command a price beyond what it now brings.

Ontario Limit Changes Hands

It is interesting to note that some prominent lumber manufacturers in Ontario still have plenty of faith in the value of standing timber. Several sales have recently been put through by the Ontario Government which brought fairly satisfactory prices and have already been reported in these columns. A private sale, which was recently completed, resulted in the transfer of berth 167 in the district north of Blind River, from the Wells Lumber Company of Menominee, Mich., to Mr. Manley Chew, of Midland, Ont. We understand that the property changed hands at a very respectable price.

New Brunswick Stocks Going to England

One of the most prominent New Brunswick lumber manufacturers in a letter to the Canada Lumberman under date of November 6th, says:—"Most of our sales to the Ontario market have been scantling and boards, but with the high price that is now being paid for deals in the English market, the price of scantling and boards has come up relatively, so that they are now worth more money in England than in Ontario, even at the best prices obtainable last year. . . . It now looks as if everything the east can manufacture will go readily to the English market."

Dixon's Boiler Graphite

The accompanying illustration represents a barrel of Dixon's Boiler Graphite in the form of a mailing card, which the Joseph Dixon Crucible Company of Jersey City, N.J., is using to introduce this product to engineers and others interested in cleaner boilers. The card is printed in two colors and on the inside calls attention to the

fact that for nearly four score and ten years, the company has had at its command, all forms and grades of graphite and therefore has no incentive to use or recommend other than the correct grade of Dixon's Boiler Graphite. D. B. G., they say, will reduce fuel consumption, prevent the hardening of scale, give to the surface of the boilers, a smooth polish, prevent pitting and make the removal of scale easy by a gentle, mechanical action. The reverse fold of the card forms a return card bearing an invitation to write for the Dixon booklet "Graphite For The Boiler."

Toronto Board of Trade New Quarters

Mr. W. P. Gundy, president of the Toronto Board of Trade reports that the Board expects to get into its new quarters on the 19th and 20th floors of the Royal Bank Building, at the corner of King and Yonge Sreets, about December 10th. A great many Toronto lumbermen have already joined the Board and the prospects for organizing an influential lumbermen's section of the Board are very promising. This lumbermen's section will be the outcome of the movement for the organization of a Toronto Lumbermen's Club which was commenced last spring and made good progress.

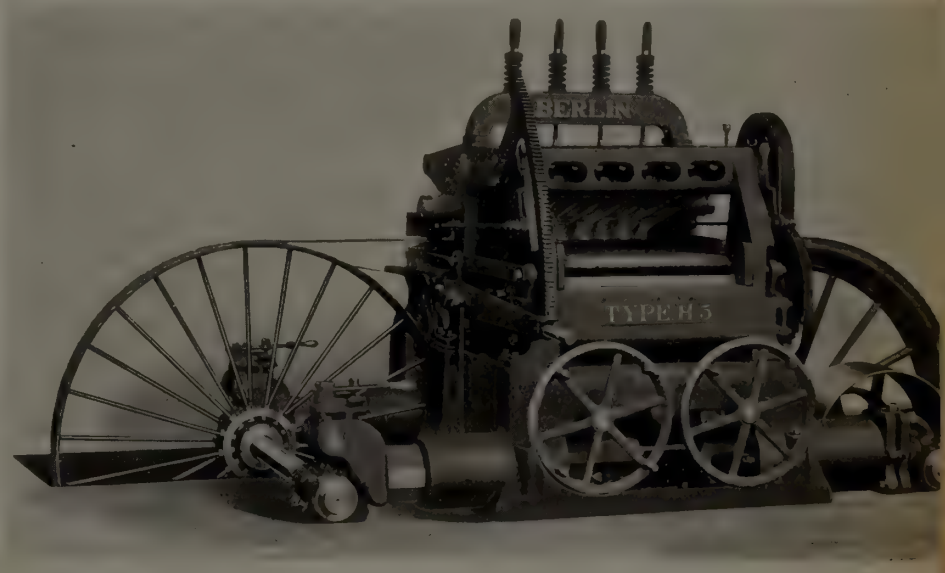
The steamer L. E. Hines, en route from John's Island, Georgian Bay, to Tonawanda, N.Y., with a cargo of white pine lumber, reached Alpena, Mich., on November 13th after one of the worst trips in the experience of the captain. The barge Ashland in tow of the L. E. Hines lost its deck load consisting of 500,000 feet of lumber. The steamer and barge ran into a blinding snowstorm and blizzard which tore away the masts and rigging and swept the deck load of lumber overboard.

Better Utilization Possible With New Slab Resaw

Lumbermen and woodworkers in general will be much interested in the new slab band resaw shown in the accompanying illustration. This is the latest production of the engineering staff of the Berlin Machine Works, Limited, Hamilton, Ont., and represents in its design and construction the experience gained by this concern during its many years as builders of band sawing machinery.

This new unit is designed to assist in the manufacture of lumber, to receive slabs or flitches and convert them into marketable lumber at a low cost. In every detail the resaw is simple in design and operation and sturdily constructed. Realizing the great advantage of a short, stiff saw on a resaw of this type, the designers of the machine have brought the wheels very close together. The saw cuts on the top tangent and maintains a fixed position. The wheels are 64 inches in diameter, and are designed to receive 8-inch blades.

As a design feature the use of an endless traveling bed in a resaw of this type is not a new departure, but the bed of this new resaw differs somewhat from the conventional design inasmuch as it com-



New Horizontal Slab Resaw, made by the Berlin Machine Works, Hamilton Ont.

bines simplicity, strength and light weight. Even under the hardest service, its builders claim, it will show very little wear, as the slats are made of steel and slide on a broad machined table, or way.

The bed is adjustable and may be quickly placed in position for cutting different thicknesses of material. A counter-balanced lever, providing a leverage of 12 to 1, makes this adjustment easy. The extreme maximum position of the bed below the saw is 4½ inches.

The overhead spur-toothed rolls are divided into four separate feeding units, each pivoting independently. The rolls will adjust themselves automatically to uneven surfaces, and where the slabs to be resawed are sufficiently narrow to permit, two or more may be resawed at once, thereby greatly adding to the machine's capacity.

The rolls will rise 8 inches above the saw, and this, together with the 4½ inch adjustment of the bed below the saw, and the 28-inch width of the table, provide ample capacity for handling any slabs the average sawmill will be likely to produce.

The resaw will operate on flitches as well as on slabs. All that it requires of material delivered to it is one sawed surface. Four rates of feed are provided, from 50 to 150 feet per minute.

WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (14 agate lines make one inch.) ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

Wanted-Lumber

Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 7-tf

Lumber Wanted

Hemlock running chiefly 14 ft. and 16 ft. lengths, 1-in. Spruce, Basswood, Birch; also Cedar Posts. Send detailed list giving lowest wholesale prices. Address Box 85, Canada Lumberman, Toronto. 21-24

Wanted

Several car loads of 2-in., 3-in. and 4-in. Birch C. & B., dry, for immediate delivery. Also 1-in. rull basswood. Box 106, Canada Lumberman, Toronto. 23

CRATING

We invite correspondence from manufacturers of spruce and softwood crating stock in Canada and the United States for the New England market. Let us know prices of ½-in. ⅝-in. and ¾-in. stock in first letter; cash business, and plenty of it. Box 91, Canada Lumberman, Toronto. 23

Wanted to Buy

We are in the market for the following good Merchantable Spruce:

100,000 ft. 2-in. x 6-in.
100,000 ft. 2-in. x 8-in.
50,000 ft. 3-in. x 9-in.
50,000 ft. 3-in. x 8-in.
50,000 ft. 2½-in. x 7-in.
25,000 ft. 2½-in. x 6-in.

all 10 ft. and up long. Terms: 75 per cent. cash against B/L. Balance on arrival and inspection. Shipment to be immediately. State price f.o.b. shipping point. Write P. O. Box No. 1595, Montreal.

We can offer such a man an exclusive territory in a well established line. Send full particulars and references in first letter or application will not be considered. Address Box 99, Canada Lumberman, 347 Adelande Street West, Toronto, Ont. 22-23

Business Chances

Timber Limits For Sale

Can be quickly and profitably disposed of by advertising them on this page. This is where buyers of timber property look for opportunities to invest. If your "ad" is here the investor will see it. Canada Lumberman, Toronto, Ont. tf

In the Supreme Court of Ontario

In the Matter of The Winding-Up Act, being Chapter 144 fo the Revised Statutes of Canada and Amending Acts.

And in the Matter of the Dominion Lumber Company, Limited.

Judicial Sale by Public Auction of valuable timber lands, limits and mills situate in the Province of Quebec.

Notice is hereby given that pursuant to the Winding-Up Order made in this matter and bearing date the 9th day of June, 1914, there will be offered for sale with the approbation of Geo. O. Alcorn, Master in Ordinary of the said Court and with the concurrence of the Royal Trust Company, Trustee for bondholders, by Public Auction by Fraser Bros., Auctioneers, at No. 453 St. James Street, Montreal, Quebec, at the hour of 10.30 o'clock in the forenoon on the 30th day of January, A.D. 1915, the following lands and premises and assets in one parcel:—

A.—In the seigniory of Ste. Anne des Monts, in the County of Gaspe, in the Province of Quebec, 1,000 acres more or less of timber lands, together with a duly equipped lumber and shingle mill, having a capacity of 25,000 feet of lumber and 125,000 to 150,000 pieces of shingles every ten hours, also dwellings, storehouses, repair shops, etc., also 289 square miles timber limits in said county held under Government license and numbered 22 to 29, estimated to contain over 350 million feet of saw logs, principally fir, spruce and cedar, and 595,000 cords of spool and pulp wood. Also logs in river estimated at 1,000,000 feet board measure.

B.—Near La Grande Vallee des Monts, in the County of Gaspe, in the Province of Quebec, 54 square miles of timber lands and 100 square miles licensed timber limits (held under Government license and numbered 30, 34 and 35) reported to contain 100 million feet of saw logs and 245,000 cords pulp and spool wood, together with new lumber mill fully equipped and having a capacity of 50,000 to 75,000 feet of lumber every ten hours, also a mill for sawing shingles and railway ties, with a capacity of 125,000 to 150,000 shingles every ten hours and all necessary shanty plant, etc.

The property will be offered for sale subject to a reserved bid fixed by the said Master in Ordinary.

Terms of Sale.—Accepted cheque for $10,000 payable to the Liquidators to be deposited with the Auctioneer by each bidder when making bid. Twenty-five per cent. of purchase price to be paid in cash and balance shall be paid in three equal annual instalments and shall bear interest at the rate of seven per centum per annum, such instalments to be secured to the satisfaction of the Liquidators.

The Purchaser may at his option pay the whole purchase money in cash.

The terms and conditions of sale in all other respects are the standing conditions of sale of the Court so far as applicable.

For further particulars apply to Archibald W. Stevenson, Eastern Townships Bank Building, Montreal, Quebec, Charles A. Millener, Deseronto, Ontario, Frank Denton, K.C., 20 King Street East, Toronto. Liquidators or to Masten, Starr and Spence, 58 Canada Life Building, Toronto, Canada.

Dated at Toronto this 14th day of November, A.D. 1914.

GEO. O. ALCORN,
23-2 Master in Ordinary.

Miscellaneous

Wanted

Second-hand medium size log haul up chain and refuse carrier. Box 101, Canada Lumberman, Toronto. 22-23

Electric Lighting Plant

wanted, without power, direct current, capable of supplying 250 to 300 16 c.p. lamps. Must be in first class condition. Name lowest cash price. Correspond with Clarke Bros., Bear River, N.S. 21-24

Ties and Pulpwood For Sale

Advertiser open to take orders for delivery of railway ties and pulpwood in any quantities large or small, to be delivered rail off vessel, upper lake ports. Apply Box 110, Canada Lumberman & Woodworker, Toronto. 23t.f.

Sawing Contract Wanted

Want to secure contract for the sawing of 1,000,000 to 5,000,000 feet of logs. Have No. 1 portable sawmill, fully equipped. Location immaterial.

HUGH BAIRD & COMPANY,
22-1 Markdale, Ont.

Sales Engineers Wanted

A large firm specializing in the manufacture of motors of all classes desires to secure sales engineers in various parts of Canada. Firms who can carry a stock of motors are preferred. Write stating the territory that you can cover. Box 96, Canada Lumberman, Toronto. 21-24

For Sale

Fifty good lumber horses from 1400 to 1700 pounds. Also harness, sleighs, water tanks, snow plows, blankets, chains, camp stoves and all camp supplies. Can all be seen at Berriedale, near Burks Falls, Ont.

Highland Lumber Company, Ltd.,
20-23 Berriedale, Ont.

For Sale

Rare bargain. Band mill located in best lumber and log center on Puget Sound. Rail and cargo shipping facilities. Excellent log pond. Ten and a half acres of land. Price one-fourth of appraised valuation. Must sell quick. Box 765, Canada Lumberman, Toronto, Ont. 8-t.f.

Sales Agents Wanted

Large firm manufacturing a complete line of electric centrifugal pumps, automatic electric compression water systems, electrically-driven multi-stage turbine pumps, electrically-driven double acting pumps and a number of other lines, wants sales agents for various parts of Canada. Write, stating what territory you can handle, to Box 94, Canada Lumberman, Toronto. 21-23

Rossed Pulp Wood

I will close a contract immediately for machine Rossed Pulp Wood, 24-in. and 48-in. long, quotations f.o.b. Cochrane, Ont., or at place of delivery. I have the control of a large quantity of pulp wood yearly.

I also have for sale 50,000 ft. of 1-in. dry White Birch.

L. BOIVIN,
23-2 Box 46, Cochrane, Ont.

Do You Want to Buy or Sell?

If you wish to purchase or dispose of a particular stock of lumber or logs, a mill property or timber limit, or some second-hand machinery, the CANADA LUMBERMAN AND WOODWORKER will bring quick returns. Use our "Wanted and For Sale Department."

Agents Wanted

Large firm making low voltage transformers and electrical measuring instruments wants sales agents for Canada. These transformers are for sign lighting, bell ringing and toy requirements. The electrical measuring instruments include a complete line of switchboard and portable ammeters and voltmeters. All agents to work on a commission basis. Write, stating what territory you can handle, to Box 93, Canada Lumberman, Toronto. 21-23

Saw Mill Machinery For Sale

Sawmill near Sellwood, Ontario, daily capacity 60,000 feet. All machinery including:—Log Ladder, Bullwheel, Steam Kicker, Log Loader, Stationary Steam Nigger, 42-in. Steel Carriage, 10-in. Steam Feed, 8 ft. Double Cutting Bandmill, Cast Iron Lumber Table, 5-Saw Slab Slasher, 48-in. Big Champion Edger, Trimmer, Transfers to Edger and Trimmer Tables, Sorting Tables, etc. Also, Independent Lathmill, Filing Room Outfit and Power Plant complete. This machinery is of the latest design, practically new and in excellent condition. Offers will be accepted for all or any part of this machinery, where it stands or F.O.B. cars Sellwood.

The Waterous Engine Works Company,
22-t.f. Brantford, Canada.

BAHAMA ISLANDS

Timber Lands

The Crown is prepared to issue a license for yellow pine lumbering operations on Cocoa Plum Creek Section, a tract containing 13,725 acres situate on the Northern part of the Island of Great Abaco. A considerable portion of this tract is covered with yellow pine timber.

The Crown has also for lease other and smaller tracts of pine land.

Parties interested are invited to apply for further information to The Colonial Secretary, Nassau, Bahamas, W. Indies. 23-24

The Belt as a Heater

I went into a factory the other day to look at some belts that I had been told were running remarkably well. I found the belt man and asked him to show me the belts, which he immediately did. They were certainly running nicely—nice and slack, no squealing from slip and as steady as a clock—and the belt man was justly proud of them.

But the most interesting thing of all was this man's method of preparing the treatment for his belts. He put it in a coffee pot and poured it on the belt hot, in a very fine stream, so that it would not lubricate the pulleys and permit slip and would penetrate into the belt. He says that it is sometimes just as well to apply the dressing with a brush, but it must always be in a hot state, so that it will penetrate properly and make the belt pliable.

Instead of heating the pot in the way that most men do, this fellow has an entirely original scheme, so far as I know. He just holds the bottom of the pot against a rapidly-moving belt, and in a very short time the dressing is sufficiently hot for application. This does away with bothering with heating devices, gas, blow torches, etc., and is very simple. The gentleman told me that necessity, "the mother of invention," gave him the idea one day when they were out of gas, gasoline, and even matches, and the belt needed dressing badly. Not such a bad scheme, is it? Perhaps it can be utilized for heating other little things as well as belt dressing—glue, for instance.—N. G. Near in the Wood-Worker.

Manufacture of Toys

It is popularly believed that nearly all wooden toys sold in America are manufactured in Europe; but this belief is erroneous, though many such toys come from across the sea. In the single state of Pennsylvania 6,421,500 feet of lumber are yearly made into toys, according to a recent report on the subject published by the Forestry Department of that state. Twelve kinds of wood are used. Basswood leads in quantity, and is followed in the order named by sugar maple, white pine, yellow poplar, beech, birch, chestnut, soft maple, ash, white oak, white elm, tupelo, red gum and spruce. Toy makers pay in that state $182,000 a year for wood. Spruce is the most expensive, and ash next, while beech at $18.41 a thousand feet is cheapest. The variety of toys manufactured may be judged by the following partial list by classes: Animals, made wholly of basswood; building blocks, white pine; boats, basswood and white pine; cannon and forts, basswood, beech and birch; chairs, beech, birch and maple; circus sets, various woods; dolls, basswood; furniture, various woods; games, ash, oak, poplar and basswood; Christmas tree holders, yellow poplar; pastry sets, elm and oak; baby play yards, oak; and the following: Shooting galleries, tricycle seats, stick horses, hoops, popguns, swings, baby walkers, rocking horses, wagons and autos, tops, wheelbarrows and xylophones.

Wooden Parts of Brushes

The manufacturers of brushes use wood for handles and backs, and they consume large quantities and it comes to the factories from all portions of this country and foreign lands. Some of this wood is employed because it is cheap; other for the reason that it is not damaged by frequent contact with water; and some is bought for its beauty, and very high prices are frequently paid for choice kinds. Some of the brush makers in Pennsylvania, for instance, pay thirty cents a foot for rosewood, while in New York three woods bought by brush makers cost $200 or more per thousand feet. New York consumes 1,562,000 feet of wood yearly for brushes, and Pennsylvania two and a-half times as much. The kinds of brushes made are very numerous, but the following partial list will show some of the most common: Those for scrubbing, creameries, breweries, sinks, dust pans, horses, feather dusters, windows, stoves, carpets, painting, whitewash, frescoing, clothes, hair, nail, blacking, roofing, spreading asphalt, cleaning streets, and many more.

Washing Sawlogs

The practice of log-washing originated with the use of ponds for storing logs and streams of water for bringing logs into the saw mill. Logs pulled directly from the water into the mill have some of the dirt and grit washed from them by their immersion, and the bark and dirt being saturated with water makes the logs easier to handle on the carriage, likewise easier to saw in that they do not dull the saw so readily.

Many of the large mills which use logs brought in by rail, appreciating the advantages of washing or saturating the logs with water, adopted the practice of spraying or splashing them as they are brought into the mills. Various devices are used for this purpose. A typical plan is that of piping water from the supply tank to a point along the incline of the haul-up from the ground to the mill, and arranging a discharge to splash or spray the logs as they pass along. Sometimes this is made strong enough in the water flow to splash and wash the logs as they pass along at their regulation gait. At other times, where a lighter spray is used, the haul-up man slows the movement of the log under the spray and gives it time for a thorough wetting.

This practice may be found in use among large mills handling both pine and hardwood. It is a practice that many of the smaller mills which use dry timber might well adopt, to make work easier for the sawing crew and also for the filer, because it is well known that it reduces the damage to saw teeth from dirt and grit in the logs.

Review of Current Trade Conditions

Ontario

The usual quietness prevailing in the lumber trade during the autumn months was increased to such an extent by the trade disturbances resulting from the war, that the general industrial situation in Ontario is of as much interest to the lumber trade to-day as is the actual situation in the lumber business itself. The best feature of the present situation is that business men in general found out, after the readjustment which was necessary early in August, that a firm foundation prevailed in Ontario and in Canada pretty generally for trade activity, sufficient in fact, to overcome to a most encouraging extent the dislocation caused by the war. Although local markets have become depressed to some extent, resulting in a cessation of building operations and a reduction in the output of some of the large manufacturing concerns, other industries have become exceedingly active as the result of war office requirements and some large industries which reduced their staffs at first, or even closed down have again come into the field and are buying stocks of lumber.

There is no question that in large cities, the demand for lumber has fallen off greatly, but there is, even among retailers a feeling that next spring will be a good one, even if the war situation has not, by that time, cleared up. As to the smaller centres and the farming districts, it is the conviction of most business men in Ontario that there will be no decrease in the purchasing activity of the rural population. The official crop bulletin recently published by the Census Bureau shows an increase in the value of the Canadian root and fodder crop of $29,000,000 or 14 per cent. The grain crop figures have not yet been published, but it is certain that the returns to the farmers from this source will be as great as, if not greater than, in 1913. For these reasons it is pretty certain that trade in rural districts will be, at least fair, during the winter, and good during the spring.

In regard to the lumber situation in Ontario, there is little to be said. Quietness is the chief characteristic. Fortunately for all concerned, the stocks of lumber both in manufactuerrs' and wholesalers' hands are light. Retailers also are carrying only sufficient stock to meet their immediate requirements. The situation therefore, is safe from an economic point of view, and is one which will readily respond to improvement in the demand, whenever that comes about. Moreover there is good reason to believe that the result of the coming winter's operations will be a reduction in the output of lumber next summer. Some of the large companies in northern Ontario are taking out large quantities of logs this winter, as they are obliged to do so because of many trees having been injured or felled by fires and storms, which must be taken out to avoid loss. A few companies not so situated, are also operating extensively, feeling that they will do well next summer as they expect a good demand and higher prices. There are however, many others who, for one reason and another, will reduce their operations considerably, resulting, it is now believed, in an important reduction in the log output. This will apply both to the Ottawa Valley andt he Northern Ontario districts.

Wholesalers in Ontario are meeting with a fair demand for lumber, but all report that the trade is much quieter than usual at this time of year, and that the situation of retailers and large consumers is such that trade is likely to take quite a spurt at the first definite sign of more satisfactory industrial conditions. Some wholesalers are confident that this situation will develop by next spring if not before.

The lumber trade at Ottawa continues quiet, the chief event of interest to lumbermen being the recent action of the Fire Underwriters' Association, in insisting upon additional precautions in lumber plants, in the way of installing extra fire fighting appliances, employing watchmen, etc. The reduction of operations in the woods this year is congesting the labor market to some extent. There are hundreds of idle men in Ottawa who formerly found employment in the lumber camps.

Eastern Canada

The early arrival of cold weather and snow at Montreal has restricted building operations which were already greatly curtailed by the general business situation. A fair amount of business however, is reported by several wholesalers and there is a rather general feeling that, at the beginning of next season, trade will revive considerably. Shipments of spruce and birch to the Old Country continue on a small scale, but very little pine is going forward. Freight rates for lumber are high, the increase since the beginning of the season being from 33s. 9d. to 60s. and as high as 65s. per standard. The total exports from Montreal will show a large decrease this year. In the St. Maurice Valley district it is expected that the cut this season will be about the same as last season. Practically all the mills in the Three Rivers district are closed and there are still many logs in the rivers.

No important changes are reported from St. John, N.B. The local building situation is practically at a standstill, but the trade is no worse than it was at this time last year. Indications are that all low grade stocks of rough lumber and much of the merchantable rough stocks will be used up by next spring. There will be from 18,000,000 to 20,000,000 feet of logs carried over the winter at St. John for spring sawing, mostly long logs for American stocks. Prices for English deals continue very firm and the mills now operating at St. John are running on this stock. During the last three weeks freights have risen from 60s. to 65s. No sales for next season have been made for the north shore of New Brunswick, although one company is reported to have received an offer of $19.50 per thousand for the ordinary specification of deals. American prices show no change. Ordinary specifications at St. John have sold as low as $17 in New York during the last fortnight.

Continued improvement is reported in the demand for eastern spruce at Boston. Quotations are firmer, some of the larger mills quoting 50c. more for frames than a fortnight ago. The number of manufacturers, now sawing spruce, is reported to be considerably smaller than a month ago. The indications at New York are that higher prices may be expected for eastern spruce. Consignment shipments are fewer than usual. Heavy blocks of stock which formerly used to go to New York are now going into English deals. Hardwood quotations at Boston are firm, but the volume of trade is not large. Shingles at Boston are quiet, but steady. Choice makes of white cedar extra clears are still bringing $3,50. A few very good extras are offering at $3.40. Clears have lately been sold at $2.80 to $2.90 and second clears at $2.55 to $2.65. The call for red cedars is quiet. Some fancy brands are held at $3.65, but more orders are given at $3.40 to $3.45. Lath are selling rather well and there is a firmer tone to the market. Sales of 1⅝-in. were made at $4.10 and of 1½-in. at $3.75.

United States

Trade conditions are quite evidently returning gradually to normal in the United States, as the obstacles to business activity disappear. Credit is expanding steadily and it is expected that, by the beginning of the new year, general business will be moving along on a fairly active basis. The opening of the reserve banks on November 16th immediately caused an easier tone to develop in money rates. Interesting reports are being received of the resumption of operations at steel mills. Railway companies have been increasing their business and are soon expected to be making purchases on a large scale as many of them have neglected their lines since the business depression commenced. The sucessful organization of the cotton pool plan is also an important factor in the approaching return of normal trade conditions. The relief afforded by this arrangement is certain to be beneficial, not only to the cotton industry, but to the whole southern business community. An important indication of the general trade situation in the United States is afforded by the fact that the payment of foreign obligations is no longer a matter for serious worry. The import excess of $20,000,000 during August has been changed to an export excess of approximately $60,000,000 in October. Wood exports have been unprecedented in amount and at good prices. Mills and factories on many sides are busy and running full or overtime. The number of unemployed is decreasing. Everything in fact points to steady improvement in the industrial situation.

The demand for northern pine at Chicago is very light and prices are steady. At Buffalo, the northern pine trade has not improved, although a few large export orders have been filled. Building operations are very light and the factory demand is small. Prices are not quite so firm as they were a short time ago, but when stock is actually needed a fair price is paid. Trade in northern pine at North Tonawanda is more active, with orders coming in from New York and Pennsylvania retailers. The open fall weather has assisted considerably by making it possible to continue operations. Prices are steady.

Great Britain

A fairly brisk business is reported in the spot market at London. Autumn shipments are reaching the docks in considerable quantities. At latest reports, vessels were being held up in the river to be berthed at the docks. The large deliveries during the past few weeks however, have cleared a good deal of space. There is no downward tendency about values. Common stocks are particularly firm. Deliveries at London docks for the week ending October 31st amounted to 11,458

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

"Rush Orders Rushed"

Cleveland-Sarnia Sawmills Co., Limited

SARNIA, ONTARIO

B. P. Bole, Pres. F. H. Goff, Vice-Pres. E. C. Barre, Gen. Mgr. W. A. Saurwein, Ass't. Mgr.

loads, as compared with 7,429 loads in the corresponding week of 1913. At Foy, Morgan & Company's recent auction sale 3 x 9 in. u/s St. John spruce were sold at £12 10s., 3 x 7 and 6 in. ditto at £11 10s., and 3 x 6 in. 3rd Quebec spruce at £12 10s. 2 x 9 in. u/s Quebec spruce brought £13 and 2 x 7 ditto £11 15s. Marked decreases are reported in imports of British Columbia and Oregon pine at Liverpool. The consumption of all kinds of timber and lumber at Liverpool has been below normal. The principal demand has been for spruce, and Oregon and pitch pine. Stocks, on the whole, are about normal. Trade has been settling down to a steady basis and there is a noticeable improvement in the tone of the market. Drainage of tonnage for the movement of troops has had a serious effect upon the timber trade, resulting in higher prices for deals at Liverpool. Spruce deals continue in good demand and prices are advancing rapidly, largely on account of the advance in freights. It is almost impossible to give any c.i.f. prices for spruce deals for this reason. They may advance from day to day on account of the shortage of vessels. The stock in thet wo ports on the Mersey at the end of October was 14,080 standards less than at the corresponding date in 1913.

Trade is a little quieter at Manchester. Stocks of spruce deals are light and prices are advancing. With 7 x 3 in. as a base the present value is near £11 15s. ex quay, and there is not much fear of Riga competition for some time. Recent reports state that the above prices may easily advance 10s. per standard. The stock of red and white deals is only 5,010 standards and prices are said to be prohibitive.

No noticeable change is reported in the trade situation at Glasgow. The volume of business continues of a moderate scale. Stocks on consignment are growing smaler steadily. A limited business is going on in Quebec pine, deals and sidings. Much of the movement is in the lower grades. Values however, continue firm. Birch logs are scarce and in good demand.

Market Correspondence

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

St. John Trade Handicapped by Lack of Vessels

St. John, N.B., November 22 (Special to the Canada Lumberman): The last two weeks have seen no changes in the lumber industry at this port. No new sales for 1915 have taken place. Prices remain about the same as at last report, with stocks not very heavy. The local building trade is about at a standstill, only such work as was started, is being finished. No new work of any importance is being started, but the trade is as good as can be expected at this time of year, and is no worse than at the same time last year, even though the war is going on. Probably all low grades of rough lumber and also much of the rough merchantable stocks will be used up by spring, especially if the steamers which are to transport horses and troops to the war zone are to be fitted up here, as they use large quantities of lumber to each boat. This will provide much work for the workmen at this port and therefore help to offset the hard times which would otherwise be much felt by the laboring men.

The mills which were reported in operation on the first of month are still going and will probably continue on to about December 15th, that is if the weather does not get too cold.

Probably about 18 to 20 millions of logs will be wintered over at St. John for spring sawing, but these are largely long logs for the American market. All the mills now running at St. John are sawing for the English deal market, prices for which remain very firm. The great trouble is in the high freights; and more than that, the scarcity of tonnage, five steamers having been taken by the Admiralty during the last few days. These five were under charter to come to St. John so it can be readily seen that it is impossible to place any confidence in published sailings, as, at the last moment they are being cancelled. Freights have risen in the last three weeks from 50 shillings to 65 shillings, and it is almost impossible to get vessels even at these prices. We understand that no sales for 1915 have yet been made from the north shore of New Brunswick although one company are said to have received an offer of $19.50 per M. for the ordinary specification of deals. No deals are for sale at St. John, with the exception of a few which are being sawn by American mills and are being sent forward to the English market on consignment. A good deal of the stock going from here is being sent to Glasgow, where the market demands longer lengths, Manchester taking shorter stocks.

Practically there has been no rise in the prices for American stock. Theoretically there has been, but if a person has the real goods to sell and asks a price which he can get a profit at, he will find it almost impossible to get a buyer at any price. An advance has been taking place all season so far as the newspapers are concerned, but where it is we fail to see. Sales of ordinary specifications have netted as low as $17.00 in New York during the last two weeks.

Laths are selling as low as $3.00 at New York and seem to be weakening every month, but now about all stocks have been shipped and it is hoped to see a revival in this line of stock. This leaves from $1.90 to $2.00 for sellers on wharves at St. John.

Shingles still continue very weak, although papers claim otherwise, but persons having a heavy quantity to dispose of find it hard to get a profitable price for the fancy gardes.

Ottawa Lumbermen Affected by Insurance Situation

Ottawa, November 23 (Special to the Canada Lumberman): With trade in the district somewhat dull just now, lumbermen are taking considerable interest in the question of fire protectioan. The Fire Underwriters' Association has compelled them to take additional precautions in their plants by putting in extra fire-fighting appliances, employing more watchmen and so on. The surtax of 50 per cent. put on by the insurance companies two weeks ago is still in effect on all new business written in Ottawa, and it is not likely to be lifted until the three new fire engines the city has ordered are delivered and put into service, the four extra pumps at the Lemieux Island pumping station installed, and the 42-inch intake pipe put into commission. Several of the insurance agents in the city have expressed themselves in the newspapers as being of the opinion that the surtax is unreasonable. Tenders have been invited by the city for the pumps, and it has been practically decided by the civic officials not to repair the 42-inch intake pipe as at first proposed, but to put it into use forthwith as its condition will warrant this.

The curtailment of operations in the wods this year, owing to the war, has naturally caused the labor market to be flooded. Hundreds of men, who in ordinary times find employment in the lumber camps during the winter, are idle in the city and the civic officials are finding it a difficult problem to find work for all those who register at the free employment bureau, which was opened a few days ago at the city hall.

Mr. John Gillies, of Braeside, Ont., one of the best known lumbermen in the Ottawa Valley, died in Pembroke last week. Deceased, who was a member of the firm of Gillies Bros., and son of the late Mr. John Gillies, of Carleton Place, founder of the firm, was taken ill while on his way home from a trip to Northern Ontario. He was taken to the General Hospital in Pembroke where he died.

Montreal Market Continues Quiet

Montreal, November 23 (Special to the Canada Lumberman): The early appearance of winter conditions is adversely affecting the lumber market. Last year the season was open until near Christmas, but now we are faced with heavy falls of snow, which has restricted building operations, already seriously curtailed, and added another handicap to the lumber trade. Some wholesalers state that they have done a fair amount of business considering the general situation, and although no large orders can be expected during the winter months, there is a hopeful feeling that at the commencement of next season there will be a welcome revival of trade. The building permits continue to decrease, and those issued are, as a rule, for unimportant structures.

There is still only a limited amount of steamer room for the shipment of lumber to the United Kingdom. Small amounts of spruce and birch have been sent, but hardly a stick of pine, the call on the other side being mainly for spruce. The vessels continue to load with grain and foodstuffs. Freight rates for lumber are very stiff, having advanced since the beginning of the season from 33s. 9d. to 60s.-65s. per standard. This has been one of the worst seasons for many years for firms doing an overseas business, and a marked diminution in the exports will be seen when the total figures for the season are available.

All mills in the Three Rivers district are now closed down. A large number of logs are still in the rivers, the lowness of the waters in the St. Maurice and its tributaries having prevented these from coming down during the early part of the season. It is expected that the cut in the St. Maurice Valley district will be about the same as last season.

Almost without exception the pulp and paper mills are fairly occupied. There is a good demand for chemical pulps, prices for fine grades having advanced between $3 and $4 as compared with the period immediately preceding the war.

The sawmill belonging to Arthur Moore at Falconburg, Ont., was recently destroyed by fire. The stock of lumber was saved.

The factory of the Classic Furniture Company, Stratford, Ont., was recently destroyed by fire, the loss on building, machinery and stock amounting to $30,000.

James Gilies, Preston, Ont., is contemplating the purchase of sash making machinery, as he intends to go into the manufacturing of sash, window frames and screens.

The James Smart Manufacturing Company, Brockville, Ont., report that the building for their new wood working plant is now all enclosed and the machinery is being installed.

The Berlin Branch of the Canadian Furniture Manufacturers, which was closed in June, has resumed operations with a large staff of men to work eight hours a day, five days a week. The surplus stock which was formerly on hand has been entirely disposed of.

The Parkhill Lumber & Manufacturing Company, Limited, have been incorporated under Ontario charter, with authorized capital of $30,000 and head office at Parkhill. The provisional directors are W. H. Mark, J. C. Mark, J. Schafer, J. Grieve and C. H. Curts.

John Carew's Sawmill at Lindsay, Ont., closed for the winter about the middle of November. The company has had a very successful year and has produced a large amount of lumber. The planing mill and box factory will be operated throughout the winter. They are at present running day and night and expect to be able to continue so for some time to come.

Eastern Canada

Laganiere & Frere, lumber manufacturers have been registered to carry on business at Grondines, P.Q.

The Irving property at Riversdale, N.S., has been purchased by Mr. H. H. Johnson, who is preparing to operate it.

The wodworking factory of the M. F. Scherman Lumber Company, Limited, at Somerset, P.E.I., has suffered a loss by fire which is partially covered by insurance.

G. A. Warman, Truro, N.S., who has purchased the Kempton, N.S., property of the Atlantic Lumber Company, is moving his mill to the property and putting forty men at work.

McCluskey & Powers, Limited, have been incorporated under New Brunswick charter with authorized capital of $40,000 and head office at Grand Falls, N.B. The objects of the incorporation include the carrying on of a general mercantile and lumber business.

The Sandwich Bay Pulp & Lumber Company, Limited, has been incorporated with head office at Montreal and authorized capital of $2,000,000. The incorporators include A. Bernier, L. Bernier, G. E. DeSeve and O. Beauchamp, all of Montreal. The objects of the company include purchasing or otherwise acquiring timberlands at Sandwich Bay, Labrador, Newfoundland or other timberlands, and to carry on the business of manufacturing and selling pulpwood and lumber.

Western Canada

The Leduc Lumber Company, Limited, has been incorporated with head office at Leduc, Alta., and authorized capital of $20,000.

Lumber Exporters, Limited, have been incorporated in British Columbia with authorized capital of $10,000 and head office at Vancouver, B.C.

D. H. Sears is contemplating the erection of a shingle mill at Port Albernie, B.C. He is also considering the opening up of logging camps. His present plan is to erect the shingle mill next spring.

The North Alberta Lumber Company, Edmonton, Alta., have about completed the building for their new sawmill and the machinery is now being installed.

The Seafield Lumber & Shingle Company, Limited, has been incorporated in British Columbia with authorized capital of $15,000 and head office at Nanaimo, B.C.

A company known as the Pacific Mills has been incorporated with authorized capital of $9,500,000 to take over the Ocean Falls Pulp and Paper Company, whose financial difficulties were promiennt several months ago. The English bondholders, led by Mr. Hamilton Benn, member of Parliament,, have consented to the new arrangement and it is expected that the plant will be reopened at once.

A new sawmill will be erected at Tobacco Plains, near Elko, B.C., by the Eureka Lumber Company. The cost of the plant will be $150,000 and it will be thoroughly modern in every respect. The company's plant was destroyed

by fire about two months ago. The new mill will be equipped with two band saws and a gang saw. Its total capacity will be 300,000 feet in 20 hours. Construction work has already commenced. A new yard system will be installed, in connection with which lumber will be conveyed from the mill by motor trucks, automatically loaded. Electric stackers will be used in piling the lumber, making it possible to double the former capacity of the yards.

The Forest Mills of British Columbia, Limited, Revelstoke, B.C., report that their recent loss by fire at Comaplix resulted in the total destruction of their sawmill and planing mill together with considerable yard equipment. This was the best of the four mills operated by the company. Its equipment consisted of one 9-ft. double-cutting band mill and one 8-ft. band mill. It gave employment to about 140 men. At the time of the fire the mill was closed down temporarily owing to the trade depression, consequent upon the war. The stock of manufactured lumber in the yard, which was all saved, amounted to 14,000,000 feet and the company had about 20,000,000 feet of logs in the water at this point. The loss was fully covered by insurance and the mill will be rebuilt probably next sprin.

Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing to the Department of Trade and Commerce and stating the number of the enquiry.

1073. **Wood pulp manufacturers.**—Inquiry is made by an Italian correspondent for names of Canadian wood pulp manufacturers.

1075. **Match splints.**—A Liverpool firm of timber merchants reports a demand for match splints and asks to be placed in touch with Canadian manufacturers of same.

1081. **Broom and pick handles.**—A London company who are open to purchase supplies of broom and pick handles would be glad to receive prices from Canadian manufacturers.

1082. **Frames for hammock chairs.**—A London manufacturing company wishes to get into touch with Canadian manufacturers who can supply frames for hammock chairs. They would contract for large quantities, and upon receipt of samples and prices are prepared to give an order for 5,000 for delivery in January.

1103. **Matchwood.**—An English company manufacturing matches is desirous of obtaining supplies of suitable matchwood, preferably aspen, from Canada. They would like to get into touch with Canadian shippers who can quote for their requirements.

1109. **Wood pulp.**—A correspondent in Spain reports a demand in that country for Canadian wood pulp, in consequence of the suspension of Swedish supplies.

1121. **Cooperage stock.**—A Cornish firm of china clay proprietors wants to buy slack cooperage stock c.i.f. Fowey. They can take about 1,000 St. Petersburg standards, if quality and price are right, of the following dimensions:—70 per cent. 41½ in. x 9-16 x 2½ to 5 in. wide; 7 per cent 41½ x 9-16 x 5½ to 6 in. wide; 20 per cent. 27 in. x ¾ x 3 to 7 in. wide; 3 per cent. 26 in. x ½ x 3½ to 4 in. wide. Send samples and prices.

1125. **Pulp.**—A Japanese importing firm wishes to get in touch with exporters of Canadian pulp.

The source of supply of Circassian walnut has been cut off by the European war and the United States are turning to the use of their native walnut, which is again becoming very popular. Before the war most of the native walnut was sent to England, Germany and France.

New Regulations for "School Lands" Timber

New regulations governing the issue of permits to cut timber on school lands in Canada have been issued. "School lands" are lands set apart as an endowment to education in the Western Provinces and they comprise some of the most valuable areas of saw timber and pulpwood in Manitoba, Saskatchewan and Alberta. The new regulations mean a very considerable increase in the license fees which will be charged for the cutting of such timber. Hitherto the timber on school lands was governed by the same regulations as on Dominion lands. However, the latter were framed to allow the settler to cut lumber cheaply, whereas from school lands as large a revenue as possible is desired. A revised schedule of dues has therefore been put into effect. For instance, the rate for cord wood will be 50 cents per cord, and for pulpwood generally, 10 per cent. on the sale value.

The British Post Office recently had an interview with the High Commissioner's secretary on the subject of placing orders for telegraph poles in Canada and informed him that whereas the competition of Russia and Norway for the smaller type of pole would probably place Canada out of court, the home government would be pleased to consider the question of placing trial orders for the larger size poles in Canada.

The Unmerciful Laboratory

Vitally important is the laboratory in the production of high grade Leather Belting. Only through the most careful analysis can defects in raw material be detected—which if not detected, would result in a weakened finished product. Then, too, the ingredients of these materials must be of the highest quality and of right proportion or they cannot be used.

That is why in the "G & K" Laboratory it is Test, Test, Test, from the green hide to the finished belt. Every analysis, every Test

Guarantees Spartan Leather Belting

—to resist exposure to steam, oil, water and heat generated by excessive pulley friction.
—to grip the pulley perfectly, transmit a maximum of power and reduce the friction load.
—to wear longer and transmit power with greater economy than any other belting material used under similar conditions.

Unqualified Guarantees—and they are back of every foot of genuine Spartan Belting—look for the Trade Mark, it is your protection

RUBBER GOODS FOR LUMBERMEN

Belting Our long experience in the making of Rubber Belts enables us to specialize on this line. "Monarch," "Red Strip" and "Lion" are our leading brands for power transmission. (Write for Booklet B-1.)

Packings "Redstone" High Pressure Sheet Packing has proved by test that it will outlast any other similar packing on the market. We make Spiral and Ring Packings, etc., that are equally reliable. (Booklet P-1.)

Hose for Steam, Water, etc., etc., in various grades, made especially to give satisfactory and economical service under different conditions. (Booklet H-1.)

Fire Hose One or more of our twenty brands of Fire Hose will be found, not only in the best equipped Factories, Mills, etc., but in almost every Fire Department in the Dominion. (Booklet H-1.)

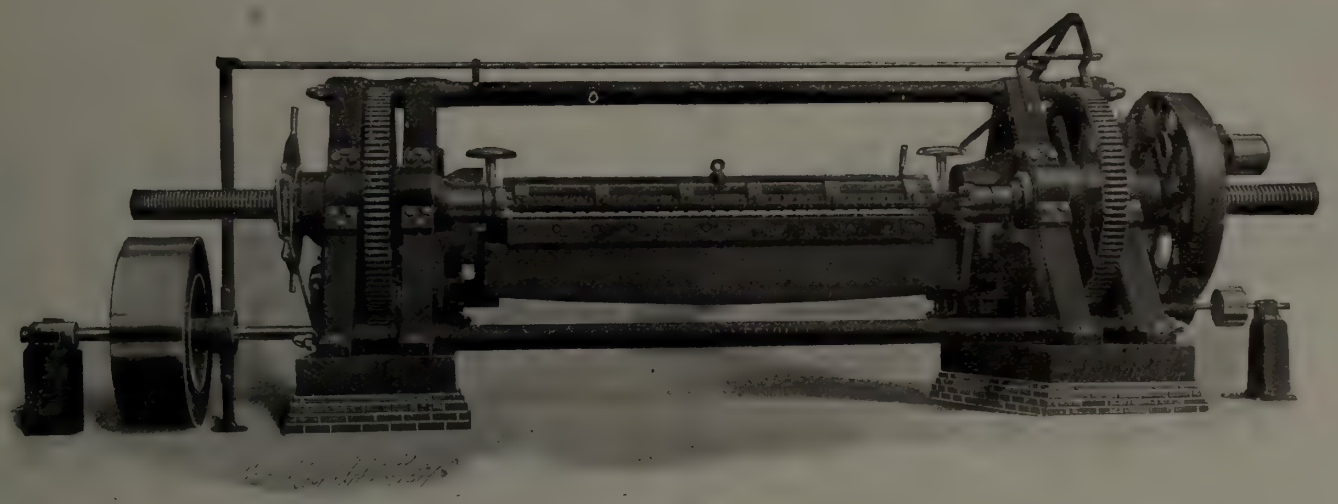
Coe Veneer Machinery

The Standard of the World for Sixty-Four Years

The Coe Rotary Veneer Cutter

Style "A" Extra Heavy Pattern



Front View

Made for any length of knife up to 120 inches; diameter of swing, 68 inches; diameter of spindle, 6 to 8 inches; weight is proportionate to length of knife.

THE chief thing required by any machine is ableness to stand severer use continued use, ableness to do whatever the work for which it is bought, as it was represented it would do it, by those from whom it was bought.

From the very first the Coe policy has been to design the most able Veneer machinery that expert knowledge could conceive, and experience suggest, and to make the Coe Veneer machines the best that selected material and skillful workmanship can produce.

We make the largest line of Veneer machines in the world and are always ready to answer questions about Coe machines. When an inquiry comes to us, we lay bare all the facts in question, for this is one of the means whereby the good points of the Coe Veneer Machines become known. Don't hesitate, therefore, to ask us questions regarding Veneer Machines for Cutting, Slicing, Clipping, Wringing, Sawing Drying or Stamping, or producing Veneer from any kind of lumber.

Judged by standards that go to make the best Veneer machinery, Coe Veneer Machines represent the best types made to-day—in capacity, resistance to wear and tear, and in excellence of product.

We are ready to plan and equip a mill complete for any capacity and we can furnish a full line of machines or any single one needed and make practically immediate delivery.

The Coe Manufacturing Company

PAINESVILLE, OHIO, U.S.A.

Established 1850

The oldest and largest manufacturers of complete veneer mill equipment in the world.

Veneer Press and Dryer

Hydraulic and other Presses for mill and factory use. Built in all sizes or to suit special conditions

DIXON'S SILICA GRAPHITE PAINT

Water-proof, weather-proof, smoke-proof, heat-and-cold-proof — this describes Dixon's Silica Graphite and explains its remarkably general recognition as "the longest service paint." Machinery and all metal surfaces exposed to the weather, or to smoke and steam, can be given the safest, surest, most lasting protection by using this protective paint with fifty years of Dixon experience to guarantee its quality.

Write for "Protective Paint" Booklet No. 238-B.

They Don't

a Specialty Not a Side Line BAND RESAWS

Saginaw Seven-Foot Band Resaw

Some think they need an 8 ft. or a 9 ft. band resaw. —Our customers know better, finding our 66 in. big enough for usual conditions and our 7 ft. ample for the heaviest and hardest service.

Wm. B. Mershon & Co.
Saginaw, Michigan

Montreal, P.Q., Sept. 10th, 1914

Gentlemen:-

The Seven-Foot Band Resaw we bought of you is giving us every satisfaction.

We find the machine reliable, substantial and amply heavy n all its working parts, and have never spent any money on it for repairs except grinding the wheels every second or third year.

Yours very truly
A. MacLaurin

Wm. B. Mershon & Company
Saginaw, Michigan

Are your horses of use to you?

This seems an absurd question—and the answer is always **"Of course they are"**—In which case provide your stables with:

Johnson's Reliable Veterinary Remedies

Johnson's Horse Liniment, No. 1 (Alcoholic)

1 gal. jugs (Imperial)	$4.50 gal.
1 lb. bottles	8.00 doz.

Montreal, P. Q.

A New Year's Resolution For You

"RESOLVED that, during 1915 and thereafter I will give preference, in my purchases of rubber goods and all other material, to such as are made in Canada."

So far as rubber goods are concerned, you run no risk in making this patriotic resolution, as we manufacture a complete line and the price, quality and style are right.

When in the market for tires, hose, belting, packing etc., let us show you what we can do.

It is our desire to serve you.

"Wilson Bros." Flooring and Trim

"Wilson Bros." stamped on every piece of this flooring stands for Quality. Look for the name. Hardwood and Pine. **Interior Finish of All Kinds.** Also Hardwood Veneer Doors to detail. We are equipped to fill large or small orders on short notice. Write us for prices.

Wilson Bros., Limited - Collingwood, Ont.

The Three Goodhue Belts

"EXTRA" "STANDARD" "ACME WATERPROOF"

These three brands are made for three different services and each brand is the best quality made from selected hides with the stretch taken out.

"Goodhue Belts" stretch less than any other belt by 15 to 25 per cent. This quality effects a great saving because it is unnecessary to be continually shortening the belt to keep it taut.

"Acme Waterproof" brand is made for the wet places in a mill and will give a remarkable service under the most trying conditions.
When you buy a belt—buy a Goodhue. Prices and particulars on request.

J. L. Goodhue Company, Limited
DANVILLE - QUEBEC

MAPLE LEAF SAWS

MAPLE LEAF SAWS, **"THE PROVEN BEST,"** absolutely guaranteed. Be sure and specify Improved Racer Cross Cut Saws when ordering your camp supplies. They are made of Razor steel and tempered by our secret process, which gives the best results under actual working conditions in the bush.

Sturtevant Collecting and Conveying Systems at C.P.R. Shops, Montreal

The above system handles all sawdust and shavings from the woodworking shops.

17 Sturtevant

Slow Speed Planing Mill Fans

are used. Note how shavings can be switched to furnace feeders, shown through the door at the left, into a car shown below or into the shavings storage vaults. Storage is the small brick structure in the centre.

Sturtevant Fans are in universal use in lumber mills and woodworking plants.

"To be, or not to be, that is the question,
Whether 'tis nobler in the mind
To suffer the slings and arrows
Of outrageous fortune,
Or to take arms against a sea of troubles." —Hamlet.

Hamlet the Prince of Denmark is a character which

every budding actor aspires to play. The late Sir Henry Irving certainly inspired many to study the works of Shakespeare and those who were privileged to hear him in Hamlet's famous soliloquy are not likely to forget it. Most of us have been in a state of doubt on many occasions and said to ourselves: The question is:

TO BE, or not TO BE

We can serve the interests of our customers who use Babbitt Metals and recommend without any hesitation.

Harris Heavy Pressure

The Babbitt Metal Without a Fault

Engineers using H. H. P. avoid a sea of troubles.
They know IT WILL GIVE EXCELLENT SERVICE

One Setter Can Work All Day With This Machine

With a steam set works you do not have to change setters twice or three times, a day. One man can do all this work, because the hard work is done by steam.

And you get better lumber, because the travel of the piston is as exact as in a steam engine, so that a steam set works of itself simply cannot cut uneven lumber.

Further, you get more lumber, because it will set up to four inches as quickly as any other machine will set two inches.

Let us send you further particulars.

William Hamilton Co., Limited

Peterborough, Ontario

Dominion Timber Regulations

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth :—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long, 1½ cents each.

Railway ties, nine feet long, 1¾ cents each.

Shingle bolts, 25 cents per cord.

And 5 per cent. on the sale of all other products of the berth.

Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

W. W. Cory,

Department of the Interior, Ottawa,
December 20th, 1912.

Deputy Minister.

The Connecting Link

Way back in 1880 the **Wanted and For Sale** columns of the Canada Lumberman and Woodworker were used extensively by the lumbermen of Canada for the purchase and sale of timber, lumber and machinery.

Time has but served to enhance the value of this medium, until to-day the **Wanted and For Sale Department** of the Canada Lumberman has become a national market.

Twice a month "the paper with the green cover" brings together buyers and sellers of lumber and machinery from all the principal lumbering centres of Canada and the United States. By covering this wide field, the percentage of waste circulation for advertisers has been reduced to a minimum.

For quick and satisfactory results, get your advertisement in the **Wanted and For Sale Department** of the

Canada Lumberman & Wood Worker

If Your Boiler Were a Mile from Your Engine

—and your pipes were covered with J-M Asbesto-Sponge Felted Pipe Covering, the loss of heat through radiation and condensation would be far less than that lost in a hundred feet of poorly insulated pipe.

For whatever distance it may be used J-M Asbesto-Sponge Felted Pipe Covering assures the delivery of the maximum amount of steam from every pound of fuel. Its insulating efficiency is so much greater than that of ordinary covering that an installation of J-M Asbesto-Sponge Felted Pipe Covering will save its cost in from five months to a year.

JM Asbesto-Sponge Felted Pipe Covering

is made of many layers of thin felt, composed of pure asbestos fibre and finely ground sponge. It is extremely tough and flexible, so that vibration, moisture, heat and rough usage will not cause it to crack, crumble or lose its insulating efficiency. It can be repeatedly taken off and replaced without injury.

Its high insulating value is due to the large amount of confined "dead air"—the best non-conductor known.

Montreal—Williams & Wilson, Ltd.

THESE WATEROUS DOGS CAN CERTAINLY HANDLE TIMBER—

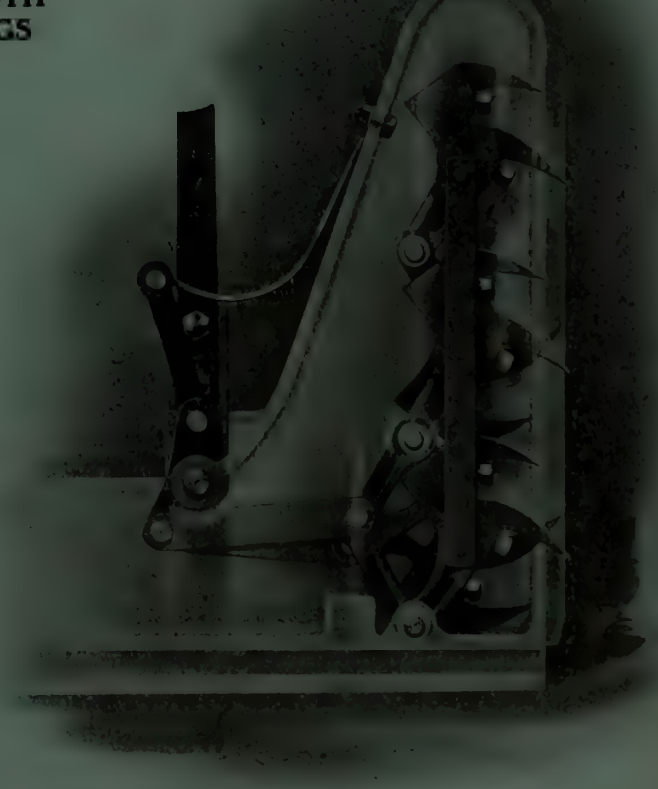
In frozen maples, or hardwoods of any description —***in small logs or large ones,***—they take hold with a bull-dog grip that pins the timber into place ***to stay.***

The shape and sweep of the teeth, the position of the pin centres, the arrangement of lever straps and connections, all are designed to make dogging, quick, easy and ***sure.***

When handling squared timbers, the dogs are without superior. They hold the timber fast without marring it—they will dog to cut the last 1" board, without slipping and with perfect safety.

WATEROUS IMPROVED BOSS DOGS

WATEROUS INSERTED TOOTH DOGS



WATEROUS IMPROVED BOSS DOGS INSERTED TOOTH DOGS

These dogs are alike in their ability to handle logs and timbers on the carriage togive the best results in ***safe and easy sawing.***

Every detail of their construction—from the choice of materials used, to the way they are put together—is the result of years of careful experiment to give you the best dog that can be produced. These dogs have made good. They not only operate easily and safely but they have the ***stuff*** in them to stand up to hard knocks and rough use.

The Inserted Tooth Dog has the special feature that the teeth are removable. It allows a tooth that is broken or bent to be replaced with a new tooth without having to remove the whole set.

Both dogs are attachable to ***any make*** of knee in use. Remember this when you overhaul your carriage this winter. ***If you want good, strong, safe dogs we sell them.***

To the Owner of Timber Lands

Far sighted owners of timber lands should take advantage of the times incident to the European wars, and prepare themselves for the day when the demand for timber is suddenly thrust upon them. This is certain to come at no distant day. Therefore cultivate a closer acquaintance with your holdings, and the best method of marketing them. Let us prepare the way for you. Remember, we not only report on the property, but assist in marketing the bond issue when necessary. Send for our booklet.

Why An Aloxite Saw Gumming Wheel Cuts Cool

ALOXITE is tough—it has just the proper temper to keep the wheel with a free cutting face.—The wheels are of an open or porous nature, thus allowing the free action of the grain. —A close bonded wheel drags—creates friction—friction means heat. Aloxite wheels cut cool, free, fast—they don't fill—they produce no unnecessary friction—they work without rasp or screech—hold their shape—show long life.

Arkansas Soft Pine Short Lengths

This stock may not excel the quality of standard length material but it is exceptionally soft, beautifully figured, of consistent texture and uniform quality. Manufacturers are disposed to regard it as the cream of Arkansas Soft Pine.

Retail lumbermen understand that custom has restricted the use of short length lumber. That custom will change and one day this short stock will command prices more nearly representing its value.

Pending the arrival of that time Short lengths will afford the lumber merchant exceptional opportunities for profit.

It actually costs more to produce and to handle the short stock. It is worth more, for used intelligently it eliminates waste.

Casing, base, mouldings, ceiling, flooring, siding and other items in 4 to 8 foot lengths can be handled with a larger profit than the so-called standard lengths.

Sprinkle an assortment of Shorts through your stock, this month and you never will be without an adequate supply in the future.

Machinery and Timber For Sale

The undersigned offer for sale, in large or small blocks all their remaining timber lands, mills and town property situated in the Town of Parry Sound, Ont.; and other Lumber Equipment, including boom chains, plows, sleighs, etc.

We have sold quite a number of timber parcels but still have some good bargains left in Townships of McDougall, Foley, McKellar, Monteith, Carling, Christie, Shawanaga, Burpee, McConkey, Mills, Allen, Secord, Falconbridge and Street.

We have the following Sawmill Machinery for sale:

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 8-block right hand steam feed carriage fitted with steam set works, made by Wm. Hamilton, Peterboro, with 10-in. steam feed cylinder.

1 Double cylinder steam nigger, right hand.

1 Log Loader for right hand mill.

1 8 ft. Double-cutting Telescope Band Mill, made by Waterous Engine Works.

1 10 in. Double-cylinder steam feed carriage, left hand, for cutting 24-ft. logs.

1 left-hand steam nigger.

1 Log-loader.

1 Endless chain jack ladder with two kickers complete for right and left hand mills.

2 Roger Gang Edgers for 8-in. cants and lumber.

1 Waterous double edger, 6 saws.

2 2-saw trimmers.

1 20-ft. Slash table.

1 16-ft. Revolving Slash Table.

1 Horizontal Slab Resaw with 5-ft. wheels, made by Diamond Iron Works.

1 70-ft. Transfer Chain for sorting lumber, with necessary levers, rolls and transfer chains to complete outfit.

1 Lath Mill with bolter.

2 Lath Trimming Saws.

FILING ROOM

1 Automatic Filing Machine for 12-in. D.C. band saws.

1 Automatic Grinding Machine for 8-in. S.C. band saws.

1 Automatic Machine for circular saws.

1 Hand Machine for cut-off saws.

1 Lap Grinder.

1 Set Band Saw Rollers and levelling blocks, with necessary swedges, a number of second-hand band, gang, edger and slash table saws.

POWER PLANT

2 Double Duplex, high pressure Water Pumps.

5 60-in. x 16-ft. Return Tubular Boilers, allowed 125 lbs. steam.

2 125 h.p. Water Wheels.

1 Upright Engine for sawdust conveyor.

1 10 h.p. Engine.

1 Mitts & Merrell Hog.

1 Wood Machine for 22-in. wood.

1 Wood Machine for 16-in. wood.

1 Edger for ripping dry lumber, installed.

1 Edger for ripping dry lumber, not installed.

1 30 h.p. Generator, 250 volt.

1 30 light arc generator.

There is also a large quantity of shafting, pulleys, hangers, belting, tram cars and turn-tables, particulars of which may be had on application.

Also, contents of machine shop, containing Planer, Drill, Lathe and Machinery, with tools necessary for repair work.

All of the above open for inspection at Parry Sound.

Single copies 15 cents.

"The Canada Lumberman and Woodworker" is published in the interest of, and reaches regularly, persons engaged in the lumber, woodworking and allied industries in every part of Canada. It aims at giving full and timely information on all subjects touching these interests, and invites free discussion by its readers.

Advertisers will receive careful attention and liberal treatment. For manufacturing and supply firms wishing to bring their goods to the attention of owners and operators of saw and planing mills, woodworking factories, pulp mills, etc., "The Canada Lumberman and Woodworker" is undoubtedly the most direct and profitable advertising medium. Special attention is directed to the "Wanted" and "For Sale" advertisements.

Authorized by the Postmaster General for Canada, for transmission as second class matter.

Entered as second class matter July 18th, 1914, at the Postoffice at Buffalo, N.Y., under the Act of Congress of March 3, 1879.

Vol. 34 Toronto, December 15, 1914 No. 24

Nothing Can Alter Canada's Enormous Resources

During the last year and a half in Canada, there has been so much discussion of the origin of the business depression that came upon us early in 1913 that nowadays, with the great war coming to cast all other subjects into the shade, the former subject seems almost to have dropped out of sight. Nevertheless, it is still of great importance, not so much in itself, but as one of the great contributing causes in connection with present day industrial and economic conditions. Englishmen whose interests lead them to an analytical study of these questions in other countries where British capital is such an important a means of national development as is the case in Canada, see our affairs from a wide angle and appreciate our situation in a manner which makes their views of prime importance. The general manager of the Clerical, Medical & General Life Assurance Company of England, Mr. A. D. Besant, returned recently from Canada, and expressed interesting views regarding Canada under war conditions, and its prospects for the immediate future.

Canadians must be patient and economize, says Mr. Besant, and must get closer down to actual production from the land. Canada has such stupendous resources awaiting development that it is absurd to be pessimistic about her. But she must act the prudent and courageous part.

Mr. Besant was struck with the contrast in present conditions between the east and the west. He says: Business conditions in the west are undoubtedly difficult. In the autumn of 1912 the land boom collapsed, and that brought about a certain amount of unemployment. Then the depression caused by the collapse was accentuated by the increasing difficulty in obtaining loans on the London market. This in its turn increased further unemployment, and the prevailing conditions caused a great falling off in immigration. This falling off meant a decrease in building, and that immediately hit the lumber industry in British Columbia severely. On the top of all this came the outbreak of war, which caused much dislocation of industry. It must not, however, be forgotten that Western Canada is quite a new country, and that its trade has been conducted on credit, and that there has not been time for the accumulation of wealth. Consequently, any temporary set-back is far more serious in its effects than it would be in an old settled country like England.

As a set-off to these conditions in the wheat growing provinces it must be said that the farmers will this year obtain very high prices for their wheat, and the circulation of the money thus obtained may do something to relieve the situation. The coming winter will be a time of difficulty for the towns. The great hope for the future is that the present crisis will check the artificial development of new towns and send a large proportion of the citizens on to the land, where they will become producers, and not merely distributors of wealth.

Eastern Canada is in a better position to meet the strain, because she possesses larger manufacturing industries, some of which are kept actively engaged by orders due to the war. The East is indeed much better off than the West. Many industries, however, are hit by the loss of trade with Germany, and by the impossibility of recovering debts. There is unemployment in the east as well as in the west, but owing to the eastern towns having reached something like maturity, they are better able to face the position. But nothing can alter the fact that the undeveloped resources of the country are enormous, and that the agricultural and mineral industries are only in their infancy. They are only beginning to be tapped, and the potential wealth of the country is incalculable.

It is rather academic to talk of Canada as a field for investment—a point of especial interest of course to British insurance companies. New capital cannot be obtained in any large amount as long as the war lasts. The constant expenditure in development is, of course, essential to a new country like Canada, and until the London loan market becomes available again, the progress of the country must be retarded. Money is needed for development in every direction for mines, irrigation, docks, and other enterprises. Large as has been the past expenditure, good investments will be found in Canada for all capital available for many years to come. But in the meantime Canada will have to pass through a serious economic crisis, and for the first time will have to meet expenditure out of income, without assistance from the stream of new capital so freely imported in the past.

Dominion Charters Upheld

The recent decision of the Privy Council in the case of the John Deere Plow Company v. Duck, and Wharton v. The John Deere Plow Company, clears up, to a very great extent, a number of uncertainties which have surrounded the matter of Dominion and Provincial Companies' licenses ever since Confederation. The chief result of the decision is the establishing of the paramount jurisdiction of the Dominion over trade and commerce, making it definitely clear that a company which has secured a Dominion Charter may carry on business in the various provinces of Canada without the necessity of taking out anything in the form of a Provincial charter. Manufacturers and other commercial companies operating in Canada who are well advised, will, as a result, henceforth take out Dominion charters and ignore Provincial licensing acts. In order to understand the situation clearly it is necessary to refer briefly to the cases upon which judgment has been given by the Privy Council.

The John Deere Plow Company was incorporated under a Dominion charter, with head office in Winnipeg, and authorized to carry on business in agricultural implements throughout Canada. The case of the Company v. Duck was an action for breach of contract to accept delivery of certain implements Duck had ordered but afterwards refused to take, alleging that the company, having no license in British Columbia, could not proceed against him. The company claimed that its Dominion charter was all that was necessary to enable it to carry on business in any province. The case of Wharton was a friendly action asking for injunction to restrain the company from carrying on business in British Columbia on the ground that such

business would be illegal because the company had no Provincial license. Both cases were tried in the Supreme Court of British Columbia and decided against the company. Appeal was then taken to the Privy Council.

The judgment is very sweeping and declares that the clauses of the British Columbia Act under consideration are invalid because they interfere with the powers conferred on the company by the Dominion Parliament, and with the company's status in the courts. The judgment applies equally to the extra-Provincial licensing and registration acts in Ontario, Manitoba, Alberta, Saskatchewan, New Brunswick, Nova Scotia and the Yukon. The act of the province of Quebec specifically excepts Dominion companies and is therefore unaffected. The act of Prince Edward Island is of a different character and is also unaffected.

Briefly, therefore, the situation is as follows:—

To do business throughout Canada a Dominion charter alone is necessary.

A Provincial license enables a company to do business in the province from which the license is obtained. Whether a Provincial license enables a company to do business outside of the province issuing the license, is still unsettled, and is under consideration in connection with a case shortly to come before the Privy Council.

A province can no longer compel a company with a Dominion charter to obtain a Provincial license or to be registered in the province as conditions of exercising its powers or of suing in the courts.

The rights of the provinces to enact laws affecting the general public in the provinces and relating to civil rights, or taxation, or administration of justice are not affected.

The opinion of the Privy Council is definitely asserted in the following reference to the provisions of the British Columbia Companies' Act which were under discussion:—"Their Lordships think the legislation in question really strikes at the capacities which are natural and logical consequences of incorporation by the Dominion Government of companies with other than Provincial charters."

Argentine Imports of Lumber

Up to the present, the greater part of Canada's exports to Argentina has consisted of lumber, chiefly white pine and spruce, says a report from the Canadian Trade Commissioner at Buenos Aires. In 1911, imports of white pine from Canada amounted to $1,095,000 out of a total import of $2,711,000, but in the following year the figures had dropped to $195,000, out of a total of $2,207,000. In the former year the United States supplied $1,510,000, and in the latter $1,791,000. The figures for spruce were, in 1911, $1,241,000, from Canada, out of a total of $3,388,000, and in 1912, $1,484,000, out of a total of $3,823,000. In the former year the United States supplied $1,510,000, and in the latter year $1,722,000.

These figures are in gold, the par value of which is $103.65 to $100 Canadian. There are no detailed statistics later than 1912; since then there have only been published the usual quarterly statements, which are confined to the total of each commodity. In 1913, imports of white pine amounted to $1,406,879, which was a decrease of $800,393, as compared with the year before. For the first six months of the present year, the imports were $629,430, which is an increase of $24,196 over last year. Comparing 1913 with 1911, the falling-off in the importation of white pine amounted to no less than $1,303,937. The total imports of spruce in the year 1911 were $3,387,659, and in the following year $3,823,429, an increase of $435,770. Last year this increase was lost, as the imports decreased to $2,964,094, a reduction of over $859,000 as compared with 1912. During the first six months of the present year the imports amounted to $734,678, which is $530,656 less than the same period of last year.

The reason for this serious decrease in the imports of timber is that building has been very much overdone in the Republic. Up to the early part of last year, the trade experienced great activity, and many new buildings were constructed. With the first warnings of the present crisis and the consequent slackening of the demand for first-class accommodation, a check was experienced. This has been gradually developing in sympathy with the increasing financial stringency, until it can be said that the trade is suffering from a veritable paralysis, the amelioration of which can only be brought about by an improvement in business conditions, and a renewal of confidence.

It is most unlikely that there will be any improvement in the imports of lumber for at least twelve months. Material coming in now is to complete contracts undertaken prior to the advent of the present financial stringency. Most of the dealers are carrying large stocks, which they are unable to liquidate, even at the lower prices which held prior to the recent increase in lumber, due to the high cost of freights, etc.

Quebec spruce has the best name in the Argentine market for quality, after which comes the New Brunswick and Nova Scotia product. To a small extent it is used as a substitute for white pine, owing to its fine grain and freedom from knots. It is particularly sought after in the construction of freezing chambers. Quebec spruce is used for the architraves of windows and for skirting boards, whilst New Brunswick and Nova Scotia spruce are used for common floors, temporary partitions, cattle sheds and for corrales in the camp. A certain amount of West Virginia spruce is imported. Whilst the quality is not so highly regarded as that from Quebec, it is liked on account of its size, as it is possible to cut all 12-inch widths out of this timber, which is not the case with the Canadian product, and it has also been stated that the lower price of the Virginian spruce more than offsets the advantages of quality and texture of that from Quebec.

The Lumberman's Influence Upon His Own Markets

A reader of the Canada Lumberman living in Vancouver, B.C., sent us a letter, a few days ago, upon a subject which we have discussed in previous issues, namely, the use of birch in the manufacture of saddle-trees, and upon a few other points suggested by our previous article. The article in the Canada Lumberman was an interview, drawing attention chiefly to the curious fact that Canadian birch was being purchased in extensive quantities by Canadian saddle-tree makers, through American wholesale houses; a strange proceeding which involved the sending of a certain amount of money out of Canada by way of commission to United States firms, in order to enable Canadian producers and consumers to do business with one another. Now, this was simply a single instance among many to which we referred, most of them, however, having a direct bearing upon one point, that Canadian consumers and United States consumers for that matter, frequently purchase stocks in a round-about manner, or stocks which are less suitable for their purpose than others which could be secured more cheaply or from a closer market. Our idea was to impress upon some of our readers the fact that there is still a great deal of room for study of the sources of raw materials, with a view to encourgaging more economic conversion of our forest products into finished articles. This particular instance had reference, like several others which were mentioned, to eastern Canadian trade, but our Vancouver reader has lost no time in letting us know that eastern Canada is not singular in this respect.

Anyone who makes lumber in any of its forms owes it to himself, and to his confreres in the industry, to encourage its use as widely and as economically as is possible and consistent with the wise preservation of our timber resources. Therefore the reference to the shingle industry in British Columbia is a timely and instructive one. If we are to continue to manufacture shingles, we should see that nothing which we do will discourage the use of shingles or have an adverse effect upon their price. A man who is engaged in the manu-

facture of lumber ought to see to it that his own example is a good one as a trade producer. This is probably one of the most fundamental axioms in connection with all kinds of industry and trade. To take a very ordinary illustration, one cannot imagine one manufacturer of pianos going to another firm and purchasing one of its pianos to install in his home; neither would one expect a manufacturer of wooden interior finish to go to a manufacturer of steel or other varieties of trim and buy the material for the inside of his home or office. When it comes to a show-down, what excuse is there for a man who puts other than shingle roofing upon his sawmill or shingle mill. The reason given is that he finds it necessary or wise, from an insurance point of view. As to the wisdom or necessity of this he has probably not informed himself as he should, or he would at least be inclined to make an effort to persuade the insurance people to favor shingles, or to permit them. Such a reason for the use of a competitive material can only be reasonable if one has already done all he can to promote a movement in favor of shingles and to encourage the study of means for making shingles fireproof.

Have the lumbermen of Canada as yet done anything effective in the direction of fighting against the opposition of the so-called fireproof materials which threaten to take away a great deal of business from the lumber trade? In the United States a very vigorous campaign is now being planned in this direction, but in Canada little has been done. We believe that, if the lumbermen will look into this matter seriously, they will find that there is now a practical possibility of bringing about a far more satisfactory situation in this connection, and that one of the most important factors in such a work will be that lumbermen themselves should become one of their own important groups of customers and so set a practical example to all others.

There are several other interesting points brought out in the letter from our Vancouver reader, which is published elsewhere in this issue. We fancy that many of our readers will think that he has put the matter a little too strongly when he reflects upon the business enterprise of Canadians as compared with the people of the United States. This is, of course, a matter of personal opinion, although we can scarcely believe that Canadians as a whole are not the equal of their friends across the line, from the business point of view. In the particular case cited by the writer of this letter, that of the use of birch for saddle-trees, we know that the Canadian manufacturers of birch were fully alive to the great possibilities in the sudden and extensive demand for saddles resulting out of the war. They were on the job from the start and the cases in which Canadian saddle-tree makers bought birch through United States houses were not the result of Canadian owners of birch being asleep. They had so much business to handle in a very limited time that they were unable to cover the whole market. Moreover, it was very natural that United States firms should have been equally awake to the importance of the situation and have sought some of the Canadian trade, knowing that it was very urgent and extensive. The interesting part of it was that some Canadian saddle-tree makers were not able, on account, we believe, of the urgency of the case, to find Canadian quotations, and so sent their orders to United States firms who sold them Canadian birch; all of which argues eloquently in favor of a much more complete and definite study, on the part of all lumber consumers, of the available sources of lumber which they can use.

Editorial Short Lengths for Busy Readers

Some startling statements were made at the sitting of the Dominion Railway Commission held recently at Edmonton, Alta., in connection with the demand of the Forestry Department that the Edmonton, Dunvegan and British Columbia Railway be made to comply with the regulations of the board regarding fire protection. One of the Forestry Department's fire rangers estimated that 20,000,000 feet of timber had been burned as a result of fires along the railway's right-of-way. The railway commission issued an order last September instructing the E. D. & B. C. to provide better fire protection. It is alleged that, according to the evidence produced, this order has been disregarded. The board reserved decision for the present but intimated that it would take drastic measures unless the E. D. & B. C. shows some respect for its ruling.

Under the caption "Wood and the Naval War" the Timber Trades Journal of London refers to an interesting feature in connection with the sinking of one of the English ships lost in the present war and makes the significant statement that "wood has, on many occasions, temporarily lost its birthright, but scarcely ever permanently. Unless there is some undisclosed fact connected with the sinking of H .M. S. Hermes the trade must, on international grounds, assume that the wooden sheath kept he affoat for about two hours, and thus gave time for the saving of many lives. It is understood that she was struck by three torpedoes. If this was so, the benefit of the wooden sheath is the more remarkable, and suggests that the absence of this in more recent warships may have something to do with such heavy loss of life in both navies. Wood has, on many occasions, temporarily lost its birthright, but scarcely ever permanently. Is this then likely to be a return in part to the wooden walls which have proved their worth in days gone by? If not altogether, then in conjunction with armor plate?"

Much excitement has been caused in Sweden by the action of the German Government in declaring that all wood will be considered contraband of war. Strong efforts have been made by the Swedish Government, but without avail, to have Germany exclude wood from its list of contraband materials. It is reported from Stockholm that many ships loaded with timber, to a total value of 30,000,000 kroner are lying in Swedish ports ready to put to sea. The foreign office of Sweden lodged a protest with Berlin against this action, but were not successful. The German legation at Stockholm gave out the following announcement in reply:—"The action taken by Germany declaring all wood conditional contraband was necessary, because wood in manufactured shape cannot be dispensed with in England for building barracks for the new army, nor in France for trenches and as foundation for artillery. Consequently, when wood is shipped to the respective countries it is serving the enemy's cause." This outcome will cause serious consequences to the Swedish lumber trade and newspapers in Sweden are recommending that renewed represntations be made to Berlin.

Speaking before the members of the Forestry Club at the University of Maine, E. Lisherness, the Bangor forest engineer, resently predicted that the picturesque log drive on the small streams of Maine and vicinity will soon be done away with. He declared that the logging railroad is the cheapest and most efficient means of transporting raw material from the scene of operations and within another decade will be universally adopted in Maine. "This will be the method for the future where large amounts of lumber are to be transported for quite a distance," he declared. In summing up the advantages of the use of a logging railroad, Mr. Lisherness claimed for such a method reliability and cheapness of operation, delivery of logs without loss from breakage, a lower cost of building and operating than cost of dams and driving on small streams, a saving in hauling and toting, possibility of operation on narrower roads than used by the log hauler, and in every way greater efficiency and safety in transporting logs from the timberland to points where large rivers or other means of transportation are available. Mr. Lisherness advocated that all foresters should study civil engineering on account of the many problems which require a knowledge of that profession constantly arising in connection with large lumbering operations. He spoke highly of the excellent work being done by the large pulp and paper concerns in Maine toward conservation of the timberlands of the State. In speaking of methods of mapping and estimating standing timber, Mr. Lisherness said that the "cruiser" who once walked through a tract of woods and guessed at the amount of timber is now out of fashion. Even the method of dividing the tract into strips, actually counting the trees on a given strip and thus approximating the whole, is inefficient, he said. The modern idea is to measure approximately 5 per cent. of the tract and thus estimate the whole.

The Reader's Viewpoint on Trade Topics

Can British Columbia Recover its Importance in the Export Trade to Australia? —Further Discussion of the Birch Question

A Diagnosis of B.C.'s Lumber Troubles

Editor Canada Lumberman: Vancouver, B.C., Nov. 30th.

In an article recently published by Mr. Henry Pearce in the Canada Lumberman, the question of the export lumber business has been treated at some length, and the influence that the present war in Europe is likely to have upon it, is touched upon. The arguments of the writer appear to me to cover very well the points they treat of. I will, however, attempt to supplement one or two of them from an experience of several years in the export lumber trade from points on the Gulf of Mexico.

I think he is quite right in advocating a British Columbia Bureau of Inspection somewhat similar to the Pacific Lumber Inspection Bureau, but the membership should be held by the shipper and not necessarily by the mill cutting the material shipped. (I will state my reason for this later). His suggestion that a commission should be sent to the various countries which promise a market for our lumber is an excellent idea. It is odd how little is known of this coast and its products in some quarters. Quite recently, the firm of which I am a member (the Mainland Lumber & Shingle Company) had an inquiry from an importer in a large seaport town in England, asking for quotations on shipments to continue until "the close of navigation by ice," evidently classifying Vancouver with Vladivostok. Another firm shipping from the Gulf Coast, with whom I have done a good deal of business in the past, asked us to confirm their assumption that Douglas fir is a resinous pine and similar to that shipped from the Gulf. It will be necessary for the commission to be supplied with all details regarding the durability of our product, breaking strains, etc., and to be able to produce samples to show its actual nature. Our advantage over the pitch pine formerly supplied to South America for example, will be in the fact of our being able to ship so much larger sizes, containing on the whole fewer knots and showing so much less sap, pitch pine being a more sappy wood and there being a difficulty in obtaining it in anything like large timbers.

I also agree with Mr. Pearce in refusing to admit that we are suffering from any disadvantage in comparison with the exporters on the American side, unless in the matter of harbor dues and wharfage, the cost of which seems at present to be rather ill-defined; but in any case these details must certainly not be allowed to stand in the way. As a matter of fact the facilities that tidewater mills on this coast enjoy, make the export business appear a veritable delight to anyone who has undergone the harassed existence of a pitch pine exporter, say, eight or ten years ago. To begin with, we always made a c.i.f. or delivered price on the basis (for steamer cargoes) of a maximum charter; a complicated contract, the two chief features of which were that the shipper had to hire and pay the stevedore and that he was obliged to load the vessel with the utmost rapidity in order to make any profit. The tramp vessels in those days carried no wireless, so that one could only approximate the day of their arrival. This was awkward when the whole cargo was to be collected (as I have known it to be) at a dozen different mills, perhaps not more than one or two of them on tidewater. It was necessary to get about half of it loaded on cars before the probable date of the vessel's arrival and to badger an ill-managed railroad system into giving cars fast enough to load the rest and keep the stevedore supplied. Sometimes a vessel would make two ports of loading, say, Gulfport and Pensacola, and three or four different ports of discharge and have more than one separate parcel for some of the latter. Also the lumber was always on flat cars and during the rainy season the sap would turn "blue," causing claims at the point of destination.

This brings me back to the reason for having the membership in the Bureau of Inspection vested in the shipper instead of in the millman, as I understand that of the Pacific Lumber Inspection Bureau is. If we are to be able to ship export lumber from the smaller inland mills it would seem an unreasonable tax on them to compel each one to take out and pay for a membership on account of his small quota of a few carloads, when a large tidewater mill could supply an entire cargo of two or three million feet on a similar membership. The actual shipper would be allowed the privilege of the bureau, of which he is a member, irrespective of what mill he may ship from. I am assuming that the railroads will give us every facility they can in the way of car service, etc., towards enabling the smaller and interior mills to participate in this business. With an administration experienced in handling the export trade it is interesting to observe how rapidly a port may be built up. I saw that of Gulfport, Mississippi, grow from practically nothing to an output of twenty-five million feet a month.

I notice that Mr. Pearce cites as an objection with which he has to contend the plea that the lower grade lumber would be left on the exporter's hands. But China takes a large quantity of the lower grades. Rio de Janeiro and the Argentine (though just now out of the running) use almost entirely a class of pitch pine approximating to our merchantable. The west coast of South America also imports a cheap grade of lumber, and the Genoa prime that goes to Italy is about on a par with our No. 1 common. France, Belgium, England and Germany, however, use the better grades of flooring and heart face boards.

One difficulty instanced by Mr. Pearce is perhaps insuperable, but it is really less of a difficulty than a necessity. The handling of export cargoes directly from the mill to the foreign dealer or consumer has not been found practicable, at least in the pitch pine trade. The amounts involved are large, the credits run to 90 days after arrival, and the chances of unjust claims are too great. Almost all of the export business I refer to is conducted through large London or Continental brokers, carrying very large capital in the business, besides maintaining responsible arbitrators to adjust claims. Being well known, the banks will discount their drafts; it would cause an endless amount of correspondence and inquiry to put every individual buyer upon a similar credit basis. Some of the most profitable orders (such as large timbers for wharf buildings) could not, in the nature of them, occur again for a very large period, and such orders are seldom heard of except through long-established brokers. The chartering of vessels, too, is something an average millman would hardly care to undertake.

British Columbia let her export trade drop some years ago on account of the enormous demand and the high prices consequent upon building up the prairie towns. All the output of these mills went inland and then could not keep up with the demand. This has now dropped even below normal, but we should be able to take up our export trade again and, between the two, maintain a status that will guard us from suffering so severely from the fluctuations in demand and prices.—Frank Foster, Mainland Lumber and Shingle Company, Limited.

One Answer to the Birch Question

Editor Canada Lumberman: Ottawa, November 27th.

We are in receipt of your letter of recent date, in which you draw our attention to the fact that some Canadian users of hardwoods buy their stock from American wholesale houses instead of from Canadian wholesale firms. Personally, I may say that, all the birch and ash lumber used in our business is Canadian, and bought from Canadian firms, with the exception of ash veneers, as we get better satisfaction in buying the veneers from the other side of the line.

The United States wholesale firm, having a much larger market to sell in, is in a position to buy and hold much larger quantities of stock for his prospective customers, and in the present shortage of good birch stock suitable for saddle trees, we find that the greater amount, dry enough and of the requisite thickness (4-in. and 5-in.) is in the hands of the United States buyer, and cannot be purchased except through his office, even though still in the Canadian lumber yard.

The better grades of red and white American oak we find superior, also their quartered oak. Chestnut, Georgia pine, whitewood, etc., of course, we must import from the other side when called for in the specification.—Estate James Davidson, per G. P. Davidson, manager.

Birch as a Wagon Stock

Editor Canada Lumberman:

I have read carefully and with considerable interest the article in the Canada Lumberman of November 15th regarding the use of birch in wagons. The only paragraph that I can discuss at all is the one in reference to wagon stock.

The author of that paragraph is wrong. None of the Canadian wagon makers are using any better timber than the makers in the United States. They practically use the same, both in the States and in Canada, with one exception perhaps. Some makers in the States use oak hubs and some birch hubs, and the same thing can be said of the Canadian wagon builders. It may be that the author of the article is a little mixed or does not know the difference between

a standard wagon and a cheap farm truck. There are concerns in the States making a low-wheeled handy farm truck, and in these there is no oak in the gearing and even in the wheels in some cases. They do not use oak spokes. They all use oak rims. It may be this wagon that the author has in his mind. There are a few of these made in Canada and they are made largely of maple and birch.—Wagon Maker.

Are We Alive to Our Opportunities?

Editor Canada Lumberman: Vancouver, B.C., Nov. 23rd.

In the last two issues of the Canada Lumberman you have given some pretty plain and appropriate talks to lumbermen, which, I am sure, will be read and appreciated by many. Any one who reads those articles, and who gives proper thought to the study of the subject can readily see that there is something lacking; and if we were fully alive to the position which we try to occupy we would not leave it to the editor to lay these facts bare, but would be first to unearth them ourselves, and thus make such comment unnecessary.

The editor, having found it incumbent upon him to take the matter up and discuss it, however, treated the subject with a great deal more modesty than might have been done, and yet he showed us quite clearly that there are other people, handling competitive lines, who are more alert, and perhaps better qualified to perform their function than we are to perform ours. Altogether they are better men—in a business way, at least—than we are. Now the nice feature in the editor's commentary on the situation is that he did not come out flat-footed, as the saying is, and tell us that, but he did lay the matter before us in such a plain and able manner that any of us who had not realized the fact before, would be very stubborn indeed if we refused to realize it now.

Take the matter of the birch lumber used in those saddles: did the saddler go to the United States with his inquiry, or did the American lumber dealer come to him, in his alertness, while we were resting secure in our convictions that patriotism would send the business to us without our having to go after it? Or again, is it not possible that while the American was rushing forward to nail this business we had never given the matter a thought?

Take those ready-made houses: did Great Britain believe that we are incapable of filling such an order, and therefore seek out the Michigan people to do it? Not at all! The Michigan people were thinking while we were sleeping, and they conceived the idea that those houses were just what Great Britain needed. Britain was in a desparate situation with all those homeless people to care for, and the Michigan people were right there with the goods to relieve that situation. What could have been more likely than that they would have gotten an order?

Let us come home to British Columbia, and even down amongst our neighbors to the south if you like, and consider why our shingles are being replaced by other materials for roofing purposes; and what applies to British Columbia will apply elsewhere in the Dominion. Go amongst our mills and manufacturing plants and what percentage of them will you find using shingles for roofing? Now this condition stands out glaringly, and yet it has always been a wonder to the writer why it should be so. No greater talking point could be put into the mouths of our competitors than this, that the manufacturers of shingles will not use them on their own buildings. We know that a certain amount of prejudice against shingles lurks and originates have had it pretty much in their power to dictate to us what we in the offices of insurance companies, and that in days gone by they should use in the construction and covering of our buildings, and this has doubtless been the cause of so much other material having been used in the past. Now, however, seeing that the mills carry their own insurance in most cases, there is no reason that I can see why they should not lead out and show to the world that they believe that lumber and shingles are superior to other materials by the fact that they have tried all others, and have at last settled upon this material.

I recall an incident which came to my notice a while ago. A wholesale house handling heavy hardware was carrying an advertisement setting forth the good qualities of their roofing material, and unadvisedly stated that it was better than shingles. I was present when the representative of that firm called upon a lumber and shingle manufacturer for business, and heard the manager of the shingle manufacturing company tell him that he could not have any business from him while the hardware house continued to "knock" the business in which he was engaged. We admit that the advertisement was ill advised, but when it is stated that every building upon that shingle manufacturer's premises was covered with other roofing than shingles, and that perhaps most of it had been bought from that same hardware house, had they not some reason for believing that they were right?

I believe that with the same amount of care and thought and intelligent energy displayed in the lumber and shingle business as is used in producing, preserving, and placing other materials before the people, shingles, as well as lumber can be made quite safe from a fire risk standpoint, and more adaptable to all climatic conditions, as well as those touching economy and design.—Douglas Fir.

Better Prices for Spruce at Boston

Editor Canada Lumberman: Boston, Mass., December 3rd.

There is little to be said in regard to the market here at present. Business is dull, and the only feature is the sharp advance in spruce schedules—that is, dimension frame lumber for houses. The market price today is $24. It went as low as $22.50. Spruce dimension lumber, long lengths, is scarce; that is, the supply is very small just now, owing to the extremely low prices; also, as it is the end of the season, most of the mills are closing down and there are very few sawing. This has affected the market. It has made a little better price for all classes of eastern spruce. Whereas the market has been irregular, there is no doubt that there is a better tone than there was, in the spruce situation, but there has been no improvement in anything else of which we are aware. There is little change in other prices, but it is difficult to state with any accuracy what some of the prices really are—the market is so unsettled.

We received recently the first inquiries since the war for small amounts of white pine lumber to go to South America. As yet we have not received orders but are in hopes that we may get some small ones. Financial conditions in this country are vastly improved. Under the new system, the surplus reserve in New York shows 170 odd million dollars now. We don't assume that the banks will want to loan all this money, but we assume they will want to loan enough of it to make conditions much better, and we believe it will make an improvement in general business. The lumber business, however, is about the last that would be affected.

Southern pine roofers are selling at the lowest prices within the memory of the younger generation at least, and all southern products are cheap and are affecting everything else. The western coast lumber, such as fir, etc., has been sold very low in New York, and it seems to have had a general bad effect in that market. We have some reason to believe, however, that high freight rates may, to some extent, cut that lumber out for a time. There appears to be an over-stock of most kinds of pine stock in Canada, but we are given to understand, from inquiries which we have made, that the cut is somewhat less this year in the Ottawa Valley. It is somewhere from 70 to 100 million less than last year; that we know. We are afraid that most of the lumber on hand is unsold and it is not moving. We understand many manufacturers will take out much less from the woods this winter, and it would appear to be only a part of prudence to do so.

The advance in spruce in this market may be entirely temporary, but we are in hopes that it will not go quite as low again as this year; that is, on spruce dimension. On boards, there has been no advance, or on anything else except in the way of eastern spruce in the State of Maine, New Brunswick and Nova Scotia,—scantling, timber, etc.; and about all the advance has been confined to dimension stock sawed to given lengths required in house frames.—Shepard & Morse Lumber Company, T. H. Shepard, Treasurer.

A Factor in the Wood Substitute Situation

A very definite illustration of one of the factors which led up to the remarkably successful introduction of substitute materials in the place of wood, is afforded by a letter received by the Canada Lumberman from a prominent Ontario wholesale and retail dealer in lumber, lath, shingles, etc., who also now handles prepared roofing, metal roofing, etc. "We think the time has long gone by," says this lumberman, who does not wish to have his name published, "for trying to recover the trade lost to the metal people. A good number of years ago we wrote to different manufacturers in connection with the poor makes of shingles and other lines that were put out, which enabled metal people to get the thin end of the wedge entered, and we think it is now pretty well driven home. The manufacturers in any of our cases, never answered us. In one way it was none of our business, but we thought, as a matter of courtesy they should have made some reply. We are confronted continually with requests to handle different kinds of goods taking the place of wood, and we are taking agencies, simply because of the persistent efforts put forward by the various manufacturers of these materials, and because of the enquiries coming for them."

Prospective Improvement in B. C. Trade

Mr. H. R. MacMillan, chief of the forest branch of the Lands Department of British Columbia reports that as a result of the war, already a number of enquiries for timber supplies are reaching British Columbia producers. Bids are asked for the supply of 8,000,000 ties to be used on British railways. Hankow, China, which was recently devastated by fire, is in the market for a large quantity of building materials, among which lumber will figure very largely. British bankers made a loan of $50,000,000 to Hankow for rebuilding and it was stipulated that British material should be given the preference in all requirements.

Canadian Operations in the South

Mississippi Hardwood Company, of Jackson, Miss., Closely Allied to Wilson Lumber Company, Toronto—Their Plant and Operations

An interesting article was published in the Canada Lumberman of June 15th, 1913, describing, among other things, the operations of the Wilson Lumber Company of Toronto at Valley Park and Smeades, Miss., where they manufacture extensive quantities of hardwoods. We have pleasure in reproducing, in this issue, three illustrations of the operations of the Mississippi Hardwood Company, Jackson, Miss., a company which, while not run in conjunction with the Wilson Lumber Company, is owned and operated very largely by those who conduct the Wilson Lumber Company's operations. Major R. S. Wilson is president of the Mississippi Hardwood Company; Mr. A. J. Morris, vice-president and general manager, and Mr. S. I. Wilson, secretary and treasurer.

The logging operations shown in one of the illustrations, are at Pickens, Miss., where the company have several thousand acres of fine oak, ash, cypress and poplar. These scenes are typical of most of the hardwood logging operations in the south. The mill, which is located one mile out of Jackson, Miss., has an average capacity of about 35,000 feet per day, producing mostly oak, ash and poplar. The equipment includes an 8-in. single cutting band mill and all the latest additional equipment necessary for its operation, such as edgers, trimmers, etc. It is located on the Illinois Central Railroad and the street cars from Jackson run right out to the company's plant.

In connection with the mill, the company have yarding capacity for about 5,000,000 feet. They make a specialty of poplar and oak and all their poplar is end-racked before sticking, so as to eliminate stain.

Major R. S. Wilson has been conducting lumber manufacturing operations in West Virginia and Kentucky for a number of years and as his timber was becoming rather scarce, he looked about for new limits. Hearing that the mill at Jackson, Miss., was on the market, he negotiated for its purchase and took possession on March 1st, 1914. The mill is a new one, having been built in 1913. Since the new company took possession they have installed several important devices for handling the product more satisfactorily. The output of the mills sold both in the United States and Canada and some of it is exported to Great Britain. The company are also expecting to find a market for some of their product in Australia. Most of the Canadian end of the trade is handled by the Wilson Lumber Company of Toronto.

One of the accompanying illustrations shows the logging yard at the mill and gives an excellent idea of the methods of transport in the south.

Another illustration shows a portion of the logging yard in the limits. As will be seen, the logs are brought to this yard all prepared for loading on to the carriage at the mill. In this case also the transportation is provided by wagons drawn by oxen. Often these yards will contain as much as 400,000 feet of logs, but they are shipped out of the yard at a very rapid rate. This illustration also shows that logging crews employed are nearly all blacks.

Another illustration shows two red oak logs which have just been brought in from the limits to the yard. These two logs were taken from one tree. The butt log, when brought to the mill, cut out

Canadian Operations in the South—Two Fine Red Oak Logs.

75 per cent. firsts and seconds, about 960 feet altogether. The second cut out 90 per cent. firsts and seconds, over 600 feet in all.

Sent to Jail for Burning a Forest

At last what believers in forest conservation have asked for so long has happened—a man has been sent to jail for three months for leaving fire in a forest. Forest protection is as much a moral question as it is a political or administrative question. The public has for a long time believed that stealing a ham or setting fire to a woodshed were crimes for which the perpetrator should be sent to jail, but that to send a man to jail for setting fire to a forest was a cruel and brutal thing to do. This was so, though the burned woodshed might be worth $50 and the burned forest worth $50,000, true also in spite of the fact that homes and even lives might be endangered.

Now it has happened. The Lower Ottawa Forest Protective Association has had a good many men fined for setting fire to their slashings to clear off their farms, contrary to law, at a time which endangered the surrounding forests. But the Association found that many of those fined considered that the more trees burned the more land cleared, and that a fine was a small price to pay for clearing their own farms—no matter what happened to the adjoining forest. It was, therefore, decided to press the matter, and as a result the delinquent was convicted and sent to jail for three months.

We do not present this in any vindictive spirit. We are sorry for the man who has had to go to jail. But if Canadian forests are to be saved somebody had to begin the unpleasant business of teaching men that arson is punishable whether in town or in the forest.—Canadian Forestry Journal.

B.C. Export Lumber Trade Analyzed

Causes of Recent Rapid Decline—A Difficult Matter to Remedy—E. J. Palmer's Remarks to Board of Trade

The rapid decline in the export lumber trade of British Columbia, was referred to briefly in a recent report of a meeting of the Victoria, B.C., Board of Trade, at which addresses were delivered by Mr. E. J. Palmer, Chemainus, J. O. Cameron, and H. R. MacMillan, chief forester for British Columbia. Mr. Palmer's remarks at this meeting covered the subject in an interesting and convincing manner, and we have pleasure in reporting them now much more extensively than in our previous issue. His remarks, as given in a letter to the Canada Lumberman, were as follows:—

While the lumber trade of Australia has been steadily increasing, in fact has increased 390 per cent. in the past ten years, the percentage shipped from British Columbia mills has as steadily decreased, until, in 1913, they shipped barely 4 per cent., against 33 per cent. shipped ten years ago.

Australia took, in 1913, 40 per cent. of all the timber exported from California, Oregon, Washington and British Columbia, and we think it should be impressed upon not only our government, but also the public at large, that here is a market which is not dependent upon the Panama Canal, but is an old and ever-growing one, and that every manufacturer in British Columbia is equally interested in securing a large share of this business, and although he may not be in a position to make foreign shipment, still, that much more lumber out of the country will improve his chances in the home market, and with the gradual changes in the methods of doing business, there is no reason why those mills, which at present cannot be classed as foreign mills, should not do some of the trade.

Think for a moment what it would have meant if our mills had secured 50 per cent. of the 238,000,000 ft. which Australia took, instead of 4 per cent.

British Columbia, in 1913, made the following expenditures in the lumber industry:

In wages olone	$11,025,000
Food supplies of operatives only	3,353,000
Mill and logging supplies	1,575,000
Employment of tow boats	800,000
Total	$16,753,000

No doubt the question will be asked, "Why it it that Washington and Oregon enjoy so much greater a share of this trade than British Columbia?" In explanation I would say that the export lumber trade of the Pacific Coast commenced first in San Francisco, and, although the manufacturing has been done in the north, the selling part of the business has remained almost wholly in San Francisco, and it has been so long established there, that it is difficult to divert it. The carrying trade, to a very large extent, is in the hands of Pacific Coast owned vessels, and it is only natural that owners will charter more readily, all things being equal, with fellow merchants in San Francisco, than with us in British Columbia. There are also some expenses they can avoid by loading in the United States instead of Canada, and consequently we find we have to pay 1/3d to 2/6d per M. feet higher freight for a vessel to load in British Columbia than the same vessel will accept to load in Washington or Oregon. This is a most serious handicap and would be neutralized were there a preference between Australia and Canada. There is also the fact that several of the importers in Australia are closely allied, if not branch establishments, of those in San Francisco, and vice versa, consequently the trade flows in that channel. The bulk of the trade, we may explain, is not done direct between the sawmill and the dealer in Australia, but passes through commission houses in San Francisco, who would buy cargoes for Australia in British Columbia, although the price might be the same, if the cargo from British Columbia would not be subject to as much duty on entering Australia as one from Oregon or Washington. Here is an article which Australia wants, and which British Columbia can supply, of as good a quality or perhaps better than our competitors to the south; hence it is eminently an article on which a preference might be negotiated.

How a Preference Would Work Out

The writer is of the opinion that should we be given the preferential duty, it would act the same as the preference we now have in South Africa. Quotations are asked from all the Washington and Oregon mills. If our quotation is the same, they base their price on the Sound quotations. The mills on this side secure the business on account of the 10 per cent. preferential. I do not think a 10 per cent. preferential would help us out to any great extent in Australia, as, while the majority of lumber going to South Africa is handled by sailing vessels, that going to Australia is carried by tramp steamers on time charters, but if we were allowed $1.00, I do not think it would cost the buyers in Australia one cent more for this material, as it would simply be absorbed by brokers and quotations would be made on a base price Puget Sound, which price rules.

There is another thing. Manufacturers in British Columbia cannot produce as cheaply as on the other side of the line. First, the topographical conditions make logging more expensive here; second, adidtional towage; third, duty on machinery. All have their effect on production costs.

I have before me a comparison of labor costs which does away with the argument that Oriental labor is cheap labor. In fact it is the most expensive labor one can employ. It is impossible however, to employ white labor on account of the wage set by the government of $3.00 per day of eight hours, and even then they do not expect to do a day's work, while our competitors on the other side pay $2.50 for ten hours work. I consider that white labor at $2.50 per day, if they will work, is much cheaper than Oriental labor at $1.50.

A comparison of a mill situated about the same as ourselves and belonging to the same company, doing export business on the other side, gives the following:

	Their Mill	Our Mill
Mill labor and expense	1.473	1.836
Yard expense	.642	.887
Shipping	1.012	1.426
Pond expense	.054	.114
Belts and findings	.036	.082
Oils	.024	.072

In our planing mill we have exactly the same machinery, the latest, whereas their labor cost is .374 ours is .553.

The above should do away with the general impression that we have cheaper labor on this side.

I think it is the duty of the Board of Trade, and in fact every one in British Columbia, to impress upon the Provincial Government the necessity or urging upon the Minister of Trade and Commerce, the importance of trying to provide an outlet for the lumber of British Columbia.

The Situation From a Revenue Point of View

Since the Provincial Government had the books of the different companies checked up, with a view to obtaining costs re the adjustment of their royalties, some of them at least, have begun to realize that something will have to be done in the immediate future to provide a revenue. As you are doubtless aware 50 per cent. of the revenue of the Province is directly or indirectly derived from the lumber interests. With these falling off at the rate they are, what will the taxes have to be on the other industries outside the lumber business, in order to produce a revenue sufficient to meet the requirements of the government.

It is the opinion of the writer that with the drawing together of the Empire during the war, the present is an opportune time for the Dominion of Canada to open negotiations for a preferential revision of the tariff in Australia. With this end in view we ask the co-operation of the Board of Trade and the citizens of Victoria in requesting and urging upon both the Provincial and Dominion Governments, the necessity for preferential duty.

Studying Wood Distillation

The State College of Forestry at Syracuse, N.Y., is carrying on careful studies of the wood distillation industry in the State because this industry uses the raw products of the forest closer than any other industry. More complete utilization of the products of the forest means a great deal not only in saving lumber and other kinds of timber for more important uses, but by utilizing closely the tops of trees left in the woods, the forest is left in cleaner condition and, therefore, not so liable to be injured by forest fires. Often all wood, including the bark, is used down to a diameter of one inch.

The chief products of the destructive distillation of wood are charcoal, wood alcohol and acetate of lime. Charcoal is used for gun powder, for fuel, in the manufacture of iron, and for various poultry and animal foods. Acetate of lime is used almost wholly in the dye industries. Wood alcohol is used largely as a solvent and for various chemical purposes. Beech, birch and maple are the best woods for the production of wood distillation products. Heartwood is better than sapwood because it does not contain so large a percentage of moisture. Elm, chestnut and cherry are not desirable woods for the wood distillation industry because they contain too much tannin, gums, etc.

The wood distillation industry began its development about 45 years ago by the making of acetate of lime to be used in the dye industry. Even at the present time much of the acetate of lime produced in this country is being used in Germany in the manufacture of dye stuffs. The College hopes that as a result of the present European war, the manufacture of dye stuffs can be stimulated in this country so that the manufacturers of acetate of lime and other products of destructive distillation may find better markets here.

Forest Policies of Canadian Provinces

Shortcomings of Timber Administration Forcibly Described—Canada Only a Short Distance Along the Road of Economic Management

By H. R. MacMillan, Chief Forester for British Columbia

Editor's Note.—The following extracts are from an interesting address recently prepared for the American Society of Forest Engineers, Washington, D.C. The address was much more extensive, but the chief subjects of interest to our readers which it contained are reproduced.

The individual Canadian is even more interested in the application of principles of forestry to the management of timberlands than is the individual citizen of the United States. The manufacture and marketing of forest products is of greater relative importance in Canada than in the United States. The estimated total value of the forest products of Canada was for the year 1912 $182,300,000, or an annual wealth production of $25.68 per head of population. The total value of the forest products of the United States is, of course, much greater than the total for Canada, being estimated at $1,280,000,000 for the year 1908. Annual wealth production per capita in the United States is therefore only $13.70. The forest as a source of wealth and a support of industries is almost twice as important to the Canadian as to the American.

From the earliest days of settlement the forest has played a very important part in the foreign trade of Canada. In 1913, 12.1 per cent. of the total exports were of forest products, the value for the year being $5.97 per head of population; in the same year in the United States the products of the forest constituted only 6.3 per cent. by value of the total exports fo that country, averaging $1.37 per head of population.

Very little timber is cut from Dominion Forest Reserves. The total cut in 1912 was about 7,000,000 feet, one-half of which was cut by settlers and the other half by timber operators. The total timber revenue of the Forest Reserves was in 1912, $21,000.

After dealing in considerable detail with the Dominion Government's administration of its public lands in the prairie provinces and British Columbia, the address took up a consideration of the separate provinces and their forest administration.

Ontario's Timberland Policy

Ontario is one of the most important forest provinces of Canada. The area of the province is 407,000 square miles, of which 260,000 is fit for no other use than growing timber. A large proportion of the land classed as potentially agricultural land is still covered with forest.

The policy of administering timberlands in Ontario has not changed greatly in thirty years. The lands timbered and non-timbered are administered by a Crown Lands Department, consisting of an office staff, a number of district Crown timber agents, offices employing cruisers, forest rangers with police duties, scalers and fire rangers. The Department employs a Provincial Forester and assistant who have no administrative duties.

All public lands in Ontario are wooded, the stand depending upon the degree to which it has been burned. The public lands are open both to purchase by timber operators and speculators, homesteaders and land purchasers. Neither the settler nor land purchaser is allowed to acquire title to valuable bodies of pine timber.

Settlers and land purchasers are not taking up important areas of timber lands in Ontario. There is no classification of land by the Government to prevent settlers or land purchasers taking up non-agricultural lands to the detriment of the community.

The system of handling public timber is simple. Cutting licenses are sold which entitle the holder to what are apparently perpetual cutting rights over the area purchased upon payment of $5.00 per square mile rental, and a royalty payable when the timber is cut, which varies from fifty cents per cord in the case of pulpwood to $5.00 per thousand on some recent sales of white pine. These licenses are sold by auction, the person willing to pay the highest cash bonus secures the license. There are at present 17,519 square miles of licenses held chiefly for white pine and pulpwood.

The sale of timber on public lands in Ontario is unaccompanied by any thought of the permanent productivity of the forest. No study is being made of the forest lands to learn their productive capacity, no restrictions are placed upon cutting operations to even encourage close utilization or bring about conditions conducive to forest reproduction of any kind. The white pine stands are treated as a mine from which a certain amount of ore is extracted each year. The quantity of pine remaining on Government lands is estimated at 12,000,000,000 board feet. The quantity on licensed lands while unknown is probably at least as great. The quantity of pulpwood remaining is enormous. No forest survey has been made of the province.

Forest reserves covering nearly 21,000 square miles have been created. The object is to hold certain valuable bodies of timber for sale, to create recreation parks or perhaps in accordance with the idea which once prevailed in New York State to create a forest "reserve" for the future. The forest reserves receive no administration beyond policing and fire protection.

Ontario was a pioneer in fire protection. At present large sums of money are spent. The Government employs fire rangers on the forest reserves, along railways and on certain public timberlands carrying valuable stands of timber. Five hundred and eighty-five were so employed in 1913 at a cost of $233,000. Holders of timber licenses are required to employ men to protect their licenses and the Government supervises their work. License holders in 1913 employed 350 men. Logged-over lands, thousands of square miles of white pine and other reproduction, on non-agricultural land, secure no protection. The expenditure of money is restricted to the merchantable crop. Studies made by the Commission of Conservation have shown that the province is losing millions of dollars annually by failure to protect the young growth on white pine lands which are even now in the centre of markets. Adjoining a densely settled portion of the province 260 square miles were burned over out of a total area of 2,100 square miles in 1913. The province rarely hires men to fight fires and rarely prosecutes for infractions of the fire law. The annual loss from fire would prove staggering if it were investigated.

The public of Ontario received a direct revenue of $2,127,000 from timber in 1913. The expenditure on the administration and maintenance of this resource was $398,000.

Quebec Evolving a Forest Service

Quebec is now the largest province in Canada. The total area is 707,000 square miles, of which 530,000 square miles is valuable only for the growing of timber.

Almost the same system of public timber lands administration has been followed in Quebec as in Ontario.

Since 1906 a Forest Service has been in process of development in Quebec. Though the forest service has nothing to do with the sale of timberland it performs an important work in the inspection of logging operations. Iicenses issued to timber purchasers by the Crown Lands Department now carry restrictions requiring clean logging and specify diameter limits of 13 inches for pine, 12 inches for spruce, hemlock, maple and birch and 8 inches for balsam and swamp spruce, below which trees may not be cut. Though these diameter limits are the same for each species over the province and are based upon insufficient data they indicate a desire on the part of the government to handle the timberlands in such a manner as to increase their productivity. There are no regulations requiring slash disposal.

No general reconnaissance of the forest is being undertaken. Some work of an exploratory nature is in charge by the Forest Service. The government has not yet interested itself in the comparatively large areas of timber under private ownership.

Forest fire protection in Quebec except along railroads is practically confined to timber at present merchantable. The holders of timber licenses are required by law to patrol their holdings at their own expense; 514 men were so employed in 1913. The government spends $24,000 a year on a general supervision of fire protection. This amount is, of course, hopelessly inadequate. The public lands have suffered and still suffer terribly from fires. Fire protection is under the control of a special branch of forest protection.

The more important license holders have formed co-operative fire protective associations, and are working out very effective plans for fire protection, putting in trails, telephones, lookouts, and protecting all timber under their jurisdiction.

Several large pulp and paper companies in Quebec are undertaking forest management on their holdings, making forest studies, cutting with a view to a future crop and making experimental plantations.

The forest revenue of Quebec for the year 1913 was $1,500,000. The expenditure on forests was $122,000.

Timber Exploration Far Advanced in New Brunswick

In New Brunswick the principles followed in the administration of the remaining lands are much the same as in the provinces already discussed. The exploitation of timber has, however, gone further. White pine, once plentiful, has been cut out and the lumber industry now depends on spruce. Practically the whole of the merchantable timber has been taken up by holders of perpetual licenses to cut, which cover 10,147 square miles. 280,000,000 board feet of timber were cut from Crown lands in 1913. The rental per year for timber licenses is $8.00 per square mile. The royalty on timber varies from $1.00 per thousand for hemlock to $1.50 for spruce, pine, tamarack and cedar.

It is felt by the government that the quantity of timber cut each

year from public lands is in excess of its annual growth. No studies have been made however, to determine this fact.

There has been no forest survey or reconnaissance of the province. A law has been enacted by the Legislature providing that such a survey shall be completed by 1917. It has not yet been begun.

The regulations under which licenses to cut are issued require that all slash shall be lopped, that stumps be cut low, logs cut to a 5-inch limit in the tops and that no spruce or pine trees be cut which will not make a log sixteen feet long, nine inches in diameter at the top. This top diameter limit is reduced to seven inches for balsam. No supervision is provided beyond that of the scalers, of whom there are about 29 for the whole area of Crown lands, and who are responsible as well for all prevention of trespass and the scaling of timber.

The forest lands in private ownership are receiving no special care.

Fire protection in New Brunswick is chiefly an auxiliary service dependent upon government and local municipal officials whose duty it is to call out the population and extinguish fires or to arrest offenders. The province appoints a chief fire warden with supervisory duties, but does not maintain a patrol force, nor does it require the holders of timber licenses to protect their timber or contribute towards its protection. The fire loss in the past has been very heavy. The sentiment of the people towards fire protection is excellent.

The forest revenue of New Brunswick was $662,000. The expenditure on the forests was about $35,000, which is not sufficient to keep the forest areas of the province in condition to provide the revenue now received.

Nova Scotia is the one province in Canada where the timberlands have all passed into the hands of private owners. The total area of the province is 21,000 square miles, of which only a little over 4,000 square miles is suitable for other uses than the growing of timber. Only 2,200 square miles still belong to the province. The timber in this area is leased at eighty cents per acre per year.

The government, awake to the depletion of the forest resources, has had an exhaustive survey made of forest conditions. The survey shows at the most twenty years cut of timber still remaining on government and private lands combined. The larger owners are skinning the land. The smaller owners are endeavoring to cut somewhat conservatively. The condition in leases on public lands giving a minimum diameter limit of ten inches has no appreciable effect on the situation.

There are at present no regulations affecting logging on privately owned land.

Fire protection is left to municipal officers. There is no organization maintained by the government, nor any requirement of fire protection affecting private timber owners. The sentiment of the people is good but the forest areas have suffered and still suffer severely.

Legislative provision has been made for a Provincial Forester but none has been appointed.

British Columbia's Forest Survey

The administration of the forest Resources of British Columbia was also described in considerable detail. An account of this, written by Mr. H. R. MacMillan, has already appeared in our columns. One or two points in the address, however, are of new interest. For instance, Mr. MacMillan said that one of the first and most important duties was to ascertain the facts concerning the timber areas of the province. From six to twelve parties have been at work during the past three field seasons. The co-operation of the Dominion Commission of Conservation has been secured. It is expected that the work will be finished in a preliminary manner in another year. At the present time it can only be said that it appears that there is more timber of a merchantable size in British Columbia than has been usually credited to the province. All timber is, of course, being estimated whether in private ownership or not.

Referring to the campaign carried on in British Columbia against waste in logging and the leaving of brush to form a fire hazard, Mr. MacMillan said its effect was being felt slowly. During the three years the Service has been in existence the lumber industry has been so demoralized that progress has been slow. It is not feasible in a democracy to enforce wholesale restrictive regulations when operators are losing money. The aim of the Service in this respect is, gradually, by constant field inspection and the enforcement of simple regulations to raise the standard of logging to that set by the most progressive and careful operators.

A matter which has recently been engaging the very serious attention of the lumber business in British Columbia is the importance of widening the markets. In this connection Mr. MacMillan said that the great necessity of forestry in the west coast is better markets. The Forest Service is now studying this question in co-operation with the lumbermen. It is hoped to add a branch for this feature of the work, but this has been delayed by the war.

The forest revenue for British Columbia in 1913 was about $3,000,000. The expenditure for the same year was about $530,000. The revenue will increase as the timber industry increases. There is every hope that the policy of forest administration recently adopted by the government will result in the forest lands of the province being made annually more productive.

In conclusion Mr. MacMillan said:—Canada has not yet travelled far along the road which she must travel if she is to make the most of her possibilities. That she has started along the road is due largely to the aggressive education campaign carried on by American foresters, a campaign which has spread far beyond the boundaries of the United States and produced profound effects on other countries, and to the friendly spirit of co-operation shown by American foresters, who have time and again placed their services generously at the disposal of Canadians.

Australia's Imports of Lumber, Pulp, Etc.

Imports of wood, raw and manufactured, including furniture, lumber, etc., into Australia from the United States during 1913 were valued at £1,732,438, an increase of £174,523 over those of 1912.

In Victoria (near Melbourne) there are two mills making strawboard from local material and other boards from waste paper. There are also two mills making wrapping paper and one of these has a plant manufacturing cartridge and blotting papers. In New South Wales (near Sydney) there are three mills making wrapping paper, manila board, straw board and varied products from local material, imported pulp and waste paper. The industry is making substantial progress, but there is no statistical information available respecting the value of the output.

On expert authority, it is estimated that the Australian paper mills will require in 1915 over 3,500 tons of sulphite (not mechanical) pulp, in unbleached and bleached sheets, about 32 inches by 26 inches, packed in bales weighing about 3½ cwts. (382 pounds). The unbleached pulp is used in the manufacture of brown wrapping paper which is protected by a customs duty of £4 10s. per ton when of United Kingdom manufacture, and £5 ($21.90 to $24.33) per ton of $2,240 pounds when imported from other countries. The bleached pulp is required for making strong cartridge and other papers. The unbleached sheets are shipped from Europe with merely a rough protection of the same material bound with wire. Bleached sheets come similarly packed with the addition of a strong hessian covering to ensure its arrival in a cleanly condition. If samples and prices of wood pulp, upon the basis of c.i.f. and e. Melbourne and Sydney, are forwarded they will be promptly brought under the notice of the importing mills.

Reduction in Western Woods Operations

A despatch from Winnipeg states that a large reduction in woods operations in Western Canada is certain to take place during the present winter. Practically no work, it says, will be done this winter by the numerous mills in the mountain district. On the Pacific Coast very few of the mills are at work at the present time. In Manitoba, Saskatchewan and in northwestern Ontario, comparatively few men will be sent into the woods, according to present expectations. The Prince Albert Lumber Company, which under normal circumstances would have from 1,000 to 1,200 men at work this winter, will open two or three camps with about 200 men. The Rainy River Lumber Company, which, under ordinary circumstances would have from 2,000 to 2,500 men at work, will have about 400. The Red River Lumber Company has large stocks on hand and will not employ any men during the winter months in the woods. The portion of Canada which is likely to be affected chiefly by the demand which will arise on the termination of the war, consists of the provinces of Nova Scotia, New Brunswick, Quebec and Northern Ontario. It is stated that the mills of Nova Scotia and New Brunswick are working overtime now preparing orders for Great Britain and getting ready for the demand which will occur later.

New Zealand's Lumber Imports

The United States Consul General at Auckland, New Zealand, reports that most of the laths and shingles used in New Zealand come from Canada and the United States, which furnished 2,852,600 and 5,659,791 respectively during last year. These pay a duty of 49 cents a thousand. Hewn logs come almost entirely from Australia, which sent last year 13,118,697 superficial feet. These are duty free. Sawn and undressed timber comes almost entirely from Australia and the United States. The former sent in 1913, 14,922,896 and the latter 11,701,22 8superficial feet.

The importance of a preferential tariff in Australia, for Canada, was discussed in an address delivered recently before the Rotary Club, at Vancouver, by Mr. S. S. Raphael, manager of the North Pacific Lumber Company, Barnet, B.C. The lumber industry, Mr. Raphael said, employs more labor, produces more public revenue and is a greater asset to the province of British Columbia than any other industry. Mr. Raphael asked for the support of the Rotary Club in the movement initiated by British Columbia lumbermen to obtain a preferential tariff in Australia.

The Settler and His Pulpwood

Contributed specially to the Canada Lumberman by a Northern Woodsman

FIRE CONTROL AND MARKETING COSTS FROM THE HOMESTEADERS POINT OF VIEW. PART I.

"Its an ill wind which blows no one any good" is a trite saying, the truth of which the settlers of Northern Ontario, and especially those along the line of the Transcontinental Railway, are beginning to realize at the present time. The war, which is causing so much bloodshed, suffering, desolation and sorrow throughout Europe is proving, strange as it may seem, a blessing in disguise to the New Ontario homsteader, and will do much to bring about that which the Provincial Government so much desires, namely, the conversion of the existing vast timber areas into fertile agricultural land.

In previous years the settlers along the Transcontinental Railway, each holding 150 acres of land thickly covered with magnificent spruce and balsam, have as a general rule, scoffed at the idea of disposing of this material for pulpwood purposes. A few of them tried it, but the verdict was almost invariably "It doesn't pay"; in fact one or two of their number who went into the business on a fairly ambitious scale, found themselves, at the end of the season, with a balance on the wrong side. So the average settler preferred each fall and winter to chop down the timber on the few acres of land which he is required to clear annually under the homestead regulations, and set fire to it the following spring and summer. Thus, not only did large quantities of pulpwood go up in smoke, but it is safe to say that many of the fires started in this way ate their way beyond the limits of the particular homestead on which they originated and, before the summer was out, had been responsible for some of the big bush fires which have caused so much damage in the north country in recent years.

Broadly speaking, the complaint of the settler that it "didn't pay" was correct. This was due rather to defective transportation facilities than to any other cause. The best price hitherto offered along the Transcontinental Railway has been $3.75 f.o.b. Cochrane. For those holding homsteads in the immediate vicinity of that town there is a small profit in pulpwood at that price, but much of the land close to the town is held by men who are not actual settlers, or residents on the land, but professional men and storekeepers, who, after paying for labor, would receive little or nothing in the way of profit, and certainly not sufficient to warrant the trouble it would entail. For the actual settler—the man who not only lives on the land, but is clearing it and chopping the timber with his own hands, how does the price of $3.75 per cord work out? It little more than pays his wages (and poor wages at that) leaving him practically nothing for the value of his pulpwood, which he has usually regarded as a fairly valuable asset, which would help to meet the cost of clearing his land.

If he lives a few miles east or west of Cochrane he has to reckon with the railway contractors, who have been constructing the Transcontinental Railway and who continue to run trains irregularly over the line, pending the taking over of the undertaking by the G. T. P. or other concern. As an example of the charges demanded by these contractors, it may be mentioned that the settler living six miles out from Cochrane has to pay six dollars for a car of pulpwood into that town. Roughly speaking 45 cents of the $3.75 is eaten up in this short haul. Settlers living still further out have to pay higher proportionately, the six dollars per car being the minimum charge. Very few settlers at the present time own their own teams, but those who are thus favored charge their less fortunate brethren at the rate of 75 cents a cord where the distance is from half to three-quarters of a mile from the track up to a dollar and $1.20 a cord where the distance is a mile and a-half or a trifle more. The charge may seem high at first blush, but the cost of keeping horses is very high until sufficient land is under cultivation to bring the prices of hay and corn down. To load on the car at the siding the usual price paid is twenty-five cents a cord. Thus the settler living six miles from Cochrane and a mile and a-half north or south of the track has to meet the following expenses before he can get his pulpwood into town:—

	Per Cord
Hauling to track	$1.20
Transportation to Cochrane	.45
Loading on car	.25
Total	$1.90

This leaves $1.85 for labor and the value of the pulpwood. The price paid throughout the district is $1.50 a cord for cutting the pulpwood, so that the settler receives for the value of his pulpwood thirty-five cents a cord, out of which he has to allow for contingencies and a certain amount of culls. Now that the snow is fairly deep, and with so much undergrowth it is a good man who can cut a cord a day. The average settler cannot cut that amount, so that in the end he is making meagre wages and receiving practically nothing for his pulpwood.

Such has been the general outlook in this district in the past. Prices have not advanced and yet since the outbreak of the war nearly every settler has been busy cutting pulpwood and is unusually interested in the work. Why? The only answer to the question seems to be that rightly or wrongly he thinks that the increased demand for pulpwood which the war has brought about, will result in a corresponding increase in the price, and he is, so to speak, busy trying to "make hay before the sun shines." He may be disappointed, but in any case it is to be hoped that the experiment will teach him that even at a small profit it is better to sell his spruce and balsam, which he has to cut down in any event, rather than burn it, as has been the general practice in the past.

(To be continued.)

Seeking Substitutes for Spruce

Pulp and paper men in Montreal have been much interested in an announcement from Washington, published in the daily papers, to the effect that the United States Government wood pulp laboratory at Wausau, Wis., is making experiments with a view to finding a substitute for spruce in the making of wood pulp for newsprint. Experiments along the same lines are being made in the Canadian Government laboratory at Montreal, as Canada has immense supplies of other timber, which might be utilized for the purpose if a suitable treatment could be discovered. It is pointed out that with the increasing consumption of newsprint in Canada, together with the ever-increasing demand from the United States, it will sooner or later be necessary to utilize other woods. The newspaper with a circulation of 60,000 of 20 pages every day uses the product of four acres of forest per diem. When the figure is multiplied by the great number of papers printed on this continent, it will be seen that the drain on forests is enormous. —Paper Trade Journal.

Price vs. Chicoutimi Pulp Company Now in Supreme Court

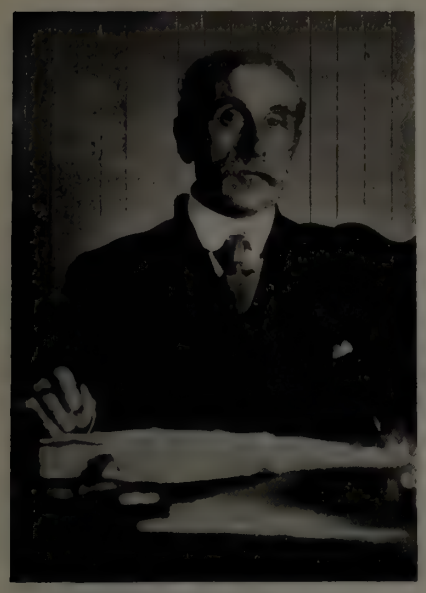
In the Supreme Court at Ottawa an appeal has been heard in the case of Price vs. the Chicoutimi Pulp Company, which has been before the Provincial courts of Quebec since 1904. Disputes extending over a long period of time occurred between the Price Company and the respondents in regard to the ownership of a strip of land in the basin formed by the confluence of the Chicoutimi and Saguenay Rivers. The respondents obtained special legislation from the Quebec Legislature in 1904, vesting in them the possession of the strip of land in question. They alleged that the appellant then wrote letters which were published in the Quebec Chronicle and the Montreal Gazette and Star accusing the respondents of having obtained the legislation in question in order to secure a title, without giving an opportunity to the Price Company to vindicate a title before the courts. The respondents brought action for damage from the Appellant for slander of title and libel on the company's character as a business concern. At the trial before Dorion, J., and a jury the finding was in favor of the present apellants without damages to the present respondents. The action was accordingly dismissed. An appeal was brought by the present respondents and a majority of the court of King's Bench ordered a new trial on the ground that the charge of the trial judge was misleading. The appellant now asks to have this order for a new trial set aside and the judgment at the trial restored on the grounds that the findings of the jury were supported by the evidence, that the statements in the letters were substantially true, that the subject matter was of public inerest and the letters a fair commen and privileged on account of the special interest of the apellant.

Exports From St. John

Something new in the lumber trade of the port of St. John, N.B., was the recent purchase of 1,000,000 feet of spruce lumber in Maine to be brought by rail to St. John and shipped to the English market. Local shippers have in times past bought some Maine lumber and shipped it from Bangor, but this is probably the first time the product of Maine mills has been hauled to St. John for shipment. The shippers say that they could get a good deal more New England spruce if tonnage were available to take it to the other side.

The timber industry represents 37 per cent. of the annual production of wealth in British Columbia.

Death of Mr. A. H. Hilyard, Dalhousie, N.B.



Late A. H. Hilyard, Dalhousie, N. B.

We regret to report the sudden death, on December 3rd, of Mr. A. H. Hilyard, manager of the Dalhousie Lumber Company, Dalhousie, N.B., one of the best known lumber manufacturers in Eastern Canada. Death was the result of an attack of pneumonia. The late Mr. A. H. Hilyard, who occupied the position of vice-president and general manager of the Dalhousie Lumber Company, Limited, had been connected with the lumbering industry for about thirty years. He went to Dalhousie from St. John, N.B., in 1903, when the Dalhousie Lumber Company first started operations, having bought out the business of Mr. Geo. Moffatt. About 1906 the plant of the Dalhousie Lumber Company was destroyed by fire. An up-to-date mill in every particular, with a capacity of over 25,000,000 feet per year of long lumber was erected a little later. The company also operate a shingle mill at Dalhousie and turn out a large quantity of pulp wood.

The late Mr. A. H. Hilyard was also a director of the St. Maurice Lumber Company, with which he had been connected for many years. He was fifty-six years of age.

Death of Thos. Charlton, North Tonawanda, N.Y.

Thomas Charlton, a well-known lumberman of North Tonawanda, N.Y., died at his home on November 29, after a long illness, aged 75 years. He had been in the lumber business from his boyhood. He was born in Ellicottville, N.Y., and located in Lyndoch, Ont., in 1868. In the following year he engaged in the lumber business with his brother. They bought 300,000 acres of timber land near Collingwood, on Georgian Bay, Canada, and timber has been cut from this tract ever since. Some years after the tract was purchased a mill was erected by the brothers on Thompson Street, North Tonawanda, and Mr. Charlton made that city his home in 1890. His brother, Hon. John Charlton, formerly of Lyndoch, Ont., was for years a prominent member of the Canadian Parliament at Ottawa. Thomas Charlton was a prominent citizen of North Tonawanda and was active in the affairs of the North Presbyterian Church, of which he was an elder. He leaves a wife and six children and is also survived by two brothers, Hon. W. A. Charlton, Toronto, and Geo. Charlton, Los Angeles, and two sisters.

Lawrence Page, a contractor for the Gres Falls Lumber, Pulp and Paper Company, Three Rivers, Que., lost his life by drowning in the lake of Seven Islands, in the Shawinigan district, above Three Rivers, late in November. Mr. Page and three other men, guides and helpers, were in a canoe which was pierced by heavy ice during a strong gale.

Concrete Ties Unsatisfactory

The chief engineer of the Chicago & Alton Railroad has written to the assistant superintendent of forestry of the Canadian Pacific Railway a letter regarding his experience with concrete ties which is partly quoted in a recent issue of the Canadian Forestry Journal:

"There were sixty concrete ties placed in the tracks in October, 1903. They were ballasted with stone, where they had good drainage and were kept in good surface. In 1906 twelve concrete ties were taken out; in 1911, thirty-two; in 1912, 10, and 1913, six. These ties were taken out on account of crushing and breaking down under the rail, thus being unsafe to remain in the track. Ties were constructed of cement, iron girder and oak block. There were two blocks of concrete 7 inches thick, 9 inches wide and 3 feet long. There was an iron girder that ran through the blocks that was 2 inches thick and 2 inches wide; there was an oak block 3 inches thick and 10 inches wide and 24 inches long set on top of the concrete tie to use for cushioning the rail and to spike rail. There was a wooden plug in the concrete to hold the spike in place.

"These ties weighed about 450 pounds, and when track was surfaced the ballast had to be dug out from between the ties. If this was not done the rail would lift up and ties would stay in ballast on account of their weight. When track heaved slightly in the winter it was caused to become slightly uneven. The ties under the heavy part of the track would crush and break, and this left the track unsafe. We were compelled to place oak track ties between the concrete ties to hold track to gauge. After the six years' test I have concluded that concrete ties of this make are a failure."

Of What Variety is Ontario Birch?

Editor Canada Lumberman:— Guelph, Ont., December 2.

Will you kindly give us a definition of black birch? We were always under the impression that the birch which grew in Parry Sound district and around there was known as black birch, but evidently, according to the architects we are not correct, so will you kindly enlighten us as to just where we are wrong.—Robert Stewart Limited.

The best authority we know of on such matters is the book on American Trees, written by the late Henry H. Gibson, of Chicago, and published by the Hardwood Record, it says:—"Sweet birch is known by that name in many localities, but in others as black birch, cherry birch, river birch, mahogany birch and mountain mahogany. Its range extends from Newfoundland to northwestern Ontario. . . . Difficulties are encountered in assigning sweet birch its individual place in the industrial world. As a tree it is well known, but that is not the case when its lumber goes to market. The sweet birch log goes into the sawmill, but when the lumber goes out at the other end of the mill, it is often simply birch, having lost the adjective 'sweet' somewhere in the operation. The reason is that sweet birch and yellow birch, quite distinct in the forest, are often mixed and become one, to all intents and purposes, when they reach the market. That is not always the case, but it frequently is. Something depends on the region. The yellow birch's range is more extensive, and in areas where it is abundant, and sweet birch is not, it prevails in the lumber markets. But south and southeast of the great lakes, as well as in the northeastern parts of the country, the two species mingle, and they are apt to go to market simply as birch. The woods may be distinguished by a microscopic examination, but the ordinary observer would make many mistakes if he attempted to tell one from the other.

"The two woods are different in several physical properties. Both are heavy, but sweet birch weighs 47.47 pounds per cubic foot, while yellow birch weighs only 40.84 pounds, according to tests averaged by Sargent. Yellow birch rates a little above the other in breaking strength. Both are very stiff, but yellow birch rates superior. In most respects the two woods are put to similar uses—flooring, interior finish, furniture—but for some purposes sweet birch is preferred. It is substituted oftener for cherry and mahogany, and for that reason is known as cherry birch or mahogany birch. Its color makes the substitution easy, and the appearance of the grain, with a little doctoring with stains and fillers, helps in the deception. The buyer may be deceived as to the exact kind of wood he is getting, but he is not cheated in the quality. Birch is substituted where strength is required, as in the rails of beds, the frames of sofas, davenports, large chairs, and certain parts of large musical instruments. It is much stronger, and fully as hard as cherry or mahogany, and as its appearance is so much like them, the article is actually better on account of the substitution. Sweet birch is largely employed for various parts of vehicle manufacture, particularly for wagon hubs and frames for automobiles. It is also much used in the manufacture of sleds, boats and handles."

This subject is an interesting one upon which the Canada Lumberman would be glad to publish the views of some of its readers.

New Import Invoice Issued by United States

A new form of consular invoice is required of all importers on and after December 1. The important feature of the new invoice is that it is to state the price paid for the imported article and the person or firm from whom it was purchased abroad.

The new consular invoice was required under the new tariff act, and also by a proclamation issued by the President some time ago. Under these circumstances the Treasury Department promulgated a form of consular invoice which is to require the stating of the purchase price and the person from whom purchased. The importers objected to having the new requirement put into effect immediately, and consequently the use of the invoice was postponed for three months. Owing to the European war the importers requested a further postponement of the invoice, and it was delayed again for thirty days.

With the approach of December 1 the importers again filed a request upon the Treasury Department to postpone the use of the new invoice for thirty days more. The Treasury Department, however, is unwilling to delay the matter further. In the beginning the customs authorities have decided to be lenient with the importers in this matter. If the consular invoice cannot be presented in the form required after December 1, the importers will be permitted to give bond for the invoice, to be presented at a later date.

The Department of Trade and Commerce, Ottawa, is in receipt of a communication from a firm in Manchester, Eng., who state their willingness to represent firms in Canada manufacturing metal and wooden goods, such as small staircase fittings, window and door frames, furniture, etc. The war has brought about a demand for such goods, as well as other kinds of Canadian woods. Those interested may obtain the name and address of the firm in question on application to the Department of Trade and Commerce, Ottawa.

B. C. Shingle Industry Stirred Up

Competition of Patent Roofings to be Fought—Will Co-operate with U. S. Movement Against Substitutes

A meeting of the Shingle Association of British Columbia was held in the association room of the lumber manufacturers' association at Vancouver recently. An interested and representative number of manufacturers were present to discuss the problem now confronting all lumber and shingle manufacturers, that of combating the "War Against Wood." Most of the time was devoted to the discussion of this subject. British Columbia shingle manufacturers have been taking interest in this matter for some time and have had a local paint manufacturer experimenting with the manufacture of a fire-resisting paint for shingles.

Mr. A. Cotton, the chairman, introduced Mr. H. H. Welch, manager of the British American Paint Company, of Vancouver, who had samples of a non-inflammable paint for shingles which his company is prepared to manufacture. Mr. Welch demonstrated that this paint in liquid state would not ignite. He said it was an asbestos compound and an emulsion paint. Mr. Welch believed that this paint was as near perfection in a practical paint for cedar shingles for commercial purposes as they would be able to get. Cedar shingles painted or dipped with this paint are not fireproof, but they have very strong fire-resisting qualities. He felt sure the paint would answer the purpose for which it was gotten up and stated that it would sell for 75 cents per imperial gallon. He said an imperial gallon will cover 200 square feet one coat. It was noted that among the shingles painted with this paint which he exhibited the vertical grain shingles absorbed the paint and took it much better than the slash grain. Mr. Welch stated that the paint would not affect the nails and that the colors were much faster and the life greater than that of creosote stains.

Following Mr. Welch a representative of the American Lumberman outlined the plans for offsetting the extravagant claims and the activities of the substitute manufacturers to injure the shingle business. He announced a preliminary meeting called by J. E. Rhodes, secretary-manager of the National Lumber Manufacturers' Association, to be held at the Hotel La Salle, Chicago, December 17, for the purpose of arranging a program and date for a general meeting of all of the lumber interests to be held during January, when it is proposed to form an organization, composed of retailers, wholesalers and manufacturers of lumber and shingles and others directly interested in the business, to carry on a campaign of education and combat the unjust inroads of substitute manufacturers.

To show how the tendency toward unjust legislation is being brought home to manufacturers, J. M. Allen, secretary of the shingle association, read a letter from a shingle salesman, who was present at a retail yard in Massachusetts when a load of shingles which he had sold was being unloaded at the yard. The salesman attempted to sell a repeat order to the dealer on the strength of the excellent quality of the shingles, but the dealer replied that he would not have as much use for shingles in the future, because of ordinances being passed restricting their use.

Chairman Cotton, commenting on the subject, briefly said: "This certainly is a very vital question to shingle manufacturers. If the enemies of shingles succeed in getting a law passed in Massachusetts prohibiting their use as a roof covering, such a law will not only hurt our business in Massachusetts, but it is apt to become a contagious disease unless checked early."

H. J. Mackin, sales manager for the Canadian Western Lumber Company, said he thought it necessary that the association take action as soon as it can intelligently do so. He suggested that the association should go on record as being in full accord with the movement for a meeting in Chicago and the organization of a bureau to handle the subject. He said the British Columbia Government, being the largest timber owner in the province, would more than likely be interested and be willing to support an organization of this kind.

Secretary Allen pointed out that the cities and towns in the United States which are taking or making steps for such radical action in regard to wood construction and shingle roofs were doing so largely because they had had only one side of the proposition put up to them. He believed that much more data could be secured by an organization of the kind proposed; and such information given to the public and to authorities would give them the other side of the question that they are not getting now and would disprove many false claims made by the enemies of shingles.

The consensus of opinion at the meeting was that whatever British Columbia manufacturers did they were anxious to co-operate and work along the same line as the manufacturers of Washington. H. J. Mackin moved that a committee be appointed to take whatever action is necessary and that this committee get in touch with and co-operate with manufacturers in Washington and notify Secretary Rhodes' office in Chicago that they favor the general outline of the proposed organization there, and that when satisfactory details have been worked out by that organization the shingle agency of British Columbia will gladly contribute financial support.

H. Davidson, manager of the Hastings Shingle Manufacturing Company, Vancouver, B.C., in supporting the motion said he was not entirely carried away by reports of the progress being made by the enemies of shingles, because he believes in the end people will have to come back to the good old cedar shingle roof. However, he said, in the meantime while the reform wave is on the business will be very badly crippled and greatly injured by the false statements of the manufacturers of substitute material. The motion prevailed and the following committee was appointed by the chair: S. J. Black, Hastings Shingle Manufacturing Company; H. A. Stoltze, Stoltze Manufacturing Company; C. J. Cutler, Coast Central Mill Company; H. J. Mackin, Canadian Western Lumber Company.

Output of Northern Pine Association Mills

The October report on northern pine production and shipments to the Northern Pine Manufacturers' Association represents only thirty-seven mills, compared with forty-five that reported for October of last year. Their shipments of lumber were 72,965,776 feet, compared with 147,180,343 feet reported by forty-five mills last year, a decrease of 74,214,567 feet or 50.4 per cent. This brought the total for ten months up to 739,244,118 feet, compared with 1,271,772,312 feet for the same months last year, a decrease of 532,528,194 feet or 41.9 per cent. The shipments of lath for October were 18,203,950, compared with 35,893,040 last year, and for ten months they were 231,953,513, compared with 350,491,025 for the same months last year. The same mills reported an October production of 97,389,169 feet, compared with 150,856,715 feet last year, a decrease of 53,467,546 feet or 35.4 per cent. The ten months' record of production was 877,779,202 feet, compared with 1,249,177,984 feet for the same months last year, a decrease of 371,398,782 feet or 29.8 per cent. Lath production was 24,315,250 for October, compared with 39,332,314 last year, and 211,981,153 for the ten months, compared with 326,974,307 last year.

The saving of pulpwood, and the relief of the unemployed situation in northern parts of the province, are the two motives behind the recent announcement of the Ontario Government that at the next session of the Legislature it will extend for a few months the permit given to licensees of pulpwood to export their surplus product. This is the explanation of the Prime Minister, who pointed out recently that it is only in districts where there is no local market that exportation will be permitted.

An example is to be found at Port Arthur, Ont., where there are no mills, but where there is considerable wood. If the licensees were compelled to ship the wood to the Soo, or the nearest mill, they would lose all profit, whereas, if they are permitted to ship it over the American border they will provide work for the unemployed and save the timber at the same time. "There are districts in the north," Mr. Hearst added, "where much timber has fallen this autumn, or where it has been partly burned over. This wood would be wasted if not cut soon. Our action will save the wood and at the same time will provide work for hundreds of men. We are providing, however, that the demands of all Ontario mills must be met before any pulpwood is exported to the United States." The step on the part of the Government is merely an enlargement of the bill which was put through during the last session of the Legislature, and which, by throwing open pulpwood to the American market, was designed to save much fallen timber in the north.

The original prohibition of the exportation of all pulpwood in the province dates back to legislation enacted by the Liberal Government, the aim being to keep its manufacture in the province and to give work to Ontario citizens. Mr. Hearst's statement is that there will not be any cutting in upon the work done locally, seeing that the Ontario mills must first be satisfied, and since thre are not enough local mills to prevent much of the timber going to waste. In the districts where the wastage is about to occur, he adds, there is hardly enough wood to warrant any manufacturer going to the huge outlay of putting in a plant, which might easily cost a million dollars. Before a manufacturer will establish a paper or pulp mill, he must be assured that the district will offer him material for twenty or thirty years, which is not the case in the localities where the waste is now facing the province.

In order to aid in outlining details of the work which it is to do next year, the American Forestry Association has invited leading foresters throughout the country to attend its annual meeting in New York City on Monday, January 11th, at the assembly room of the Merchants' Association of New York in the Woolworth Building. The meeting is for the purpose of discussing the best service the Association can render to various phases of forestry, lumbering and the paper and pulp trade.

A great deal of the oak used on the Pacific Coast comes from the eastern part of Asia.

Successful Fire Prevention in B. C.

Forest Branch Kept Down the Destruction in Spite of the Past Season Being a Very Bad One

The fire season in British Columbia, during 1914, was, as regards dry weather and hazard, the worst for many years. Old inhabitants say that there was not another so dry summer this century, nor in fact since the 80's. The expenditure in fire-fighting was very heavy but justified, for, considering the very large number of fires and the extraordinary hazardous conditions, the amount of merchantable timber and other property destroyed is remarkably small—much smaller than in the Pacific States where the fire season was also very bad.

Figures so far available are given below. It should be remembered these are, as yet, only approximate; the final figures will probably exceed these somewhat.

Total number of fires over 1,500, of which over 400 cost money to fight. Total cost of fire-fighting over $150,000.

Total area burned over—over 350,000 acres, of which over 250,000 acres was old burn or slash; over 50,000 acres was valuable second growth; over 20,000 acres was merchantable timber; over 30,000 acres was range land.

Over 70 million feet board measure, merchantable timber destroyed, of which one-fifth is estimated to be salvageable.

Over 400 miles of fire trail were built in fighting fires during the summer.

An outstanding feature of the fire season was the valuable co-operation given to the forest officers by the people at large. It is doubtful if, anywhere else in Canada, there exists so close and effective a co-operation in forest protection as in British Columbia. One reason for this is, that British Columbia is so universally forested and the utilization of those forests so important to her, that their fate does and always will vitally concern a very large part of her population and her industries. The railway, mining, irrigation, power, lumber, etc., companies are all more or less dependent on the forests and forest products for their existence and operation. They show their appreciation of this by the keen interest they manifest in fire protection and the ready assistance they give the forest officers.

It was shown that the only way to make logging or other slash really safe is to burn it under control during not too dry weather. Otherwise the slash is a constant hazard during dry weather and, sooner or later, it results in an expensive and often destructive fire.

The permit system again proved its great value and necessity. During August, and the first week of September, in the southern part of the Province at least, permits were cancelled and no burning allowed in, or adjacent to, the forests, except under the strictest safeguards. Were it not for this control by the Forest Branch, fire protection would be almost impossible.

Quite a number of prosecutions were made for violation of the fire law and convictions secured. The policy followed is to deal leniently with the unknowing offender, but to make examples of the wilful lawbreaker.

In spite of the bad fire season the Forest Branch was able to do a considerable amount of permanent improvement work during the summer, in extension chiefly of last year's projects. The telephone line up the Columbia River from Revelstoke was completed to Big Bend, or Boat encampment, opposite the mouth of the Canal River, the total distance now being 120 miles. Another line which connects some of the Island to the north of the Gulf of Georgia was extended, the total length now being 65 miles. Still another line was built 20 miles up the Upper Kootenay River above Canal Flats. Over 75 miles of trail have been constructed in different parts of the Province. A number of cabins, boat houses, lookout stations and tool caches have been built.

The total force of the Forest Branch of British Columbia during the height of the fire season in August, 1914, was over 500 of whom nearly 350 were employed solely in fire protection. In addition were about 25 officials as chiefs of police in municipalities, construction foremen, etc., who were appointed and acted as forest guards without pay for the Forest Branch.

On the railways under Dominion Charter, as the C. P. R.; G. T. P.; G. N. R.; about 50 special fire patrolmen were employed by the railways besides the hundreds of section men, etc., a part of whose duties is fire protection. As officers of the Board of Railway Commissioners for Canada, the officers of the B. C. Forest Branch supervise fire protection on the railways.

On the railways as the C. N. P., and P. G. E.; under Provincial Charter the Forest Officers, by virtue of the B. C. Forest Act, have even closer control of fire protection, and here the patrolmen are appointed by the Forest Branch, the cost being recovered from the railroad at the end of the season.

The Dominion Forestry Branch, Crown Timber Branch, and Dominion Parks Branch employ 50 to 75 rangers and guards in the Dominion Railway Belt during the summer.

A number of private forest guards are employed in different parts of the Province by owners of large bodies of valuable timber.

Altogether in midsummer the B. C. Forest Branch and other forest protective organizations employed over 500 men on special protection work. Altogether there were in the Province over 1,000 whose duties were in whole or in part fire protection.

Value of Fire Wind Forecasts

If you can hurdle this title, which sounds like one of these psychology-of-business talks given by some college professor whose business experience consists of buying cream for the study cat, you will probably find in this little screed something that applies to the selling of sash, doors and blinds and lumber and such like on the road. A man may know all there is to know about how a door is stuck together, from the slicing of the veneer to the clamping of stiles and rails and the application of the shellac, or he may know all about the making of lumber from swamping a tote-road to stacking it in a yard, but unless he has personality his salesmanship lacks the final punch to put it over and is no better than the salesmanship of a thousand other men who try to make the retailer and the factory buyer purchase his product.

Personality is the flavoring in the cake. It is the thing that makes your selling talk sound different from the selling talk of the army of knights of the grip who visit the retail lumber yard and the factory office. Personality is being different from the ordinary run. The salesman is inclined to forget sometimes that he is only one of many, that he is an individual in an army of order solicitors. Once in a while he wakes up to the fact. It was such a salesman who wrote the house that there were seven salesmen just ahead of him and that he thought he would better change his route. And the house wired back: "Keep moving; there may be seven salesmen ahead of you, but there are seventy right behind you."

Of course most men realize that they have the competition of other salesmen in their own line. No lumber salesman is foolish enough to have the idea that he is the only man selling lumber on that division of that particular railroad. The buyer does not let him forget the presence of competition even if the salesman were disposed to do so. The buyer always has a price to flash or some other souvenir of some previous salesman's visit. But the salesman generally overlooks the competition of the man who is seling calendars or soliciting advertising in a county directory or giving away a set of encyclopaedias bound in calf with a year's subscription to the Weekly Hash. Yet they are all competitors of his—taking his customer's time and out for his cutsomer's money.

Losing Money at the Sander Unnecessarily

I considered myself an A No. 1 man when it came to sanders. My eight years as a sander operator settled that for me, I thought. The company thought so too, I guess, for they put me in charge of all their sanding. But I now know that I lost regularly as much for them as my job was worth.

It came about this way. We often had pretty big runs of pitchy pine and butternut to sand. Regularly this stuff would come out showing marks which had to be dressed over by hand. The boss didn't know whether to blame the machine or me, so after it kept up, in spite of everything I did, he inquired around and as soon as he found out that another company was having this trouble he laid it to the machine, and that let me out.

But I kept looking for the trouble anyway, because it didn't look natural to me that one piece would sand where another couldn't be made to without tearing out the paper and catching every little while. The machine had it on me for some time, but I finally got back to the trouble, and it was this way: Pitchy pine and butternut are about the greasiest of all woods, and after a little run would grease up the feed rolls so that they would slide over the stock without pushing it through. I would think my pressure was too light and would make the mistake of setting the rolls down too hard. This not only caused marked stock, but wore out the paper twice too fast, and caused a heavy strain on all the working parts and that was hard on the bearings and bed alignment. I now get rid of all this trouble and expense by cleaning the rolls in time.

Lots of men have this same trouble through a different cause. They make the mistake of oiling up while running. The oil spatters and is thrown over the rolls by the oscillators, so that the rolls become too greasy to grip the stock. The same happens, of course, if the stock itself has become oily or if pieces of unequal thickness are run.

This all goes to show, in my opinion, that too many firms are needlessly putting up with occasional defective runs, and are too easily satisfied with the service their machines are giving, because they don't know that such faults lie with the operators and not with the machines.—Berlin Quality.

Interesting Facts About Quebec's Forests

In the Canada Lumberman of December 1st we published a short reference to the statistical year book which has been issued by Quebec Province. The following is a more complete reproduction of some of the interesting facts which it contains about the provincial forests.

According to the census of 1901, lumbering throughout Canada gave employment to about 70,000 persons, Quebec's share being about 20,000. But, inasmuch as certain lumbering operations are classified under the head of manufactures, this number is certainly too low. It has been ascertained that, in 1912, the cutting of timber on limits in the province of Quebec employed 17,600 men, while about 5,000 worked in private forests, so that the number of men who work in the woods every winter may be put down at 22,000 at least.

The forests of the province may be divided into five classes, according to their tenure: (a) Private forests, 6,000,000 acres; (b) forests leased as timber limits, 44,500,000 acres; (c) forests on lots under location ticket, 1,300,000 acres; (d) township forest reserves, 200,000 acres; (e) forests not in timber limits, 78,000,000 acres; total, 130,000,000 acres.

(a) Private forests.—These 6,000,000 acres come from the old seigniories, lands sold to settlers by the government or granted to railways in aid of their construction.

The total value of these stands is about $25,000,000. It is rather difficult to estimate the revenue derived from them owing to lack of information, but it is a well-known fact that maples produce yearly $700,000 worth of sugar and syrup; that farmers sell annually at least 500,000 cords of pulpwood worth on an average $2.00 standing, so that the total revenue from the private forests, adding to the above the value of the firewood cut is at least $3,000,000 per annum.

So far no restriction has been imposed on these operations and on the disposal of the wood for export.

(b) Forests leased as timber limits.—This class comprises all forests usually called "timber limits," leased to various license-holders at sundry periods. The limits are exclusively leased by auction after a thirty days' notice. In 1868, there were 19,000 square miles under license; from 1868 to 1906, 51,138 square miles were leased as timber limits. The government has not so leased any lands since 1906, but owing to the sale of lots of land to settlers, the area of the limits is now reduced to about 68,800 square miles.

From 1867 to 1913, the forests under license brought in the following amounts to the province: (a) ground-rents, $6,484,536; (b) bonuses, $3,260,611; (c) transfer fees, $290,039; (d) royalties or dues on timber cut, $24,779,854; (e) interest on suspense accounts, penalties for illegal cutting, fire-tax, $713,882; making a total of $35,528,924. The revenue now exceeds $1,500,000 per annum.

(c) Forests on lots under location ticket.—Every year the government sells to settlers lots of land containing 100 acres on an average and usually well timbered.

(d) Township forest reserves.—Since 1911, the Forest Service has devoted its attention to setting apart the uncultivable vacant lands in certain townships to form forest reserves. They are destined to supply timber to the inhabitants of the neighboring villages.

(e) Forests not in timber limits.—These extend beyond those under license and also lie in the basin of the St. Lawrence as well as in that of Hudson Bay. No cutting has ever been done on those vast territories, but fire, storms, insects and fungi cause great damage every year. Moreover, the growth in volume of the trees is very slow as in all virgin forests. To the Forest Service has been assigned the duty of making an inventory of them so that they may gradually be utilized as the country's needs require.

The forests of the province contain approximately the following:

50 billion feet, board measure, of white and red pine, worth	$200,000,000
125 billion feet, board measure, of spruce and balsam fir, worth	250,000,000
100 billion feet, board measure of pulpwood, worth	100,000,000
35 billion feet, board measure, of hard wood, birch, maple, etc., worth	25,000,000
20 billion feet, board measure, of cedar, worth	25,000,000
	$600,000,000

The Forest Service of the Province of Quebec, as at present constituted, has charge of the exploration of the unsurveyed territory of the Province of Quebec, the classification of soils, the supervision of lumbering operations on Crown lands, reforestation and other technical work of the department in connection with forests.

The present staff consists of the chief forestry engineer, his assistant, 2 civil engineers, 13 forestry engineers, 60 forest-rangers and 14 cullers. In addition, the students of the forestry school are employed in technical forestry work during the summer season.

The yearly legislative appropriation for the Forest Service is $100,000.

The total amount collected from 1867 to 1913 in connection with lumbering on forests under license, was $35,528,923. Out of this total $24,779,854, or 69.7 per cent., came from stumpage dues; $6,484,536 or 18.1 per cent., from ground-rents, and $3,260,611, or 9.2 per cent., from timber limit sales; the remainder, amounting to 3 per cent. only of the total, came from transfer fees, interest, penalties and fire-tax.

The total sums so collected every year grew pretty steadily with a few slight fluctuations, especially between 1905 and 1909. From $195,115 in 1867 it has risen to $1,510,171 in 1913.

Miscellaneous News of Interest to Lumbermen

The late Charles Miller, lumberman, of St. John, N.B., left an estate valued at $411,000.

A careful estimate that has been recently prepared shows that 195 saw mills in the states of Oregon and Washington are running with an average output of 41 per cent. of their capacity.

The will of the late John Manuel, lumberman, which was filed for probate at Ottawa recently disposed of an estate of $2,188,000, over one-half of which goes to his brother James Manuel, of Ottawa.

It is reported at Ottawa that negotiations for closer trade relations between Canada and Australia have been re-opened and that there s a good prospect of reciprocity being completed before the winter is over.

As many different kinds of trees are cut in New York for lumber as in any other state. There are about eight softwoods or conifers and about fifty different kinds of hardwoods or broadleaf trees cut for commercial purposes.

The mild weather at St. John, N.B., has made it possible for the sawmills to carry on their operations much later than usual, affording the owners an opportunity of getting their logs out of the booms before the ice sets in.

A flagpole 230 feet long, 4 feet in diameter at the butt end, and 1 foot in diameter at the small end was taken from Vancouver, B.C., recently by the Royal Mail steamer Merionethshire to London to be erected over the Colonial Office.

One of the most expensive woods used regularly in an established industry in the United States is boxwood, the favorite material for wood engraving. It has been quoted at four cents a cubic inch, and about $1,300 by the thousand board feet.

A report from Thessalon, Ont., states that the large lumber mills in that district have 18 or 20 camps in the country north of Thessalon and that between 2,500 and 3,000 men are being employed thereby. The outlook for local trade is excellent.

According to a report in the Timber Trades Journal of London England, one result of the recent visit of the Commission from England to Canada to enquire into the supply of pit prop timber, is that large orders for these goods will be received by New Brunswick lumbermen.

Berth C in the Mississaga Reserve north of Lake Huron, Ont., which was recently bought from the government by Mr. J. J. McFadden, of Renfrew, Ont., has been sold to E. B. Foss & Company, of Bay City, Mich. The berth contains a large stand of excellent white pine.

In northern Idaho and Montana, which had many fires during the past summer, 35 per cent. of the fires on national forests were caused by railroads, 26 per cent. by lightning, and 10 per cent. by campers. The remainder were due to brush burning and other miscellaneous or unknown causes.

The Hocken Lumber Company, Otter Lake Station, Ont., have commenced operations at their winter mill. The plant is being run night and day and is turning out 30,000 feet per day, principally hemlock. The company report that their operations in the woods this winter will be nearly as large as last winter.

"The Labor Gazette of the Dominion Department of Labor shows the index price of lumber in Canada to be 182.8 in September, 1914, as against 183.8 in August, 1914, and 185.0 in September, 1913, indicating lower price levels. Toronto lumber dealers look for a large curtailment of operation in the woods this winter."

Mr. H. K. Stonehouse, Springhill, N.S., is sending a considerable number of men into the woods between Springhill and Springhill Junction and intends to carry on extensive operations this winter. Mr. Lambert Taylor, of Collingwood, N.S., is moving his mill into the woods and will saw Mr. Stonehouse's logs.

Judgment has been given for the plaintiff in the action brought by Edgar Bellvance against P. W. Fau Vel and T. Sharpe, who operate a shingle mill at Burnaby Lake, B. C. The plaintiff was injured while running a machine and one of the chief points at issue was whether the mill could be classed as a factory. To do this, it is necessary that five men should be working, both day and night staffs counted.

"Besides supplying the London box and case trades with spruce, Canada is, for that industry, providing nails which before the war in great part came from Germany. Pitwood for the mines, spruce for box factories, and nails are only a few of the multifarious items of

supply that the Dominion can send us, not only in times of stress, but afterwards, too. Like grain and produce, all will be welcome."—Timber Trades Journal.

The Canadian Pulp & Paper Association recently held an executive meeting at Montreal at which Mr. Roy Campbell was appointed secretary, to fill the vacancy resulting from the resignation of Mr. H. T. Meldrum. Mr. Campbell is the editor of the Pulp & Paper Magazine of Canada, whose offices are at Montreal. The work of gathering statistics regarding the pulp and paper industry in Canada will be vigorously pursued.

The Stearns Salt & Lumber Company, Ludington, Mich., report that the Stearns interests of Ludington expended for labor in Ludington during the first ten months of 1914 no less than $427,254.96, or an increase of nearly $70,000 over a like period for 1913. The company are justly proud of this rather excellent showing in spite of the general industrial and commercial depression. The increase, they state, was the result of developing and handling new business.

The Dominion Board of Railway Commissioners recently heard the claim made by representatives of the Canadian Manufacturers' Association, the Canadian Lumbermen's Association and others, that inter-switching rates in Canada are higher than those in the United States, from $8 to $12 per car in Toronto and Montreal, they asserted, as compared with an average of from $5 to $9 in the United States cities. The case was adjourned to come up again a little later.

The steamship Briardene arrived at Parrsboro, N.S., from Barcelona, Spain, on December 1st, to load deals for an English port. Burpee L. Tucker is supplying the cargo. The Briardene is the first steamship that ever commenced loading at Parrsboro in December, and the fact of her being so late is due in part to the temporary suspension of deal shipments caused by the outbreak of the war, and in part by the present high prices of lumber in the United States.

The New York State College of Forestry at Syracuse University announces the establishment of an Eastern Forest Products Laboratory to be located in the State Forestry Building which will be ready for occupancy in the summer of 1915. In the State Forestry Building, for which the State appropriated a quarter of a million dollars, there will be nearly 14,000 square feet given up to experimental laboratories outside of laboratories especially for educational work with students.

According to a St. John, N.B., recruiting officer who had expected to get a good many recruits from men who ordinarily go to the lumber woods for the winter, the demand for men in the woods will be even larger for the coming winter than it was last winter. His statement is confirmed by dealers in lumbermen's supplies, who say that they are getting large orders from the operators, especially in the northern part of the Province, although the firms who operate on the St. John River say they do not expect the cut in their territory to be any larger than it was last year.

Reports from St. John, N.B., indicate that, contrary to the earlier reports, the output of logs in New Brunswick during the present winter will be extensive. When the war commenced, lumber manufacturers considered seriously the advisability of curtailing their operations. When the Baltic ports were closed, however, and it became difficult to secure lumber in Great Britain from the usual European sources, the trade in New Brunswick began to improve. Large crews of men, it is now reported, will operate in the woods of New Brunswick this winter and the cut will be well up to the average.

Australia Studying Our Pulp and Paper Industry

Mr. W. E. Shoobridge is now on an official visit to Canada with a view of increasing trade between the Dominion and Australia and Tasmania, having been commissioned by the respective Australasian Governments to interview the Canadian Government and business men. He is particularly desirous of obtaining information as to the pulp and paper industries, which it is proposed to develop in Tasmania, that island possessing some fine water powers which can be turned to account in the manufacture of pulp and paper. Mr. Shoobridge has obtained the services of a Canadian pulp and paper expert who will accompany his to Tasmania, and report on the possibilities of establishing the industries. Mr. Shoobridge has visited some of our mills, including those at Jonquieres and Chicoutimi, P.Q.

Ontario's Timber Revenue Lower

Returns of revenue in the Department of Lands, Forests and Mines for the fiscal year just closed show a total income of $2 341,198. This is $458,000 less than the estimate presented to the House last session by the Provincial Treasurer, but much better than was expected a few months ago. The revenue for 1912-13 was $2,793,809. Hon. W. H. Hearst, in making the figures public, said that the chief falling off was from timber, from which he expected at the time the estimate was made $2,000,000, but the revenue in this branch only reached $1,698,445, a shortage of $301,555. The remainder of the amount is distributed between lands and mines.

An Arkansas Soft Pine Booklet

The Arkansas Soft Pine Association have published an attractive illustrated booklet entitled "Arkansas Soft Pine—An Architectural Aid." The booklet is handsomely illustrated in colors and will unquestionably create a favorable opinion among those who secure copies. If placed in the hands of contractors and architects this booklet is likely to become a very valuable trade building factor. The illustrations show scenes in the woods, at the mills, etc., and also include pictures of buildings with Arkansas soft pine used for many purposes. An interesting set of illustrations represents eight panels of Arkansas soft pine stained in very effective colors. The rich effect secured by the use of curly Arkansas soft pine is also well illustrated.

The Salesman's Personality

When you have called on a lumber yard or a carriage factory what kind of an impression did you leave? Were you just one of that army of order-takers who stream through the office of the ordinary business man? Has he a conglomerate picture of salesmen as a class in which you do not stick out any more prominently than the calendar salesman or the subscription solicitor Did your talk all sound alike? Or do you remain in his memory after the name and the game of the man with the county directory were forgoten? If so you have Personality.

Personality doesn't mean being a good fellow and making an impression that way, although that is better personality than no personality at all. It means to be so well-informed, so earnest, so interesting, that your visit is recalled with pleasure and profit. It means to be Yourself, to be different from the ordinary run. It means to be original and resourceful. It means to talk like a salesman and not like an advertising tract. It means to stick in the memory as a man rather than as one of a class.

The personality of the salesman is the blood of any business. It makes his sawmill an instituion instead of just a sawmill. It makes the buyer realize he is doing business with people instead of with an inanimate something in the backwoods. It is the factor that establishes the permanent and friendly relation between man and man and makes the buyer stick to you in good times and bad. It is the thing that lifts you out of the ordinary run and makes you an aid instead of an interruption, makes you a man that the buyer is glad to see instead of anxious to avoid.

As to how you are to acquire personality if you haven't it, heaven only knows. It is something that has to be born in you to some extent. Poets, they say, are born not made. It is a good deal the same way with salesmen. Yet there never was a salesman who couldn't make himself a better salesman if he set about it. Don't be satisfied to be a sing-song salesman. Be a salesman with personality.—American Lumberman.

A report from Oxford, N.S., states that the outlook for lumbering operations in that neighborhood during the coming winter is excellent. Mr. T. C. Glennie is arranging to take out a large cut, probably in excess of his last year's operations. Mr. C. O. Black, whose timber limits are located in the River Philip Valley is also planning large operations. King Bros., who operate on limits on Portaupique, Colchester County, have a large number of men in the woods. The present indications are that operations will not be curtailed in any way on account of the war.

Boxmakers in the United States use more than four and a half billion feet of lumber each year or more than one tenth of the entire lumber cut of the country.

The annual cut of British Columbia timber is approximately two billion feet. There are 420 mills and 790 logging camps in the province, employing about 60,000 men.

Canada's trade in forest products for the month of October, 1914, was valued at $4,935,715. During October, 1913, and 1912, the values were $4,505,067 and $5,783,014 respectively. During the twelve months ending with October, the total values were as follows:—1914, $42,621,760; 1913, $42,749,039; 1912, $43,353,926.

The Wilson Lumber & Box Company, North Tonawanda, N.Y., has closed a contract for furnishing thirty car loads of box shooks for shipment to Europe. The stock will be converted into boxes to be used principally for conveying ammunition for use during the war.

A contribution to the war relief fund of special value with the onward march of winter has been made by the Canadian Western Lumber Company, Fraser Mills, B.C., in the shape of two carloads of wood, and more when needed is promised.

Settlement of Accounts With Slow Debtors

The last month of the year might be fitly termed the "Judgment Day" of the year for the man in business. He looks forward to it with mingled feelings of suspense and anxiety. The employer wonders how he is coming out and the employee, how he is going into the next year. Both yard owner and manager are thinking more intently of things that didn't bother them so much during the summer. During the rest of the year they took chances that December would prove whether their judgment was good or not. Some have justified their acceptance of them, and others they are beginning to worry about. Most every dealer, too, has some accounts that for various reasons he has refrained from pushing for collection as much as he now sees he should have done. He has let them go and put them off till the last of the year when he promised himself to round them up and take measures to make the parties pay. It is these accounts that are "hanging fire" that causes the dealer the unusual amount of worry at this time and gives occasion for him to think that if he had only known at the time what he knows now the parties would not have gotten into him as they did.

It is too late for such regrets now and yet such experiences are in a way beneficial if they will operate to make the dealer more cautious in the future in the avoidance of making bad accounts. He will learn also the folly of giving credit to a man and then inquiring about him afterwards. This way of doing business is what makes this month the season of regrets, also the seeding time for a crop of good resolutions that may or may not come to fruition. This selling goods to a man on time and then afterward trying to find out whether a mistake has been made or not is a universal fault among business men. Even the most careful dealer will do this in cases where the applicant for credit is of a strong, pleasing personality and "puts up" a line of convincing talk that hypnotizes him at the time and he yields to its influence by granting the request. But afterward when away from the spell of the man's personal influence his judgment and caution begin to act and prompt him to investigate the basis for the man's credit.

I'll warrant the assertion that nine-tenths of the bad accounts on the books of the lumber dealers today were made through their failing to investigate first before giving the credit and this is the principal reason why I have so often advocated the advisability of every dealer having an index system of listing the ratings of every man in the town and locality. Then if he has this to consult every time a new customer applies for credit he has the man's rating to influence his judgment and counteract the lot of smooth talk that is being given him. If a dealer has this rating system and has been governed by it during the year, it is a sure thing that he won't have a lot of uncertain accounts looming up before him in December to worry him about their collection. And if you have any at all it will be because you have in those cases let the bars down between the restraint and your own weakness. In other words, it's your own fault with no good business reason to excuse it. If any of you are up against the problem of collecting a lot of tough accounts between now and when you will get them in let it lead you to make up your minds to go to work and have such a rating system as I have mentioned in order that you may be protected in future from your own errors of judgment and weakness of will power. It is considerable of a job I know from experience, but you have the whole winter with its many dull days to do it in. If you can get one more of the other business men in the town to give you their experiences with parties you know little about it will lessen your work as well as make it more complete in its information.

A Credit Clearing House

There should be some organization among business men in every town that would be as a clearing house of credit experience and some one man in charge of it to keep the system corrected up to date. A few of the larger towns in the country have adopted this system and I have yet to hear of any town where they had it that it was not a success. But it is something that is hard to start in a small town for there are not enough in number of business men so that it would pay to employ a secretary. Nevertheless, it is practicable for any merchant to have a rating system of his own and as I've said, there are to be found one or more of others whom he could get to go in with him and each having the same list and the ratings they could assist each other in adding to and keeping it corrected. If three men in a town will do this it is bound to have the effect to induce others to join in and want the benefit of the others' credit experiences. Another effect too, it would have. It would bring them together in more cordial business relations and in the course of time there would develop a business association without being organized as a formal body. In such a beginning there is a definite common bond of purpose as a basis whereon to work together because all are interested in knowing who the slow pays and dead beats are in the community.

Two or three business men in a town having a system of this kind for protection and guidance in giving credits would have an additional effect of driving all the undesirables to those places where they are giving credit tin the usual way. When these business men discovered this they would wonder what was the cause of it and when they do they will understand something of what co-operation means.

Now understand me, I am not advocating a combination to prevent certain people from obtaining credit, but simply a system whereby an interchange of credit experiences can be made leaving each one to act according to his own judgment on the information he obtains. It does not bind him from giving credit to a well-known "dead beat" if he chooses to take the chances of getting his pay or of crediting anybody as he sees fit. But he does it with his eyes open after he knows of the experiences of others with the parties. When you come to study the proposition you will find there is nothing in it but what is being done more or less every day among business men in a country town. For instance, a man comes to your office wanting credit for a little lumber. You have had no experience with him. You are in doubt, and you ask him where he has been trading, you call up the storekeeper and ask him what his experience has been with the party. If favorable you give him the credit. If the information is otherwise you use your own judgment. Some times you will meet a business man on the street whom you are friendly with and you get to talking of business conditions. Invariably almost, the subject of collections will come up and one of you will inquire what the other knows of a certain party and his disposition to pay his debts. You freely interchange what you have heard or what your own experience has been in dealing with him. In this way you mutually benefit each other. Now what is the difference between this kind of an interchange and the interchange of information kept on card system? The only difference as I can see is one is systematized and the other is not. If you can derive a benefit from the information that one business man gives you from his experience with credits in the town how much more you can get from the experience of three, four or five others or of all the business men in the place.

Knows from Experience

During the past ten years I have had a good deal of experience with this system of interchange of credit experiences and therefore I feel that I am not assuming too much when I say that I know something of its practical workings and furthermore, I know it can be made a success in any town where it is adopted. I know what you will think when you read this. You would say to me, "Oh, well, things were different there. Conditions in this town are such that it wouldn't work." Yes, that is what everybody says when they hear of anything being a success in another town. We say of an individual who has been successful that he has good luck; that we could do as well if we had had the same chances. The credit business is practically the same in character everywhere and any country town can do what we have done and are doing here.

When I first broached the subject to our business men they said conditions here were such that it could not be made to work. But a few months hammering away at it convinced a few that it would and so we started with eleven members and got one of the justices of the peace to keep the records for us and answer our inquiries over the 'phone. We worked along for three years before we got a membership of forty-two. Then we dug into our pockets for a banquet and invited every business man in town. That brought us in a membership of over one hundred. Since then we have developed in every way for the individual and collective benefit of the whole city of 35,000 inhabitants and have a present membership of 360. I could fill this entire article with what this association has done of a public nature, but that would be unnecessary at this time. I have spoken of the work of this association several times in former articles. A number of men have written me from various parts of the country asking for further details of the system and subsequently I learned that some of them had started the system in their towns and it had proved a success from the beginning.

I thought this was a good time to bring up the subject again because the winter is a propitious time for working up anything of the kind. Business men's thoughts are taken up with credits and collections more at this time than perhaps at any other during the year and are therefore responsive to any project that will assist them in the prevention of making bad accounts. I want to say again before parting with this subject, if it so be that you think it is not feasible to have such a collective clearing house for credit experiences as I have suggested, by all means, get up an index card system of your own. It is not only valuable for keeping tab on the credit records of people in your locality but you can use it also in your selling business. You can circularize the farmers as to their intentions for future building and this and other valuable information you can get in this way, you can make a note of on the individual cards for use in following the inquiries. Now if you go at it and work this out this winter you will have something in the spring that will henceforth serve you as a guide post directing the avoidance of the pitfalls of bad accounts.

Prevention Better Than Cure

If anyone should come to you with the proposition that he would give a heavy bond as a guarantee to protect you from making bad accounts, you would feel willing to pay him a fee of at least one hun-

dred dollars. Some of you no doubt have paid a good portion of this at sundry times to collection agencies and have never gotten any substantial returns for it. Many business men are willing to throw good money after bad in this way, but they wouldn't give a cent towards a proposition that will protect them from the making of bad accounts. The disposition rather is to go to the expense of buying a good lock for the coal house door after the coal has been stolen.

Retail business men as a rule are working continually in the dark with respect to their credit business and they seem by their actions to prefer it to working in the light of a systematic control of it. Go where you will you will hear the same old song about the evils of the credit business. I have heard it sung in varying keys for so long that I have no sympathy for the sinners any more because, from what I know of successful prevention they are themselves to blame, and what is more they know in their own consciousness that this is true. This thing of putting money into lumber and then selling it to a party "on suspicion" and keeping on doing this year after year and then complaining when they get "stuck" or the party is taking his time in paying for it is when you come to look at it in the clear cold light of business sense, the rankest folly.

Don't think for a moment that I am saying this without knowing the meaning of it. I do know it is a folly, because I have felt it to be this by my own experience and I have many a time condemned myself for being guilty of it. I know, of course, there are more or less chances incurred in doing a credit business. Even the most conservative business men will get caught through the intervention of circumstances that could not be foreseen. What I am advocating and urging is the adoption of methods and measures that will reduce the chances of non-payment to the lowest minimum and if the retailers will individually adopt a system of limiting ther credits and have a tabulated list of the credits in their localities to guide them, with the will and courage to enforce it there will be a general relief from the excessive burden of credits they are now carrying and a large reduction in the loss from bad accounts and interest on capital put out on long time business.

Discovering Your Mistakes

It goes without saying that you are all immersed now in the business of collecting and probably discovering some of your mistakes in the giving of credit earlier in the year. You have some accounts that you worked hard to sell the material and now you have got to work harder to collect for it. You have parties owing you that you consider good and who will pay when they get the money. This class of people as a rule are poor collectors themselves of what other people owe them. It won't do for you to rely on their promises, however honest in intention they may be and if you expect to collect from them in the near future you have got to help them to collect their debts. When they come to you and say they can't pay that bill because somebody else is owing them take down the names of those parties and go and see them and ascertain the facts in the case, and if true, urge their paying the man so you can get your money. It is not a bad idea for you to obtain a written order from your debtor on the party that owes him so that he won't have the excuse to make of not liking to pay without an order. If your debtor doesn't want to give such an order it is pretty good evidence that he has some reason back of it that he doesn't care to let you know. He is probably "hard up" and wants that money for more pressing needs and would rather collect it himself and use it for them. A man with a family just before the winter has to consider their wants and with only the money other people are owing him to depend on the pressure of this knowledge is greater on him than the desire to pay the debts he incurred at a time when there was a longer prospect for getting the means to do it. You have got to assist this class of people to collect their debts and get what you can out of it.

The contractors and jobbing mechanics that trade with you and are owing for balances on bills and long drawn out accounts that they have paid a little on here and there at different times are the most annoying and difficult to bring to a "show down" at this time. You dislike to press them very hard and they know it. As long as you only ask them to settle their accounts it is taken as a matter of course, but when you try to "nose around" to find out who is owing them they are apt to resent it and get mad if you press them too hard, and as this threatens the loss of their trade and influence you are naturally inclined to handle them a little gingerly in your efforts to round them up. The most influential contractor who does the largest business with you is immune from the hard pressing you may exert on some of the others. You wouldn't offend him for anything and therefore he in turn is not going to press his best customers very hard. So you have to wait on both him and his customers till the spirit moves them to settle their accounts.

Of course a good deal of these difficulties with this class of your debtors depend somewhat on the way you have allowed them to treat you during the year. If you have educated them to pay their bills for material at the completion of the jobs they will know what to expect at the end of the year. But if you have allowed them to run accounts and pay something on them now and then as they had the money to spare you will have to bear the consequences of such a loose way of doing business. If you have it understood with your contractors and mechanics that if they trade with you they will have to settle for each job, big or little, as soon as it is done it will have the effect of making them more cautious in taking jobs and more energetic in collecting for them. In business you reap as you sow, just as you do in anything else. If you take it for granted that this jobbing fraternity is going to pay you when the work is done without stipulating that they must do so at this time you are going to be disappointed, for they will follow the line of the least resistance in permitting their customers to be as easy with them as you are. There should be a settlement of all unpaid bills on contract jobs before the first of the year, and the owner notified to that effect also. This will have the effect of assisting the contractor in collecting his money. I have frequently had my contractors ask me to "punch up" some man who was holding off in making the payment as agreed on their contracts. They couldn't get any money out of them and wanted me to try my hand at it for them. It may be advisable in some cases when notifying the owner as I have mentioned to also give him to understand that security will be taken by filing a lien if the contractor is not paid within a certain time. This will generally bring them to time. Of course, you won't have to do this with contractors who pay their bills promptly, but as a rule you don't have many of this class.

Success Depends Upon Effort

Collecting this month depends a good deal on the amount of "steam" you put into your efforts. You have got to convince your debtors that you must have the money. No doubt the bulk of your accounts are with the farmers and speaking in a general way the farmers this year, with comparatively few exceptions, have got the means to pay their bills. And when you know that a farmer that owes you has got a lot of grain and other produce stored away on his place it is your own fault if you don't press him hard enough to cause him to market enough to settle his account. When crops are poor there is some excuse for carrying a farmer and going to the bank to borrow money to pay bills for stock, but it certainly is poor business to borrow money to carry on business when your books are loaded with accounts of farmers that have ample means to pay them. It is not so much a question of credit as it is of supineness on the part of the dealer in collecting. When you press a farmer to the point that he says: "Well, if you have got to have it I suppose I'll have to haul in some stuff and get the money for you," you have convinced him that you actually mean what you say when you tell him you need the money.

The fact is, the farmer is intensely individualistic in his way of thinking about such matters. He considers no one else's interests but his own. His thought is that the lumberman is obligated to him for his trade and in turn is under obligations to give him credit and carry him till he gets ready to pay it. He thinks, too, that the lumberman has plenty of money and can afford to carry him and all such talk as "needing money" is merely a matter of form.

You will see in the local papers these days articles of various business men informing those that owe them that they should call and settle their bills by the first of the year as they are needing their money. As a matter of fact such appeals have but little effect in producing the desired results, because the community of debtors have read such notices before and nothing came of it in the way of extreme measures. The principal reason that some men are better collectors than others is because they succeed in convincing those they go out after that they really mean what they say when they tell folks the money has got to come.

The great retail stores in Chicago do a large credit business in the city and suburban towns. Most anyone of good character and references can obtain credit at these stores, but it is understood that bills must be settled by the tenth of every month unless some special arrangement is made otherwise. Statements are sent out the first of the month. If no return is made on this first statement in ten days, a second is sent politely inquiring the reason why. No answer being returned to this, a formal notice is sent that unless remittance is sent by return mail a collector will call at their residence for the payment of the account. This is not intended, nor is it a "bluff," for just so sure as a check is not sent by return mail a collector is put on the trail, and he gets the money at once, or it goes to the law department of the store for more extreme measures.

Here again you may think that this can be done in the city, but it can't be done in the country. The fact is, though, location has but little to do with it. Human nature is the same everywhere, and when people know that they have got to do a thing at a certain time they are going to make extra efforts to prepare for and do it. You have the opportunity this month to make a reputation for yourself in your community as a collector, and next year, when people come to you for credit and you tell them your terms on which they can have it, they will know you really mean business when you tell them that accounts must be paid at the specified time. Think this over and turn over a new leaf in dealing with your credits.

C. H. Ketridge, in the Mississippi Valley Lumberman.

WANTED & FOR SALE DEPARTMENT

PUBLISHER'S NOTICE

Advertisements other than "Employment Wanted" or "Employees Wanted" will be inserted in this department at the rate of 15 cents per agate line (14 agate lines make one inch.) ($2.10 per inch) each insertion, payable in advance. Space measured from rule to rule. When four or more consecutive insertions of the same advertisement are ordered a discount of 25 per cent. will be allowed.

Advertisements of "Wanted Employment" will be inserted at the rate of one cent a word, net. Cash must accompany order. If Canada Lumberman box number is used, enclose ten cents extra for postage in forwarding replies. Minimum charge 25 cents.

Advertisements of "Wanted Employees" will be inserted at the rate of two cents a word net. Cash must accompany the order. Minimum charge 50 cents.

Advertisement must be received not later than the 10th and 26th of each month to insure insertion in the subsequent issue.

Wanted–Lumber

Basswood Wanted

No. 2 Common and Mill Cull. Winter cut preferred. Apply Firstbrook Brothers, Ltd., Toronto, Ont. 7-tf

Lumber Wanted

Hemlock running chiefly 14 ft. and 16 ft. lengths, 1-in. Spruce, Basswood, Birch; also Cedar Posts. Send detailed list giving lowest wholesale prices. Address Box 85, Canada Lumberman, Toronto. 21-24

Birchwood Wanted

5-in. thick, 6-in. wide and up. Must be air dried 1912 cut.

LAMONTAGUE, LIMITED,
338 Notre Dame Street West,
24-t.f. Montreal, Que.

Wanted to Buy

We are in the market for the following good Merchantable Spruce:

100,000 ft. 2-in. x 6-in.
100,000 ft. 2-in. x 8-in.
50,000 ft. 3-in. x 9-in.
50,000 ft. 3-in. x 8-in.
50,000 ft. 2½-in. x 7-in.
25,000 ft. 2½-in. x 6-in.

all 10 ft. and up long. Terms: 75 per cent. cash against B/L. Balance on arrival and inspection. Shipment to be immediately. State price f.o.b. shipping point. Write P. O. Box No. 1595, Montreal. c

For Sale–Lumber

For Sale

400 Spruce Spiles, 60 ft. long, 7 in. tops. Also any quantity Spiles 35 to 50 ft. long. Prompt shipment.

The Northern Lumber Mills, Limited,
21-t.f. North Cobalt, Ont.

For Sale—White Pine Bevel Siding

Either in Idaho White Pine, Silver White Pine or Michigan White Pine. All grades at prices so low that you will be sure to buy. Write us.

American Lumber and Mfg. Company,
22-1 Pittsburgh, Pa.

Dimension Timbers

50 pieces Red Pine, 6 x 10 x 18, $30.00.
20 pieces Red Pine, 8 x 10 x 18, $30.00.
10 pieces Red Pine, 8 x 12 x 20, $32.00.
15 pieces Red Pine, 10 x 12 x 16, $32.00.
30 pieces Cedar, 8 x 8 x 12, $19.00.
30 pieces Cedar, 9 x 9 x 12, $19.00.
20 pieces Cedar, 10 x 10 x 12, $20.00.

Send for full list. Spruce and Yellow Pine also.

South Shore Lumber Company, Limited,
21-24 St. Lambert, P.Q.

Wanted to Sell

One to five million feet of 8 x 8's to 24 x 24's, 12 ft. to 18 ft. long, No. 1 common pine timbers, rough or dressed. To be shipped as fast as cut, approximately four hundred per month.

PERRY-FRASER LUMBER CO., INC.,
23-2 Noxapater, Miss., U.S.A.

Lumber For Sale

200 Pieces 1 x 15 and up 22 ft. Cypress.
375 Pieces 1 x 15 and up 24 ft. Cypress.
Clear for boat building, in stock at Montreal.

GEO. C. GOODFELLOW,
c Montreal, Que.

For Sale

1 car 2 in. Rock Elm, No. 2 and 3 Common.
1 car 2¾ in., 3 in. and 3½ in. Sound Rock Elm Hearts.
1 car 2½ in., 3 in. and 3½ in. Maple, No. 2 Common.
2 cars 2 in. Maple, No. 2 Common.
1 car 2 in. Maple, No. 3 Common.
1 car 1¼ in., 1½ in. Beech, No. 2 Common and Better.
2 cars 1½ in. Beech, No. 1 Com. and Bet.
3 cars 1½ in. Beech, No. 2 Com. and Bet.
30,000 Cedar Posts, 8 ft. long.
1,000 cord 4 ft. Hardwood Slabs.

This stock is dry and in good shipping condition.

For Sale–Machinery

Planing Mill Machinery

Purchased modern plant, receiver's sale; also 200 horse automatic engine; bargain price, any machine; write to-day. Baird Machinery Co., 123 Water Street, Pittsburgh, Pa., U.S.A. 24

For Sale

28 36-ft. 600,000 lbs. flat cars.
1 55 ton Locomotive.
1 35 ton Dinkey.
15 25 ton Dinkies.

In first class order, for immediate delivery.

W. FRASER,
21-24 83 Craig St. West, Montreal, Que.

Rebuilt Veneer Machines

We have the following rebuilt Coe veneer lathes and clippers ready for immediate shipment:

Lathe, 50-in. swing, 88-in. knife, 6-in. spindles.
Lathe, 50-in. swing, 64-in. knife, 6-in. spindles.
Lathe, 50-in. swing, 64-in. knife, 5-in. spindles.
Lathe, 42-in. swing, 64-in. knife, 3⅞-in. spindles.
Lathe, 42-in. swing, 52-in. knife, 5-in. spindles.
100-in. power clipper.
88-in. power clipper.
54-in. foot power clipper.

These machines are decided bargains and carry the same guarantee as we give our new ones. Prices on application.

THE COE MANUFACTURING COMPANY,
23t.f. Painesville, Ohio.

Special Woodstock Machines

Latest Types—Like New—Guaranteed. Some examples:

2—12-in. Defiance Patent Automatic Benders.
1—No. 2 Defiance Automatic Rim Strip Equalizer.
1—42-in. Defiance Combined Handle and Spoke Lathe.
2—48-in. Defiance Neckyoke and Singletree Lathes.
3—32-in. Defiance Automatic Spoke Lathes.
2—48-in. Wapakoneta Automatic Spoke Lathes.
2—36-in. Fay & Egan Automatic Spoke Lathes.
1—No. 1 Defiance 18-in. Belt Sander.
1—Defiance Auto Spoke Throat Polisher.
1—18-in. Empire Belt Sander.
5—Sinker-Davis Hoosier Self-feed Rip Saws.
1—No. 110 Fay & Egan Self-feed Rip Saw.
1—No. 2 American Self-feed Rip Saw.
1—30" Whitney Double Surfacer.
1—24-in. Fay & Egan No. 140 Double Surfacer.

Complete list the seventy odd machines ready.

WAYNE MACHINERY CO.,
Fort Wayne, Ind., U. S. A.

We've seven hundred machines in stock at Fort Wayne. Our Wayne list mailed to anyone interested. 24

WOODWORKING MACHINERY FOR SALE: 2 8-in. three side moulders; 3 upright power mortisers; 2 26-in. surface planers; 3 20-in. Ideal pony planers; 1 No. 802 Canada Machinery Corporation two-spindle wood shaper; 1 MacGregor-Gourlay self-feed cut-off saw; 2 Ideal variety saw tables; 1 40-in. MacGregor-Gourlay band saw; 1 20-in. American wood scraper; 1 36-in. double-drum sander. H. W. Petrie, Limited, Toronto, Ont.

Wanted–Employment

Advertisements under this heading one cent a word per insertion. Box No. 10 cents extra. Minimum charge 25 cents

WANTED—Position as engineer. Can handle A.C. work. References. R. E. Keech, 412 Pavone Street, Benton Harbor, Mich., U.S.A. 22-1

POSITION WANTED by stenographer and bookkeeper. Young man, stenographer and bookkeeper, desires position with lumber company, with a chance of advancement. One year's business experience, and best of references. Address Lock Box 42, Highland Park Station, Des Moines, Iowa, U.S.A. 22-1

Planing mill man expert in sales, advertising and estimates, with exceptional record for increased business and profits, will be open for new position January 1st. Will guarantee results for 1915 and will make pay contingent upon resutls. Apply Box 108, Canada Lumberman & Woodworker, Toronto. 23-2

Manager or Secretary-Treasurer

Position wanted by married man. Fifteen years' experience in every department of the lumber business. Successful manager of company manufacturing thirty million feet annually. Four years in wholesale and retail business as secretary and manager. Licensed log scaler. Can provide capital and furnish excellent references. Reply to Box 112, Canada Lumberman, Toronto. 24-3

WANTED—Position by young married man who has a general knowledge of the lumber business and who is particularly adapted for the sash and door business. Has had practically four years' experience as buyer. Willing to go almost anywhere and to consider any proposition. Would go to lumber camp or work in mill. Firms with interests in South America, desiring the services of a general man, please consider this. Box 100, Canada Lumberman, Toronto. 22-24

Wanted–Employees

Advertisements under this heading two cents a word per insertion. Minimum charge 50 cents

WANTED—Practical man to act as superintendent of new plant about to manufacture box shooks. Must have thorough knowledge of the business. Apply Box 109, Canada Lumberman & Woodworker, Toronto. 23t.f.

Business Chances

Timber Limits For Sale

Can be quickly and profitably disposed of by advertising them on this page. This is where buyers of timber property look for opportunities to invest. If your "ad" is here the investor will see it. Canada Lumberman, Toronto, Ont. tf

Furniture Manufacturers

Lumber dealer, having unlimited quantity of birch, maple and beech, desires to enter into negotiations with Ontario firm of furniture manufacturers who would be willing to change their location. Have no experience, but can procure sufficient capital to develop business. Excellent prospects. Address in first instance to Box 115, Canada Lumberman, Toronto. 24-1

Splendid Chance for Sash and Door Manufacturer

One or two practical planing mill men with a little capital are offered an excellent opportunity to get into business. The property available is an excellent newly-equipped woodworking plant, in Ontario, for turning out sash, doors and millwork. Local capital can be obtained to build up business. Unsurpassed location and shipping facilities. Owner wants to retire from business. Box 116 Canada Lumberman and Woodworker, Toronto. 24-1

In the Supreme Court of Ontario

In the Matter of The Winding-Up Act, being Chapter 144 of the Revised Statutes of Canada and Amending Acts.

And in the Matter of the Dominion Lumber Company, Limited.

Judicial Sale by Public Auction of valuable timber lands, limits and mills situate in the Province of Quebec.

Notice is hereby given that pursuant to the Winding-Up Order made in this matter and bearing date the 9th day of June, 1914, there will be offered for sale with the approbation of Geo. O. Alcorn, Master in Ordinary of the said Court and with the concurrence of the Royal Trust Company, Trustee for bondholders, by Public Auction by Fraser Bros., Auctioneers, at No. 453 St. James Street, Montreal, Quebec, at the hour of 10.30 o'clock in the forenoon on the 30th day of January, A.D. 1915, the following lands and premises and assets in one parcel:—

A.—In the seigniory of Ste. Anne des Monts, in the County of Gaspe, in the Province of Quebec, 1,000 acres more or less of timber lands, together with a duly equipped lumber and shingle mill, having a capacity of 25,000 feet of lumber and 125,000 to 150,000 pieces of shingles every ten hours, also dwellings, storehouses, repair shops, etc., also 289 square miles timber limits in said county held under Government license and numbered 22 to 29, estimated to contain over 350 million feet of saw logs, principally fir, spruce and cedar, and 595,000 cords of spool and pulp wood. Also logs in river estimated at 1,000,000 feet board measure.

B.—Near La Grande Vallee des Monts, in the County of Gaspe, in the Province of Quebec, 54 square miles of timber lands and 100 square miles licensed timber limits (held under Government license and numbered 30, 34 and 35) reported to contain 100 million feet of saw logs and 245,000 cords pulp and spool wood, together with new lumber mill fully equipped and having a capacity of 50,000 to 75,000 feet of lumber every ten hours, also a mill for sawing shingles and railway ties, with a capacity of 125,000 to 150,000 shingles every ten hours and all necessary shanty plant, etc.

The property will be offered for sale subject to a reserved bid fixed by the said Master in Ordinary.

Terms of Sale.—Accepted cheque for $10,000 payable to the Liquidators to be deposited with the Auctioneer by each bidder when making bid. Twenty-five per cent. of purchase price to be paid in cash and balance shall be paid in three equal annual instalments and shall bear interest at the rate of seven per centum per annum, such instalments to be secured to the satisfaction of the Liquidators.

The Purchaser may at his option pay the whole purchase money in cash.

The terms and conditions of sale in all other respects are the standing conditions of sale of the Court so far as applicable.

For further particulars apply to Archibald W. Stevenson, Eastern Townships Bank Building, Montreal, Quebec, Charles A. Millener, Deseronto, Ontario, Frank Denton, K.C., 20 King Street East, Toronto. Liquidators or to Masten, Starr and Spence, 58 Canada Life Building, Toronto, Canada.

Dated at Toronto this 14th day of November, A.D. 1914.

GEO. O. ALCORN,
23-2 Master in Ordinary.

Miscellaneous

For Sale

Rare bargain. Band mill located in best lumber and log center on Puget Sound. Rail and cargo shipping facilities. Excellent log pond. Ten and a half acres of land. Price one-fourth of appraised valuation. Must sell quick. Box 765, Canada Lumberman, Toronto, Ont. 8-t.f.

Sales Engineers Wanted

A large firm specializing in the manufacture of motors of all classes desires to secure sales engineers in various parts of Canada. Firms who can carry a stock of motors are preferred. Write stating the territory that you can cover. Box 96, Canada Lumberman, Toronto. 21-24

Electric Lighting Plant

wanted, without power, direct current, capable of supplying 250 to 300 16 c.p. lamps. Must be in first class condition. Name lowest cash price. Correspond with Clarke Bros., Bear River, N.S. 21-24

Ties and Pulpwood For Sale

Advertiser open to take orders for delivery of railway ties and pulpwood in any quantities large or small, to be delivered rail off vessel, upper lake ports. Apply Box 110, Canada Lumberman & Woodworker, Toronto. 23t.f.

Sawing Contract Wanted

Want to secure contract for the sawing of 1,000,000 to 5,000,000 feet of logs. Have No. 1 portable sawmill, fully equipped. Location immaterial.

HUGH BAIRD & COMPANY,
22 1 Markdale, Ont.

Rossed Pulp Wood

I will close a contract immediately for machine Rossed Pulp Wood, 24-in. and 48-in. long, quotations f.o.b. Cochrane, Ont., or at place of delivery. I have the control of a large quantity of pulp wood yearly.

I also have for sale 50,000 ft. of 1-in. dry White Birch.

L. BOIVIN,
23-2 Box 46, Cochrane, Ont.

Do You Want to Buy or Sell?

If you wish to purchase or dispose of a particular stock of lumber or logs, a mill property or timber limit, or some second-hand machinery, the CANADA LUMBERMAN AND WOODWORKER will bring quick returns. Use our "Wanted and For Sale Department."

Saw Mill Machinery For Sale

Sawmill near Sellwood, Ontario, daily capacity 60,000 feet. All machinery including:—Log Ladder, Bullwheel, Steam Kicker, Log Loader, Stationary Steam Nigger, 42-in. Steel Carriage, 10-in. Steam Feed, 8 ft. Double Cutting Bandmill, Cast Iron Lumber Table, 5-Saw Slab Slasher, 48-in. Big Champion Edger, Trimmer, Transfers to Edger and Trimmer Tables, Sorting Tables, etc. Also, Independent Lathmill, Filing Room Outfit and Power Plant complete. This machinery is of the latest design, practically new and in excellent condition. Offers will be accepted for all or any part of this machinery, where it stands or F.O.B. cars Sellwood.

The Waterous Engine Works Company,
22-t.f. Brantford, Canada.

BAHAMA ISLANDS

Timber Lands

The Crown is prepared to issue a license for yellow pine lumbering operations on Cocoa Plum Creek Section, a tract containing 13,725 acres situate on the Northern part of the Island of Great Abaco. A considerable portion of this tract is covered with yellow pine timber.

The Crown has also for lease other and smaller tracts of pine land.

Parties interested are invited to apply for further information to The Colonial Secretary, Nassau, Bahamas, W. Indies. 23-24

Condtion of Trade Expansion

In a "Plain Talk on Opportunities for Trade Expansion in South America," Dr. David Kinley, University of Illinois, gives his fellow countrymen some good advice to Canadians. He says:

"There is too much talk of Government initiative in this matter. We cannot build up trade by writing about it or talking about it, or by determining that 'this country' must do business with some other country. Countries do not trade. Business firms and individuals trade. If, therefore, any manufacturer is in earnest about developing trade with South America he must proceed on his own initiative. He should send sensible, responsible agents at once to report upon the conditions under which business can be done. He should find the usual terms of credit, for the conditions and methods of doing business, particularly in granting credit, are not the same in all these countries in all lines of business. These agents should report exactly what articles the people have been accustomed to buy, and what they want in style, quantity, colors, prices, and other details. The manufacturer should then endeavour to meet the wishes of his prospective customers in all respects. All this implies what a recent manufacturer has called a "network of intelligent agencies."

Breakage of Narrow Band Saws

A fruitful cause of narrow band saws breaking—especially with wheels of the old fashioned heavy type—is the over-running by the top wheel of the bottom or driving wheel of the saw and also of the saw itself. When the top saw wheel is running at full speed it necessarily acquires a considerable momentum, and acts somewhat after the fashion of a flywheel; consequently, when the speed of the saw blade is suddenly checked by its entry into the wood as it commences to saw, the acquired momentum of the top wheel not being checked in a like proportion, over-runs the saw and the driving wheel, and creeps, so to speak, up the back of the saw, and consequently buckles or breaks it at the point of resistance, viz., where the saw enters the wood. The remedy for this is to construct the top saw wheel as light as possible—we prefer a built-up steel wheel—make it an absolute balance, mount it elastically, and cover it with a thick band—say ¾ in. of vulcanized India rubber. The bottom saw wheel can also be made, say, one-third heavier than the top wheel, and these arrangements will neutralize to a considerable degree the sudden strain put on the saw at starting, and largely obviate the over-running and breakages above alluded to.—Timber Trades Journal.

Sugar Made From Sawdust

The manufacture of sugar from sawdust is the latest problem to be solved in the effort to find an effective use for that waste product of the mills of the world. The process for manufacturing has been discovered by an English scientist and experiments made during last December go to show that it may yet result in revolutionizing the sugar making industry and at the same time enhance the value of a product that has so far been practically a waste material at all sawmills and especially at those situated in interior sections.

Sacchulose is the name applied to the new product. The results obtained are what are termed "classed processes," in which sawdust is subjected in closed retorts to digestion with a weak sulphuric acid solution and under a pressure of about 100 pounds to the square inch, effective transmusion takes place. Of the resulting product twenty-five per cent. is sugar. The constituent sugar so formed is dextro in part and fermentable to an extent of eighty per cent. The rest is not fermentable.

Large quantities of the product have been actually produced and it is said that arrangements have been made for the establishment of a large factory in England for the further exploitation of the product. According to these reports the manufacture of sugar from sawdust is to become an actual fact in that country, and, if successful, plants will be established in the United States by those interested in the new process. A. Z. Zimmerman, an English scientist, has been making numerous experiments in the feeding of horses and it is announced that increases in weight have been noted ranging from thirty-five to seventy pounds.

According to the same announcement the dust from practically all woods can be used in the manufacture of sugar by this process while that from yellow pine and the various oaks is superior to that from other woods. Further experiments to be made will be watched with much interest by the lumber interests of the United States.—Lumber Trade Journal.

As a result of tests made by the forest service on western woods, the specific gravity based on air dry volume, and the oven dry weight per cubic foot have been determined. It should be understood, however, that the figures given are averages, for the climatic conditions, kind of timber, and other factors enter into the question. For instance, no two pieces of Douglas fir, a cubic foot in size, will weigh just the same. The following figures, therefore, are average estimate:

Kind of wood.	Specific Gravity based on air dry volume.	Oven dry weight per cu. ft. in lbs.
Douglas fir	.46	28.8
Western hemlock	.42	26.3
Amabilis fir	.39	24.4
White fir	.37	23.1
Grand fir	.37	23.1
Sugar pine	.37	23.1
Western yellow pine.	.48	25.8
Redwood	.35	21.9
Sitka spruce	.32	26.0

Tests on Douglas fir show that the best time to ship the wood, if one would decrease his freight bill, is the summer. Green Douglas fir weighs 38 pounds to the cubic foot; in winter, even when air dry, it will weigh 34 pounds, and in summer 32 pounds. If you wish to figure in board feet, 1,000 board feet of rough Douglas fir lumber, shipped green, will weigh 3,200 pounds; the same amount air dried, shipped in winter, will weigh 2,850 pounds, but in summer the same wood, air dried, will weigh only 2,675 pounds. Kiln dried, 1,000 board feet will weigh 2,580 pounds. Thus it may be seen that 1,000 board feet of timber, in summer, weighs 175 pounds less than it does in winter.

If you wish to find the oven dry weight of a 1,000 board feet of any wood, multiply the weight per cubic foot by 83.3. To obtain the kiln dry weight, increase the oven dry weight per 1,000 by 7½ per cent. To obtain the summer air dry weight, increase the oven dry weight by 12 per cent. To get the winter air dry weight, increase the oven dry weight by 18 per cent.; and to get the green weight of most woods, increase the oven dry weight by 30 per cent.

Review of Current Trade Conditions

Ontario

While there is no improvement to report in connection with the lumber trade in Ontario, during the past fortnight, travellers are pretty generally of the opinion that trade has settled down upon a much more satisfactory basis than was expected a month or two ago. Wholesalers report that the volume of trade is sufficient to give everybody a fair amount of business and to relieve practically everybody of the anxiety which they felt in regard to the prospects for the winter season. Latest reports confirm the earlier ones to the effect that the output of logs in Ontario will be greatly reduced this winter. Nevertheless, reassuring statements are frequently received from important firms to the effect that they are not making the extensive reductions that they contemplated at first. This applies especially to the Ottawa Valley district, where operators have become more confident in regard to the business outlook and where the weather conditions have been sufficiently favorable to encourage winter operations on a large scale.

A well-konwn lumber manufacturer in Ontario reports that the cut of logs in the Georgian Bay district this year will not be over 25 per cent. of normal. He also reports that the quantity of logs carried over from last year is quite limited. Speaking of retail trade he has the following to say:—"In the the retail yards, the supply of lumber has been depleted for several months back, to such an extent that many of them are now borrowing from one another, and few yards, if they were favored with an order of a fair sized building, would be able to supply all the stock required without making fresh purchases. In the manufacturers' yards, especially those of the smaller mills, stocks are plentiful. Speculative house building dropped off immediately after the outbreak of the war and consequently all low ends of lumber are no plentiful in manufacturers' hands. The same is true to a large extent throughout the country.

"Referring to the outlook for the trade next year the same manufacturer states that, on account of the benefits to be expected from the new banking system in the United States, trade is likely to become normal in the near future. This will assist the trade in Canada greatly, by reducing the quantity of material coming on to our markets from the United States. Possibly the United States will even require a good percentage of our product. Fifty per cent. of a normal trade next spring would soon show large gaps in stocks in manufacturers' yards in Canada, which would have a very good effect on prices, making them much more uniform. Next fall, with only a slight revival of trade, the situation should once more become quite satistactory."

Bradstreet's in a recent report states that farming vicinities in Ontario have been ordering goods freely of late, but most other localities are buying barely enough to cover their immediate needs.

Eastern Canada

Little or no change is reported in the lumber trade situation at Montreal. The building business is exceptionally quiet, scarcely any new work being commenced. A few good contracts are under consideration, but are not likely to materialize until the spring. Wholesale and retail lumber trade is therefore very quiet and is expected to remain so for the next few months. Navigation has been closed and preliminary figures show that the quantity of lumber exported from Montreal, by the large shippers, was a little over 62,000,000 feet, a decrease of over 29,000,000 feet as compared with last year.

The demand for eastern spruce at Boston is about steady and offerings are light so that prices are firmly maintained, with a base price for dimension of $24. Some improvement is shown in random, the usual quotation for 2 x 3, now being $21. For 2 x 8 $22.50 is the bottom price, and $23 has been obtained. Spruce boards are plentiful and prices are inclined to be weak. Good covering boards 5-in. and up wide, 8-ft. and up long, are bringing $20 to $21. Offerings of shingles at Boston are heavy and the demand from city yards is slow. White cedar extras are selling at $3.35 to $3.45, clears at $2.80 to $2.90 and second clears at $2.55 to $2.65. Red cedar shingles are moving slowly. Stocks of lath are small and quotations are firmer. A few sales of 1⅝-in. for quick delivery are reported at $4.25, while $4.15 is the lowest price. There is not so good a call for 1½-in. as for 1⅝-in., but the price is firm at $3.70 to $3.80. The demand for hardwoods at Boston is spotty.

At New York, the spruce market is quiet, but shows a slight improvement over a month ago. Better trade is looked for after the new year.

At Boston, the lumber trade continues quiet, though the recent sharp advance in spruce dimension frame lumber for houses is held, the market price being $24 now instead of $22.50 a short time ago. Long lengths of spruce dimension lumber are scarce, and prices for all classes of eastern spruce are a little better. A few enquiries for white pine lumber for South America have made an appearance. All southern lumber is cheap and is affecting other values. Spruce boards have not shown any advance.

Great Britain

There has been considerable discussion in Great Britain recently of the apparent abundance of wood supplies, the impression being gathered in some quarters that stocks are too large. The opinion of most of the members of the trade, however, is that abnormal conditions render the present stocks none too plentiful. The consumption of lumber for several months has been extremely heavy and there is every indication of a continuance of this activity. Speculative building may come to an end, but the great variety of uses to which wood is put in ordinary times, added to the extraordinary uses to which it is now being put for temporary shelters, huts, transport work, cheap furniture, box and case making, must more than counterbalance the ordinary demand in times of peace.

Considerable business is still in progress in the spot market at London. Saw millers, yard owners and other large consumers are taking extensive stocks overside and floated goods are also moving rapidly. Arrivals are still heavy, but are not expected to more than balance the withdrawals.

A much improved trade situation is reported from Liverpool. Those who are engaged in the spruce deal trade are still very busy, the demand for government requirements continuing exceptionally strong. The Timber Trades Journal in a recent issue refers to two or three cargoes of spruce deals from New Brunswick and Nova Scotia which were then offering. It was expected that the prices would be very high compared with previous transactions, as freight rates had advanced greatly. Some revival is reported in connection with the timber import trade, Canadian pine being more active.

Trade at Glasgow has been a little more active, both on the spot and forward basis. War office requirements are still responsible for most of the trade. Box making demands continue active and there is a good request for spruce deals. Shipments arriving have sold readily at full prices.

United States

General trade conditions in the United States are improving. It is felt by everybody that industrial conditions are fundamentally sound and the result is that steady improvement has been shown during the last few weeks. The clearing of the financial situation, by the opening of the Federal reserve banks and by the assistance given to the cotton industry is having a marked effect upon the development of confidence. The extensive orders received by American industries from the nations of Europe which are at war, are also important factors in trade improvement. An expert of the Bureau of Foreign and Domestic Commerce has given out an estimate that one year of war in Europe will add $500,000,000 to the foreign commerce of the United States. The only reasons why the export lumber business has not been larger, are that vessels have been scarce and freight rates very high.

At this time of year the lumber trade has ordinarily settled down upon a winter basis. Trade this year, however, will not be by any means dead. Reports from Minneapolis show that building activities have broken all records. St. Paul also has enjoyed a building boom. In the northern States, along the border, however, the cold weather is likely to restrict building operations and reduce trade. In Chicago and other large cities of the middle west, building activity is keeping up and promises to produce a steady demand for all kinds of building stocks throughout the winter. Curtailment in production has enabled the lumber business to hold its own pretty generally and the improved demand of the last two weeks has brought about a few encouraging price advances. Consuming factories are running pretty generally and as most of them have only limited stocks they are buying steadily. Curtailment and the small stocks in the hands of retailers and factories are expected to bring about better prices as soon as conditions become more normal.

An optimistic feeling prevails in connection with northern pine at Minneapolis. Price lists show very little change. Country yards are doing a fair business and are expected to look for new stocks in the near future. Manufacturers in the northwest are continuing their curtailment. Some increase in activity is reported by white pine firms at Buffalo, some of the stock going abroad. Low grades are quiet and the box business is not active. At North Tonawanda, stocks of northern pine are moving steadily into consumers' hands. Manufacturers are busier and building operations are fairly active.

View of Mills in Sarnia.

BUY THE BEST

Retailers and woodworking establishments who like to get A1 NORWAY and WHITE PINE LUMBER always buy their stocks from us because we can ship them on quick notice. It pays to have the goods, but it pays better to "deliver" them.

We also make a specialty of heavy timbers cut to order any length up to 60 feet from Pine or B. C. Fir.

SPECIAL REPORTS ON CONDITIONS AT HOME AND ABROAD

Montreal Market News—Navigation Closed

Montreal, December 11; (Special to the Canada Lumberman):—Business in the lumber trade is still on the dull side. There is hardly any new work in the building line being commenced, and although some fairly good contracts are pending, it is not likely that a beginning will be made until the spring. The sales of lumber, both by wholesalers and retailers, are therefore of small volume, and this condition is likely to continue during the next two months. Although many wholesalers are still hoping for a satisfactory turnover when the business outlook for the immediate future is not particularly good, the building season opens.

The building permits for last month naturally show a decrease. The value was only $374,710, as compared with $1,293,746 in the corresponding period last year. The value for the year to date, including harbour work, is $17,277,311, as against $25,723,867 last year.

Navigation is now closed, the last boat for Great Britain having left the port. She carried a small amount of lumber, including a little birch. Thus ended one of the poorest years in the history of the port, so far as lumber is concerned—a season full of anxiety for shippers.

The recent activity in the pulp and paper sections is reflected in the September return of the exports from this country. The sales were on a very large scale, all three commodities sharing in the great demand. The exports of both chemical and ground wood pulp were large, and exceeded those of any previous month during this or last year. The table below shows the exports of the three classes:

Month 1913	Chemical Pulp	Mechanical Pulp	News-print
April	$202,110	$143,126	$596,554
May	201,276	234,494	810,575

Montreal Lumber Exports During 1914

The following is a preliminary comparative statement of the exports of lumber from the port of Montreal for the 1913 and 1914 seasons. This does not take into account the shipments made by small shippers, railways and steamship agents, which will be given in a later issue. The past season has been one of the poorest in the history of the trade, the falling off being due mainly to war conditions. Watson & Todd, who in 1913 increased their exports by over a million and a quarter feet, naturally show the largest decrease, they being the most important exporters from the port.

Exporters	1914 Ft. B.M.	1913 Ft. B.M.
Watson & Todd, Limited	26,165,790	34,596,642
R. Cox & Company	11,336,151	18,326,191
W. & J. Sharples	6,296,006	13,571,128
J. Burstall & Company	6,708,937	8,905,256
E. M. Nicholson	5,284,731	7,695,305
Dobell Beckett & Company	2,677,768	3,527,783
E. H. Lemay	3,339,582	3,522,941
Cox, Long & Company	474,818	1,878,741
	62,283,783	92,023,987

Decrease for 1914 season 29,740,204 feet B.M.

S. P. Musson, Son & Company, Barbados, report under date of November 13th as follows: Lumberstuffs.—White pine—There has been no arrival during the fortnight, and the position of the market has strengthened somewhat; first arrival of merchantable should be worth around $34, and second quality $26. Spruce—No receipts in this either, and we value a cargo of good shippers at $27.50. Pitch pine—No arrivals during the fortnight. Shingles—The position is unchanged since our last, stocks are heavy and further supplies are not needed at the moment. Shooks—We note the arrival of 260 bundles by steamer from New York for dealer's account. Wood hoops—The S.S. "Saba" from London brought 351 bundles, also or dealers' account.

Ottawa Market News—Trade a Little Livelier

Ottawa, December 10 (Special to the Canada Lumberman):—There has been some improvement in trade during the last two weeks at the prices which have prevailed for some time past. Operations in the camps are on a larger scale than it was expected they would be when the war started, the weather being partly the cause of this. Most of the lumber firms are busy totalling up their cut for this year and taking stock. The water has risen in the Ottawa very considerably of late, which, though not proving of much benefit to the majority of the lumbermen, is a great help to pulp and paper manufacturers, such as J. R. Booth and the E. B. Eddy Company.

Owing to a peculiar condition in the money market brought about by the war, lumbermen in Ottawa and elsewhere, as well as other merchants, are finding that it is profitable to receive a cheque from New York or any other American city just now. Canadian banks are paying a premium of 1/16 per cent. on these cheques, which means quite a neat little amount on a big transaction. This is much different to the conditions which prevailed soon after the war began, when a discount of 2 per cent. was charged by the banks here on cheques from New York. The reason the premium is now being paid is because Canadian bankers have overdrawn on their American accounts and so are anxious to get them balanced up.

Application has been made to the Dominion Government by the Sprague Falls Manufacturing Company, of St. Stephen, N.B., for permission to dam the St. Croix River, build power houses, etc., in order to carry on a general lumber business. The application is under consideration by the government. It is doubtful if it will be granted, for the reason that the St. Croix River is said to be a navigable stream for most of its length and the construction of a dam would interfere with navigation.

The vexed question of switching and interswitching tolls is still before the Railway Commission. Last week, the Board held another hearing, with the hope that it would be the last, but it was found that it will be necessary to hold sittings in Winnipeg and Hamilton before the inquiry is closed. Mr. Frank Hawkins, secretary of the Canadian Lumbermen's Association, has filed a protest with the Board that the switching tolls on cars of lumber are much too high compared with the rates charged in American cities. This is the crux of the objection taken by all other manufacturers and merchants.

Judgment was reserved in the Supreme Court of Canada when the case of Booth vs the King was argued last week. In 1891 Mr. J. R. Booth, the veteran lumberman, was given a license by the superintendent of Indian Affairs to cut timber on certain Indian lands. Since then the license was renewed until 1909 when it was refused. An order-in-council passed in 1888 provided that a licensee who had paid his fees and met all the requirements of the license could have it renewed on application. Action followed the refusal and the Exchequer Court of Canada gave a verdict in favor of the King. It is against this judgment that the appeal was taken.

The case of the Vancouver Lumber Company vs the King, also came up again in the Supreme Court a few days ago. After a lengthy argument over that much disputed land, known as Deadman's Island, judgment was reserved.

Quebec Cullers' Report

The following comparative statement of timber measured and culled is furnished by the Quebec Supervisor of Cullers' office under date of December 3rd:

	1912 Cubic Feet	1913 Cubic Feet	1914 Cubic Feet
Waney white pine	1,087,600	244,280	593,080
White pine	1,760	7,560	.....
Red pine	12,200	960	1,040
Oak	113,840	161,200	343,240
Elm	276,640	284,880	305,240
Ash	520	1,000	680
Birch and Maple	42,920	47,680	50,800

Getting Acquainted

Is somewhat of a problem, at times, occasionally decidedly unpleasant You have probably found it so in both your buying and selling experience.

Why take a chance of having your pride, feelings or temper ruffled—stick close to your old friends, not quite the excitement maybe, but there's that peace of mind, that satisfaction in knowing that they can be depended upon.

There is no more dependable place on earth to get your Dressed Spruce, than Fenderson's—the value is in it—beautifully dressed—excellent grade—bone dry—you can bank on its being good when you place the order.

If you would help your business grow, handle better stock than the other fellow, your customers talk it over, if pleased, they build your business—if not pleased, they tear it down. Be jealously careful of your strongest advertising medium.

Remember

The most value for every dollar.

Each car chuck full of satisfaction.

Make that next car a Fenderson car.

You'll like it.

Fancy Woods and Veneers

THEIR ORIGIN, VALUE AND USE—COMMENT AND VIEWS ON AN IMPORTANT BRANCH OF THE TRADE.

The Most Costly Woods

It has been claimed that the small piece of spruce used in the manufacture of a high-class violin is the most costly wood in the world. The test is not fair. It is the work bestowed on the wood, and the name of some famous maker associated with it, that give the spruce in a violin its value. The test is the wood bought in the rough, before any value has been added by manufacturing. Measured in that way, spruce, even the finest that the market affords, does not measure in value up to a number of other woods. A value of $100 a thousand feet would be excessive.

It is not possible to say what is the cost of any wood. The cost varies with time, place, and quality. Very fine samples may sell for two or three times as much as ordinary samples of the same wood. The fairest method of coming to a price is to take averages in a good market during a considerable period of time, and the cost should be at wholesale, so far as the wood has a wholesale value.

Calculated in this way the list which follows gives some of the costliest woods in the American market, but not all of them. Doubtless some which are not in the list are as expensive as some that are there, but the list will answer the general purpose of showing the range of expensive woods in the market. The figures are taken, for the most part, from reports of wood-using industries of either New York or Illinois, and are the average prices paid during one year. They should, therefore, be fairly representative. All of the values are based on the basis of 1,000 feet, board measure. Some expensive woods are bought and sold by the pound, but where price is given it is calculated on the basis of 1,000 feet.

The following list of woods and prices is compiled from actual purchases:

Wood	Cost per thousand feet	Wood	Cost per thousand feet
Mahogany	$140	Cocuswood	275
Cocobal	160	Vermillion	300
Madagascar tulip	180	African walnut	321
Donselia	203	English oak	340
Rosewood	220	Amaranth	400
Teak	262	Turkish boxwood	400
Circassian walnut	275	Sandalwood	400
Ebony	275	Satinwood	400
Australian plum wood	275	Snakewood	575

Every one of the foregoing woods is foreign. Black walnut is usually credited with being the most expensive wood of the United States. The claim probably holds good if only woods in general use are considered. Mesquite lumber, sawed for furniture, sells for more than black walnut, but it is not regularly in the market and is sawed to order and in small amounts only.

Some of the most costly woods are never sawed into lumber. Among such are the tropical woods made into fishing rods. They are marketed in small billets, and they are often paid for by the pound. Some of these, if reduced to board measure, would range in price from $500 to $1,000 for 1,000 feet.

The nannyberry, or black haw, which grows in most of the eastern states, is an important source of supply for canes and umbrella handles of the common sort. Natural crooks in the wrong place are straightened, and artificial crooks are made where wanted, and in that shape the stock goes to the factory to be finished. It is somewhat difficult to arrive at an average cost of such material, but if reduced to board feet $600 or $700 a thousand would be inside the limit for the best; but at that price some manufacturing has already been done on the material.

If searching for the highest priced wood in the world, according to present markets, the honor will doubtless fall on malacca (Calamus scipionum). This is neither a hardwood nor a softwood, but a climbing palm found in the jungles of Siak on the island of Sumatra. It is used for canes. There are all grades. Some cost very much more than others. The finest grades top the world's prices. The choice stick for a cane is cut from between the joints of the palm, and must be forty inches long. That length is quite unusual, and long search is required to find one. It is said that from 50,000 to 100,000 pieces must be sorted to find one that is perfect. However, good prices are obtained for those which are not faultless, and it is not necessary to throw away imperfect stock. When a perfect specimen is found it is handled with the greatest care, for it is worth almost its weight in gold.

New York is said to be the best market in the world for high-class malacca canes. London, Paris, Vienna, and St. Petersburg follow. Much of the stock reaches New York with the roots still attached to the stems. The lower grades are bought by the ton. In New York the straight palms are steamed and carefully hand bent in a vise until the proper crook is secured. There are men who think they possess the secret of doing this, and they guard the secret with jealous care.

A malacca cane of fair quality sells for fifty dollars, while the best, with artistic taper and perfect crook, is worth $125. If the stock in such a cane is reduced to board measure, and the value figured on that basis, it is found that it is worth the enormous sum of $700,000 the thousand feet. No great part of this is due to cost of manufacturing, but can be charged to the expense of finding the high-grade stock in the jungle and taking it to market.—Hardwood Record.

Walnut and Combinations

With the revival of interest in American black walnut on the part of many furniture manufacturers and others, there has been a temptation to cut the cost to a limited extent by using cheaper woods in combination with walnut, the idea being that by staining the combination material it can be made to produce a satisfactory result, says Hardwood Record. The shrewder consumers, however, are keeping away from this as much as possible. They realize that while using high-grade black walnut all the way through would be rather expensive, they can buy a cheaper walnut for less conspicuous portions of the piece, and have the advantage of being able to offer a product that is exclusively walnut, instead of having to admit that it is a hybrid. The temptation to substitute some other wood for walnut is felt chiefly by the makers of popular-priced furniture, of course, those making high-grade lines not having considered anything but an exclusively walnut proposition; but even the former, it is contended, could well afford, at the expense of a few cents additional per piece, to use walnut exclusively. The walnut men who see combinations being made are likewise apprehensive lest this make a bad impression on the public and hurt the reputation of American black walnut at this critical time in its revival.

Ebony and It's Imitations

The black keys of pianos are sometimes made of ebony. It forms part of many other musical instruments, handles for small tools, and novelties of many kinds. It is persimmon wood, but not the species found in North America. It comes from Ceylon, Madagascar, Africa's east coast, and from other tropical countries. It is of many colors, ranging from jet black to brown and green. The blacker it is, the more valuable. Two thousand years before the days of Abraham the Egyptians were cutting ebony under the equator on the east coast of Africa and shipping it to furniture makers in Egypt. Some of that furnture is in existence today.

The cost of ebony tempts counterfeiters to imitate it. The most common imitation in this country is holly. It is worthy of note that one of the whitest woods in the world should be chosen to imitate one of the blackest. The holly is boiled in hatter's dye and becomes so black that no one suspects the counterfeit if he judges by the color alone. The fine grain of holly contributes to the deception, but the weight gives the secret away. Ebony is twice as heavy as holly. This imitation is often employed in making billiard cues and in other inlay work where the weight is not taken into consideration.

In Europe, one of the most common imitations of ebony is prepared from the wood of fruit trees, preferably pear. It is dyed in much the same way as holly, and it takes a fine polish which closely resembles ebony.

Other imitations are numerous. They are found in tropical America and in the tropical countries of the East. Of late a timber from Africa, called wat-wood, has been mentioned as a successful substitute for ebony; but the wood appears not to be mentioned under that name in any of the standard books on commercial timbers, and its botany is uncertain.

Even the United States has a candidate for favor as an imitation of ebony. It grows along the Rio Grande, and the people in that region like to have it called Texas ebony. It is little kin to real ebony, but is a locust tree, and a denizen of the jungles of mesquite, huisache, devil claw, and other thorny brambles which cover the hills and ravines of south-western Texas. It is known to botanists as Zygia flexicaulis. Efforts to put it on the market as ebony have not been successful, for the probable reason that its color is unsatisfactory. Some parts of the trunk may be as black as ink, but there are stripes and zones of wood as yellow as bodark or as brown as walnut, and it is

not easy to cut the black pieces in shapes and sizes suitable for uses in cabinet-making.

The railroads in that region cut the wood for ties, and as far as it may be judged by experience, it will last for ever. No one ever saw a rotten railroad tie of this wood. Worms devour the sapwood, which is yellow and half an inch thick, but they can make no impression on the heartwood, and it becomes harder the longer it is in use.

Texas ebony is valuable as fuel. It is at its best under the boilers in the cane-grinding mills near Brownsville; but it is not popular as stove wood because it is said to generate so hot a blaze that the stove is burnt out. The damage to the stove is probably not due so much to the extreme heat developed by combustion as to the acid set free in process of burning. When the northers come down across the plains and send shivers through the thin-blooded Texans along the Rio Grande, the fireplaces are piled with ebony and the red blazes make their presence felt, while the odour contains a strong and not wholly pleasant suggestion of burning leather.

Accounts have been published recently of artificial ebony which is said to be meeting requirements fairly well in some instances, but it must face failure in others. It is manufactured by mixing sawdust and blood and subjecting the mass to enormous pressure. The color might be all right, and possibly the weight and polishing properties may be satisfactory, but the strength ought to be thoroughly tried out before the composition is accepted for situations where great strength is required.—Hardwood Record.

Importance of Proper Feed on Thin Circular Saws

With the advent of the band resaw and the light gauge blade, the prediction was freely made that the circular resaw was doomed to extinction in a short time, as part of the sawing outfit of the planing mill. The prophecy has failed of verification, and like the thin log saw, the thin resaw still holds its own.

One of the advantages of the thin circular over its competitor, the band, lies in the fact that nearly all of the ordinary employees around the mill can point up a saw and go on, doing good work at a fair rate of feed until the saw needs gumming. It will work under conditions that are absolutely prohibitive to the band.

Some experience with thin circulars that caused us lots of trouble might be of benefit to some one who is trying to get a circular to work on a band kerf. Our saws were ordered 14-gauge at the eye and 22-gauge on the rim, using full swage, side dressed to take only one-sixteenth inch kerf. The old saws they were to replace were 12-gauge straight, which would run along a half day without filing. It was like an axe chopping out a three-sixteenth inch kerf.

The mandrel ran hot, but it did not seem to make any difference to the old saw. The new blades, however, went all to pieces, so to speak. They writhed and twisted like a midway dancer and the first twist took all the swaging off both sides, by striking the bed plate at the back of the blade. It took some time to get the mandrel to run cool. From previous want of care, the arbor had scored at the bearing and showed slightly sprung when put in the lathe. When this was finally remedied and the box kept cool with the aid of a stream of cold water, another saw was put on. For a time, the saw would work well when the feed was about fifty feet a minute. Gradually heat would start to develop at the rim and then the saw would "snake" until water was applied to cool it off.

Here was a quandry; the saws would not work without the water and the dust would not go up the blow pipe with the water. The old saw was too small and orders were pressing. The saws were twenty-two inches in diameter and had eighty teeth, and it occurred to me that the saws were cutting too much fine dust to a given amount of feed; if they had less teeth or more feed, they might work all right. The feed pulley for a ninety foot feed was put on, with the result that the saws went through the siding as if it were cheese, without heating. The feed had been too slow. The same rule that applies to a big circular applies to a small one. If your saw has plenty of teeth and belt power, give it all the feed the belt will pull; if you have to run a slow feed, use fewer teeth; don't make flour instead of sawdust. —M. W. in the Disston Crucible.

Single or Double Surface Sanders for Interior Finish

Six drum or double surface sanders have been well established in sash and door plants for a number of years. All the very large plants in the United States use them. Even many of the smaller concerns, putting out from 300 to 600 doors per day, find them more economical than the triple drum sanders, and use them where there is no real necessity of the second side being sanded.

This state of affairs brings up a question in my mind as to why a double surface sander wouldn't be a good investment for many concerns making interior finish. Undoubtedly where a firm makes only the standing trim for offices, residences, school buildings, etc., there would be no need of a six drum sander, although they find the triple drum machine a growing necessity. But when office furnishings form part of a firm's business, wouldn't sanding both sides of most pieces entering into such work be a decided improvement? Take a wardrobe, for instance. Plainly both sides of such a piece of furniture should be sanded. Telephone booths are in the same class; cupboards, including their doors and shelves, open counter table parts, and many pieces of special furniture for office use should be well sanded both sides.

Not that these furnishings are always sanded. They are not, I'm sorry to say. But they should be, because when both sides of more or less exposed parts of such furniture are sanded, it gives one a sense of quality, workmanship and care that is not present when these parts are only planed and left not even partly finished.

There was a time, not so very long ago, that you didn't find a sander in but a mighty few interior finish plants. But, you find them now. You find them even in the relatively small plants. And buyers of interior finish appreciate, in fact, insist upon their finish being sanded.

Now the question is: in those plants where many special doors, special fittings, like cabinets, cupboards, etc., are made up for individual jobs, and where both sides should be sanded, even though they are not now, wouldn't the six drum sander be the more economical to install?

It seems so to me. It should be remembered that the six drum sander is not necessarily always a double surface sander. Its top drums may be raised above stock, very easily and quickly, or the first drum may be allowed to cut, if desired. And the second side of whatever pieces should be double surface sanded, may be finished once through and have it done with.

This doesn't apply, naturally, to shops where the sander is used but little; but where a sander is on the job continuously, and the operator always has work ahead of him, I believe the six drum is the machine to install. It is economical, the work is certainly fine, and there isn't a single drawback.

I know of several concerns making doors in large numbers which the trade generally think of as high class, that are still using triple drum sanders, and sanding one side at a time. Others use triple drum sanders working tandem.

Neither of these methods is as economical as six drum sanding, especially considering the quality of work obtained. In working tandem at least one more man is required, even when the second machine is immediately back of the first, than the six drum requires. And as regards the quality of the work of the two methods, the two machine method loses out in the comparison.

It is interesting, on the other hand, to note that several concerns making small articles use six drum sanders, and are able to economize to a considerable extent thereby. Possibly after all, the whole matter lies in the viewpoints of the men who are responsible for the installation of machines. A little prejudice often blinds a man, whereas an open minded policy would give him a microscope for investigation.—Berlin Quality.

Railway Tie Consumption in South Africa

The United States Daily Consular & Trade Reports in a recent issue referring to the demand for railway ties in South Africa, says:—

With the exception of the short line owned and operated by the New Cape Central Railway Company, extending from Worcester (a station 111 miles inland from Cape Town) to Mossel Bay, a distance of 209 miles, the entire railway system within the Union of South Africa is owned and operated by the Government.

During the last five years the South African Railways have used a million or more ties in the extension of new lines or the repair of existing ones. These ties (or sleepers, as they are called here) are generally of jarrah or karri wood, both of which are imported from Australia. I have been reliably informed that ties cut from these woods resist decay (whether from dry rot or from being submerged in water) and the destructive white ant. A man well informed on this subject stated that he had seen ties of jarrah and karri wood taken out of the roadbed in a perfectly sound condition after 15 years' use. He further stated that, in the absence of the strongest proof of similar resisting qualities, it would be very difficult to induce the Government officials to experiment with ties made of other woods.

The imports of jarrah and karri wood (practically all used for ties or sleepers) into the Union of South Africa under the head of "Merchandise," amounted in 1911 to 257,797 cubic feet, value $78,521; in 1912 to 218,505 cubic feet, value $65,216; and in 1913 to 242,181 cubic feet, value $72,355. In addition jarrah wood was imported as "Government stores" from Australia as follows: During 1911, 21,561 cubic feet, value $17,539; 1912, value $33,097; 1913, 163,347 cubic feet, value $67,518.

Most of the ties or sleepers used by the Government railways are bought through local representatives and are therefore tabulated as "merchandise" and not as "Government stores." The proper parties to address with regard to the three lines of railway in operation in this country are as follows: South African Railways—The Assistant General Manager, Cape Town; Beira and Mashonaland and Rhodesian Railways—The General Manager, Bulawayo; New Cape Central Railways—The General Manager, Robertson.

EDGINGS

Ontario

Barrett Bros., Catherine Street, Ottawa, recently lost their lumber building and yard by fire, the loss amounts to $6,000.

The planing mill owned by Mr. O. E. Wallace at Listowel, Ont., was recently destroyed by fire, the loss, which included the planing mill, stable and coal and wood sheds, amounted to $2,000, on which there was insurance of $1,000.

The planing mill owned by Oliver & Ellis at Listowel, Ont., was re-Smart Manufacturing Company, Limited, Brockville, Ont., to replace the one which was destroyed by fire early last summer, is now nearing completion. The building is three storeys, 100 x 50 ft., of reinforced concrete and brick construction. The cost is $15,000.

The Kastner Lumber Company, Wiarton, Ont., report that they will take out a fair amount of logs during the coming winter, in order to give employment to a number of men. From a business point of view Mr. Kastner was inclined to omit his woods operations this winter, but has sufficient confidence in the outlook to take a chance on next summer's trade. Johnston, Hunter & Crawford, of Wiarton, will also conduct logging operations this winter.

J. R. Booth, Ottawa, is making good progress with the construction of his new timber mill. The building is to be one storey, 150 x 45 ft., of reinforced concrete construction. The walls are now up and the balance of the work will be carried on by day labor. The cost of the timber mill will be $22,000. Similar progress has been made in the construction of the sulphite mill which is to cost $35,000. This building is to be two storeys, 50 x 98 ft., of reinforced concrete construction.

Eastern Canada

The Canadian Match Company, Drummondville, P.Q., recently lost their match factory by fire.

H. Chagnon & Company, Limited, lumber dealers, have been incorporated with head office at Montreal.

The Bordeaux Sash & Door Company, Limited, have been registered to carry on business at Montreal.

W. R. McCloskey Limited, have been incorporated with head office at Boiestown, N.B., and authorized capital of $40,000, with power to carry on a general lumber and mercantile business.

A report from Truro, N.S., states that the Dominion Steel & Coal Company are calling for tenders for cutting and making 96,000 props and beams for the mines and between 200,000 and 300,000 feet of lumber for their own use to be cut on their own timber lands.

The Montreal Harbor Commissioners have awarded contracts for the supply of 3,304,000 feet B.M. of hemlock, longleaf yellow pine, elm, maple, Douglas fir and oak, to the following firms:—W. H. Kelly Lumber Company, Buckingham, P.Q.; G. W. Dansereau, Grenville, Ont., and Mason, Gordon & Company, Montreal.

The Halifax Lumber Company, with a capital of $750,000, has been formed to take over the Alfred Dickie lumber areas from the Royal Bank as the holding corporation. This property of 300,000 acres was sold a short time ago on foreclosure for some $400,000 to the Royal Bank, whose claim is $750,000. These lands are much more valuable than the claim of the Bank, and when times improve a sum much more than any claim is likely to be obtained.

Western Canada

W. B. Cutler, Port Coquitlam, B.C., has opened his new sawmill and is installing three shingle machines.

A. J. Waskett has almost completed arrangements for the erection of a shingle mill costing $25,000 at Port Alberni, B.C.

The Usk Lumber Company, Limited, has been incorporated with head office at Usk, B. C., and authorized capital of $25,000.

The Western Logging Company, of Vancouver, B.C., has purchased $875,000 feet in the Sayward district, on the basis of $1.25 per thousand feet.

The Dominion Lumber & Timber Company has transferred its head office from Vancouver, B.C., to Kamloops, B.C., where the president, J. C. Shields, resides.

The firm of Prentiss, Ramsden & Mack, of New Westminster, B.C., has recently purchased 4,156,000 feet of fir, cedar and spruce, and 386,000 feet of

hemlock, from the Provincial Government, paying on the basis of $1.60 for the stumpage, which is in the Lillooet district.

The Wilton Shingle Company, Eburne, B.C., announce that it will reopen the shingle plant formerly operated on the north arm by the North American Lumber Company, which has been idle for some months. The capacity of the mills will be about 200,000 shingles per day.

Middlesboro Collieries, Limited, have been incorporated with head office at Vancouver, B.C., and authorized capital of $20,000. In addition to the usual rights connected with the carrying on of a mining business, the company's powers include the right to carry on business as timber merchants, lumber manufacturers, etc.

The Eureka Lumber Company, of Elko, East Kootenay, B.C., whose mill burned about six weeks ago, has commenced the construction of a new and larger plant, which will have a capacity of over 200,000 feet daily. An entire new yard system will be installed whereby the lumber will be conveyed from the mill by motor trucks, automatically loaded, and electric stackers will be used in piling the lumber.

The Mackie Mill & Mercantile Company, operating a plant at Gettysburg, Wash., has leased property on the south side of the Fraser River at New Westminster, B.C., and will build a shingle mill, having an initial capacity of 200,000 shingles per day. The mill will employ about 35 men at the beginning which number will be increased as conditions warrant. Construction of the plant will commence immediately.

Two hundred million feet of hemlock and spruce timber has been sold by the British Columbia Department of Lands to the B. C. Sulphite Fibre Company, Limited, operating at Mill Creek, Howe Sound. The timber purchased by the company consists of eight parcels, located on Seymour Inlet, Ahnuhite River, Knight's Inlet, Big Creek, Johnstone Strait, Vancouver Island; Stafford River, Loughborough Inlet; Eden Island, Thurlow Island, and on Viscount Island. For stumpage, the estimated revenue to the province from these sales is $88,869. The company also pays a ground rent which amounts to approximately $2,000 per year. The revenue from royalty will total $75,000. The British Columbia Sulphite Fibre Company is at present making about 65 tons of sulphite daily, operating its plant day and night and giving employment to about 400 men. Their markets are Japan, South America, New York and the northwestern States.

The Canadian Pacific Mills Limited, with a capital of $9,500,000, is the outcome of a reorganization of the Ocean Falls Company, as reported in a recent issue of the Canada Lumberman, was carried out by Messrs. Mortimer Fleischhacker, Herbert Fleischhacker, and Wm. Pierce Johnson, of San Francisco, who purchased the property from the receiver in January last. The incorporators include W. S. Lane, solicitor, Vancouver; R. A. Leiter; T. S. Robinson and Leslie Craven, lawyers, of Portland, Oregon, and R. E. Parker, law student, Vancouver. It is stated that Messrs. Fleischhacker and Johnson will turn their holdings into a new company and that a modern paper-making plant will be installed at once. A good demand for British Columbia paper is expected to result from the completion of the Panama Canal and, for a similar reason, the demand for Pacific coast lumber on the Atlantic Seaboard is expected to increase.

Trade Enquiries

The Dominion Government Trade and Commerce reports contain the following trade enquiries. Readers of the "Canada Lumberman" may obtain the names of enquirers by writing to the Department of Trade and Commerce and stating the number of the enquiry.

1167. **Railway ties.**—A London firm which has large inquiries for cedar and other railway ties, sawn square, invites quotations c.i.f. Liverpool, and from Canadian manufacturers.

1168. **Wood pulp.**—A Glasgow firm desires the addresses of Canadian manufacturers of wood pulp who are in a position to quote for prompt shipment.

1178. **British Columbia fir.**—A number of French firms ask to be placed in touch with British Columbia fir dealers wishing to do business in France, Algeria, Tunis and Morocco.

1179. **Lumber.**— A firm at Rouen, France, are prepared to correspond with Canadian lumber manufacturers able to ship timber in the following sizes: 3 in. x 9 in., 2½ in. x 7 in., 2½ in. x 6½ in., in well-matched lengths of three metres and more.

1188. **Railway ties.**—A firm in Rotterdam wishes to obtain quotations from Canadian shippers for 60,000 pine and 40,000 oak railway ties. Particulars of sizes, etc., can be obtained on application to the Department of Trade and Commerce, Ottawa, report No. 515.

1189. **Wood tubs.**—An Irish firm desires the addresses of Canadian manufacturers who can supply them with cheap wood tubs.

1190. **Pulpwood poles.**—A Welsh manufacturing company invite quotations from Canadian firms who can supply pulpwood poles (4 in. to 12 in. top and in lengths of 9 to 12 feet barked and partly basted), suitable for conversion into wood fibre for packing purposes.

The Old Time Landlooker

Took a look and made a guess. If he underestimated by 3,000 feet to the acre the buyer did not complain; if he was 3,000 to 4,000 feet short, the buyer grumbled but concluded it was not a matter of great amount. For

A thousand feet of timber today is worth more than an acre of timber bought during the days of the old time landlooker.

On an investment basis it now costs less to secure accurate information respecting the value of timber property than it did to get a landlooker's opinion during the acre days.

Quantity and value are not closely related. Quality and accessibility govern timber values. If you wish to learn all about the value of your timber get a report from,

ONTARIO
Canada's Banner Province

Ontario's timber production last year valued at $26,774,937 or 40% of Canada's total output.

Pine production, 905,442,000 ft. B.M.
Pulpwood, 246,282 cords.
Railway Ties, 5,704,459.

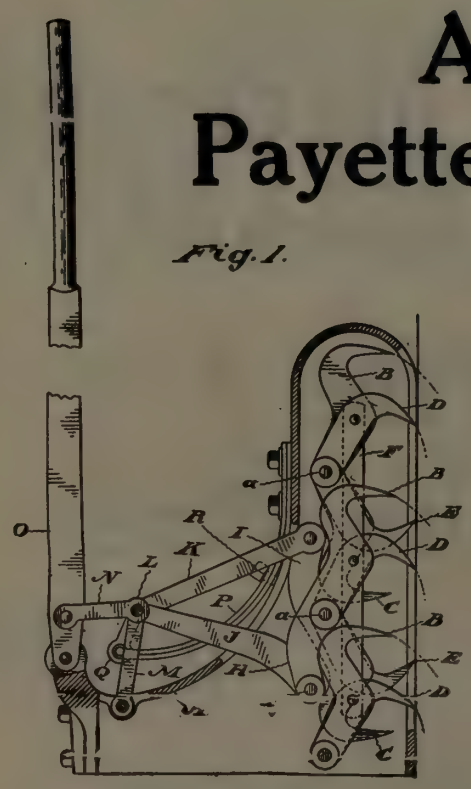
Ontario's woodworking industries, using 34 different kinds of wood, provide a ready market for the lumberman. Eighty-two per cent. of lumber used in Ontario's industries purchased within the Province.

Ontario's vast resources offer unsurpassed opportunities to the lumberman.
For maps and full information regarding Ontario, apply to

HON. W. H. HEARST,
Minister of Lands, Forests and Mines.

A Boon to Lumbermen
Payette's Famous Patent Mill Dogs
650 Sets already sold

Fig. 1.



BECAUSE
(1) They will dog with perfect ease and safety in any class of timber.
(2) Will dog just as easily, frozen maple or hardwoods of any description.
(3) Will dog the last board, just as easily as they dogged the first one.
(4) They do not tear the board or stock.
(5) Many other reasons, too numerous to mention here.

Write us for full particulars and booklet on same.

We also manufacture the following High-Grade Saw-Mill Machinery;—New Modern Saw-Mill Carriages, with either three or two head blocks; P. Payette's New Patent Saw-Mill Dog, for use in either winter or summer. P. Payette's Grip-Set Works; Steam Feed Valves, Steam Lifter and Loaders, Valves. Five different classes and styles of Edgers, for either light or heavy duty. Combined Gang-Circulars and Edgers, or Independent Gang Circulars.

Steam-Canters, Steam Lifters and Loaders, and a general line of saw-mill machinery. Detachable Chain-Sprockets, Castings of Gray-Iron, Semi-Cast Steel, and brass castings for general use.

Descriptive Booklet and prices mailed free upon request.

Producing Economies Needed

CHRISTMAS brings us close up to the day when we will know the profits or the losses of this queer business year. It also brings us close to the end of the year's business lessons.

Whatever may be the general teachings of these lessons, your close knowledge of the producing units in your system of manufacture must show definitely the need of economies at certain points.

One of these points may be your Planer and Matcher.

Planer and Matcher production is practically standardized, in speed at least. Berlin Matchers placed the standard profitable rates of feed at from 150 to 250 feet per minute. In every section of Canada and the States they are working at that rate.

Unless your machines are working at upwards of 150 ft. per minute, you are not taking all the profit you can from your operations.

In many mills Berlin Matchers have reduced the cost of matched stock 30% Besides, the better lumber made brings better prices on the open market. This additional profit should be on your books this year. If it isn't, it is because you are not operating a late type Berlin Matcher. Cheaper Matcher production is one that points for your investigation early next year.

Begin by sending for full information on Berlin Matchers. Free upon request.

A New Year's Resolution For You

"RESOLVED that, during 1915 and thereafter I will give preference, in my purchases of rubber goods and all other material, to such as are made in Canada."

So far as rubber goods are concerned, you run no risk in making this patriotic resolution, as we manufacture a complete line and the price, quality and style are right.

When in the market for tires, hose, belting, packing etc., let us show you what we can do.

It is our desire to serve you.

You Can Add 50' to Your Stack

Are you anxious to burn all your sawdust and shavings? Are you in vital need of more steam? Perhaps you are—but you haven't the draft necessary. If you could only add 50 feet to your stack.

You can get the equivalent of a high stack by installing a

Sturtevant
(REG. CAN. PAT. OFF.)

Mechanical Draft System

Mechanical draft will enable you to burn all sorts of fuels including sawdust, shavings and mill refuse—it will enable you to get up steam in a hurry—it will get you over peak load—it will give you enough steam for every purpose—heating and lighting.

Mechanical draft means

—more power from the same fuel.
—equal power from poorer quality fuel.
—increased power from the same plant or
—ability to burn sawdust, shavings and screenings.

Is not this worth investigating immediately when every day of procrastinating is costing money? Let us tell you about hundreds of plants whose steam output has been increased by our mechanical draft systems.

Write at once, mentioning this paper.

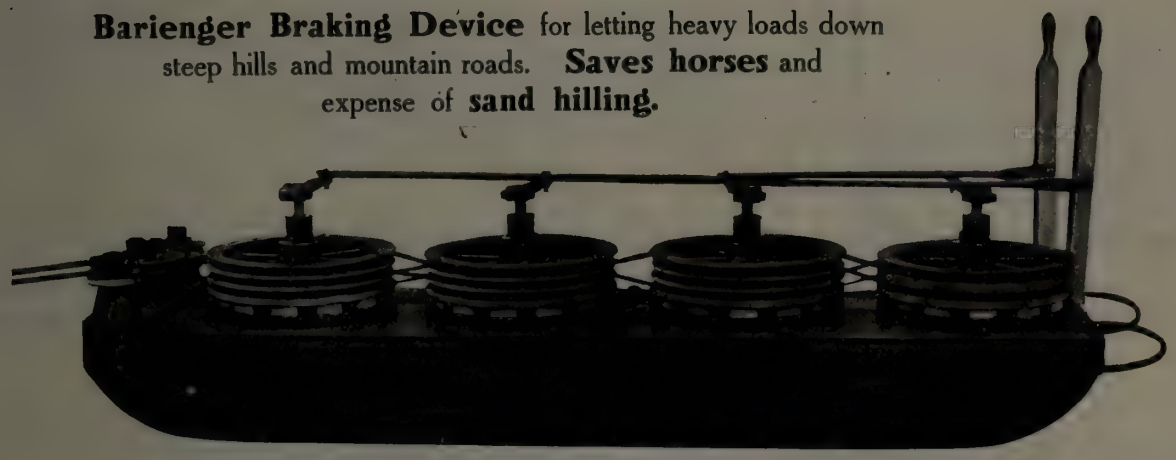
ESTABLISHED 1827

You Need a Brake This Season

Barienger Braking Device for letting heavy loads down steep hills and mountain roads. **Saves horses** and expense of **sand hilling.**



Now is the time to consider the use of this brake for another season before hauling roads are planned and built. By using this brake lumbermen are able to work much steeper roads, and in consequence, shorter roads and there is a considerable saving in the cost of building roads.

INDUSTRIAL LOCOMOTIVES

The designs of our small locomotives are the result of wide experience.

All details are accurately finished to standard gauges and are absolutely interchangeable on all locomotives of the same class and size.

This cuts out long delays when parts wear out, as parts liable to wear can be kept on hand or shipped promptly from our works.

MONTREAL LOCOMOTIVE WORKS, LIMITED

DOMINION EXPRESS BUILDING, MONTREAL. CANADA

CLIMAX Improved Geared LOCOMOTIVES FOR WOOD AND IRON RAILS

It Takes Years

to find out what belts are specially fitted for different kinds of work. We have spent the time and money to find out.

Why not use our Service? It is Free.

If you give us the requirements of the work the belt is to do, we guarantee the performance of the Belt.

Write for our Belting book "The Main Drive."

Federal Engineering Co., Ltd.
Toronto - Montreal

This engine is 13½ ins. x 18 ins. and weighs 35 tons.

The knowledge and experience of fifty years in locomotive designing and construction is what you get in our Logging locomotives. They are specially constructed for logging operations and will stand up to the severe service in which they are expected to run. Oil or coal burning.

They are as carefully designed and built as our 200 ton locomotives, Repair parts may always be obtained on the shortest notice.

Grey Iron Castings—any size or shape—ordinary or intricate—made promptly. New foundry, splendidly equipped. We would be pleased to quote on castings—singly or by contract. We also make drop forgings of all descriptions.

MAY WE SEND YOU SPECIFICATIONS?

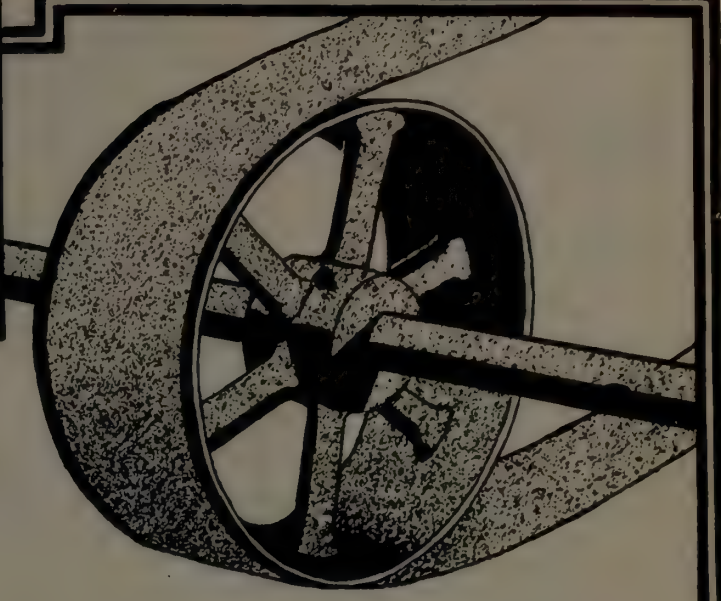
"Wilson Bros." Hardwood Flooring

is the Flooring that is manufactured expressly to supply the demand for the best. It is made by modern machinery from carefully selected stock, and every precaution is taken throughout our entire system to make it fulfill the requirements in every particular. Write us for prices.

Wilson Bros., Limited - Collingwood, Ont.

When You Overhaul Install

GOODHUE BELTS



"Acme Waterproof" Leather Belting

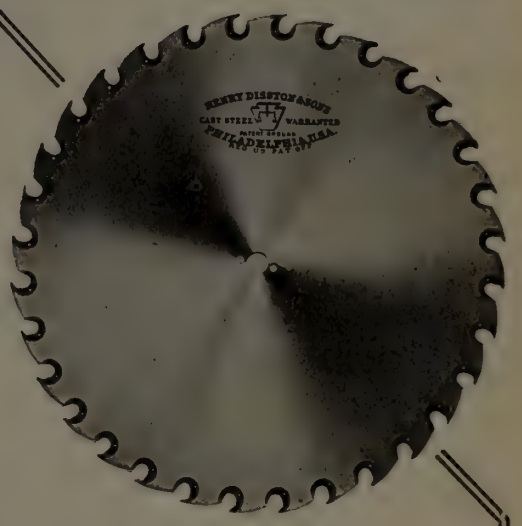
This brand is especially well suited to the wet places in a saw or pulp mill and will run true as long as it is in service. When you are overhauling your mill equip it with "Goodhue Belts" and you will never regret it. They are honestly made of solid leather—every inch a good belt and they won't stretch.

Get our details and prices.

J. L. Goodhue & Company, Limited

DANVILLE - QUEBEC

Maximum feed through the heaviest cuts with the DISSTON Chisel Tooth Saw



The large throat-room secured in the Disston design insures easy running. Choking down is practically impossible even under the heaviest feeds—insuring the greatest possible output per horse-power applied.

The extra large chambering capacity in the Disston chisel tooth saws in connection with perfect side-clearance, highest grade material and workmanship adapts these saws to the manufacture of lumber from the log in any class of wood.

Write today for full information and our new book "Saw Appreciation".

Dominion Timber Regulations

Licenses to cut timber on Dominion Lands in the Provinces of Manitoba, Saskatchewan, and Alberta, the Northwest Territories, within twenty miles on either side of the main line of the Canadian Pacific Railway in the Province of British Columbia, and in the tract of three and one-half million acres to be located by the Government in the Dominion in the Peace River district in the Province of British Columbia, lying east of the Rocky Mountains and adjoining the Province of Alberta, shall be disposed of by public auction at the office of the Dominion Timber Agent for the districts in which the berths are situated.

Before any parcel of timber is offered for sale it shall be surveyed by a duly qualified Dominion Land Surveyor into berths of an area not exceeding twenty-five square miles, and each of such berths shall then be thoroughly cruised by a duly qualified timber cruiser in the employ of the Dominion Government. The Minister shall then fix an upset price at which the berth shall be disposed of, and no berth shall be sold at less than the price so fixed.

Purchases to the amount of one thousand dollars or under shall be paid in cash at the time of sale. Purchases over one thousand dollars and not exceeding five thousand dollars shall be paid, one-half in cash at the time of sale, and a note or notes shall be given for the remaining half of the purchase price, payable in three months, with interest at the rate of five per cent. per annum. Purchases over five thousand dollars and not exceeding ten thousand dollars shall be paid one-third in cash at the time of sale, and notes shall be given for the remaining two-thirds of the purchase price, payable in three and six months, with interest at the rate of five per cent. per annum. Purchases exceeding ten thousand dollars shall be paid one-fourth in cash at time of sale, and notes shall be given for the remaining three-fourths of the purchase price, payable within three, six and nine months, with interest at the rate of five per cent. per annum. Notes shall be made payable at a bank in the city or town in which the sale is held or at a bank in the city of Ottawa. Cash payments must be made at the time of sale in legal tender or by an accepted cheque on a chartered bank, or by a draft issued by a chartered bank, payable to the order of the Deputy Minister of the Interior. If default is made in any payment required by this section the sale shall be forfeited and void.

The purchaser must also pay the cost or the estimated cost of the survey of the berth before a license is issued.

The licensee shall pay an annual ground rent of five dollars per square mile except for lands situated to the west of Yale, in the Province of British Columbia, in which case the yearly ground rent shall be five cents per acre.

The licensee shall pay the following dues on timber cut on his berth :—

Sawn lumber, 50 cents per thousand feet, board measure.

Railway ties, eight feet long, 1½ cents each.

Railway ties, nine feet long, 1¾ cents each.

Shingle bolts, 25 cents per cord.

And 5 per cent. on the sale of all other products of the berth.

Timber Permits

Yearly permits are granted to settlers, mine operators and others on application to the Dominion Timber Agents, from whom further information can be obtained.

W. W. Cory,

Department of the Interior, Ottawa,
December 20th, 1912.

Deputy Minister.

Machine Knives

You can buy knives cheaper than **White's**—but do you want to? In other words, do you want cheaper quality knives? **White's** are the higher grade and we are proving every day they will wear 10 to 50 per cent longer. All we ask is a trial order—just to show you. We ***can*** show you. Price may not be only very little higher either.

Start Saving Money Today.

Veneer Machinery

The Best in 1850
The Best in 1914

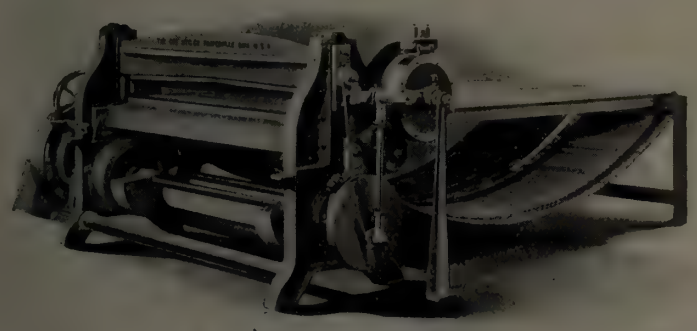
Slicer

Lathe

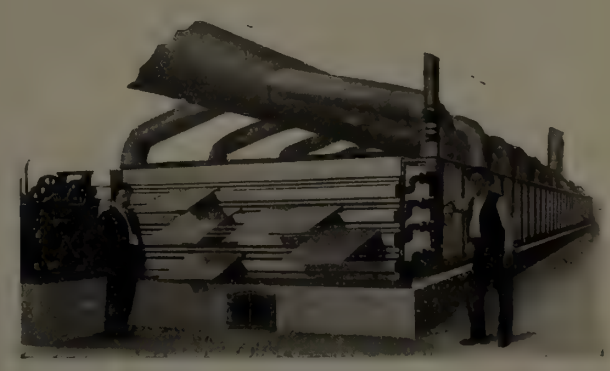
In this age of specialization only those firms of keen observation and untiring effort can hope to win success in any one line. Our entire efforts for 64 years have been spent upon making Coe Veneer Machiney the best possible equipment for cutting, slicing, clipping, wringing, sawing, drying, stamping or producing veneer from any kind of lumber.

With the rapidly increasing demand for lumber and the rapidly dwindling supply, the use of veneer products must greatly increase.

If you are in the market for veneer equipment we will be pleased to hear from you. The many and varied Coe plants now in successful operation are proof that we can design and equip a plant to suit your conditions. **Write us for Catalogue.**



Clipper



Dryer

The Coe Manufacturing Company

Painesville, Ohio, U. S. A.

Established 1850

The oldest and largest manufacturers of complete veneer mill equipment in the world.

The Connecting Link

Way back in 1880 the **Wanted and For Sale** columns of the Canada Lumberman and Woodworker were used extensively by the lumbermen of Canada for the purchase and sale of timber, lumber and machinery.

Time has but served to enhance the value of this medium, until to-day the **Wanted and For Sale Department** of the Canada Lumberman has become a national market.

Twice a month "the paper with the green cover" brings together buyers and sellers of lumber and machinery from all the principal lumbering centres of Canada and the United States. By covering this wide field, the percentage of waste circulation for advertisers has been reduced to a minimum.

For quick and satisfactory results, get your advertisement in the **Wanted and For Sale Department** of the

Let Steam Do the Work When You Shift Your Guides

—It's Done on the Waterous "New Model" Bandmill

The latest improvement added to our Bandmills—

THE WATEROUS STEAM RAISING DEVICE

Your sawyer is only human. If he gets tired at the end of his shift and does not move his guide with a smaller log on the carraige, don't blame him. Give him a steam cylinder to do the work—instantly, and without an effort on his part—and you can be certain that he will keep the guide just where it should be—***close to the timber on the carriage.***

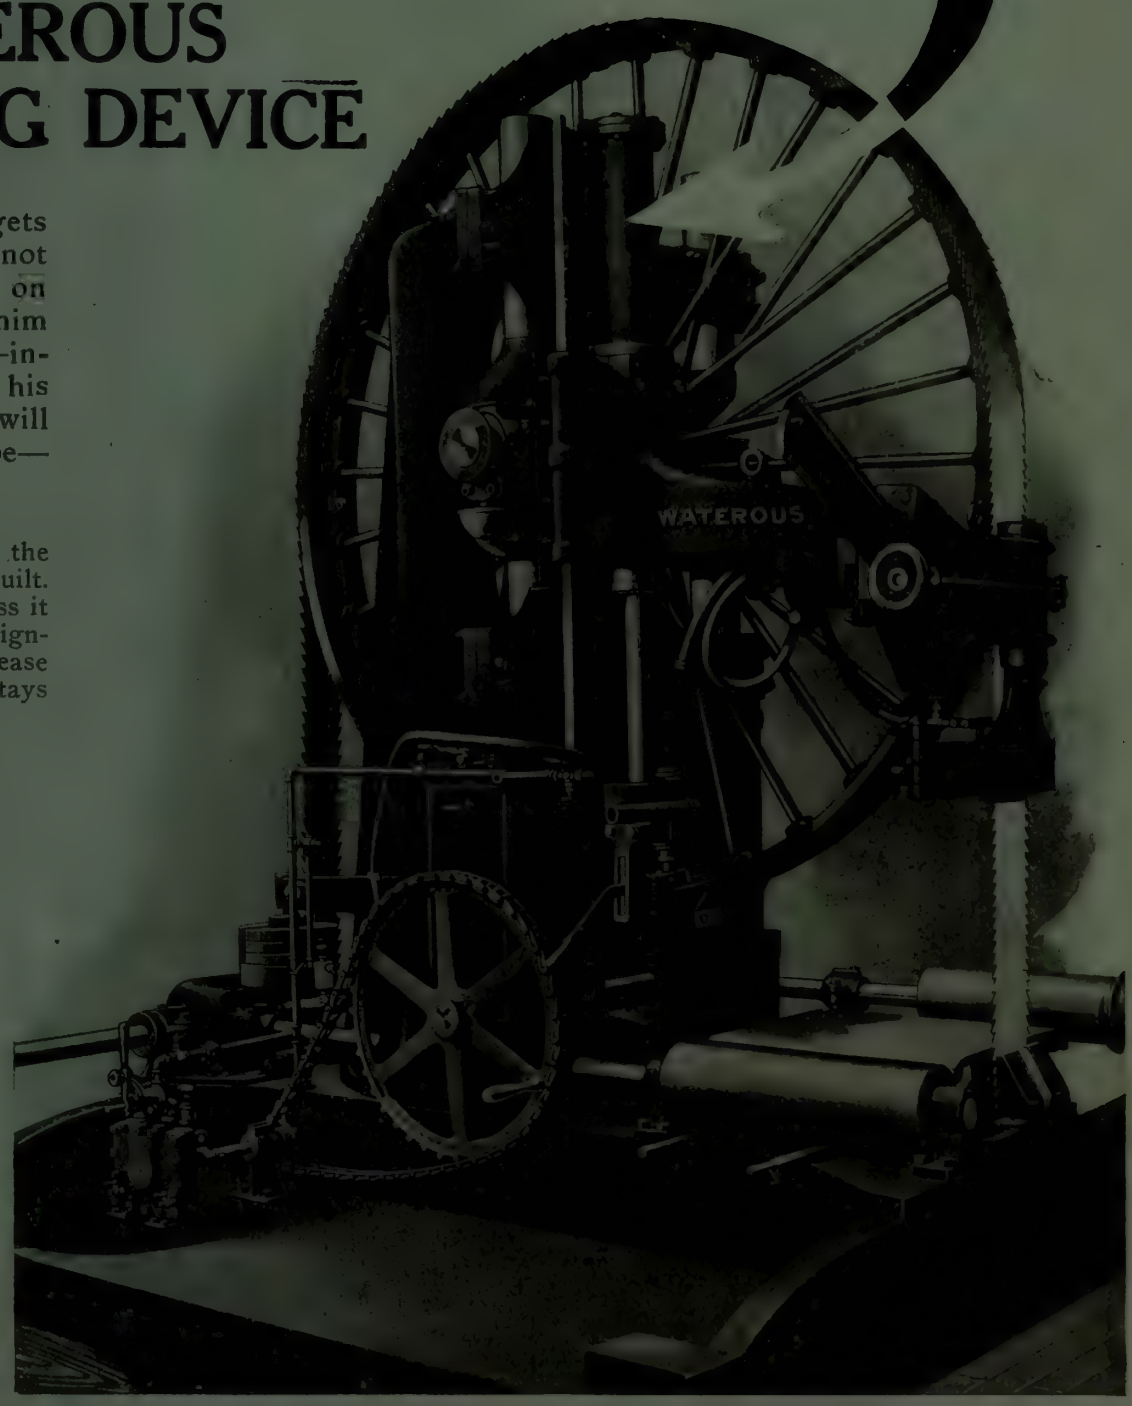
The Waterous Steam Raising Device is the quickest, surest acting guide shifter being built. Pull up the lever and up goes the guide, press it down and the guide drops. The valve is designed to balance both sides of the piston. Release the valve and the guide stops dead—and stays there without a shift.

That's how the **Waterous Steam Raising Device** has simplified guide adjustment on the bandmill. It means more lumber and better lumber for every hour of the day's work.

The Waterous "New Model" Bandmill is supplied with this attachment. Where it is in use, in some of Canada's fastest cutting mills, it has more than made good. **We can attach it to your bandmill no matter what make it is.**

This device is worth more than casual notice, it is fully described in Bulletin No. 1021.

Notice the Rotary Engine that drives the wheel raising device. That's another Waterous feature. The bulletin describes it, too.



The Waterous Engine Works Co., Limited

Vancouver, B.C. **Brantford, Canada** **Winnipeg, Man.**

"FROST KING" METAL

$5,000,000.00
worth of mixed metal sold annually.

Our thirty-five years' experience in metal mixing enables us to place on the market a babbitt that we believe to be absolutely perfect. For high speed machinery and engine work it is without an equal. It is specially designed for saw-mills, planing mills, threshing engines, traction engines, pumps, rolling mills, pulp machinery, and all classes of stationary engines. It is a high grade metal made of the very best selected stock, and carefully compounded.

If your dealer does not stock FROST KING send us a money order for your requirements. Price 30c per lb., Fort William and East; West of Fort William 35c per lb., delivered nearest railway station; packed in 30 lb. and 60 lb. boxes.

For extra duty, such as over-hanging saws, our FAULTLESS BABBITT will stand where all other metals will fail. Price, Fort William and East, 40c per lb.; West of Fort William, 45c, delivered to your nearest railway station; packed in 30 lb. and 60 lb. boxes.
